FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CUBAN INTERVIEW WITH DEPUTY MINISTER OF DEFENSE

Havana VERDE OLIVO in Spanish 2 Nov 80 p 18

[Interview with Deputy Defense Minister Lt Gen Le Quang Hoa by Armando Lopez Rivera in Cuba]

[Text] "The past 35 years have been marked by continuous struggle and intense battle: 9 years of anti-French resistance and 20 years of confrontation with North American imperialist intervention. And, since the victory of 1975, a new battle has been waged against Chinese expansionism. These wars have had grave consequences for the country. Nevertheless, we have carried out our internationalist obligations toward the fraternal peoples of Laos and Kampuchea."

With these words Lt Gen Le Quang Hoa, member of the Central Committee of the Communist Party of the Socialist Republic of Vietnam and deputy minister of national defense, began his answer to a question on the situation in Vietnam over the last 17-1/2 years.

Lt Gen Le Quang Hoa visited our country, invited by the Committee of Solidarity With Vietnam to the activities marking the 35th anniversary of the national day of that fraternal people. A few hours before returning to his beloved fatherland the veteran of the long struggle of that Indochinese country and deputy chief of Operation Ho Chi Minh, which liberated south Vietnam, he granted this interview to VERDE OLIVO.

"Vice, drugs, prostitution and other evils flourished in South Vietnam during the colonial and neocolonial occupation. At the time of the liberation of Saigon, now Ho Chi Minh City, we found ourselves with more than 3 million unemployed and hundreds of thousands of prostitutes and drug addicts. We dealt firmly with these problems, giving urgent attention to the sick and addicts and work to the unemployed."

The visitor interviewed referred to achievements in agricultural and industrial production, public health and education. Also, in the field of foreign policy, he referred to the thwarting of the campaigns of slander and distortion unleashed by the enemies of the Vietnamese people, with the intention of confusing the public staining the prestige of the country.

He pointed out the close relations with the Soviet Union and the beneficial agreements signed with that country, among others those referring to specialized work in the field of food production to be developed in the Mekong Delta and on the western plains of Vietnam and especially in the exploration for and exploitation of petroleum possibilities. He said: "With the help of the USSR, within a few years we will be producing petroleum.

"After the liberation of the south we held general elections for national reunification and construction of an independent and socialist Vietnam. Our achievements are still modest, but one must take into account the aggressions and expansionist ambitions of Beijing. They consider us a great obstacle for their plans of hegemony and their expansion toward Southeast Asia.

"They are in league with North American imperialism and they are becoming hysterical. They have attempted a thousand and one maneuvers with the intention of sabotaging the choice of the three Indochinese countries: Vietnam, Laos and Kampuchea. On the northern border of our country alone they have stationed more than 610,000 soldiers, in addition to hundreds of pieces of artillery of various types, tanks and airplanes. They are constantly carrying out armed provocations, infiltrating their agents among the people of the border area, distributing leaflets and engaging in acts of sabotage. By their campaigns of slander and false rumors they are trying to attract to their side the national minorities of those zones."

[Question] You were saying that these aggressions are directed against the three Indochinese countries. Could you refer to the events in Kampuchea?

[Answer] They are also engaging in acts of sabotage and destabilization against the Kampuchean revolution. They are using the territory of Thailand to provide arms and food to the remnants of the army of Pol Pot. They try to use so-called "voluntary repatriation" to introduce elements of the former regime into the territory of Kampuchea. Nevertheless, things have not gone as they hoped, and the armed forces of the neighboring country [Kampuchea] repulsed those maneuvers, which had the support and participation of Thai troops.

Recently, the foreign ministers of the three Indochinese countries held a conference and drew up a four-point resolution, but Thailand, under pressure from China, refused to accept those logical and reasonable propositions. Kampuchea proposed the creation of a demilitarized zone along the common border between the two countries; however, Thailand in a counter proposal tried to ensure that the demilitarized zone be established in Kampuchea. In reality what they are attempting is to have a state within another state.

[Question] And in Laos?

[Answer] Military pressure is being applied to Laos. They close the borders and blockade the national economy. Behind all these maneuvers and aggressions is the hand of Chinese hegemony and imperialism.

In Laos, as in the other Indochinese countries, the subversive activities of the Maoist-imperialist duo have failed. In Laos as in Kampuchea are Vietnamese troops in accordance with signed treaties and at the request of the governments of the two countries to guarantee their territorial integrity. The troops will remain in there until they fulfill our internationalist obligations.

[Question] Is Vietnam prepared to confront and defeat the collusion between the Chinese and North American forces?

[Answer] We have been fighting for 30 years and we are now prepared to confront the aggression of the enemy. We will make use of the right of self-defense to safeguard our air, sea and land space and our islands.

We want peace to improve the living conditions of our people, but if they dare to invade us, we will defeat the aggressor. We will win, whatever the price. If Beijing should attempt a new armed action against our country, it will meet with the same fate as on the previous occasion.

[Question] How do you interpret the recent changes in the Chinese cabinet? Could these changes signal a shift in Beijing's foreign policy and in particular its attitude toward Vietnam?

[Answer] This is not the first time the Chinese Government has made changes in its leadership. During the past 10 years there have been various restructurings of this kind. Nevertheless, its foreign policy continues to be the same: expansionism, anti-Sovietism and great power hegemony. It is opposed to the strengthening of unity among Vietnam, Laos and Kampuchea because of its interest in annexing these countries and using them as a springboard for its plans of expansion toward Southeast Asia.

[Question] What has the Chinese response been to the Vietnamese proposal for a third round of negotiations?

[Answer] In requesting the resumption of the third round of talks we were expressing our wish to resolve existing problems by this means. We have always tried to resolve differences with Beijing by means of negotiations, by peaceful means. It was Beijing that unilaterally suspended the second round and now is trying to sabotage our proposal.

China will use military power and economic pressure against our country. We desire peace, but we will not fold our arms against imperialism and the Chinese reactionaries. It is necessary to speak to them with reason and also with force. Both of these are on our side; they belong to the Soviet Union, Cuba, Vietnam and all progressive forces.

HANOI DECIDES ABOUT PHASE-TWO TROOPS-RECRUITING TASK

Hanoi NHAN DAN in Vietnamese 8 Nov 80 p 4

[Article: "Hanoi: Municipal People's Committee Decides About the 1980 Phase-2 Troops-Recruiting Task"]

[Text] To properly fulfill the task of building a strong permanent armed force, to achieve a high degree of combat readiness and to contribute to the economic construction, the Municipal People's Committee of Hanoi has made a decision on the second phase of its troops-recruiting task in 1980.

As this troops-recruiting phase is to be completed within a short specified time, and to ensure both quality and quantity, the city considers it a job of top importance that requires concentrated leadership and close coordination among all sectors. In order to develop the people's collective ownership right in the fulfillment of the military obligation, it must ensure the implementation of all procedures and policies. It is necessary for production installations to make public their lists for the people to discuss them.

On the basis of a decision by the Council of Ministers, the Municipal People's Committee has set the following guidelines and criteria for troop recruitment:

Male citizens in all rural areas, streets, organs, state enterprises and vocational schools (from primary to college level), no matter what jobs they are doing and what families they belong to, must enroll in the army for the specified time if they satisfy all of the recruitment criteria. For the duration of their induction, they are to receive the same treatment.

After the military obligation has been fulfilled:

- Those who volunteer to remain in the army will carry out the same procedures and policies as they are applicable to the military personnel serving in the army for a long time.

- Every year the Ministry of National Defense, along with the State Planning Commission and the sectors concerned, will make arrangement to provide those who have fulfilled their military obligation with jobs in accordance with the policy in force.

In the second phase this year, the city recruits inductees from organs, enterprises (central and local), street blocks in cities and towns and among graduates of vocational schools (from primary to college level) who after their graduation in 1980 or in the previous years have been waiting for job placement, with deferment being granted to students now in those schools or those students who have been notified about their admission to vocational schools (from primary to college level) in the 1980-1981 school year.

Criteria: males, age from 18 to 25 (born between 1955 to 1962), health classifications A and B1. In addition, some females will be recruited from both rural areas and street blocks, age from 18 to 20 (born between 1960 to 1962), health classification A, and volunteering to serve for 3 years.

Military obligation is waived for the following persons:

- The only son of a family (the parents have only a son).

- The only working person in a family.

- The last remaining son of a family of war dead, or the only son remaining in the family while other sons are serving in the armed forces (army and public security force).

To ensure work and production for organs and enterprises, the state grants deferment to a number of cadres and workers of the latter; however, depending on the actual state of their work and production, these state organs and enterprises within a period of 3-5 years must have plans for letting these people take turns fulfilling their military obligation.

THEFTS INCREASING IN HANOI

Hanoi VAN HOA NGHE THUAT in Vietnamese No 7, Jul 80 p 77

[Article by Nguyen Duc Thai, the Ministry of Communications and Transportation: "Something Was Stolen Here"]

[Text] On many walls along the streets of the city, signs like the following are becoming increasingly numerous: "Here, a bicycle was stolen," "here,..."

At first, these signs were seen as an innovation that helped us to be more careful whenever we had to leave our bicycle on the sidewalk. But, as this innovation has spread, the sidewalks have ceased being sidewalks! These "good will" messages have unintentionally become boogymen sticking out their tongues and intimidating passers-by. As the lettering on the signs becomes increasingly boldface, the existence of them becomes increasingly difficult to bear. It is not that we should "hide our faults," but that these "something was stolen here" signs have made the city more than a little unsightly. Someone visiting the city for the first time might think: what has caused this lack of security in Hanoi?

EDITORIAL SEES VIETNAM-MADAGASCAR RELATIONS AT NEW LEVEL

Hanoi NHAN DAN in Vietnamese 17 Nov 80 p 1

[Editorial: "Militant Solidarity"]

[Text] The delegation from our party and government led by Vo Nguyen Giap, member of the Political Bureau of the Party Central Committee and vice premier, has successfully completed its official visit of friendship to the Democratic Republic of Madagascar. From the moment they first arrived in the capital Tananarive until they said farewell to their hosts, the Vietnamese delegation was given a war and cordial welcome by the leaders of the Supreme Revolutionary Council, the government, the National Assembly and the people of Madagascar. This warm feeling developed in the process of the long fight waged by the two nations.

The peoples of Vietnam and Madagascar are very proud of their militant friendship, which blossomed at a very early date and has become closer with each passing day. This precious militant friendship was started by the great patriots of the two nations, Ho Chi Minh and Ra-lai-mon-go [Vietnamese phonetics]. The peoples of the two countries have always supported and encouraged each other in the long struggle for independence and freedom. Our hearts shared the pain of Madagascar when, in 1947, the colonialist aggressors sunk the brave, armed uprising by the people on the peninsula in a sea of blood. We also shared our friends' great joy when the corrupt Tsiranana dictatorship, the tool of neo-colonialism, was toppled (8 October 1972) and when patriots, led by President D. Ratsiraka, took power (15 June 1975), thereby ushering in a new period for the country. We are happy over the tremendous achievements recorded by free Madagascar in the course of building a progressive country under the guidelines of its socialist revolutionary charter.

Our people shall never forget the valuable support given them by the people of Madagascar.

On 18 December 1972, when the U.S. aggressors were insanely sending B-52's to heavily bomb Hanoi and Haiphong, the government of Madagascar declared the establishment of diplomatic relations with our country on the ambassadorial level. At the 6th High Level Conference of Non-Aligned Countries held in Havana, at a time when the U.S. imperialists and the international reactionaries were doing everything possible to falsely accuse Vietnam, President D. Ratsiraka unequivocally stated: "We, the newly independent countries, we say to our Vietnamese friends that through your fight to defeat the French imperialists and the U.S. imperialists, you have not only liberated your territory, but liberated all oppressed nations on this planet, and we shall be forever grateful to you." Madagascar has always encouraged solidarity among the peoples of the three countries of Indochina, considering this an important factor contributing to the defeat of every scheme of hostile forces and Madagascar has welcomed the efforts by Vietnam, Laos and Kampuchea to make Southeast Asia a region of peace and stability. The government of Madagascar voted against the unreasonable resolution of the United Nations on the representation of Kampuchea and demanded that the legitimate position of the Revolutionary People's Council as the only genuine and legal representative of the people of Kampuchea be recognized at this international organization.

In the present world situation, in the face of the increasingly close collaboration between the imperialist forces led by the United States and the international reactionary powers, strengthening the militant solidarity and the relations of friendly cooperation among the peoples of the countries of Asia, Africa and Latin America and the progressive forces of the world is very important and necessary. Highly evaluating the contributions made by the Democratic Republic of Madagascar in the struggle against imperialism, colonialism, both old and new, apartheid and zionism to safeguard peace, primarily to maintain peace in the Indian Ocean and Africa, our people totally support the proposal by Madagascar to convene a high level conference at Tananarive to discuss the maintenance of peace and security for the countries within this region of the world.

The unanimity between Vietnam and Madagascar concerning many international issues is an important factor strengthening their solidarity and the signing of the Treaty on Economic, Scientific and Technical Cooperation was a beautiful event that marked a new stage of development in the relations between the two countries.

XUAN THUY ON IMPORTANT ROLE OF YOUTHS

Hanoi NHAN DAN in Vietnamese 16 Nov 80 pp 1, 4

[Article by Xuan Thuy, secretary of the Party Central Committee: "The Youths of Vietnam, a Powerful Revolutionary Force"]

[Text] Soon, the 4th National Congress of Delegates of the Ho Chi Minh Communist Youth Union will be held. This will be a very important event for the Youth Union and the youth movement of our country.

In greeting this Youth Union congress, we recall the words spoken by Uncle Ho:

"I love youths very much. Because, they are the persons who give revolutionary strength to the older generation and, at the same time, are the persons in charge of guiding the young generation of the future, that is, today's children. Because, youths are the assault force in economic and cultural development, in socialist construction, etc. Because, youths are the basic force within the army, the public security sector and the militia and self-defense units and are enthusiastically maintaining order and security and protecting the fatherland. Because, on every job, youths emulate to implement the slogan: 'youths go wherever they are needed and perform all jobs that are difficult.'"(1)

Over the past half-century, ever since it was established, our party has asserted: "The Youth Union is the competent right hand, the dependable reserve force of the party, is the school of communism of youths." The revolutionary history of the Communist Youth Union has been closely linked to the glorious revolutionary history and tradition of our party. Le Duan, general secretary of the Party Central Committee, has said: "The undertaking of the party is the ideal of youths, the objectives of the party are the raison d'etre of youths."(2)

Since antiquity, the majority of the heroes in the struggles of the nation has been youths. Trung Trac and Trung Nhi, Trieu Trinh Nuong, Ngo Quyen, Dinh Bo Linh, Tran Quoc Tuan, Tran Quoc Toan, Pham Ngu Lao, Nguyen Hue and so forth, all were young heroes of the nation. In particular, ever since we have been under the leadership of the party, brilliant examples have been set by youths, such as Tran Phu, Nguyen Van Cu, Ngo Gia Tu, Le Hong Phong, Nguyen Thi Minh Khai, Ly Tu Trong and so forth, in the struggles to win the independence and freedom of the fatherland. Practically all of the leaders of our party and state were youths when they began to participate in the revolution.

In the two wars of resistance against the French colonialists and the U.S. imperialist aggressors and, more recently, in the victory over the Chinese expansionist army, young heroes "blossomed like flowers in the spring." Representative of them were the 483 youths who were bestowed the title "Hero" by the state. Our people and youths frequently think of Vo Thi Sau, Tran Van On, Mac Thi Buoi, Cu Chinh Lan, Be Van Dan, Nguyen Van Troi, Le Thi Hong Gam, Le Dinh Chinh, Hoang Thi Hong Chiem and Nguyen Ba Lai. Among teenagers and children, there are Kim Dong, Le Van Tam, Ho Van Men, Ko Pa Ko Long, Ho Thi Thu, Doan Van Luyen, Nguyen Ba Ngoc, Ma Van Cho and countless other heroes and emulation warriors within the people's armed forces, in the building of the country and socialist transformation and in socialist construction.

Over the past several years, ever since the 4th National Congress of the Party, a revolutionary action emulation movement of youths has been strongly developing throughout the country. This is the "three assaults of collective ownership" movement. This movement has the purpose of accelerating the performance of the tasks of youths in work and production, in the protection of the fatherland, in their studies and in their effort to build the new life.

Several results of this revolutionary action emulation movement are worthy of praise: young workers have undertaken tens of thousands of youth projects. In 1979, the movement to collect and recycle cement bags resulted in more than 5 million being collected. This year, an effort is being made to recycle 6 million cement bags. In 1979, the young collective farmers produced more than 31 million tons of organic fertilizer; this year, an effort is being made to raise 500,000 hectares of green manure crops. In previous years, rural youths in both the South and the North recorded many achievements in the movement to carry out socialist transformation within agriculture, in the clearing of land, the restoration of fields to production, multicropping and intensive cultivation on 5 and 10 ton fields to defeat the U.S., to defeat the expansionist army. The young intellectuals of the country have undertaken many research projects and many creative projects and made many technological improvements, thereby contributing to the country's common cause. On the occasion of the celebration of the 50th anniversary of the founding of the party, the Youth Union launched the "entire Youth Union builds the party" movement. Nearly 500,000 outstanding Youth Union members were introduced to the party and more than 140,000 of them were accepted into the party, thus accounting for 85 to 90 percent of the new members accepted into the party.

Having been forged in the realities of the revolutionary struggles of the class and the nation as well as in the various revolutionary activity movements, the youths of our country have matured in many respects: they possess socialist patriotism and the pure international spirit, possess the will to overcome difficulties and hardships and possess intelligence and creativity.

The process of the development of our country's revolution has clearly reflected the important role and position of youths. Youths account for a very high percentage of the workers in the economic, technical and national defense sectors (according to preliminary statistics, youths account for 54 percent of the labor within the material production sectors, which is broken down as follows: 80 percent within modern industry, 80 percent of the corps of middle level scientific and technical cadres, more than 40 percent of the corps of high level scientific and technical cadres and more than 80 percent of the national defense forces).

However, compared to the requirements of the revolutionary tasks, some of our youths possess certain shortcomings and weaknesses. Their spirit of socialist collective ownership and their ability to exercise this ownership are not high. A rather large number of youths has yet to join the various organizations of youths, including the Ho Chi Minh Communist Youth Union and the broad youth front. The number of youths who are backwards and negative in outlook is not small. These shortcomings and weaknesses are due to many causes. Foremost among them are the following: objectively, they are due to the consequences of the prolonged war, the influence of neo-colonialism, the rather prevalent influence of small-scale production and the collaboration by the U.S. imperialists with the Chinese reactionaries and with the other reactionary powers in a vain attempt to undermine our country's revolution and our corps of youths through a variety of activities. Subjectively, our organization and management of the economy and society are still marked by numerous shortcomings at a time when the education and training of youths by responsible agencies, by the various mass organizations and, in particular, by many families are not being performed well; in this area of work, the Ho Chi Minh Communist Youth Union still has a good many shortcomings.

To fulfill their tasks in the new stage of the revolution, the various party committee echelons, the cadres affairs sections and the party factions must give their attention to leading youth work. The Ho Chi Minh Communist Youth Union must take the initiative and closely coordinate with state agencies and the other mass organizations in order to perform its work well; it must intensify its teaching of communism to Youth Union members so that they become the new strata of fully developed socialist persons, become the loyal and outstanding inheritors of the glorious revolutionary cause of the party and people; and it must continue to promote the intense revolutionary action emulation movement of youths by means of the "three assaults of collective ownership" movement.

On this occasion, the Youth Union must conduct a general review of the experiences gained in its work in the recent past, learn appropriate lessons and improve both the content and mode of its activities so that the Youth Union is close to the mass of youths, is truly the school of every youth and is the representative of the interests of youths.

All of the youths of our country must be made to understand that, under the leadership of the Vietnam Communist Party, the advance by the entire country to socialism is consistent with the history of the development of mankind. Even if the U.S. imperialists and the Chinese reactionaries together with the other types of reactionaries collaborate with one another, create a tense international situation and threaten a major war, they cannot prevent the ever increasing erosion of capitalism, prevent the Soviet Union and the socialist community from growing rapidly, prevent the national liberation movement from surging like the sea or prevent the struggles by the working class and laboring peoples of the capitalist countries from developing strongly. The activities of the imperialist clique and its lackeys will only serve to make the situation more complex, not reverse the situation. Vietnam stands in the ranks of the revolutionary and progressive forces; we have, as everyone knows, encountered difficulties, but these are only temporary. The nation of Vietnam has triumphed over the largest and most cruel of aggressors, a Vietnamese, Pham Tuan, has flown into space and young Dang Thai Son won first place in the F. Chopin contest, thereby proving that we can do anything, regardless of how difficult it might be. Our people will firmly protect the fatherland, successfully build socialism and fulfill their noble international obligation.

In view of the tremendous feats of arms and achievements that have been recorded and the rather rich experiences gained in the work of the Youth Union over the past years, the 4th National Congress of the Youth Union will surely set forth new tasks and express a new determination to advance our country's youth movement, win even larger victories and be worthy of the trust of the entire party and all our people.

ECONOMIC PLANNING, TRADE AND FINANCE

EDITORIAL STRESSES IMPERATIVE NEED FOR MARKET MANAGEMENT

Hanoi NHAN DAN in Vietnamese 8 Nov 80 p 1

[Editorial: "Market Management"]

[Text] The people's everyday life is directly related to market activities. These activities both reflect and either encourage or slow down the development of the economy. If the market continually changes and prices fluctuate, the living conditions cannot be stable. Therefore, to manage the market and to properly organize the exchanges of goods must be a vital part of economic management. As an immediate work to do, it is an urgent part of the improvement of distribution and circulation.

Taking part in our social market today are not only the state-operated commerce and collective commerce but also the buying and selling activities of individual handicraftsmen and farmers and a number of people engaging in unorganized business. While the organized market is expanded further everyday, the unorganized market still remains because the economy still consists of many components. While the state-operated commerce and marketing cooperatives are not so widely organized and still fail to satisfy all of the people's needs, the circulation of goods within the narrow scope of the unorganized market is necessary as it makes a contribution to serving production and the standard of living. However, since its activities are dependent on the law of supply and demand and there is the participation of those who are engaged in unorganized business, the free market always gives rise to negative phenomena, particularly in the situation of difficult production and scarcity of goods. Beside the normal commercial activities there also exist the illegal black-market activities of speculators and smugglers and the destructive acts of the foes of socialism. The unhealthy development of the unorganized market badly affects production and the life of honest working people and obstructs the socialist transformation and construction.

To reorganize and strengthen market management and to build a unified socialist market consisting of the state-operated commerce and marketing cooperatives is an urgent work of economic management. The decision of the Council of Ministers about "strengthening market management" aimed at stabilizing the market and prices helps to step up production and the socialist transformation, to improve distribution and circulation, to consolidate finances, to stabilize and to create favorable conditions for improvement of the standard of living.

Market management and expansion of the state-operated commerce and marketing cooperatives in all fields -- purchases, wholesale and retail sales and services -- by means of within-the-plan and outside-of-the-plan business formulas and at directed and agreed prices are the basic measures. The leading and superior role of the socialist commerce must ceaselessly be strengthened. By means of appropriate economic policies and work formulas, the state-operated commerce must control more and more important goods produced by the state-operated, collective and individual installations so as to satisfy more effectively everyday the people's needs and to control the market. The collective commerce must correctly serve as the efficient assistant of the state-operated commerce.

As to the unorganized market, strengthen management by using in a coordinated manner all of the three kinds of economic, administrative and educational measures; putting this market under state inspection and control; and guiding its activities toward serving production and the people's life. Inspection and control are achieved through such measures as business registration; opening bank accounts; enforcing the regulations about commercial and industrial taxes, managerial procedures, control and posting of prices; rearranging rural and city markets, etc. The state transforms the privately-operated commerce and industry through the following: purchasing agents, retailers, cooperative teams, cooperatives, joint state-private enterprises, etc. The managerial measures that must be correctly carried out are to deal in accordance with the law with any violations of policies, to punish speculators and smugglers and to commend and reward those persons who have helped to fight the speculators, smugglers and market disrupters.

Market management is a part of the "who wins" struggle between socialism and capitalism in the transitional period. Wherever there are production and circulation, there must be a good organization of market management.

NEW PRICE POLICY TO STRENGTHEN SOCIALIST MARKET

Ho Chi Minh City TIN SANG in Vietnamese 28 Sep 80 p 3

/Article by Vinh Hai: "On the Occasion of the Drive To Contribute Opinions Concerning the Draft Outline of the 2nd Congress of the City Party Organization: Thoughts on the Matter of 'Two Prices'"/

/Text/ In 1978, the socialist commerce sector of Ho Chi Minh City once accounted for 40 percent of retail sales; by 1979, however, this percentage had declined to only 27 percent.

This situation was not entirely due to the fact that the "internal forces" of the socialist commerce sector have recently declined but, generally speaking, due to the fact that the city's market in 1978 created many more favorable conditions for the socialist commerce sector, especially the state-operated sector. At that time, the city was at the height of the transformation campaign. The "pressure" of transformation forced the private sector to draw back. Bourgeoisie in commerce were shifted to production and this naturally caused a period of instability in the activities of small merchants. Some of the merchandise belonging to the bourgeoisie was purchased and redistributed by the state to support the production and daily lives of the people. This reduced the ability of the bourgeoisie in commerce to engage in speculation, hoarding and monopolization of the market; at the same time, it caused the volume of goods flowing through state-operated commerce to increase significantly.

In addition, although production within the state sector has increased in the recent past, this does not mean that the quantity of goods controlled by the state must increase if imports decline and the quantity of goods in warehouses gradually declines. On the other hand, although statistics show that the total output value of the city's industry has increased from 655 million to 1,172,000,000 dong, this does not mean that output has nearly doubled if the price of each unit of product has also increased during this period of time.

Recently, the "pressure" of transformation upon merchants has declined at a time when the "attraction" of state-operated commerce has not increased, thereby causing the already meager supply of goods for society to begin to flow onto the unorganized market.

It can be said that, over the past year, the state-operated commerce sector has not fulfilled its function of circulation and distribution, rather, it has been almost entirely involved with "redistribution." According to regulations, goods produced by the state-operated sector must be consigned to state-operated commerce for distribution. Whatever is consigned must be distributed. There have even been instances in which the commerce sector has done nothing more than "write an acknowledgement" allowing the customer to go to the production enterprise to take receipt of his goods, but without forgetting to add on the necessary "business costs."

Thus, it is not necessary to raise the matter of purchasing activities with regard to the state-operated production sector; however, when the collective and private production sectors undertake purchasing activities, they are restricted by regulations on prices, financial activities, banking activities and so forth, regulations that are considered inconsistent with the situation surrounding production and everyday life and actual practice within the five economic segments in the southern provinces.

In the southern provinces, the output of commodities within the collective and private sectors are rather large, especially the output of agricultural products, food products and some consumer goods. The purchasing activities of these sectors are not merely carried out by means of legal norms, consequently, many places have recently had to take a number of administrative measures and establish inspection stations. If the purchasing prices of state-operated commerce are not enough to stimulate production and the inspection system is tight, goods cannot circulate and production stagnates. However, if inspection measures are relaxed, neither the producer nor the consumer can benefit if the prices at one end are about the same as the prices at the other end. If inspections are abandoned, state-operated commerce cannot conduct purchasing activities at all.

On the other hand, production has not increased much in the recent past. If state-operated commerce employs administrative measures for the purpose of purchasing more goods, the supply of goods on the free market will diminish and prices on the free market will rise. As free market prices rise, state-operated commerce encounters increasing difficulties trying to purchase goods at fixed prices. Meanwhile, the quantity of goods distributed by state-operated commerce is not distributed for for the purpose of regulating the market, but distributed on the basis of supply standards. Some of the persons who are eligible for supply standards consider the products they receive under the standards to be part of their "income," consequently, whatever cooking oil they do not need is sold on the free market at high prices. This situation has led to artificial increases in prices on the free market.

In order to resolve the problems mentioned above, the state recently granted some sectors in industry and commerce permission to do business at two prices. The outline of the draft of the resolution of the 2nd City Party Organization Congress also stresses this mode of business. Purchasing at two prices has begun to achieve a number of results worthy of attention. However, some installation cadres still express an attitude of caution toward making purchases at negotiated prices because they maintain that it is only a "temporary concession by the system of laws of the planned economy to the system of laws of the value economy."

Actually, there are two types of planning: direct planning by means of legal norms and indirect planning by means of the system of economic levers. In cases in which the state is unable to balance the necessary factors for production, the use of economic levers is generally more effective than the assignment of legal norms.

As regards tobacco products, for example, previous purchasing prices forced the Saigon and Vinh Hoi Processing Plants, which have a capacity of one-half billion packs of cigarettes per year, to stand helplessly by and watch the market be monopolized by private merchants and handicraft cigarette producers. However, the two price policy has enabled the state-operated sector to purchase much more tobacco. Purchasing more will, naturally, allow it to sell more. And, with such advantages as high capacity processing plants, good means of transportation, the absence of commercial taxes, the special marketing tax and other taxes and so forth, cigarettes produced by state-operated enterprises must be cheaper. This situation has reduced the competitiveness of private merchants. When private merchants are no longer able to operate, tobacco growers will have to move closer to the state-operated sector and once they have become the masters of the situation, state-operated commerce and the processing plants can "plan" by raising or lowering purchasing and sale prices. Then, farmers will continue to grow tobacco as long as they see that tobacco yields more profit than the other agricultural products that can be raised on the same type of soil.

Another problem is that although the new policy has been initiated, some places still adhere to the old way of thinking. These places make widespread purchases at negotiated prices but when they sell at business prices, they hesitate and limit the quantity of goods put on sale.

Business prices do not mean that limits are automatically put on the quantity of goods to be sold. Very heavy demand means that prices can be raised.

In addition, there are also some places complaining that the bank has not approved the cash needed for them to purchase goods at negotiated prices. The management of cash is necessary; however, "management" should not mean "under lock and key." Spending cash to purchase products that can be sold at a profit and result in a larger amount of cash on hand is surely something that should be done.

The outline of the draft resolution of the 2nd Congress of the City Party Organization confirms that the two price policy continues to be in effect. Many persons have expressed the confidence that buying and selling at two prices will play a positive role in broadening the scope of operations of state-operated commerce in the future. However, this is still something that is brand new, consequently, it is suggested that the city party organization issue specific regulations on the authority and responsibility of the various commerce installations in buying and selling at business prices. At the same time, it should explain how to resolve problems related to finances, banking, prices, market management and so forth.

Of course, in addition to doing business at high prices, state-operated commerce must, at the same time, also supply a certain quantity of essential goods at directed prices, especially to those who work for the state.

The city's total industrial output value accounts for 24.5 percent of the total industrial output value of the country and the city contributes 25 pervent of its total budget revenues to the entire country each year. Meanwhile, the total number of persons within the city who work for the state, including cadres, manual workers, civil servants, army troops public security troops and so forth, is about 500,000. As a result, with the correct guidance of the city party organization, distributing the various types of essential goods at supply prices to the persons mentioned above is certainly not something that lies beyond the capabilities of the Commerce Service.

BUSINESSES REGISTERED AGAIN IN HO CHI MINH CITY

Ho Chi Minh City TIN SANG in Vietnamese 27 Sep 80 p 3

[Article by V.H.: "To Insure Legitimate Rights"]

[Text] Ho Chi Minh City recently concluded a supplementary phase of registration of the industrial and commercial businesses in the collective and private sectors. Incomplete statistics show that about 120,000 installations were registered.

According to the Business Registration Committee, the detailed statements required in this registration drive will help the state to clearly determine production and business capacity so that it can adopt necessary methods of management and guidance.

Recently, however, some persons have maintained that the state's purpose behind the registration of businesses is to collect taxes. As a result, many of the registrants understated the size of their businesses for the purpose of evading taxes. Some persons had to revise their declarations several times, with their final income being 50 times higher than first declared. Some persons have stupidly declared that they only earn 1,000 dong a month, when they have been paying 1,300 dong a month in taxes up until now. There are also some production installations that declared a decline in output. State agencies observed that this represented a failure to make full use of machine and equipment capacity and suggested that this machinery be retaxed at a price equal to the declared profit. On hearing this, these installations requested permission to reregister.

This situation shows that we might not have assessed the production capacity and volume of business of collective and private industry and commerce very accurately in the recent registration drive. However, statements made at this time will be considered the "landmark" and subsequent investigations will distinguish between those who earn their living legally and those who do not.

According to the Finance Service, the computation of taxes will not only be based on the volume of business declared, but also on an investigation conducted at the conclusion of the business registration drive; the state will determine who did not register but is continuing to do business and who has declared that they have a small business while actually doing a large volume of business and will prosecute them under the business registration statutes and tax regulations.

It should be repeated that since the recent stages of transformation, especially since the transformation of private commerce in March 1978, each bourgeoisie in commerce whose business was closed has been replaced by many peddlers. These peddlers operate on many different streets and in all of the roughly 120 markets within Ho Chi Minh City, consequently, inspecting their marketing activities has become an even more complex task. Many of them refuse to comply with the arrangement of market spaces and have become merchants that have no stores, no license, no permanent location, consequently, they cannot offer their customers any guarantee on the products they sell. For example, fake western drugs, fake cigarettes, fake wine and so forth are not new to the residents of the city nor are motorbike frames that are "guaranteed for 6 months" but which must be thrown out before they can even be used without the customer knowing from whom to demand a refund or against whom to lodge a complaint.

On the other hand, it can also be said that the unsupervised marketing activities mentioned above are one of the factors encouraging the production of fake goods. Because, if fake goods could not be marketed easily, it would be difficult for the production of fake goods to develop.

The production of fake goods not only harms consumers, but also tarnishes the prestige of the legitimate production installations within the sector.

In this business registration drive, persons who have service businesses must clearly state what their business is and persons with commercial businesses must declare which products they do business in, how large their businesses are, where their products are produced, purchased and sold, what their average profit is and so forth. Production installations must report what they produce, report their production methods and techniques, their product specifications and their product label. On the basis of the statements made in the registration report, the Economic Arbitration Council, the Institute of Standards and the other responsible agencies will inspect implementation and propose prosecution under current laws if violations are found.

Thus, it can be said that the business registration is one of the basic measures taken by the state to assess the situation and, on this basis, adopt methods of management and guidance designed to insure the wholesomeness of economic activities within the collective and private sectors while guaranteeing the rights of consumers and the rights of those persons who earn a legitimate living.

ECONOMIC PLANNING, TRADE AND FINANCE

NHAN DAN EDITORIAL URGES BETTER STATE ENTERPRISE TAX MANAGEMENT

Hanoi NHAN DAN in Vietnamese 14 Nov 80 p 1

[Editorial: "Closely Manage State Enterprise Taxes"]

[Text] After each production or commercial period the industrial, agricultural, transportation, commercial, and other economic bases managed by the central or local levels have the obligation of immediately and fully turning over to the state budget such payments as state enterprise taxes, part of the profits, deductions for depreciation of fixed property, etc.

The state enterprise tax is a form of fixed financial income, a principal and important component of monetary accumulation of the state. The state enterprise tax is integrally related to the production and commercial results of each base. The more production expands, and the higher the economic effectiveness, the greater is the total amount of state enterprise taxes collected by the state. That assures a balanced budget and the balancing of financial income and expenditures throughout the nation.

The needs of economic and social development and of strengthening national defense and state management are increasingly great. The immediate requirements regarding monetary income, including the various payments in the form of taxes on the different economic components are still very limited. Collections are not yet sufficient to meet expenditures. Assuring monetary accumulation and mobilizing the full amount of state enterprise taxes is one of the most important responsibilities of each state enterprise as well as of the financial and banking organs, and the upper-echelon managing organs of the enterprises.

In order to fulfill the mission of mobilizing all sources of income for the state budget during the last months of the year, the enterprises must strictly observe plan discipline and financial discipline, and fulfill their obligation of submitting state enterprise taxes as well as the other payments which must be made to the budget.

In fulfilling their obligations, because they developed the collective mastership right of the workers and correctly resolved the relationships among the three benefits many advanced units have continually accelerating the development of production and increased payments to the budget. Those bases have maintained the balances in production and commercial operations, tied in production with the marketing of products, and fully met the plan norms regarding the submission of state enterprise taxes, the submission of part of the profits, etc. In addition to those enterprises which do their work properly, there are some which operate at a loss, have many negative manifestations in their production and financial activities, do not submit the full amounts of state enterprise taxes and profits by the deadlines, etc. There are bases which have abandoned their state plan missions and pursued secondary products, or have arbitrarily changed the principal products in the list of products managed by the state into "products outside the plan" in order to decrease the amounts paid in state enterprise taxes and paid into the budget. That incorrect practice has caused much damage with regard to state property and must be ended by means of resolute measures.

The financial and banking organs and the upper-echelon management organs of the enterprises have a direct responsibility in organizing and mobilizing state enterprise taxes in the basic units. It is necessary to concentrate on guiding the enterprises, especially the key bases with large incomes, intensify auditing, move the products, rapidly collect overdue bills, and supervise the enterprises in paying their taxes in correct accordance with regulations.

If the regulations and laws are to be strictly observed it is necessary to promote the improvement of the organization of state enterprise tax collections and widely apply the state enterprise tax form in all state enterprises. The assigning of 1981 state plan legal norms regarding enterprise taxes must be carried out in a spirit that is both positive and practical, and in balance with the production norms. The direction for improving the state enterprise tax system is to meet the requirement of concentrating more rapidly and in greater amounts the income that belongs solely to the state, while expanding the right of the bases to take the initiative in production and commerce, and encouraging the enterprises to truly enforce the economic accounting system.

READER TELLS OF AGGRAVATION CAUSED BY RED TAPE

Ho Chi Minh City TIN SANG in Vietnamese 28 Sep 80 p 2

[Stories from Readers column: "The Confusing Procedures Involved in Buying a Lightbulb"]

[Text] One of the lightbulbs in my house had burned out. The agency for which I work gave me a letter of introduction so that I could go to the Electrical Appliances and Metal Goods Store to buy a new one.

When I arrived at the Electrical Appliances and Metal Goods Store at number 211 Dong Khoi Road, I was told by a person who works for the store that I had to contact the Professional Services Office at number 76C Le Thanh Ton Street in order to have my purchase approved bufore I could buy a lightbulb. As soon as I entered the Professional Services Office, I saw the following notice on a blackboard: "Purchases at the Electrical Appliances and Metals Goods Corporation approved on the following days: wholesale: Tuesday and Saturday; retail: Monday and Friday. Closed Saturday afternoon for meeting."

A cadre at the office further instructed me: because you only want one bulb, go to any one of the electrical appliance and metal goods stores and ask them to sell you a bulb. If you want to have the purchase approved, you will have to come back on the stipulated day, come back tomorrow." Satisfied by the fact that apparently nothing difficult was involved, I went to the Electrical Appliance and Metal Goods Store at 183 Dong Khoi Road. A cadre there told me to go to the store at 15-16 Eden to buy it. It was not until I stepped outside and looked up at the sign that I realized that I had entered the offices of the Electrical Appliance and Metal Goods Corporation. Walking my bicycle to the 15-16 Eden store, a salesperson there told me that they do not sell lightbulbs and sent me to the "store at 32 Dong Khoi." Following these instructions, I immediately went back to the store at 32 Dong Khoi where I was told "we do not have any" and was sent to the store at 135 Nguyen Hue Street. There, a salesgirl with a saddened expression on her face said: "We have lightbulbs but you will have to go to the Office of Professional Services and have your purchase approved before you can buy one." I still had some hope of buying a lightbulb but was beginning to feel "discouraged" because I had to go back to the beginning and start over, go back to the Office of Professional Services at number 76C Le Thanh Ton Street. I asked how long this procedure had been in effect and was told by the salesgirl: "It has been in effect for a long time, your letter of introduction must have the approval of the Office of Professional Services before the store can sell you what you want." By then, I had spent an entire afternoon trying to buy one lightbulb.

On the way home, I passed many places along the Ly Thai To and Dien Bien Phu Roads (the intersection) where electrical appliances were being sold on the roadside; I asked and was told that the price was 12 dong per bulb. Remembering how very dark it would be at home, I wanted to buy a "black market" bulb but, after hesitating for a moment, went home without one, partially because the price of one bulb would have cost me one-quarter of my monthly salary and partially because I still wanted to wait until the next day, have my order approved and buy a bulb at the official price.

The next morning I returned to the Office of Professional Services at number 76C to request that my letter of introduction be approved as instructed by the office and by the store on the previous day. When my turn came, the cadre who was handling the requests of customers said to me: "We are sold out of lightbulbs; purchases at the store at 135 Nguyen Hue Street are approved by the Children's Department Store, not by the office of Professional Services, so we are turning you over to them." I exclaimed: "The store said that this office would approve my purchase." In the end, however, I had to take my letter of introduction back to the store at 135 Nguyen Hue Street to ask where I could have the purchase approved. At the store, a salesgirl sat filing her nails beside a basket containing more than 10 lightbulbs and as she filed her nails, she said: "We do not sell lightbulbs here!"

That was the last straw! I had spent a considerable amount of time for one lightbulb, travelled from one store to another and still not purchased a lightbulb or even learned the procedures for buying one. I would probably have felt better if I was told at the outset that there are no lightbulbs, that I would not be able to buy one.

When I returned to my agency, I was still perplexed about my attempt to buy a lightbulb. I went back to the Office of Professional Services once again, not to buy a lightbulb, but to learn the procedures involved in buying one. When I entered the Office of Professional Services at number 76C, I was immediately met by the cadre who refused to approve my purchase previously. Hesitating for a moment, I showed him my letter of introduction. For some unknown reason, after examining my letter, this very same person approved my purchase of a lightbulb at the Ben Thanh Market Store.

Finally, that afternoon, I purchased one 100 watt lightbulb. The salesgirl happily explained: "If you want to buy an extension cord you will need another letter of introduction and an approval. You are very lucky to have bought a lightbulb!"

I had spent 2 days buying one lightbulb. Now, I feel that I must thank all those persons who made it possible for me to buy this consumer good, although not a very large one. However, I still feel that the instruction and procedures for approving purchases and buying products cause me--and many other persons as well--to encounter difficulties, become angry and waste much time!

STATUS OF AGRICULTURAL SITUATION UPDATED

Hanoi NHAN DAN in Vietnamese 11 Nov 80 p 1

[Article: "As of 5 November the North Had Harvested 304,000 Hectares of 10th Month Rice, Planted 165,000 Hectares of Winter Crops; the South Continues to Plant Winter-Spring Rice"]

[Text] According to the Statistics General Department, as of 5 November the north had harvested 304,000 hectares of 10th month rice. During the past 10 days, the harvesting rate has been double that of the previous 10-day period.

The provinces of Son La, Lai Chau, and Cao Bang had harvested 51 to 55 percent of their 10 month rice acreage. The provinces of the Red River delta had harvested only 23.2 percent of their acreage. Hai Hung had harvested 30.7 percent, Hai Hung had harvested 28 percent, Ha Son Binh had harvested 21.3 percent, and Ha Nam Ninh, Thai Binh, and Hai Phong had harvested more than 19 percent. The provinces of the former Zone 4 had harvested 22 percent but in Binh Tri Thien Province harvesting slowed down due to heavy rain.

Over-all, the main 10th month rice crop in the north has ripenned, but the organization of harvesting forces has not kept pace. The cooperatives are going all-out to deploy workers and facilities to rapidly harvest the ripe rice and avoid waste caused by scattering, and are making all-out efforts to complete harvesting this month.

Due to cold weather at the beginning of the season, the acreage affected by insects and diseases had declined by 100,000 hectares in comparison to the previous week, but it is still necessary to prevent and eliminate insects and diseases. It is especially necessary to completely eliminate insects that eat rice ears.

Despite many difficulties caused by late harvesting and wet soil, all the provinces have made all-out efforts in their winter season production activities to make up for the losses caused by natural disasters during the 10th month season.

As of 5 November the northern provinces had planted 165,000 hectares of winter crops, including 20,092 hectares of corn, 93,930 hectares of sweet potatoes, 19,446 hectares of white potatoes, and more than 30,000 hectares of vegetables and legumes of the various kinds. The acreage of the various winter crops is less than during the same period last year. But 1,990 hectares of soybeans had been planted, compared to only 587 hectares during the same period last year.

Some provinces had planted rather large areas in white potatoes. For example, Hai Hung had planted 7,742 hectares, Thai Binh had planted 3,246 hectares, and Ha Nam Ninh had planted 2,570 hectares. But Vinh Phu, Ha Bac, and Ha Son Binh had planted fewer than 1,000 hectares. The present time is the best time for planting white potatoes and the weather is becoming drier, which is favorable for the growing of winter crops in general and the growing of white potatoes in particular. The provinces of Thai Binh, Ha Bac, Thanh Hoa, Quang Ninh, and Son La had plowed 50,000 hectares and was continuing to plant white potatoes. The localities are concentrating seed potatoes in order to plant all of the planned area, and some places which lack seedstack have changed over to other crops.

Many places have deployed workers to tend the various kinds of winter crops and to plant and harvest in the correct sequence the various types of vegetables planted at the beginning of the season.

In preparing for the 5th month-spring production season the northern provinces had sown 12,750 hectares of rice seedlings, some of which were sown too early and are thus too old and cannot be transplanted, which has caused a waste of seedlings. The provinces had also plowed 75,126 hectares and had prepared nearly 3.2 million tons of organic fertilizer and more than 21,000 tons of chemical fertilizer, and had spread more than 3,600 hectares of azolla.

In the south, after surpassing the plan for transplanting the 10th month rice area by .14 percent, the provinces are going all-out to fulfill a plan to plant 672,000 hectares in winter-spring rice. The provinces of Long An, Tien Giang, and Ben Tre had planted between 11.6 and 56 percent of their early winter-spring rice area. The provinces of Quang Nam-Da Nang, Nghia Binh, Phu Khanh, and Dac Lac had planted 22,500 hectares of winter-spring vegetables, subsidiary food crops, and industrial crops, including nearly 4,000 hectares of vegetables, which was an increase of more than 9,000 hectares over the same period last year.

NHAN DAN EDITORIAL URGES STEPPED-UP SOIL IMPROVEMENT

Hanoi NHAN DAN in Vietnamese 15 Nov 80 p 1

[Editorial: "Improve and Invigorate Cultivated Soil"]

[Text] What can be done, in the course of production, not only to prevent soil from deteriorating but to steadily improve it? That is a basic problem of agriculture. That requirement can be effectively met only by improving, protecting, and invigorating the soil. That is an advanced technical measure which is based on intensive cultivation and the in-depth exploitation of the latent capabilities of the soil in the most scientific and beneficial manner. If the soil is improved and invigorated properly poor soil will become good soil; if not, good soil will become poor soil.

In our work of improving and invigorating soil we have achieved a number of results in understanding the soil types and soil chemistry of the agricultural areas, and have created good models regarding the improvement and invigoration of soil.

Soil maps for the north and for each province have been completed. Many provinces have drafted soil maps of each cooperative. After the liberation the southern provinces quickly studied the soil and began to draft soil maps of each district.

Cultivated areas with different soil conditions -- from the mountainous area to the coastal area -- have models regarding the improvement and invigoration of the soil. In the marshy area there is the Vu Thang cooperative in Thai Binh, in the coastal area there are the Giao An and Xuan Tien cooperatives in Ha Nam Ninh, the leached hill area has the Canh Thuy and Trung Hoa cooperatives in Ha Bac and the Dong Thanh cooperative in Vinh Phu, in the mountain area there are the Che Lan cooperative in Lang Son, the Thong Nguyen cooperative in Ha Giang, the Phat Ha cooperative in Son La, etc., which after improving their soil have advanced from unstable production and difficult living conditions to increasing average productivity from 10 to 20 quintals of paddy per hectare to 30 to 50 hectares.

In the southern provinces there are districts and villages in the acidic, saline loil areas in Dong Thap, Cuu Long, Minh Hai, etc., which, although they have only begun to build irrigation works and improve the soil, have increased rice yields by 30 to 40 quintals per hectare on fields which grow an additional winter-spring and summer-fall crop.

Most of the more than 5 million hectares now being cultivated in our country must be improved to one degree or another. A widespread situation is acidic soil that is poor in nitrogen, phosphorus, and the other nutrients, and a thin layer of topsoil, in the Mekong Delta. Of the more than 3 million cultivated hectares in that region, more than 1 million hectares are acidic and more than 1 million hectares are saline. In the coastal areas there are more than 600,000 hectares of sandy soil, and there are 2 million hectares of denuded hill land, nearly 2 million hectares of leached soil, etc.

Clearly, our work of improving, protecting, and invigorating the soil is a great, long-rang task which demands basic, meticulous measures.

Although soil type-soil chemistry plans have been drafted for each basic unit, there are many problems regarding implementation guidance and actual production activities which have not been resolved. With regard to intensive cultivation, only plants have received attention and little attention has been paid to improving and invigorating the soil. Intensive cultivation itself has not been in correct accordance with technical requirements and has not attained the minimum level. The northern provinces have only attained a level of five tons of organic fertilizer (in manure equivalent) per season per hectare. A ton of fertilizer contains only 3 kilograms of pure nitrogen, while the minimum requirement is 20 kilograms of pure nitrogen per ton of paddy. In addition to chemical fertilizer, the plans must draw nitrogen from the soil to live and develop. The soil also degenerates for many other reasons, such as failure to take steps to protect the soil during land reclamation: overflowing banks during irrigation and drainage, destroying watershed forests, denuding hillsides to grow upland rice, etc., which leads to the washing away of fertile soil. Millions of hectares of red soil in the Central Highlands have also been subjected to erosion and leaching, and have begun to laterize.

In guidance as well as in actual production, it is necessary to fully manifest the close relationships between plants and soil. Plants will develop well only in good soil. Whether soil is good or bad also depends on the requirements of each type of plant. It is most essential in improving and invigorating soil that we study and understand the land to serve as the basis forzoning, planning, and determining the production directions for each crop, area, and production base. Each crop has different requirements regarding the improvement and invigoration of the soil.

With regard to the types of soil that must be improved (such as acidic soil, saline soil, leached soil, etc.), after determining the production directions of the principal crops, but before we are able to use that land for production, we must fully utilize abandoned land and plant appropriate crops so that the soil can gradually be improved. In acidic soil areas it is possible to build embankments, dig drainage ditches, and wash out the acid in order to grow pineapples, sugarcane, manioc, and bananas before planting rice. In coastal saline soil areas, before planting rice it is possible to grow several crops of rush. In soil of medium acidity and salinity it is possible to immediately plant rice varieties that are tolerant of acidity and salinity.

The improvement and invigoration of the soil demands the implementation of a whole series of combined measures, such as combining the building of irrigation projects and the building of fields with the building of works to maintain the soil; combining agriculture with forestry; planting different crops, especially legumes on a crop rotation basis; and using fertilizer to improve the physical and chemical nature of the soil. The most decisive and important measure that must be applied to a high degree on all types of soil is the spreading of much fertilizer by using the correct techniques.

1980 WINTER SEASON TASKS LISTED

Hanoi NHAN DAN in Vietnamese 14 Nov 80 p 2

[Article by Le Van Hoang of the Cultivation Department of the Ministry of Agriculture: "Tasks That Must Be Carried Out During the 1980 Winter Season"]

[Text] The north is entering this year's winter season, which differs from winter seasons in the past. The early 10th month rice has ripened late, which has in turn slowed down the planting rate of the winter season crops. At the beginning of the winter season there was much heavy rainfall. Water is still standing in many corn fields and the corn stalks have been "crippled." Many sweet potato fields have been too moist since they were planted, which has slowed down the growth rate of the vines and leaves. The first planting of white potatoes has grown slowly; their vines are thin and their leaves are small. The various types of vegetable seeds that were planted at the beginning of the season have suffered much damage. During this year's winter season there has been much rain and the cold weather has arrived early. The best period for planting corn and sweet potatoes ended in mid-October, but in order to fulfill their area plans the localities "automatically" extended the corn and sweet potato planting period to the end of October and the first part of November. The best time for planting white potatoes will end soon but the area that has been planted doesn't amount to much.

The winter season requires workers to work night and day, and is also the period during which the main planting of 10th month rice ripens and must be rapidly harvested. The 5th month rice seedlings must continue to be sown, the spring rice seedling land must be plowed early and carefully, and azolla must be rapidly propagated in order to have sufficient amounts to cover the spring rice acreage.

"A hundred jobs and a thousand tasks" must be done at the same time. In view of the actual situation of this year's spring season, when there are few favorable conditions, no matter how difficult the situation we must attain good results with regard to area and high output with regard to all crops, especially the staple food crops. It is necessary to resolutely mobilize all of the labor in order to simultaneously apply the following principal measures.

1. Immediately tend the crops that have been planted.

During the winter season, crop tending plays a decisive role in determining whether the yields of the various crops will be high or low. Crops that were planted at the beginning of the season, such as corn, sweet potatoes, soybeans, etc., must be weeded and cultivated early. Especially, the places which must plant on damp ground must invest additional labor in tending. It must be assured that the soil is loose and sufficiently humid. The fields that are too poor in quality must receive additional nitrogen fertilizer, night soil, urine, etc. If the crops are promptly tended and fertilized they will rapidly complete the growth stage and shift over to the development stage early, before the low-temperature days of winter.

2. Rapidly expand the area planted in crops that are still in season.

First of all, the area planted in white potatoes is still too small. White potatoes should be planted before 15 November if high yields are to be attained. If they are planted after 15 November they usually affected by mould and produce how yields. We must rapidly plant the entire area during the best seasonal period. Then we must change over to guiding crop tending.

We must stress planting potatoes alone or interplanting them with the various types of winter vegetables and legumes. When seed potatoes run out but there is still winter season land available, we must endeavor to immediately plant vegetables on that land.

Azolla is part of the winter season crop structure. There must be specific plans and measures for rapidly propagating axolla so that at the end of the winter season there can be enough to spread on the 5th month-spring rice land.

3. Prepare seed stocks for winter-spring subsidiary food crops and short-term spring industrial crops.

With regard to fields on which winter crops cannot be grown, all necessary conditions must be prepared to grow winter-spring corn and sweet potatoes. With regard to land used to grow spring season subsiadiary food crops and short-term industrial crops, such as sweet potatoes, corn, spring corn, peanuts, jute, kaoliang, etc., it is necessary to pay attention to the following two matters:

If spring crops are planted on winter season land, the winter crops must be harvested 5 to 7 days before the planting begins, to assure that crops planted during the spring season are planted at the best time.

If the crops are planted on land that has laid fallow during the winter season, the soil must be prepared early, during the winter season, in order to rapidly plant winter crops during the best period.

While the winter crops are being planted, it is necessary to simultaneously prepare sufficient seedstock for the subsidiary food crops and short-term industrial crops during the winter-spring and spring seasons. Of the winter-spring and spring subsidiary food crops, attention must be paid to manioc seedstock. When harvesting manioc, sufficient seedstock must be set aside.

4. Prepare sufficient spring rice seeds, especially for the spring rice varieties that are transplanted at the end of the season.

During the past several years the winter season acreage has steadily expanded, and the spring rice acreage planted in the various short-term varieties has steadily increased. So that the winter crops can produce high yields and good quality, and also in order to assure that the spring rice is planted at the best time, even when harvesting 10th month rice the localities must take the initiative in making calculations and set aside sufficient short-term rice seedstock for the 1981 10th month and spring seasons. The winter season crops are harvested late, and the spring rice must be transplanted at the end of February or the beginning of March so it is best to use the dwarf Tran Chau variety with NN75-10, NN75-6, TH2 and the other varieties with similar growth periods.

Furthermore, during the winter season it is also necessary to be concerned with fertilizing the winter-spring and spring crops. During recent years many places have not spread additional fertilizer on spring rice transplanted on winter season land, which has had the effect of clearly reducing the yield of spring rice. At present, the quantity of fertilizer is too small and the quality of the fertilizer is not high, which has prevented the winter and spring crops from producing maximum yields.

Making preparations for the succeeding crop while harvesting the present crop is the secret to successful harvests of both crops.

PROGRESS REPORTED IN HARVESTING, PLANTING

Hanoi NHAN DAN in Vietnamese 10 Nov 80 p 1

[VNA News Release: "Putting Out the Winter Crop, Preparing for the Winter-Spring Crop"]

[Text] Although the 10th month rice ripened late and many rain storms created difficulties for winter season planting, as of 5 November the cooperatives in the outskirts of Hanoi had planted more than 14,700 hectares of 10th month rice of the various types, as well as more than 4,744 hectares of vegetables of the various types, 5,500 hectares of sweet potatoes, 2,461 hectares of corn, 1,258 hectares of white potatoes, and 800 hectares of beans. The winter corn area increased nearly 50 hectares over the same period last year.

In order to overcome the tardy planting and assure adherence to the best seasonal schedule, the districts have concentrated labor, facilities, materials, and draft power, and the soil is prepared rapidly as soon as the harvesting has been completed, so that white potatoes, vegetables, and subsidiary food crops can be planted immediately. More than 30 percent of the area has been harvested and prepared for planting in sweet potatoes, vegetables, and beans of the various kinds. The districts with much wet acreage, such as Dan Phuong, Hoai Duc, and Dong Anh have guided the cooperative members in the techniques of planting white potatoes on wet soil and growing additional vegetables and subsidiary food crops to make up for the corn acreage lost because it could not be planted in time. The districts of Gia Lam, Phuc Tho, Thanh Tri, and Soc Son allowed the cooperative members to borrow land early and plant more than 327 hectares of sweet potatoes, white potatoes, corn, vegetables, and subsidiary food crops of the various kinds, with the proper techniques.

Hanoi has encouraged the cooperatives with much acreage to assign product quotas and has allowed the cooperative member families and organs to borrow land on which the collective cannot yet produce. Creating favorable conditions for workers and families to plant white potatoes on the entire acreage, on schedule and with high effectiveness, nearly all of the cooperatives have done a good job of the soil preparation, irrigation, chemical fertilizer, insecticide, and potato seed stock tasks, and have a system of material rewards for surpassing assigned quotas by 90 to 100 percent.

Ho Chi Minh City now has nearly 400 production collectives and 10 test cooperatives, of which 104 collectives -- 26 percent of the total -- are "good" or "advanced."

The city has gotten a firm grasp of the basic situation of the collectives, such as their production area, the number of households, people, and workers, the existing material bases, and the activities of the management boards of the collectives, the party members, Youth Union members, etc., and has taken specific steps to assist each type of production collective, especially to advance the weak, deficient cooperatives to a "good" or "advanced" status.

Cadres have continually gone to the villages, collectives, and cooperatives to help draft directions and organize rational, explicit distribution according to work days.

Binh Thanh District has concentrated on helping the collective of precinct 25 to get its production on the right track. Nha Be District sent 40 accounting cadres to help the collectives do a good job of calculating and distributing. Go Vap Ward organized study for the advanced collectives by means of visits to gain experience.

Hai Hung concentrated its efforts over a 90 day period on perfecting the irrigation works, building fields, assuring sufficient water to irrigate 70,000 hectares of winter crops, and preparing to irrigate the 5th month-spring crop.

The districts assigned canal and ditch repair quotas to the water conservancy units and dredged the sluice gates. The pumping stations mobilized workers to repair their machinery. The water conservancy sector repaired 518 electric pumps, 900 diesel-powered pumps, and 79 sluice gates. Manual workers dredged 32 sluice gates and repaired the canal systems.

The cooperatives cooperated with the irrigation clusters in drafting water usage scheduled and went all-out to create sources of gravity-fed water or water obtained by manual facilities to lessen dependence on electricity and oil.

Ten thousand workers are now engaged in irrigation projects. The districts of Chi Linh, My Van, and Phu Tien, each of which dug and embanked 10,000 cubic meters of earth, completed their work early.

Recently, Gia Lai-Kon Tum Province has concentrated on building a network to organize, manage, and operate irrigation systems. All production bases have irrigation teams or units. Many units, such as those of An Phu, Phu Hoa, Dac La, Lien Binh, Nghia Binh, etc., have worked well. Many districts have begun to pay attention to irrigation management. The districts of An Khe and a Dun Pa have organize pumping machine units, which have operated smoothly. The province has launched a movement to study the Phu Hoa model. The Heo, An, Quy, and Tan Hoi pumping stations have attained high effectiveness. The De Ba, E Ro Bon, Dac Tia, Dac Ro Nang, and Lien Binh dams have done a good job of serving production. Many small irrigation systems have attained 60 to 70 percent of their designed capacity, and the An Phu istallation in Play Cu City has attained 90 percent of its designed capacity.

Attention has been paid to the elementary and advanced training of cadres and workers to manage and operate irrigation facilities.

Quang Nam-Da Nang has competed in producing organic fertilizer for the winter-spring crop. As of 3 November, nearly 70,000 tons had been produced. The districts of Hoa Vang, Dien Ban, and Thang Binh did a good job, producing 12,300 to 25,000 tons for use on winter-spring rice and subsidiary food crops. Tam Ky has mobilized the entire district to increase hog raising, produce large amounts of fertilizer, and fully utilize straw, grass, urine, green leaves, and mud in making compost to use on the winter-spring crop.

Many places have set rational fertilizer prices, and families selling a ton of fertilizer are permitted to buy a certain amount of paddy.

CONFERENCE REVIEWS WATER CONSERVANCY WORK IN 1980

Hanoi NHAN DAN in Vietnamese 9 Nov 80 p 4

[Article: "Bring Depth and Greater Effectiveness to Management and Use of Water Conservancy in Farming"]

[Text] Recently the Ministry of Water Conservancy convened a conference of representatives of water conservancy services from the midland and Red River delta provinces and Former Zone 4 to evaluate the water conservancy work done in 1980 to serve agricultural production and to discuss the water conservancy plan for 1981.

This year, the water conservancy work was done under the conditions of our economy having encountered many difficulties, complicated changing weather and grave natural calamities in the north. Serious drought that lasted long affected the fifth-month and spring rice crops; water was in very short supply. During the tenth-month rice crop, continual rains and storms flooded hundreds of thousands of hectares in the Bac Bo provinces and Former Zone 4.

The localities that were flooded or waterlogged and the water conservancy, electric power in farming and other sectors used every means available and developed their flood-fighting capacity to restore production, as in Haiphong and such provinces as Ha Nam Ninh, Thanh Hoa, Ha Son Binh, Hai Hung, etc.

However, some water conservancy works still showed weaknesses like pump stations being placed in too low a location, drainage ditches failing to operate properly because of lack of dredging, etc. The movement for emulating the Cau Ghe water conservancy network for exploiting more effectively the water conservancy works was expanded, but the quality was far from good, steady and commensurate with the capacity and need of individual networks. Prevention and control of flood and storms was done early in all sectors from central to local, but at the basic level preparations of all kinds remained poor. Except for such weaknesses, the efforts to prevent and control storms and flood this year brought about good results as the network of dikes, embankments and sluices was protected after several floods, with damages caused by them being considerably limited.

The conference unanimously agreed that the 1981 plan for construction and development of water conservancy works would be aimed at stepping up production of grain, foods and export farm products. For the northern provinces, the number-one water conservancy task in the next year will be to maintain in-depth management and use of the existing network and to create a new change -- to switch from working in the administrative routine way to maintaining management in the way of industrial enterprises. In order to attain this goal, the sector in charge of using water conservancy in farming in any locality must change its ways of thinking and working, consolidate anew its organization, rearrange its cadres' and workers' force and seriously implement the network operation pattern in such a way as to use the water conservancy works with the greatest economic results.

In addition to stepping up the use of the existing works, the right goal must be set for and the proper level of importance must be attached to building additional works and supplementing and perfecting some projects for the water drainage networks, with careful calculations of economic benefits. Efforts must be made to step up the improvement of farm land and to set norms for management, thus gradually achieving good economic and technical management and moving toward profitable production and business.

In capital construction, the sector should step up the "3 contracts" procedures -- for doing work by machines, on the basis of final products with work being done manually and for wide application of paying wages on the basis of products made in factories.

The conference heard reports on and discussed such specialized topics as a program of water drainage for the midlands and Red River delta; a program for watering in the specialized vegetables-growing zones; in-depth use of water conservancy works; continued execution of work for the half-completed projects; and consolidation of the network of dikes, embankments and sluices.

HEAVY INDUSTRY AND CONSTRUCTION

NHAN DAN EDITORIAL COAL MINERS' REVOLUTIONARY TRADITION PRAISED

Hanoi NHAN DAN in Vietnamese 12 Nov 80 p 1

[Editorial: "The Revolutionary Tradition of Coal Miners"]

[Text] With a legitimate pride in the accomplishments made in building our country's coal sector, today the coal miners and all cadres and workers in the coal se sector are celebrating their 25th traditional festival day.

When we inherited the coal sector from the old regime it consisted of a few poor material bases that were exploited principally by manual labor, but now, after 25 years of construction,it has taken great developmental steps. The mining installations include dozens of open-pit mines and large and small underground mines which have a designed capacity more than 10 times greater than in the past. Technical equipment has increased, including many modern mining and transportation facilities. The technical cadre and worker forces have continually grown. During the past 25 years the coal sector has mined a quantity of coal nearly twice that mined during 80 years in the colonial period, and has met more and more domestic and export needs. In capital construction, in addition to developing large mines with capacities of millions of tons, the coal sector has also opened small mines and secondary mines which require little investment and are rapidly constructed, while also developing the local coal mines to fully utilize raw materials and meet local needs. The construction of many installations to serve mining, such as factories to repair and maintain equipment, coal sorting installations, coal tipples and conveyor belts, etc.

In the process of advancing, the coal sector cannot avoid deficiencies and difficulties. Due to objective reasons, and also to subjective deficiencies regarding guidance, organization, and management, during recent years the development rate has slowed down: in some years the state plan has not been fulfilled and there has not been enough coal to supply to the sectors of the national economy. Capabilities regarding labor and technology have not been well exploited. The utilization effeciency of equipment is still low. The construction of many projects has been prolonged and the effectiveness of investment capital has not been developed.

The coal sector, commemorating its 25th traditional festival day at a time when the second five-year plan is concluding and the third five-year plan is about to begin, the coal sector is facing very great new missions. For many years to come coal will continue to be our country's principal energy source. The strong development of the coal sector is an important requirement for assuring the short-range and long-range development of the domestic and export economic sectors.

After many years of mining, a considerable number of new problems are being posed for the mining area. The mining conditions are clearly more difficult. More and more earth and rock must be removed, the transportation distances are becoming greater and greater, and the mines are increasingly deep and distant. At the same time, in many mines the conclusions regarding geological conditions are not yet certain. The production line is also unbalanced and incomplete. However, with the existing raw materials and the material-technical bases that have been built, and with the organizational and managerial experience it has gained, the coal sector has favorable conditions for developing and bringing about high economic effectiveness.

The all-out efforts of the coal sector must be concentrated on the correct resolution of the problems that are being posed in order to stably advance the entire sector. It is necessary to apply comprehensive measures regarding the determination of development directions, the adoption of policies regarding the mining and use of coal, plans for investing in and constructing mines, increasing technical equipment, organizing management, etc. We must go all-out to perfect the production lines, concentrate on completing the mines which are now unfinished, and quickly complete and bring into use the bases serving mining. We must make all-out efforts to advance the coal sector by doing a better job of developing the existing capabilities regarding natural resources, labor, and material-technical bases, added to effective cooperation with the Soviet Union and the other fraternal socialist countries in COMECON.

The coal sector must develop the resolute revolutionary spirit of the working class in the mines, and everyone must go all-out to mine increasingly larger amounts of coal for the homeland.

VANG DANH COAL MINE HELPED TO OVERCOME DIFFICULTIES

Hanoi NHAN DAN in Vietnamese 10 Nov 80 p 1

[VNA News Release: "Uong Bi Coal Corporation Helps Vang Danh Mine Overcome Diffities."]

[Text] The Uong Bi Coal Corporation is concentrating its forces to help the Vang Danh mine overcome difficulties in order to fulfill its plan to produce 380,00 tons of coal this year.

The Mechanized Bridge and Road Construction Enterprise brought into use Vein No 7 road, a curved segment 3,500 meters long, which created favorable conditions for the transportation of coal in an area with high output. The enterprise is extending the road from the 300-meter altitude mark to the 397-meter altitude mark, and is endeavoring to complete the work 15 days before the deadline, so that the mine can expand the mining area.

The Surface Mechanized Construction Enterprise has opened a mining site at Vein No 8 which has an output of 200 to 300 tons of coal a day.

The Uong Bi Electrical Machinery Factory has overcome difficulties regarding materials and has surpassed its plan for carrying out major repairs on tip wagons capable of transporting three tons and carried out major repairs on electric-powered locomotives which pull the coal from the shafts. The factory has also completed many projects, such as by manufacturing pulleys to errect metal shaft support columns, repairing latticework jacks, improving 11 hydrolic jacks of shaft digging combines, producing railroad switches, etc.

Recently the Vang Danh coal mine has mined between 1,200 and 1,400 tons a day, an increase of 50 percent over previous months.

BAI BANG PAPER MILL COMPLETES PHASE ONE

Hanoi NHAN DAN in Vietnamese 16 Nov 80 p 1

[Article: "The Bai Bang Federated Paper Mill Completes the Installation of the Entire System of Phase One Machinery"]

[Text] On 8 November, Machine Installation Enterprise Number 3 of the Federation of Machine Installation Enterprises under the Ministry of Building consigned paper-pulping machine number 1 of the Bai Bang Federated Paper Mill in Vinh Phu to the Production Preparations Committee of the Ministry of Light Industry.

All 35 machine installation project items of phase one have been completed. In the process of construction since early 1977, although very many difficulties have been encountered and despite shortages of supplies and electricity, the machine installation cadres and workers looked for every possible way to overcome these difficulties, took the initiative and completed their task. Using large and modern construction equipment, such as the 70 ton Loren crane, the machine installation force installed nearly 100 kilometers of non-rusting steel pipe; in some months, they installed as much as 160 meters of pipe bridges. In paper-pulping system number 1, the technical workers and cadres installed nearly 1,000 tons of equipment, 10,000 meters of pipe of various types and hundreds of kilometers of electric cable. The construction force poured 76,000 cubic meters of concrete to make supports, machine bases and sturdy wall and roof sections. The mechanized construction unit and the Viet Tri Building Corporation excavated and spread more than 1.2 million cubic meters of dirt and stone.

Paper-pulping machine number one is being test operated under a load so that it can be put into official production in December.

Enthusiastic over and confident in the achievement it recently recorded, Machine Installation Enterprise Number 3 is now installing second phase equipment in an effort to maintain the construction rate and complete the construction of the Bai Bang Federated Paper Mill, which will have a capacity of 55,000 tons per year.

STANDARD PROCEDURES URGED FOR TEACHERS SEEKING TRANSFERS

Hanoi NGUOI GIAO VIEN NHAN DAN in Vietnamese 25 Oct 80 p 2

/Readers' Opinions column: "Concerning Requests for Reassignment by Northern Teachers Now Working in the Southern Provinces"/

/Text/ Recently, the state adopted a specific policy concerning cadres and teachers going to work in the mountain provinces, on the islands and so forth. I feel that such regulations are very necessary and have the effect of remolding the thinking of persons transferred to these areas.

I also think that the state must soon promulgate a similar policy regarding the cadres and teachers sent from the North to work in the southern provinces. If the present situation is allowed to drag on, many teachers working in the southern provinces will encounter many difficulties and suffer undue losses. Because, due to the lack of clear regulations, the various education services handle requests for reassignment in a manner that poses many difficulties and problems to teachers. Each year, the number of teachers' requests for reassignment that is approved is very small (even though teachers have all the necessary paper work and a legitimate reason for being reassigned).

Through the sector newspaper, we would like to propose that the Ministry of Education adopt a specific policy concerning this matter; it should intervene with the various services in a number of specific cases so that teachers requesting reassignment encounter fewer difficulties and do not suffer heavy losses.

READER BLAMES NEAR-DEATH OF MANY ON DRINKING HOLY WATER

Hanoi NHAN DAN in Vietnamese 8 Nov 80 p 3

[Readers' Opinions column by Vu Thi Nhat of Ha Nam Ninh Province: "Near-Death Results From Drinking Holy Water"]

[Text] The cathedral of Vinh Thuong in Nam Loi Village, Nam Ninh District, is the place where Catholics come to worship and to pray. Rumors had been circulating to the effect that the cathedral had a miraculous holy water that could cure any ailments and make people who were weak and old become stronger and feel young again, respectively. The good news spread. Many people who would easily believe others gave up the productive work they were doing and found their way to the cathedral to pray and to ask for that "holy" water. In the last 2 months quite a large number of people came to the Vinh Thuong cathedral. After having drunk the holy drug, many people almost died.

We suggest that measures be taken to stop what is happening.

TABLE OF CONTENTS OF 'HISTORY OF THE VIETNAM COMMUNIST PARTY'

Hanoi LICH SU DANG CONG SAN VIET NAM, TRICH VAN KIEN DANG [THE HISTORY OF THE VIETNAM COMMUNIST PARTY, EXCERPTS FROM PARTY DOCUMENTS] in Vietnamese 1979 Volumes I and II

[Table of Contents of LICH SU DANG CONG SAN VIET NAM, TRICH VAN KIEN DANG edited by the Editorial Board of the Department of Propaganda and Training of the Party Central Committee, published by the Marx-Lenin Textbook Publishing House, Hanoi, 1979, 15,150 copies printed at the Tien Bo Printing House, Hanoi, second printing, printing completed on 20 July 1979, Volume I: 407 pages, Volume II: 363 pages]

[Text] Volume I, 1927-1945

Introductory Note: with a view toward supporting the study of party history under the middle level and elementary programs, we have published "The History of the Vietnam Communist Party--Excerpts from Party Documents."

This book consists of three volumes:

Volume I consists of party documents from 1927 to 1945.
Volume II consists of party documents from 1945 to 1954.
Volume III consists of party documents from 1954 to 1975.

The contents of this book were selected to be consistent with these programs and an effort has been made to arrange them in a manner consistent with program chapters while still maintaining the systematic nature of the development of history.

We look forward to receiving the criticisms of readers so that the next printing will be more complete.

The Editorial Board of the Department of
Propaganda and Training of the Party Central
Committee

A. The Preparations for the Founding of the Party and the Founding of the Party

--The Revolutionary Road (excerpt) 1927 7
--Letter from the Communist International to the Communist Groups in Indochina 1929(there are two copies of this document, one in French and one in Vietnamese. We have used the Vietnamese version. The

Vietnamese copy contains no date. In the French copy, it states:
9444/5 ex 27-10-1929. Confidentiel.) 17
--The Abbreviated Platform of the Party 1930 25
--The Summary Program of the Party 1930 28
--The Appeal Issued on the Occasion of the Founding of the
Communist Party in Indochina February 1930
(Appeal by Nguyen Ai Quoc on behalf of the Communist International
and the Vietnam Communist Party) 29
--The Political Platform of the Indochina Communist Party
(Draft to be debated within the party) October 1930 33

B. The 1930-1931 Revolutionary Movement and the Struggle Against White Terror to Restore and Develop the Movement

--To the Trung Ky Executive Committee 50
(Letter from the Party Central Committee; this document bears
no date, but on the first page of the document, the archives of the
Soviet Union inscribed: Lettre du CC Comite region en Annam
Concernant les Soviets, Septembre 1930)
--Resolution of the Party Plenum on the Present Situation in
Indochina and the Urgent Tasks of the Party October 1930 53
--Resolution of the 2nd Party Plenum March 1931 66
--Program of Action of the Indochina Communist Party, an Independent
Chapter of the Communist International (excerpts) 87
(signed by the Provisional Central Committee of the Indochina
Communist Party; the original document bore no date, but the
resolution of the members of the Party Leadership Committee
overseas and Bolshevik Journal, Number 10, February 1935, stated that
this document was issued in June 1932)
--The Political Resolution of the 2nd Congress of Delegates,
27-31 March 1935, of the Indochina Communist Party 107

C. The 1936-1939 Revolutionary Movement

--Concerning the New Policies 140
(Signed by the Indochina Communist Party, 30 October 1936)
--The New Organizational Program of the Party (excerpt) March 1937 164
--Resolution of the Enlarged Plenum of the Indochina Communist
Party (excerpt; held from 25 August to 4 September 1937) 171
--Resolution of the Plenum of the Indochina Communist Party
(excerpt; 29 and 30 March 1938) 182
--The Declaration of the Indochina Communist Party Concerning the
Present Situation 29 October 1938 192
--Concerning the Line and Position of the Party in the Period of
the National Democratic Front (1936-1939) 196
(Report by Nguyen Ai Quoc on the political situation in Indochina
from 1936 to 1938 entitled: "Lines and Positions that Were
Disseminated Which I Still Remember")

Addendum: Self-Criticism (excerpt) July 1939 198

D. The 1939-1945 Revolutionary Movement and the 1945 August Revolution

--Resolution of the Party Central Committee 6, 7, and 8 November 1939 224
(Now commonly called the resolution of the 6th Party Plenum)
--Resolution of the Party Plenum 6 to 9 November 1940 (excerpt) 283
(now commonly called the resolution of the 7th Party Plenum)
--The 8th Plenum of the Indochina Communist Party May 1941 303

Addendum: The 1941 Resolution of the Party Central Committee September 1941 (excerpt) 346

--The Resolution of the Standing Committee of the Central Committee of the Indochina Communist Party (excerpt) 352

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

'NHAN DAN' REPORTS PHAM HUNG LETTER ON VPA ANNIVERSARY

BK221302 Hanoi Domestic Service in Vietnamese 0545 GMT 22 Dec 80

[From the review of NHAN DAN for 22 December]

[Text] NHAN DAN today carries in its frontpage a letter by Pham Hung, vice premier and minister of interior, to the minister of national defense on the occasion of the 36th anniversary of the VPA.

The letter praised the VPA for its great achievements scored over the past 36 years under the leadership of the VCP and esteemed President Ho Chi Minh.

The letter said: The Beijing expansionists in collusion with the U.S. imperialists are frantically attempting to undermine the Vietnamese revolution in order to weaken, subjugate and annex our country. They are attempting to sow division and undermine the solidarity among the three Indochinese countries and the countries in the Southeast Asian region. Faced with this threat, the sixth party Central Committee plenum has set forth, among other urgent tasks, the task of strengthening the defense and security forces to fight against the aggressors to defend the fatherland.

The people's public security forces pledge to close their ranks behind the VPA, to heighten their vigilance and strengthen their fighting ability to foil all dark schemes and adventurous acts of the Beijing reactionaries in collusion with the U.S. imperialists and other reactionary forces.

On the occasion of this glorious traditional day, all officers and combatants of the people's public security forces wish that the entire VPA may score many more glorious achievements in defense and production tasks, and always be worthy as a heroic army of the heroic Vietnamese people.

With cordial and determine-to-win salutation.

MILITARY AFFAIRS AND PUBLIC SECURITY

COURT TRIES GROUP FOR ATTEMPTED ILLEGAL EMIGRATION

BK261508 Hanoi Domestic Service in Vietnamese 0400 GMT 26 Dec 80

[Text] The Phu Khanh People's Court recently tried (Nguyen Duc Trong), (Doan Dinh Si) and their accomplices on charges of murder, robbery and attempted illegal emigration.

(Nguyen Duc Trong) and (Doan Dinh Si), residing in Ninh Hoa District, in late July 1980 colluded with (Vo Van Hoang), (Ho Van Nam), (Tran Van Quang), (Nguyen Tiep), (Nguyen Tho), (Vo Thi Hoa), (Vo Hong Dung), (Nguyen Ngoc An), (Le My) in stealing a boat, gasoline and weapons from the Ninh Phuoc Fishery Cooperative. They also stole food from the people in an attempt to illegally emigrate.

(Trong) assigned (Vo Thi Hoa) to steal gasoline and food, while he and his accomplices planned to steal a boat and weapons.

On 21 July 1980, making use of his rank as deputy village military unit leader, (Trong) forced militiamen in (Dam Van) hamlet to give him a number of guns and ammunition.

Carrying out their plan, on the night of 21 July (Trong) and his accomplices robbed Mr (Phu) of his boat in (Dam Van) hamlet. (Hoang) held Mr (Phu) at gunpoint and pushed him on board his boat. (Tho) stood guard while (Quang) cut the rope and sailed the boat to a nearby point. (Nam), (Si), (Tiep) stood guard while (Dung), (My) and (An) carried gasoline into the boat. While carrying out their second round of loading, the militiamen in (Dam Van) hamlet surrounded and tried to arrest them. The robbers fled in the boat and fired at the shore, killing Comrade (Tra), deputy hamlet head of (Dam Van), and wounding five other persons.

Faced with these obstinate acts, the militiamen of (Dam Van) hamlet fired back, killing (Ho Van Nam) and (Vo Van Hoang). They confiscated two guns and other material as evidence.

The Phu Khanh People's Court sentenced leaders of the group (Nguyen Duc Trong) and (Doan Dinh Si) to death; (Nguyen Tiep) and (Nguyen Tho) to life imprisonment; and (Vo Thi Hoa), (Tran Van Quang), (Vo Hong Dung), (Nguyen Ngoc An) and (Le My) to 3 to 10 years imprisonment. They were also sentenced to pay more than 5,000 dong to the Minh Phuoc cooperative and the people they robbed.

HO CHI MINH CITY OFFERS REWARDS TO FIGHT CRIME

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 25 Sep 80 pp 1, 4

[Article: "City People's Committee Promulgates Temporary Regulations on Rewards for Persons Who Expose and Struggle To Stop the Activities of Counter-Revolutionaries, Persons Who Violate Criminal Law and Those Who Violate Socialist Property in Order To Maintain Political Security and Social Order and Safety"]

[Text] On 23 September 1980, in order to mobilize and encourage the spirit of collective ownership of cadres, manual workers, civil servants and the people for the purposes of exposing and struggling to stop the activities of counter-revolutionaries, persons who violate criminal law and those who violate socialist property while implementing the policies and regulations on commendations and rewards promulgated by the Council of Ministers, the Ministry of Interior and the Ministry of War Invalids and Social Welfare, the city people's committee issued temporary regulations concerning commendations and rewards. Below are the main points in the code of regulations:

Eligibility for Rewards

Persons who perform the following services are eligible for rewards:

--Exposing and denouncing to the local government organizations and individuals who are preparing to commit a crime or are currently engaged in criminal activity;

--Participating in the struggle to promptly prevent counter-revolutionary acts, violations of criminal law, speculation and smuggling by dishonest merchants and the violation of socialist property in order to protect the property of collectives and the property of the state;

--Collaborating with and helping the public security agencies in the struggle to prevent and expose political crimes, violations of criminal law and economic crimes.

The persons who are eligible for rewards include all civilians, cadres, manual workers, civil servants, troops and collectives, including those within the public security sector...who perform one of the services described above.

The Size of Rewards

When merchandise or property is confiscated or reclaimed for the state, 30 percent of this merchandise or property, in the form of money or product, shall be immediately set aside for use as a reward.

The following rewards in money or products of equal value have been established:

--Individuals who record an achievement shall receive a reward of one hundred (100) to no more than three thousand (3,000) dong.

--Each unit or collective shall receive a reward of three hundred (300) to no more than five thousand (5,000) dong.

--The remaining portion of the 30 percent that is not given in rewards shall be given to the public Security Service and the precinct and district people's committees to be used for other rewards.

In all cases, rewards must be accurate and must be given to the proper recipient.

Commendations and rewards must be given in a timely fashion, that is, within at least 15 days from the day reward procedures are initiated.

Cases involving rewards that are related to the professional work of the public security sector must be kept confidential; the names of persons who make denunciations and the names of collaborators must not be revealed nor should any ongoing efforts be revealed so that all criminals involved in the case can be apprehended.

Units and individuals who record achievements in the implementation of these regulations shall receive an appropriate commendation or reward.

Anyone who, for personal motives, intentionally violates the provisions of this code of temporary regulations shall be dealt with in a strict manner ranging from criticism to prosecution under the law, depending upon the seriousness of the violation.

ILLEGAL EMIGREES TRIED FOR MURDER, STEALING

Hanoi NHAN DAN in Vietnamese 22 Nov 80 p 4

[VNA News Release: "The Vung Tao-Con Dao Special Zone Harshly Punishes Gang of Murderers Who Stole Ship in Attempt To Flee Overseas"]

[Text] The People's Court of the Vung Tao-Con Dao Special Zone recently tried Le Van Le and his accomplices on the crimes of murder and stealing a ship in an attempt to flee overseas.

Le Van Le, 35 years of age, once served as a soldier for the Saigon government. After liberation day, he was given clemency by the revolutionary government and sent back to his family to live and work. During a trip at sea on boat number VT678 belonging to Mrs. Nguyen Thi Tam, Le talked with Ha Ngoc Mai and Tran Cong Khanh about stealing the boat and subsequently they killed Nguyen Van Quang and Nguyen Ngoc Son, two fishermen who were also on the boat, in order to flee overseas. Carrying out their sinister scheme at a time when the boat's fishing net was entangled, Le pushed Quang overboard as he was standing on the bow untangling the net and Mai and Khanh then pushed Son into the water, cut the net and headed the boat out to sea.

On their way out to sea, Le Van Le and his accomplices, having been discovered by a patrol boat of our Navy, fled to the coast in the area of Xuyen Moc in Dong Nai Province where they stated that the public security forces had asked them to come to Vung Tao to tow another boat that had run aground. Thwarted in their attempt, Le and his accomplices, still looking for a way to illegally flee the country, fled into Ho Chi Minh City where they continued their conspiracy and organized others to attempt to flee the country. However, having been discovered by the people, all three of them were arrested by the Vung Tao public security force at their hiding place. In court, faced with overwhelming evidence, Le Van Le and his accomplices confessed to all of their crimes.

On the basis of the law and the attitude of Le Van Le and his accomplices, the People's Court of the Vung Tao-Can Dao Special Zone sentenced Le Van Le to life imprisonment, Ha Ngoc Mai to 18 years in prison and Tran Cong Khanh to 16 years in prison.

HAIPHONG CONFERENCE REVIEWS TASK OF PROTECTING GOODS AT SEAPORTS

BK300700 Hanoi Domestic Service in Vietnamese 1100 GMT 28 Dec 80

[Text] A joint conference was recently held in Haiphong by the ministries of communications and transportation and interior to review the task of protecting socialist property at seaports throughout the country.

Fully aware of the characteristics of seaports, the party and people's committees of Haiphong and Ho Chi Minh cities and Quang Ninh, Quang Nam-Danang, Nghe Tinh and Phu Khanh provinces strengthened their supervision and control over the protection of goods and built material bases for the ports. Various sectors concerned paid attention to seeking experience in the prevention of and opposition to negativism and overcoming mistakes and shortcomings causing damage to or losses of goods. The sectors owning goods and means of transportation motivated the masses to bring into play their spirit of mastery by strengthening supervision, control and protection of state property during delivery, reception and shipping operations.

Despite the many efforts made and good results achieved in the protection of seaports in recent days, negativism still exists and the protection of state property, supplies and goods still shows many shortcomings. Fully aware of these weaknesses, localities with seaports, the leadership at various echelons and the sectors concerned are motivating the masses to promote the movement for the protection of the fatherland's security in enterprises, sectors concerned and subwards and villages adjacent to the ports. They are consolidating organizations and strengthening managerial measures to struggle against and check corruption and the theft of state property and goods in seaport areas and to consolidate and unify the port defense forces. At the same time, they are strengthening coordination among the sectors and localities concerned and beginning to apply positive measures to check and eventually eradicate theft, collusion and corruption, satisfactorily protect goods sent through their ports, increase their cargo handling capability, expeditiously unload all the ships in docking and quickly clear the goods piling up at the ports.

FRENCH COMMUNIST PARTY ANNIVERSARY MARKED

OW290735 Hanoi VNA in English 0711 GMT 29 Dec 80

[Text] Hanoi, 29 Dec (VNA)--The French Communist Party [PCF] is always a loyal defender of the interests of the working class and all other labouring people in France, says NHAN DAN's editorial today on the 60th anniversary of the PCF.

The daily of the Communist Party of Vietnam notes that the founding of the PCF at the Tours Congress was an historic turning point in the French workers' movement and an important event in the international communist movement.

The paper says: "Nguyen ai Quoc, later President Ho Chi Minh, attended this historic congress as a founder of the PCF. He was the first Vietnamese communist to lay the foundation of friendship and revolutionary solidarity between the communist parties and working class of Vietnam and France, which remain a symbol of the solidarity between the workers' movement and the national liberation movement."

The paper points out: "In the subsequent sixty years of struggle the PCF has written many pages of history full of hardships but with many successes. It has always been a loyal defender of the interests and moral values of the working class and all other labouring people in France. It has inspired the French working class united actions and the solidarity between workers and intellectuals. It upheld the banner of anti-fascism and of militant solidarity with the colonies, especially with the working class and the Communist Party of Vietnam."

The paper recalls that in recent years the PCF headed by Georges Marchais has surmounted many difficulties in uniting the working class, all other labouring people and progressive forces in a persistent struggle against monopoly capital and for greater democracy, thus paving the way for France to advance towards socialism.

The paper goes on: "Dedicated to the traditions of internationalism, the 23d PCF Congress in May 1979 reasserted solidarity with the socialist countries, with the peoples oppressed by imperialism and harassed by Chinese expansionism, and with the working class in the capitalist countries. The PCF has actively struggled for international detente and against the arms race, making a positive contribution to peace in Europe and the rest of the world. The French communists have wholeheartedly supported the party and people of Vietnam in our struggle against the Chinese hegemonists, and condemned the latter's dirty aggression against Vietnam. It has also wholeheartedly supported the struggle of the peoples of Laos and Kampuchea."

The paper goes on: "In its history the PCF has always been the courageous vanguard of the French working class and the mind, honour and hopes of the French people. It has played an important role in the international communist and workers' movement."

"The communists and the rest of the people of Vietnam rejoice at and take price in the great achievements of the PCF on its glorious path over the past sixty years. We are prodoundly grateful to the French communists for their fraternal support for our past struggle and present national construction and defence. We will protect and promote the militant solidarity between the two parties," it says.

"We wish the communists, the working class and all other labouring people in France new successes in their noble revolutionary cause, NHAN DAN concluded.

TRUONG CHINH ADDRESSES 29 DECEMBER VFF CEREMONY

BK041442 Hanoi Domestic Service in Vietnamese 0400 GMT 30 Dec 80

[Speech delivered by Truong Chinh at 29 December ceremony to award the Golden Star Order to the VFF--recorded]

[Text] Dear delegates, dear comrades and friends!

Today, on behalf of the SRV National Assembly, we are elated to present the Gold Star Order to the VFF. As the successor our people's national united fronts, the VFF has recorded many great achievements in building, consolidating and expanding our national unity bloc, and motivating and encouraging our people of all strata to score great victories in the struggle to liberate and unify the country as well as to build socialism and defend the socialist fatherland.

Throughout half a century of unity and heroic struggle by our people, the National United Front, founded and led by the VCP and President Ho Chi Minh, has grown constantly and become one of the factors that decided the victory of our revolution. Between 1930-1931, along with the campaign to establish the Anti-Imperialist League [hooij phanr dees dongf minh] and the Indochinese Anti-Imperialist Front [mawtj traanj phanr dees], the Worker-Peasant Alliance--a base of the National United Front --quickly took shape. The alliance, which led to a seething anti-imperialist and anti-feudalist revolutionary movement, reached its pinnacle with the establishment of the Nghe Tinh-Soviet movement. Then, between 1936-1939, along with the campaign to form the Indochinese Democratic Front and the growth of the revolutionary forces, a broad mass of the people of all strata joined a massive democratic campaign nationwide. They received training in both overt and clandestine struggles in preparation for the advancement of the revolution.

In 1940, the National United Front entered a new stage of development. Upholding the banner of national salvation, the newly born League for the Independence of Vietnam--the Viet Minh Front--instinctively rallied all patriotic forces to launch a movement to fight the French and drive out the Japanese, thus paving the way for the success of the August revolution and the founding of the DRV. Implementing the policy of great unity adopted by the VCP and President Ho Chi Minh, the National United Front was able to motivate the entire Vietnamese people to successfully carry out the resistance against the French colonialists, which led to the signing of the 1954 Geneva agreement recognizing the independence, sovereignty and territorial integrity of Vietnam.

During the anti-U.S. resistance for national salvation, the VFF constantly developed its enormous impact in strengthening and expanding the all-people solidarity bloc to build socialism in the north and serve as a solid base for the liberation of the south, the defense of the north, and the unification of the country. Meanwhile, the National Liberation Front [NLF] in the south was able to unite and instinctively rally all patriotic and progressive forces to struggle heroically against the U.S. aggressors for national salvation.

Together with the NLF, the Vietnam Alliance of National, Democratic and Peace Forces [VANDPF] contribued in uniting and encouraging the people of all strata in various southern cities to participate in the struggle against the U.S. aggressors.

The strength of solidarity of the people and armed forces throughout our country defeated the U.S. imperialists and their lackeys, completely liberating the south from the yoke of neocolonialism in the 1975 spring general offensive and uprising, the peak of which was the historic Ho Chi Minh campaign.

Following the complete liberation of the country, the three front organizations in both parts of the country--the VFF, the NLFSV, and the VANDPF--were merged into the great and powerful VFF. The front, which has now become the mainstay of the revolutionary administration, is constantly consolidating and expanding the all-people solidarity bloc and strengthening political and moral unanimity among the entire people, as well as motivating our compatriots throughout the country to make every effort in the struggle to build socialism and defend the socialist fatherland, thereby contributing actively to the revolutionary undertaking of the people in the world.

With all these great achievements, the VFF deserves the highest and noblest order awarded to it by the state. This is a joint honor for the various political parties, the front's mass organizations, personalities and cadres who have contribued to the building of the all-people great solidarity bloc. It is also an honor for our compatriots and overseas Vietnamese who have participated in carrying out the policy of great unity set forth by the party and President Ho Chi Minh, and for those who have participated in and supported the VFF.

Dear delegates, dear comrades and friends!

The SRV National Assembly on 18 December 1980 unanimously adopted a new constitution. The spirit and basic contents of this constitution are aimed at building the people's right to collective mastery system, and strengthening popular solidarity to successfully build Vietnam into a peaceful, independent, unified and socialist nation.

Article 9 of the new constitution affirms: The VFF, which comprises the various political parties, the Vietname Confederation of Trade Unions, the Vietnam Association of Collective Peasants, the Ho Chi Minh Communist Youth Union, the Vietnam Women's Union, and other member organizations, is a firm base of the state. The front promotes the tradition of national unity; strengthens political and moral unity among the people; takes part in building and consolidating the people's power; and educates and motivates the people to raise their sense of collective mastery, and to emulate one another in building socialism and defending the country.

According to the new constitution, the systematization of the roles of the VFF, political parties and mass organizations is one of the main policies aimed at fulfilling the basic relations in our society--the relations according to which the party is the leader, the people are master and the state is responsible for management. We are confident that this task will create favorable conditions to further develop the role of the all-people solidarity bloc in the task of building socialism and defending the socialist fatherland.

Dear delegates, dear comrades and friends!

We are now in a time of peace, but war may break out at any moment. We must strive to build and reform socialism throughout the country, at the same time we have to carry out economic and cultural development tasks to gradually stabilize and improve the people's daily life, overcome negative phenomena in society, strengthen and consolidate the defense forces to be ready to fight and triumphantly smash all schemes and plans of control, of and sabotage and aggression against, our country by the enemies. Along with these tasks, we have to satisfactorily carry out international obligations, especially toward the fraternal Lao and Kampuchean peoples.

Faced with the current situation and tasks, the VFF must strengthen and expand the great national solidarity bloc, and motivate the people to enthusiastically participate in the socialist emulation movement throughout the country so as to strive to overcome difficulties; fulfill and overfulfill the 1981 state plan; and contribute, together with the armed forces, in accelerating the movement of building and strengthening the defense forces, and firmly maintaining political security, social safety and order.

The adoption of the new SRV constitution was an important event in our people's political life. We suggest that the VFF should, together with state organizations, organize a comprehensive political drive among the masses aimed at making cadres and the people understand the basic contents of the constitution, clearly realize the people's rights and tasks, the duty of each individual, and the necessity of strictly implementing the constitution and the state law. Based on this context, it must mobilize cadres and civil servants of the state and the front to self-consciously and interrelatedly check and correct all practices which are against the constitution and the state law. Criticism of the people is also needed, especially on their shortcomings in implementing the constitution and the state law, and in fulfilling their tasks for the state and the society. Through these activities, everyone has the chance to positively participate in consolidating the revolutionary administration, building the law and perfecting the socialist legal system, improving the economic and social managements, and developing the people's right to collectiv mastery.

The elections of deputies to the Seventh National Assembly and the people's committees are also important events in 1981. We suggest that the VFF and its constituents strive to closely cooperate with state organizations to satisfactorily prepare and organize these democratic elections. The front's constituents must positively participate in the three revolutions--the revolution in production relations, the scientific and technological revolution and the cultural and ideological revolution. They must accelerate the task of building a new life, new culture and a new socialist man.

Dear delegates, dear comrades and friends!

The tasks of triumphantly building socialism and firmly defending the socialist fatherland are great and long-term tasks. History over the past 50 years has proven that, due to our great unity, we defeated the French colonialists and the U.S. imperialists as well as gained victory in the two wars of defending the country against the aggression of the Beijing expansionists and their lackeys.

In strengthening the solidarity of the VFF, our people will surely gain a glorious victory in the task of building Vietnam into a peaceful, independent, unified and socialist nation, and smashing all acts of provocation and aggression conducted by the enemy. Only when all these tasks have been achieved, can we then fulfill the sacred testaments of President Ho Chi Minh and advice of esteemed Uncle Ton Duc Thang.

As the new year is coming near, I wish all delegates, comrades and friends good health. May you score many achievements in your tasks and have all good luck. [applause]

VFF HOLDS CEREMONY TO RECEIVE GOLD STAR ORDER

OW291641 Hanoi VNA in English 1622 GMT 29 Dec 80

[Text] Hanoi, 29 Dec (VNA)--The Central Committee of the Fatherland Front today held a ceremony to receive the Gold Star Order, Vietnam's highest honour, conferred on it by the Communist Party of Vietnam and the Government of the Socialist Republic of Vietnam.

Opening the ceremony on behalf of the presidium of the front Central Committee, acting President Nguyen Huu Tho said:

"The Gold Star Order is not only for the front activists, but also for the entire people, for all those who have made glorious contributions to the struggle against foreign aggression, for national reunification, and for building and defending the socialist country."

On behalf of the National Assembly, Chairman Truong Chinh made a speech, hailing the constant growth of the front in a half-century of the [as received] policy of great unity laid down by the former Indochinese Communist Party and the last President Ho Chi Minh.

He said: "The institutionalization of the role of the Fatherland Front and the political parties and mass organizations in the new constitution is a big contribution to achieving the fundamental social relations between the party, which is the leader, the people--the masters and the state--the manager. We believe that this will create more favourable conditions to bringing into full play national unity in socialist construction and national defence."

In his speech, Hoang Quoc Viet, president of the front presidium said: "This important event will strongly encourage all political parties and mass organizations, all front workers, and all personalities to continue striving to meet the demands of this new revolutionary stage when the whole country is advancing toward socialism."

HANOI REPORTS CLOSING OF SIXTH VFF CC CONFERENCE

BK021000 Hanoi Domestic Service in Vietnamese 1100 GMT 31 Dec 80

[Report on the 31 December closing session of the Sixth VFF Central Committee conference, with portions recorded]

[Editorial report] The announcer begins by saying: "The sixth conference of the VFF Central Committee ended this afternoon, 31 December, after 3 days of work in an atmosphere of solidarity and enthusiasm over the conferrring of the Gold Star Order by the state. The conference has passed a resolution warmly acclaiming the fine success of the seventh session of the Sixth National Assembly and the promulgation of the new constitution."

The report continues with a 3.5-minute recorded excerpt of the VFF Central Committee's resolution pointing out its main tasks for 1981 read by its presidium member and secretary Nguyen Van Tien: "1981 will be the year to begin the implementation of the new constitution and the first year to implement the Third Five-Year 1981-85 Plan as well as the year in which the Fifth National Congress of delegates of the VCP will be held.

"Faced with the new situation and duties, the conference decides that in 1981, it is necessary for the front committees at all levels to streamline their organizations; improve their operational methods; step up political and ideological work; strengthen unity and unanimity among the people and national solidarity; and vigorously develop patriotism, revolutionary zeal and the sense of collective mastery among the people of all strata so that they can be diligent and thrifty in building socialism. In so doing, they must carry out the following tasks and duties:

"1. Scrupulously implement the new constitution and organize the Seventh National Assembly election; carry out propaganda work among and explain the new constitution to the people in a broad and deep manner; coordinate with various state organs in launching a political indoctrination drive, as an immediate step, aimed at making the cadres and people clearly understand the basic contents of the constitution and the rights and duties of citizens so that they can voluntarily and scrupulously implement the constitution and other laws; coordinate with various state organs in actively preparing for and satisfactorily organizing the elections of the Seventh National Assembly and the People's Councils in 1981; arrange the procedures for an motivate the people to enthusiastically participate in formulating the laws, strengthening the socialist legal system, streamlining the state apparatus, ensuring their right to collective mastery, and resolutely opposing activities that are against the constitution and other laws; and establish a committee for the legal system of the VFF Central Committee to help study and implement the aforementioned duties.

"2. Step up various patriotic emulation movements to successfully fulfill the 1981 state plan; make the people of all strata clearly understand the new situation and tasks and the favorable conditions and difficulties so they can resolutely struggle to create a new change in the economic situation andtheir everyday life; motivate the masses to earnestly and continuously emulate in their productive labor to produce more grain and food and consumer and export goods as well as to overfulfill the state plan; actively participate in improving distribution and circulation and market management; motivate the entire people to strictly practice thrift in production, construction and consumption as well as in their daily life; and accelerate the family planning campaign and make all people clearly understand the enormous benefit they will acquire from this matter in the immediate future and on a long-term basis so that they can implement it accordingly and voluntarily."

The announcer then says: "The sixth VFF Central Committee conference's resolution has pointed out the responsibility of the front at all levels concerning the effort to motivate the people to accelerate the all-people movement to build and consolidate national defense and ensure national security and the campaign to struggle against all manifestations of negativism in social activities, as well as to more satisfactorily carry out the campaign to shape a new lifestyle along with thoroughly disseminating among the people of all strata the foreign policy line adopted by the party and the state. The resolution has also pointed out a number of specific problems which must be solved in order to streamline the organizational system and improve the operational methods of the front at all levels."

The radio then presents a 3-minute recorded excerpt of the speech summing up the conference by Xuan Thuy, secretary of the party Central Committee and member of the VFF Central Committee Presidium, in which he says: "We must explain to the entire people and motivate them to implement the new constitution and to overfulfill the state plan. At the same time, we must try to rearrange the organizational and operational systems of the VFF at all levels, particularly at the grassroots level. This is necessary to gree the fifth party congress in a realistic manner."

The announcer concludes by saying: "On behalf of the presidium, Comrade Hoang Quoc Viet, chairman of the VFF Central Committee Presidium, delivered a closing speech calling on the people and combatants nationwide to strengthen unity and unanimity in their struggle to overcome all difficulties while making every effort to participate in the various patriotic emulation movements to as to fulfill all tasks in the new stage."

PARTY ACTIVITIES AND GOVERNMENT

VIETNAM FATHERLAND FRONT REPORT REVIEWS 1980 WORK

OW300735 Hanoi VNA in English 0711 GMT 30 Dec 80

[Text] Hanoi, 31 Dec (VNA)--"In 1980, the Vietnam Fatherland Front, together with the Democratic and Socialist parties, mass organisations and other affiliates, have contributed to further consolidating the unity of the entire people," says a report of the front's Central Committee at a regular session to review its work this year.

The report says: "This year, the front has encouraged the entire people to overcome all difficulties to contribute to national construction and defence. It has mobilized the entire people to struggle against psychological warfare and other disruptive activities of the Chinese reactionaries in collusion with U.S. imperialism and other reactionary forces against our national unity.

The front committees at all levels, in cooperation with administrative committees, have correctly implemented the party and state policies aimed at strengthening the worker-peasant alliance, and policies towards intellectuals, religious communities and national minorities. The front committees in many cities and provinces, especially those hit by natural calamities, have encouraged the people to help one another in restoring and boosting production and normalizing their living conditions. The people throughout the country have also actively responded to the call for increasing production and practicing thrift. In the south, the front has mobilized peasants to join collective farming by setting up cooperatives and production collectives. Meanwhile, workers have been encouraged to overcome difficulties in the supply of raw materials. The campaigns for "retrieving 5 million cement bags" and "producing 35 million tons of organic fertiliser" have been fulfilled. Other campaigns such as those for "retrieving 6 million cement bags" and "growing 500,000 hectares of green fertiliser" have obtained good initial results.

The report continues: "In the face of the Chinese reactionaries' schemes and acts of sabotage, our people throughout the country have strengthened national defence, and maintained public order and security. The fighting potential in the armed forces and localities throughout the country has improved. The armed forces and people in various areas have promptly intercepted groups of enemy commandos and scouts intruding into our country and successfully coped with enemy provocations and encroachments on our territory in the northern frontier."

On international relations, the report says: "The front, political parties and mass organisations have sent many delegations for friendship visits to other countries and received foreign delegations visiting Vietnam and took part in international conferences such as the interparliamentary conference, the conference of the world people's parliament for peace, etc. These activities have contributed to strengthening the Vietnamese people's solidarity, friendship and cooperation with the peoples of the Soviet Union and other socialist countries, consolidating our special militant solidarity and friendship with the Lao and Kampuchean peoples, and broadening our relations with Third World countries and progressive people around the world. We have also sent delegations to attend religious conferences of Catholics, Buddhists and protestants. In our international relations, we have expressed our firm support for the world struggle for peace, national independence, democarcy and socialism, and strongly condemned and denounced the plots and crimes of the Chinese expansionists in collusion with U.S. imperialism and international reaction against the revolutions of the three Indo-Chinese peoples. We have contributed to frustrating attempts by international reactionary forces to sow division among the countries of the socialist community, between Vietnam and the Soviet Union and between the three Indo-Chinese countries.

PARTY ACTIVITIES AND GOVERNMENT

INDUSTRY LEADERS DISCUSS ECONOMIC PROBLEMS

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 25 Sep 80 pp 1, 4

[Article by Kim Vy: "Restrictions That Are No Longer Appropriate Must Be Eliminated"]

[Text] On the morning of 23 September, more than 100 leadership cadres of the various textile, leather shoe, ready-made clothing, office products and pharmaceutical products enterprises, the Printing Corporation, the city Federation of Artisans and Handicraftsmen, the city planning committee and so forth met to contribute their opinions to the draft resolution of the 2nd City Party Organization Congress. Evaluating the situation in the city since the 1st City Party Organization Congress, many representatives agreed that our party organization has made many efforts to develop production and care for the daily lives of the people. In particular, in the field of order, security and national defense, we mobilized the masses to participate in protecting the revolutionary government, thereby thwarting the schemes of sabotage of the enemy in their infancy. In the struggle to build and strengthen the system of collective ownership, the masses have actively participated in production, in organizing daily life and in economic management and have determinedly struggled against ideological deviations, negative phenomena and deviancy within the party as well as in society.

However, besides the results mentioned above, many problems still exist in economic management and the management of society that must be rapidly corrected. Specifically, in transformation, we have given light attention to building and developing production; a number of production installations have fallen into stagnation and many difficulties are being encountered in the lives of the people. Mobilizing compatriots to go to new economic zones is a correct policy of the party; however, when organizing the implementation of this policy, we have been less than thorough and allowed the present problems to develop. The representatives, who held discussions in various sections, suggested that the city party committee review the areas mentioned above in a more thorough manner. At the same time, they suggested that figures should be presented to cite as proof of the major jobs we have performed since the 1st Party Organization Congress.

In the evaluation of strongpoints and shortcomings, the congress must clearly stipulate which person, which sector or which echelon is responsible for shortcomings so that corrective steps can be taken. The representatives suggested that the economic sector committees of the city display initiative and creativity and not rely upon the upper level. In leadership work, there must be a clear division of responsibilities between the party and the government with the party playing the role of leading, supervising and inspecting, not taking over the work of or replacing the government.

Resolution number 6 has been and is being implemented and resolution 27 of the Party Central Committee is beginning to be implemented; these are effective weapons for persons performing economic work in the present stage of the city. At a time when our production and daily lives are still being controlled by the laws of small-scale production and the free market, many complex problems face the various sectors and levels that must be resolved. To begin with, in resolving economic problems, importance must be attached to economic measures. Next, in order to achieve high economic returns, we must change the present methods of operation in production and distribution. These are points that were deeply discussed and analyzed and concerning which opinions were set forth in part II of this meeting.

In the discussion group consisting of leaders of the textile sector, a leading sector of the city that is encountering difficulties, the representatives expressed many private thoughts and aspirations... One said: when a new situation exists, when a new, historic turning point has been reached in history, new policies must be adopted... However, we should realize that, although we have adopted correct positions and policies, we have implemented them incorrectly. This is one way to explain why the jobs we have performed and the measures we have taken have not been good. In actuality, however, some policies and regulations are only suited to one period of time, to a given set of economic and political circumstances. Failing to appropriately change them is no different than tying the hands of producers. Specifically, circular 34 of the Ministry of Finance assigns the bank the task of controlling the wage funds of enterprises. If the production plan is surpassed, wage funds are dispersed on the basis of the average worker grade; if the production plan is not met, the wage fund is reduced. Since 1979, a period during which the textile sector has been encountering difficulties with raw materials for production, this sector has been required to implement this circular. In actuality, the standard of living of manual workers is low, there is a lack of work and product contracts cannot be implemented (due to the difficulties with raw materials), consequently, the standard of living falls even more.

In economic management at this time, our apparatus is still cumbersome, still consists of many departments and offices. The various discussion groups proposed the following to the Party Central Committee and the city party committee for inclusion in this resolution: the possibility should be studied of combining similar economic-technical sectors instead of dividing them into central and local enterprises because the majority of the products now being produced are turned over to one echelon. For example, as regards the ready-made clothing sector and the textile sector, the central enterprise has a supply station and the enterprise of the city also has a station that distributes raw materials. Recently, in order to prepare for the 4th quarter, the central textile sector had surplus fiber and turned it over to the city textile sector for contract production of textile goods. If we centralize this sector on one level and put it under the management of one unit, we can balance supplies and the production plan.

The draft resolution emphasizes the need for investments in depth in the mechanical engineering sector and the raw materials industry. The representatives of the various enterprises suggested that the city should soon carry out well-coordinated equipment planning and, at the same time, adopt a plan for importing a number of raw materials for the textile sector, the plastics sector, the paper sector and so forth.

One of the ways to resolve the problems now being encountered in production and everyday life is to export goods. Over the past several years, the city's foreign trade sector has wanted to accelerate exports but, in actuality, the sector is still encountering difficulties. The reason is that we lack experience and management skills. On the other hand, because a number of pricing positions and policies still restrict us, we have not been able to provide incentive for producers. In addition, our method of working is still bureaucratic, consequently, we do not give production installations appropriate support. The value of exports in 1981 will be 200 million dong, a modest figure, and we should be able to raise this figure.

In addition to earning foreign currency with which to meet the import needs of the city, the task of providing jobs to workers within the export sector is also very important. The comrades in the discussion groups criticized a number of rightist phenomena of the foreign trade sector that must be rectified, such as importing foreign cigarettes while exporting bran instead of using it to develop hog herds and chicken flocks in order to export these products. The discussion groups also suggested that the party organization resolution call for the quick establishment of local export-import corporations and the full utilization of the experience and the liquid capital of private merchants under the management of the state in order to open a new position for our system of production.

If our export sector is a strength that has not been fully developed, the artisan and handicraft sector is a sector with abundant potential, especially with regard to consumer goods production. In view of the fact that there are still five different economic segments within the city, the collective economy will make a major contribution to increasing the sources of goods, regulating and controlling the market and so forth.

In the section dealing with the economy and the standard of living, the draft resolution talks about "giving attention to increasing the authority of the directors of the basic economic units." In actuality, the director has a major responsibility but no authority. As their function is presently structured, directors must provide political leadership and leadership in their special field of technology in order to produce many products at low costs, produce high quality products and earn a profit. Meanwhile, the directors are restricted by hundreds of laws and circulars that must be implemented but the directors themselves are protected by not one law should they be prosecuted. For this reason, a situation has developed in which some directors only "manage" in a benign fashion and seek to get along with others and offend no one so that no one will bother them. In order to correct this situation, enterprise leaders have suggested that the responsibilities and authority of the directors be clearly defined in the areas of the expenditure of cash, the recruitment of labor, the establishment of prices and the wage fund.

In part III of the draft resolution, which deals with party building, the various discussion groups reached unanimous agreement concerning political and ideological work, the strengthening of the basic party organizations and the improvement of work methods within the party and also recognized the need to increase the fighting strength of the party organization and bring about a strong improvement in the ability to lead and manage the economy. However, as regards organizational structure, party members and enterprise directors suggested that the city party organization research the establishment of industrial enterprise party committees directly subordinate to the precinct party organizations. This suggestion is unsuitable in many respects because the nature of production, the professional nature of the enterprises and so forth differ, consequently, the precinct party organization is unable to closely guide party work, the recruiting of new party members, the management of party members, etc. In addition, the party should adopt a plan for training cadres who specialize in party work within production enterprises, such as the secretaries of the enterprise party chapters. Because, in addition to political skills, cadres must also be skilled in economic management and not simply become leaders because of their age.

LE DUAN'S BOOK ON SRV'S NEW CONSTITUTION PUBLISHED

OW131409 Hanoi Domestic Service in Vietnamese 1430 GMT 12 Dec 80

[Text] The VCP Central Committee held its plenum in September 1980 to contribute views on the SRV's draft constitution and discuss the measures aimed at ensuring scrupulous implementation of the constitution after its adoption by the National Assembly.

At the concluding session of the plenum, Comrade Le Duan, general secretary of the party central committee, expressed many important views in his speech.

On the occasion of the session held by the National Assembly to discuss and adopt the new constitution, the main part of Comrade Le Duan's speech was published by the Su That Publishing House in the form of a booklet entitled "The New Constitution, A Constitution Of The Socialist Collective Mastery System." The 28-page booklet is composed of 3 parts.

The first part points out: The SRV's new constitution is the very product of our people's heroic long struggle for national and social liberation under our party's leadership. At the same time, it is a sharp weaon for our entire people to continue the struggle to firmly protect national independence and achieve the decisive success of socialism in Vietnam.

The second part stresses: Collective mastery is the basic spirit and indivisible substance of the new constitution because it is the true objective of national independence and socialism and is an extremely important moving force of our people's revolutionary undertaking.

The last part of the book points out: The socialist collective mastery system is manifested through a mechanism in which the party is the leader, the laboring people are masters and the state is the manager. These three elements, which are distinctly different as regards their substance, functions and responsibilities, are organically correlated and form a unified structure.

The last part also points out the trends and pressing tasks to be implemented after the adoption of the new constitution by the National Assembly.

The book "The New Constitution, A Constitution Of The Socialist Collective Mastery System" helps us understand the new constitution whose basic ideological substance is the achievement of socialist collective mastery aimed at building socialism and defending the socialist fatherland. The book also helps us grasp the basic direction for building and perfecting the mechanism of the socialist collective mastery system, thus giving us more strength to advance the revolutionary undertaking and achieve even more brilliant successes.

EDITORIAL STRESSES IMPORTANCE OF RURAL YOUTHS

Hanoi NHAN DAN in Vietnamese 18 Nov 80 p 1

[Editorial: "The Assault Force of the Revolution in the Countryside"]

[Text] The 8 million youths in the rural areas of our country, the nucleus of whom are the several million Communist Youth Union members, are an important socio-political force in the countryside. They also comprise a young, healthy and increasingly highly educated work force that possesses abundant revolutionary capabilities and has taken the lead in carrying out the three revolutions, accelerating agricultural production, transforming the old countryside and building the new countryside.

On the agricultural production front, the Youth Union has adopted a 10-point revolutionary action program designed to mobilize the powerful forces of the young on this front of utmost importance. Millions of young men and women have enthusiastically gone to build water conservancy projects, build fields and complete farmland water conservancy systems in order to provide irrigation water for millions of acres of crops. In the face of the shortage of fertilizer, the Youth Union launched a movement to produce 35 million tons of fertilizer followed by another movement to plant 500,000 hectares of green manure crops. The "high yield fields" and "high yield hog herds" undertaken by youths are increasing in number with each passing day.

Hundreds of thousands of youths are also enthusiastically participating in the various units building the material-technical bases of socialism and building new economic zones, new state farms and new state forestry sites. The shock youth units carrying out afforestation in a number of midland provinces, especially Vinh Phu, have made important contributions to covering tens of thousands of hectares of barren fields with vegetation, thereby creating sources of raw materials for the lumber and paper industries. From the industrial complexes and major cities, many units of young workers have eagerly left for the countryside to help to repair machinery and implements and train machine workers for cooperatives.

In the socialist transformation campaign in the rural areas of the southern provinces, Youth Union members and youths are propagandizing and encouraging their families and neighbors to follow the course of socialism.

The Youth movements mentioned above, although not truly strong, widespread and comprehensive, have made important contributions to accelerating agricultural production, implementing intensive cultivation, building material-technical bases for agriculture and expanding and strengthening the new production relations. Through these movements of practical revolutionary value, the Youth Union has widely rallied the forces of youths and created the conditions for cultivating their sense of collective ownership and forging them into new socialists. The several hundred thousand progressive youths that have emerged within the various movements and been accepted into the Youth Union have increased the fighting strength of the young communists. The tens of thousands of outstanding Youth Union members that have been accepted into the party have brought a new strength to the basic organizations of the party.

As the assault force of the revolution on the agricultural production front and in the building of the new countryside, the organizations of the Youth Union in the countryside are trying to expand their corps, especially in the newly liberated provinces, increase their fighting strength and improve their organizational skills in order to rally the forces of youths in the countryside more widely within mass movements for the purpose of carrying out their pressing immediate production tasks, expanding and strengthening the socialist production relations, insuring the purchase of grain and other agricultural products for the state and increasing the income and improving the material and cultural lives of farmers. While accelerating the various productive labor emulation movements, the Youth Union must firmly adhere to the various new policies and struggle against violations of these policies. Only by developing the collective ownership role of working farmers and closely coordinating the interests of laborers with the interests of the collective and society can we create a strong moving force for carrying out the three revolutions, stimulating the development of agriculture and building the new countryside.

BRIEFS

HO CHI MINH ORDER CONFERRED--Hanoi, 3 Jan (VNA)--Acting President Nguyen Huu Tho and chairman of the National Assembly Standing Committee Truong Chinh have signed a decision to confer the Ho Chi Minh Order on the Vietnam Democratic Party. The decision, made at the proposal of the Council of Ministers, says that "a member of the fatherland front, the Vietnam Democratic Party has rendered outstanding services to the strengthening of national unity and has made a worthy contribution to national liberation and reunification, and to socialist construction and national defence." Speaking at the presentation ceremony held here this afternoon, Xuan Thuy, vice chairman and general secretary of the National Assembly Standing Committee, said: "Since its founding 35 years ago, the Democratic Party has sided with the Communist Party and other patriotic organizations in the struggle for national liberation. It made an important contribution to the triumph of the August revolution of 1945 and the foundation of the Democratic Republic of Vietnam (now the Socialist Republic of Vietnam). The Democratic Party has also contributed to the victories of the wars of resistance against the French colonialists, the U.S. imperialists and the Chinese expansionists and their henchmen. It has played an active role in the country's socialist transformation and construction." [Text] [OW031531 Hanoi VNA in English 1518-GMT 3 Jan 81]

ECONOMIC PLANNING, TRADE AND FINANCE

CHE VIET TAN ON CHANGES IN PLANNING

Hanoi NHAN DAN in Vietnamese 19 and 20 Nov 80

[Article by Che Viet Tan, deputy head of the State Planning Commission: "Bringing the Contents of Planning Up to Date"]

[19 Nov 80, p 2]

[Text] Bringing the contents of planning up to date is the most important element in researching and improving planning. In the improvement of planning, there is a host of questions that must be researched and clearly answered; however, the three most important questions that we must research more deeply are:

--The characteristics of our country's revolution;
--The application of the various economic laws;
--The thorough implementation of the lines and policies of the party.

1. We all know that the line of the party is set forth on the basis of applying objective laws (including economic laws, natural laws and so forth, with economic laws being of primary importance) and clearly analyzing our country's situation. Therefore, in order to gain a deep understanding of the line of the party and express this line in planning, it is absolutely necessary that we clearly understand the characteristics of our country's revolution and the characteristics of the application of laws in the present stage of the revolution; if we do not gain a clear understanding of these characteristics, it might lead to programs, policies and measures that are incorrect, that are not consistent with practice. Has not one of the main causes of the shortcomings in planning in the recent past been the failure to truly deeply analyze the characteristics of our country's situation in the present stage?

As regards the major characteristics of our country's revolution, the resolution of the 4th Party Congress set forth three major characteristics, with which we are all familiar:

The first characteristic: "Our country is in the process of advancing from a society in which small-scale production still predominates directly to socialism without experiencing the stage of capitalist development."

The second characteristic: "The entire country is advancing to socialism in a situation in which it has many very large advantages in its favor; however, there are still many difficulties resulting from the aftereffects of the war and the remnants of neo-colonialism."

The third characteristic: "International circumstances are favorable but the struggle to resolve the question of 'who defeats whom' which exists between revolutionary forces and counter-revolutionary forces in the world is still an arduous, sharp struggle."

Of the three characteristics mentioned above, the first is the most important.

An issue that we must clarify more is what changes have occurred in the international and domestic situations since then and what is the trend of development of the situation in the coming period. In the face of these changes, we must analyze these three characteristics to determine what about them is new, what is favorable and what poses difficulties; on the basis of the new situation, we must gain a deeper understanding of the characteristics of our country's revolution as presented by the previous congress of the party; on the basis of our new analysis of the characteristics of the revolution and our country's economy (with attention to natural characteristics), we must reach conclusions of practical value to planning in the initial stage of the period of transition. Consider the following example: we still say that the most important characteristic is the predomination of small-scale production; however, we must also define what small-scale production is. Are we still in the initial stage of the period of transition from small-scale production to large-scale socialist production when production forces are still small-scale production (a number of production installations and the rudiments of large-scale production) and production relations still involve many different economic segments? This characteristic is concretely manifested within each economic sector, each economic area and each type basic unit. There are a number of large production installations; where are they and how large are they? If we do not carefully analyze the diversity of our country's economy in the present stage, it might lead to the use of rigid planning methods employing model norms for each unit, each sector and each area. In form, we have clearly completed the establishment of the planning system for sectors and this planning system has been uniformly implemented throughout the country. In actuality, however, this planning system and its appended methods and system of model norms is still having less of an effect than it should have. There has been a situation in which the lower level and installations must look for every way to fill in all the necessary figures in model charts and then submitting these figures to the upper level, but only submitting them to the upper level, not using them in the economic management of the lower level and basic unit. Let us consider another example: because we inappropriately evaluated both the scale and degree of the economic and social changes following liberation and the reunification of the country as well as the aftereffects of the war, overevaluated domestic and foreign capabilities and production capacity and failed to fully realize the difficulties and complications involved in using these capabilities, a number of plan norms have not been implemented. We must give our attention to analyzing the characteristics of our country's revolution and reaching conclusions of practical benefit to planning.

2. We have discussed the impact of the various economic laws at great length; however, the question we face is what is our understanding of the special characteristics of the impact of these laws in our country in the present stage? How is the application of the various economic laws expressed in the contents of the plan and in planning methods? Is there not still a rather large gap between our understanding and the application of these laws? And, even in our understanding are there not problems that must be discussed further, especially our understanding of the relationship among the law of planned and balanced economic development, the law of value and the law of distribution in accordance with labor?

We are in the initial stage of the period of transition. This indicates that our economy still consists of many different segments. Two points that must be stressed are: among the various segments of the economy, the state-operated economy has played the dominant role and this role is being strengthened with each passing day. In every application of laws, attention must be given to this fact and the role played by the state-operated economy must be strengthened as a result. The second point is that all of the other economic segments are undergoing change, change that is taking a definite direction, that is, the private segments are being transformed and will gradually be narrowed in scope. We shall continue to make use of these segments in the initial stage of the period of transition in order to support socialism. In my opinion, the following points can be made concerning the application of laws and it is my fervent hope that you will contribute your opinions concerning this matter:

a) Applying a law means having a full understanding of this law in everything from its requirements and contents to the conditions needed for this law to have an impact. Next, we must take the initiative and create the conditions needed for this law to have the highest possible beneficial impact for us. Conversely, if we do not apply a law to support socialist construction, it is very likely that this law will have a spontaneous, objective impact, will "open its own path" and have an adverse impact.

b) In all societies, the various economic laws are in effect at the same time. These laws have an impact upon one another (they restrict or stimulate one another). When applying a particular law, very much attention must be given to the impact of the other laws, consequently, we must also understand how these other laws are applied so that they have an impact in a direction that is beneficial to us. In our country at this time, even more attention must be given to this point because there are many different types of laws governing the different economic segments which are having an impact at the same time.

c) The opinion is held by some that because the economy still consists of many different segments and because small-scale production predominates, we should emphasize the limiting aspects of the socialist economic laws (such as the basic economic law of socialism, the law of planned and balanced economic development and the law of distribution in accordance with labor). This is a matter that is being debated at great length and has led to different understandings of the application of laws in research and in the contents and methods of planning.

The impact of the various economic laws cannot be separated from the mode of social production. It must be stated that, from the point of view of the entire mode of socialist production, the impact of the socialist economic laws is rather broad in scope, encompassing the entire economy, even though the level of development of production forces is still very low and production relations are still in the initial stage of the period of transition (that is, many different segments still exist); consequently, the impact of these laws is only limited in the degree and form of expression. This is no reason to automatically restrict the scope of the impact of the economic laws of socialism to the socialist economy. As an example, consider the law of the planned and balanced development of the economy: attention must be given to the fact that within the national economy as a whole, this law has played the role of regulating the national economy, has been applied to establish the basic ratios of the economy, such as the structure of capital investments, the development of the various economic sectors, the distribution of labor and cadres, the structure of foreign trade, the financial and monetary balances, etc. The economy of our entire country is now within the orb of planning. This has been achieved because we have the dictatorship of the proletariat and because the state-operated economy plays the dominant role. On this basis, we state that the trend of development of the economy toward socialism is irreversible. Thus, the manifestation of the law of planned and balanced economic development is limited only by the fact that it is not possible to assign a full system of state plan legal norms to the various segments of the collective economy nor assign legal norms directly to the segments of the non-socialist economy. However, attention must be given to the fact that the segments of the non-socialist economy lie within the planned economy as a whole and are in the process of being transformed and gradually being narrowed in scope. Here, therefore, it is necessary to carefully examine the scope, extent and impact of the law of planned and balanced economic development and determine which characteristics must be alalyzed in greater depth by us.

d) As regards the role and impact of the law of value within the socialist economy, no one within theoretical circles in our country places it above the law of planned and balanced economic development; however, a deeper analysis must be conducted in order to determine the impact of this law, its scope, the strength of its impact and so forth. For example, the following matters must be researched:

--The influence of the law of value upon the formation of the basic ratios of the economy: does the law of value participate in the regulation of these ratios or does it merely have an impact upon or participate in regulating them within the scope of the non-socialist economic segments? Within these segments of the economy, what is the strength of the impact of the law of planned and balanced economic development and the law of value?

--Within the various sectors of the national economy, how do we apply the law of value to support planning? We have long failed to apply the law of value well in many areas of planning, such as prices, wages, bonuses and the distribution of profits. Even cost accounting, which is the center of the various economic levers used in the methods of managing the planned socialist economy and which has a very important impact and clearly manifests the application of the law of value, has not been coordinated with planning well.

--Looking back over the past, has not one of our major shortcomings in planning been our failure to fully coordinate the various economic levers with the system of legal norms and even within these norms in order to properly apply the various economic laws, the primary ones being the law of distribution in accordance with labor and the law of value? Thus, how should these laws be applied? Is it not true that present research stops at explaining the position of laws, explaining the importance of applying them but does not clearly present the specifics or the characteristics involved in applying the various laws in planning within our country in the present stage?

It is necessary to avoid both tendencies of inflating the impact of the law of value within the planned socialist economy and giving light attention to or not being aware of the impact of the law of value. However, our understanding of this law cannot stop here. The application of the law of value must be placed against the historic background of the present revolutionary stage of our country and, in particular, we must define the specifics involved in the application of this law in planning. The application of this law is not only evident in the various policies on economic levers, but is actually very evident in the formulation of plans, in plans themselves and in each plan norm as well as the entire process of guiding the implementation of plans; this is the reason why we state that the plan is the strongest lever, is the greatest stimulus to the development of the entire national economy. In order to overcome the administrative-bureaucratic nature of the plan, perhaps we should give much attention to this matter.

3. Only on the basis of correctly understanding and applying the various laws can we acquire a scientific and sound methodological basis for thoroughly implementing the line of the party. Thoroughly implementing the line of the party means correctly expressing the party's line, concretizing it in the form of an economic structure, stages of development, programs and tasks, establishing the various balances and considering all of the measures needed to insure the fulfillment of the strategic objectives of the national economy with high returns.

This is the matter of foremost importance in bringing the contents of planning up to date in our country because, if we do not thoroughly implement the line of the party, the contents of plans will not be correctly established, the major imbalances that exist cannot be corrected soon and the economy cannot develop in the correct direction. Experience has shown that a thorough understanding of the line of the party is manifested in the contents of the plan, basically in the establishment of an economic structure and stages of development that are as efficient as possible and insure continuous expanded reporduction. This is an important matter in bringing the contents of planning up to date, a matter that must be researched and resolved in the coming period in the drafts of the long-term plan as well as the yearly plans and 5-year plans, especially the 1981 plan and the 1981-1985 five year plan.

Over the long range, the economic structure of our country will be a modern industrial-agricultural economic structure formed in the process of carrying out socialist industrialization in accordance with the line of "giving priority to the rational development of heavy industry on the basis of agricultural and light industrial development" so that agriculture and industry are always closely linked together, stimulate one another and combine to form a unified entity.

[20 Nov 80, p 2]

[Text] The industrial-agricultural economic structure which we must build is a unified, nationwide economic structure that encompasses the central economy and the local economy, correctly coordinates the economy with the national defense system and coordinates economic development at home with an expansion of the international division of labor and international cooperation. Within this economic structure, the industrial-agricultural structure is the basic structure and will, depending upon the situation within each specific area, form the economic structure of each area, each locality, district and province. Within this basic structure, agriculture occupies an extremely important position in the course of socialist industrialization. The strong development of agriculture, forestry, fishing and consumer goods production has an important impact upon the process of socialist industrialization in many areas: resolving some of the difficulties encountered in everyday life, meeting the need for grain, food products and raw materials for industrialization, creating jobs in order to make good use of labor, redistributing labor on a large scale, implementing the new division of labor, raising social labor productivity, creating important sources of export goods to support the requirements of the development of industry and the other sectors and stimulating the constant growth of the industrial-agricultural structure. For this reason, the resolution of the 2nd Party Plenum pointed out: "In the next several years on the economic front, we must adhere to the foremost task of bringing about a leap forward in the development of agricultural production, forestry and fishing." Industry must be closely coordinated with agriculture from the very beginning; every stage of development of industry, especially the heavy industrial sectors that occupy key positions in industrialization, must be directed toward supporting and stimulating agriculture. We must concentrate our efforts on the task of developing agriculture and must, at the same time, actively build and develop the heavy industrial sectors and the other sectors of the economy, beginning with the exploration and development of petroleum and natural gas, power production, the production of coal, cement, lumber, fertilizer and consumer goods from domestic raw materials, the development of communications and transportation and the acceleration of the production of export goods.

In the course of industrialization, in order to create an economic structure whose nucleus is an industrial-agricultural structure, planning in the present stage must help to further stimulate the process of reorganizing production on an economy-wide scale as well as within each sector and each economic zone, beginning immediately within each basic economic unit. The specifics and requirements involved in the present reorganization of production have not been clearly manifested in our plans, especially in the plans of the districts, the places which our party considers to be the base for reorganizing production and redistributing labor.

This process of reorganizing the system of production is the process of causing the continuous formation and development of large-scale production and creating favorable conditions for planning to broaden the scope of its impact. In bringing planning up to date in the initial stage of the period of transition, importance must be attached to constantly broadening the objectives of the plan and increasing the effectiveness of planning, not only by means of the system of legal norms of the state plan, but also by coordinating the various economic levers and the various forms and methods of planning that are effective in view of the diversity of the economy.

In other words, in our country at this time, planning must even involve planning the very formation of that which is to be planned and broadening the scope of planning to planning itself; instead of planning an existing system of large-scale production, we are only planning the creation of relationships, and only this can be considered a characteristic of planning in our country in the initial stage of the period of transition. The position taken by our party with regard to building the districts into agro-industrial economic units is a part of the line on socialist construction in our country and is consistent with our country's characteristic of advancing from small-scale production to large-scale socialist production. The task of planning must be to express this position in the contents of plans. In the present situation, the plans of the districts primarily involve reorganizing production within the scope of the district by using plan norms in close coordination with other measures to reorganize production within each economic unit and create economic relationships among these units along the lines of specialization, cooperation and federation, which characterize large-scale socialist production. The plans of the districts must be integrated and balanced within the plan guidelines and planning of the province and the central level.

The formation of a modern industrial-agricultural economic structure for the entire country begins with reorganizing production in a manner closely linked to developing production. In the establishment of the third 5-year (1981-1985) plan and the 1981 plan, we must correctly evaluate the present economic situation in the economic units, the districts, provinces, municipalities and economic-technical sectors, correctly evaluate the characteristics of the initial stage in the period of transition in our country and, on this basis, establish an economic strategy that encompasses a suitable structure and stages. This is a matter of major importance in thoroughly implementing the line of the party and is something that must be accomplished in the process of formulating and integrating long-term, 5-year and yearly plans. At this scientific conference, I would like to present some initial thoughts of mine and suggest that we continue to research this matter together. In my opinion, to be suitable, this economic structure and these stages of development must resolve the problems raised by the state of our country's economy in the next several years so that we can bring about fundamental changes in many areas of our work and revise and supplement the present structure of the economy with a view toward creating an optimum economic structure in order to highly utilize our two most precious assets, our labor and arable land, making good use of existing material-technical bases and establishing a more efficient relationship between mechanized labor and manual labor in order to create many jobs, make good use of labor to virtually meet the needs for food, clothing, shelter and education, gradually improve travel and health care, meet the needs of the people for essential consumer goods better with each passing day, create large sources of export goods, develop our petroleum and natural gas, develop the rich natural resources of the country, improve the economic-social management system and create a stable initial balance and forward momentum for economic development. Therefore, in the coming years, we must attach particular importance to resolving the grain and food problem in order to meet the food needs of the people and we must provide an even better supply of grain and food products to meet the requirements of industrialization in subsequent years. As regards industry and the handicraft trades, importance must be attached to accelerating the production of consumer goods, producing export goods under contract and building and developing a number of important industrial sectors, such as the electricity and coal sector, the petroleum and natural gas sector, the building materials sector, the chemicals sector, the mechanical engineering sector, the metallurgy sector and so forth so that our country can, in the coming period, meet its need for fuel, meet an important portion of its needs for raw materials and supplies and be able to provide some of the mechanized equipment needed for the various economic sectors, especially agriculture, while expanding its export capabilities and meeting the needs for technical equipment and supplies that we still lack. We will gradually strengthen the material-technical bases of the communications-transportation sector, the scientific and cultural sectors and the other activities. On this basis, we will have sound conditions in the 1990's for strongly expanding the construction of the material-technical bases of socialism on a large scale, improving the material and cultural lives of the people and completing the task of socialist industrialization.

The above are several matters that pertain to bringing the contents of planning up to date, which we are doing now, and matters that we are continuing to research with a view toward thoroughly implementing the line of the party, the most pressing ones of which are planning the reorganization of production, coordinating it with the completion of socialist transformation in the South and the strengthening and improvement of the new production relations in the North, concentrating our efforts on strongly developing agriculture under a new structure and coordinating industry with agriculture from the very outset on a nationwide scale as well as within each province, municipality and district. We shall continue to conduct pilot projects and gain experience so that we can make steadier and more rapid progress, develop the economic potentials of each sector and each locality better, correct the imbalances that exist, extricate the economy from the present difficult situation and create firm springboards for gradually advancing our country's socialist construction.

QUALITY OF ECONOMIC INFORMATION IN NEED OF IMPROVEMENT

Hanoi NHAN DAN in Vietnamese 22 Nov 80 pp 1, 2

[Editorial: "Statistics and Economic Information"]

[Text] Management is the process of handling information arising in production and business and selecting decisions that yield the highest possible returns. To manage the planned economy, the party and state must have economic information on the actual situation, that is, information in the form of figures that reflect the process of social reproduction on the basis of a unified and scientific viewpoint. The Political Report at the 4th Congress of the Party stated: "In order to improve the management of the economy, we must perform good work in the field of economic information, strengthen statistical reporting discipline and organize a sensitive system of information from top to bottom and bottom to top to insure that the various levels of management can keep abreast of changes in production and everyday life so that they can take accurate and rapid measures."

In order to perform its task, the statistical sector has formulated and issued a system of national economic norms and many types of statistical reporting regulations for all sectors, conducted many basic investigations of the socio-economic situation and promoted the organization of unified cost accounting procedures within the national economy. By means of basic data on the socio-economic situation that is accumulated, adjusted, integrated and analyzed, statistical work and economic information directly contribute to the formulation of state plans and some economic policies. The statistical system has been established and strengthened and become a vital component of the management apparatus of the state.

The weakness of statistics and economic information is that the level of accuracy of much of the data in statistical reports is still low, especially data related to the implementation of plans, the evaluation of emulation achievements and the fulfillment of obligations to the state. The processing and transmission of information from the basic level to the central level are still being carried out slowly. Data do not promptly support the research and formulation of plans and policies. Statistical work by sector, by locality and by area, statistical work on economic balances and work on economic analysis are being carried out slowly.

Overcoming the weaknesses mentioned above and increasing the effectiveness of statistics and economic information are an important element in improving management.

The statistical sector has the task of orienting each of its activities toward supporting the formulation and the inspection of the implementation of the state plan for the improvement of economic management in a manner consistent with the steady advance to large-scale socialist production. It is necessary to further accelerate the formulation of a unified, consistent, sensitive and effective system of economic information extending from the basic level to the central level and gradually modernize the various categories of information with a view toward increasing the timeliness, accuracy and completeness of the various sources of information. We must improve and promulgate unified statistical-accounting reporting regulations for the basic units throughout the country; organize the keeping of statistics by sector, by locality and by territorial area in order to support the correct implementation of the principle of coordinating management and planning by sector with management and planning by locality and territory. Improving the quality of statistics and economic information cannot be separated from researching and applying modern science, such as electronic computer technology, information transmission technology and mathematical economics; we must collect and process statistical data well and attach importance to qualitative norms. In order to thoroughly implement the line of the party in its work and work methods, the statistical sector must correctly apply the economic laws of the period of transition in promptly and accurately analyzing and evaluating the situation surrounding the implementation of the economic plans and policies of the party during each period. In the immediate future, it must support the major requirements of the investigation and evaluation of the implementation of the second 5-year plan, the formulation of the third 5-year plan and the performance of the pressing economic tasks set forth in the resolution of the 6th Party Plenum and resolution number 26 of the Political Bureau.

In order for statistics and economic information to truly become an effective tool of the state in managing the planned economy, it is necessary to employ the combined strength of the entire state statistical system and the statistical systems of the various professional sectors. All sectors, levels and basic economic units must display a high degree of responsibility in complying with the regulations on cost accounting and statistical reporting and regularly concern themselves with building the cost accounting, statistics and economic information system.

ECONOMIC PLANNING, TRADE AND FINANCE

BRIEFS

BINH TRI THIEN ECONOMIC ZONES--Since 1976, more than 155,000 residents of Binh Tri Thien Province have gone to build new economic zones in and outside the province. The people's committees and committees for building new economic zones at all levels, together with various sectors and mass organizations in Binh Tri Thien, have created favorable conditions for the people leaving to build new economic zones. NORTH VIETNAM HARVEST REPORT

Hanoi NHAN DAN in Vietnamese 22 Nov 80 p 1

[Article: "The North Harvests 568,000 Hectares of 10th Month Rice and Plants 227,000 Hectares of Winter Crops"]

[Text] As of 15 November, according to the Statistics General Department, the provinces and municipalities of the North had harvested 568,000 hectares of 10th month rice, 50.4 percent of the rice transplanted, which represents nearly 260,000 hectares less than the same period of time last year. Over the past 10 days, as a result of working hard and more efficiently distributing labor between the harvesting of 10th month rice and the planting of winter crops, the North has harvested 26,000 hectares per day, an increase of 11,000 hectares compared to the average during the 10 preceding days; however, compared to the amount of rice that has ripened, harvesting is still slow.

The provinces of the Red River Delta have harvested 175,000 hectares, 40.2 percent of the area planted. Hanoi has harvested 57 percent of its crop, Haiphong 54 percent, Thai Binh Province 45 percent, Hai Hung Province 40.5 percent, Ha Nam Ninh Province 39 percent and so forth. The midland provinces have harvested nearly 50 percent of their crop, former Zone 4 has harvested 52.7 percent and Thanh Hoa has harvested 53 percent.

Some of the 10th month rice that was transplanted late has not headed yet; for example, 3,741 hectares of rice have not headed in Ha Son Binh Province.

Together with harvesting 10th month rice, the provinces and municipalities of the North have planted 227,000 hectares of winter crops, including 23,700 hectares of corn, 68,513 hectares of sweet potatoes, 43,600 hectares of western potatoes, nearly 38,000 hectares of vegetables and legumes, 2,085 hectares of soybeans, 603 hectares of tobacco, etc.

During the past 10 days, the North has planted an additional 61,000 hectares of winter crops. Although the season for planting corn and sweet potatoes has ended, the provinces are continuing to plant late corn and potatoes.

The various localities have intensified the cultivation of winter crops. Ha Bac Province has earthed up the furrows on 5,000 hectares of sweet potatoes and 2,000 hectares of corn. Generally speaking, corn and sweet potato crops are growing well. Pests have appeared at a few scattered places and positive steps are being taken to control them.

Preparations for the 5th month-spring production season are being intensified. The provinces have planted nearly 21,000 hectares of seedlings, plowed 142,628 hectares, spread duckweed on nearly 6,400 hectares, prepared 3.5 million tons of organic fertilizer, 23,000 tons of chemical fertilizer, etc. Generally speaking, preparations for the 5th month-spring season are proceeding slowly; little fertilizer has been applied and the rate of plowing has been slow; seedlings were sown too early and some have become old and will be wasted if fields are not harrowed rapidly and the seedlings mentioned above are not transplanted.

The districts of Tan Phu, Thong Nhat and Xuan Loc in the specialized soybean growing area of Dong Nai Province are harvesting more than 9,000 hectares of two-season soybeans and mobilizing farmers to fulfill their agricultural product obligation.

The various villages in the specialized soybean growing area, such as Phu Hoa, Phu Loc, Xuan Bao, Bau Ham, Cay Gao and so forth, have mobilized thousands of laborers and provided them with a full supply of implements, equipment, bags and so forth so that efforts can be concentrated on harvesting soybeans. The communications sector has provided additional trucks and has transported laborers to distant fields. The industrial, commerce and agricultural supply sectors of the province have supplied various types of equipment and various types of materials to farmers and production collectives.

The districts have also strengthened and constructed additional warehouse systems and supplied rice to the specialized cultivation villages. The Tan Phu and Xuan Loc purchasing stations have established many purchasing agents and teams and done a good job of mobilizing purchases, putting nearly 500 tons of beans into warehouses during the first 10 days of November alone.

The districts of Chau Phu, Chau Thanh, Thoai Son, Phu Chau and Cho Moi in An Giang Province are expanding the amount of area under the cultivation of soybeans to more than 10,000 hectares on 10th month rice fields. Chau Phu District has adopted a plan for planting more than 3,000 hectares of soybeans during this winter-spring season.

In order to successfully implement its plan for planting soybeans during the winter-spring season, the province has been guiding the districts in planning each specific area and making prompt investments in production: 58 kilograms of urea nitrogen and 60 liters of petroleum products and insecticide have been supplied for each hectare of soybeans.

AGRICULTURE

HANOI REPORTS NATIONWIDE AGRICULTURAL FIGURES AS OF MID-DECEMBER

BK230946 Hanoi Domestic Service in Vietnamese 2300 GMT 22 Dec 80

[Text] According to the General Statistics Department, as of mid-December, the northern provinces and cities had grown 83,000 hectares of 5th-month rice seedlings including 33,000 hectares of the "314" variety and 424,000 [figure as heard] hectares of the "Nong Nghiep 8" variety. This amount of seedlings is enough for the transplantation of 60 percent of the entire 5th-month crop area.

Various localities are guiding the peasants in growing seedlings in paddies and on hard ground on schedule and in sowing spring rice seed according to plan. Frost has accelerated the growth of the 5th-month seedlings. Various cooperatives are concentrating on quickly transplanting fully-developed seedlings. They have also plowed 641,000 hectares, 170,000 of them mechanically. This area represents a reduction of 100,000 hectares compared with the corresponding period last year.

The cooperatives have prepared 5,124,000 tons of organic fertilizers for the winter-spring crop, nearly as much as they did in the same period last year, providing an average of 4.7 tons for each hectares. Subtracting the amount of stable manure already applied to the winter crops, this means that only 2.3 tons of fertilizer are left for each hectare of the 5th-month spring rice, a mere 30 percent of the amount needed for intensive cultivation purposes. The amount of chemical fertilizers prepared for the entire crop has exceeded the same period last year by 5,000 tons, but the production of nitrogenous fertilizer has decreased by 3,000 tons. The cooperatives are trying to deploy their labor forces in a rational manner, collecting and processing stable manure as much as possible, producing green manure and rapidly growing duckweeds so as to ensure sufficient fertilizer supplies for intensive cultivation purposes.

On their part, the southern provinces and cities have planted 201,000 hectares of winter-spring rice, fulfilling more than 28 percent of the plan norm, a rate lower than the same period last year. Specifically, the provinces from Thuan Hai southward have planted 155,000 hectares, fulfilling more than 29 percent of the plan norm. The provinces achieving a relatively high rate of winter-spring rice cultivation were Long An, fulfilling 72.4 percent of the plan norm; Hau Giang, 40.5 percent; Ben Tre, 56.2 percent; Tieng Giang, 55.1 percent; and Phu Khanh, more than 47 percent. On their part, Cuu Long, Dong Thap and Tay Ninh provinces and Ho Chi Minh City have just begun to transplant winter-spring rice.

The southern provinces and cities have harvested 310,000 hectares of the 10th-month rice crop, or 16 percent of the transplanted area. Specifically, the provinces from Thuan Hai southward have harvested 166,000 hectares, or 9.8 percent of the transplanted area. Doing well were Nghia Binh, harvesting 62 percent of its rice area; Gia Lai-cong Tum, 69.4 percent; and Lam Dong, 68 percent.

This year, the 10th-month rice crop in the provinces from Thuan Hai southward developed well and suffered little from harmful insects and diseases, and the rice yields of the areas already harvested were higher than last year.

Along with harvesting rice, the localities have brought in more than 4,000 hectares of corn, sweet potatoes and cassava, nearly 1,300 hectares of vegetables and more than 2,000 hectares of industrial crops.

AGRICULTURAL REPRESENTATIVES COMMENT ON DRAFT RESOLUTION

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 27 Sep 80 p 4

[Article by Thanh Le: "The Agricultural Sector Helps To Resolve Various Problems Related to Agricultural Norms in the Draft Resolution"]

[Text] At the meeting hall of Enterprise Number 3 of the Livestock Feed Corporation, nearly 140 delegates from the production installations, state farms, enterprises, offices and departments of the agricultural sector had gathered and were intensely debating the outline of the draft resolution of the 2nd City Party Organization Congress.

In addition to discussing and evaluating the overall situation, these groups of delegates were very concerned about agricultural norms because they represent the task of their own sector and are one of the foremost tasks of the upcoming congress as regards improving the life of the people, cadres, manual workers and civil servants of the entire city.

Food Products: Can the Goal of 230,000 Hogs in 1981 Be Achieved?

Nguyen Ngoc Chuong, a delegate from the Livestock Feed Corporation, said:

"We are in the process of resolving a number of problems so that we can make full use of our machine capacity (100,000 tons per one shift per year and 200,000 tons per two shifts per year). We must expand the signing of contracts with neighboring provinces for the purchase of raw materials in order to maintain production levels. We are also planning to send livestock feed to the various provinces under two-way contracts. If these provinces raise many head of livestock, they will provide a source of food products for the city."

Nguyen Van Beo, the assistant head of the Livestock Production Corporation, also said:

"The draft of the resolution states that production will double in the next 5 years, and I think that this is a goal that can be achieved. In addition to providing incentive for the people to develop household livestock production, the state-operated installations must strongly develop their herds of swine breeding stock in order to create many types of cross bred hogs so that the people have cross bred hogs that can be raised over a large area. Prices must be revised and made more reasonable in order to stimulate production, in general, and livestock production, in particular."

How Can We Achieve the Target of 230,000 Tons of Grain?

Miss Hoang Thi Yen, a crop production engineer, stated:

"Our city has the ability to meet this target. However, we must concentrate on investing in science and technology in order to develop new varieties that are resistant to planthoppers and bear high yields; a rather high percentage of the supply of fertilizer, petroleum products and insecticides must be allocated to the key areas that raise two rice crops per year."

Nguyen Van Dong, a delegate from the Farmers' Association, said in addition:

"In addition to the supplies provided by the state, it is necessary to mobilize farmers to produce much organic fertilizer.

Our city also has state farms that raise pineapples and areas specializing in the cultivation of peanuts, tobacco and other industrial crops that can be exported and, in this way, enable us to import agricultural supplies, thereby stimulating the development of agriculture."

How Should Labor Be Deployed Within the Agricultural Sector?

Within the group of delegates representing shock youths and the new economic zones, Huynh Van Tam expressed the following opinion:

"In the deployment of labor within the various production sectors in the coming period, attention must be given to sending labor to clear land and restore fields to production in the districts in the outskirts of the city, especially in the Duyen Hai area. For the time being, the city should stop sending persons to the new economic zones in the provinces and concentrate on sending labor to clear land in the wilderness areas surrounding the city because these places can yield returns in both crop production and livestock production if they are planned as food production belts producing various types of food products and industrial crops for the city."

Miss Dang Thi Loan, a delegate from the force of shock youths, stated the following:

"In view of the present situation within the urban precincts, a situation in which there are still many persons who are able to work but refuse to work because they are lazy, it is suggested that the city take steps to teach and organize them in work and production so that they produce much material wealth for society."

The Outskirts of the City Must Rapidly Build a Strong Party in Order To Advance to Cooperativization

In the recent past, the party organizations in the rural areas outside the city have fulfilled their role of leading the revolutionary movements of the masses in the fields of production and agricultural transformation and have guided farmers along the path of earning their livings collectively. However, at many places, the force of party members is inadequate. I suggest that the city party organization send additional cadres and party members who possess good qualities and skills to the rural areas outside the city in conjunction with training and accepting into the party outstanding persons in the local revolutionary movements with a view toward improving the quality of party leadership at installations, especially within agricultural production in the outskirts of the city.

HANOI REPORTS 10 DECEMBER AGRICULTURAL NEWS

BK171338 Hanoi Domestic Service in Vietnamese 2300 GMT 10 Dec 80

[Agricultural review for the past 10 days]

[Summary] "According to the General Statistics Department, the northern provinces and cities have so far basically completed the 10th-month rice harvest with the average output estimated at a little more than 17 or 18 quintals per hectare.

"Various lowland and mountainous provinces have shifted their production efforts to planting vegetables, subsidiary food crops and 5th-month spring rice.

"As of the beginning of December, the southern provinces and cities had harvested 10th-month rice on more than 180,000 hectares or nearly 10 percent of the sown acreage with the output collected varying from 27 to 30 quintals per hectare."

Following the 10th-month rice harvest, the northern provinces and cities have concentrated on planting winter crops in areas where the sowing schedule still permits as well as on planting spring vegetables, subsidiary food crops and industrial crops.

"The northern provinces and cities have thus far planted more than 300,000 hectares of winter-spring vegetables, and subsidiary food crops with the areas of corn, sweet potatoes and legumes of all sorts reported to have increased over the same period last year."

The potato sowing period is already over. Various provinces are reported to have been able to sow winter potatoes on only about 70,000 hectares, or a little more than 50 percent of the planned target. Even Hai Hung, a province with the largest area of potatoes, has been able to achieve only more than 60 percent of the planned target.

"According to the Ministry of Water Conservancy, water levels in various rivers, canals and reservoirs are now lower than at this time last year. Providing water for the 5th-month spring crop production will therefore be very difficult. Fully aware of these difficulties, localities are striving to conserve water in order to sow rice seeds and duckweed. So far, localities have sown nearly 60,000 hectares of rice seeds, plowed nearly 500,000 hectares of land, prepared nearly 5 million tons of organic fertilizer and germinated more than 14,000 hectares of duckweed."

In the period ahead localities must concentrate on carrying out the following main tasks:

1. The northern provinces must care for and ensure enough water for winter crops along with efforts to step up the production of fertilizer. Meanwhile, the southern provinces must satisfactorily protect the already-planted 10th-month rice acreage against insect infestation and must continue the planting of winter-spring subsidiary food crops.

2. According to the General Meteorological Department, the weather will turn cold in the days ahead. Localities are therefore requested to pay specific attention to protecting their herds of domestic animals, especially cattle, from cold.

CSO: 4209

HANOI REPORTS 10-DAY NATIONWIDE AGRICULTURAL STATISTICS

BK011346 Hanoi Domestic Service in Vietnamese 2300 GMT 30 Dec 80

[Review of agricultural news for the past 10 days]

[Summary] "According to the General Statistics Department, as of late December, the northern provinces and cities had sown nearly 95,000 hectares of the 5th-month rice seedlings, of which 40 percent were spring seedlings. These seedlings will be transplanted on 70 percent of the planned cultivation areas."

Due to the current cold spell, however, the pace of sowing is rather slow and peasants have been shifted to plowing land and producing more fertilizer for the spring crop. As a result, localities have produced 5.55 millions tons of fertilizer to date, of which 2.5 millions tons have been delivered to rice and subsidiary crops cultivated areas.

"Also due to the cold spell, the northern provinces and cities last week only transplanted more than 36,000 hectares of the 5th-month rice and their development was slow and needed more care to maintain their normal growth.

"Meanwhile, the southern provinces last week concentrated their efforts on harvesting the 10th-month rice and transplanting the winter-spring rice. As of the end of December, these provinces had harvested almost 500,000 hectares of the 10th-month rice, representing more than 25 percent of the cultivated areas.

"In general, the yield of the 10th-month rice obtained in southern provinces this year is better than previous years with output collected varying from 22 to 25 quintals per hectare, and in some areas, as much as 30 quintals per hectare."

Along with the harvest work, the southern provinces and cities have transplanted almost 300,000 hectares of the winter-spring rice, achieving more than 40 percent of the plan norms. The pace, however, was very slow since the winter-spring rice crop is almost over. Urgent measures must therefore be applied to accelerate the pace of transplanting to fulfill the plan norms.

With respect to the growing of vegetables and industrial crops, various localities, primarily northern provinces, last week increased by more than 30,000 hectares.

Hai Hung Province planted more than 1,000 hectares of corn and 1,300 hectares of sweet potato, while Vinh Phu and Thanh Hoa provinces each grew 1,500 hectares of corn.

According to the meteorological and hydrological general department, the cold spell will remain in various localities for the next 10 days, thus these localities must concentrate their efforts on carrying out the following main tasks in the days ahead:

--The northern provinces must care for and effectively protect the spring seedlings sown since 10 December. They must satisfactorily care for the winter subsidiary crops and look after herds of cattle in mountainous areas to ensure that they are properly used in drafting work, especially during the new year days.

--The southern provinces must accelerate their harvest of the 10th-month rice to quickly fulfill their grain obligation task. Localities which were set back in transplanting the winter-spring rice must accelerate their work to fulfill plan norms according to schedule.

HANOI REPORTS ON 1980 FLOOD CONTROL PROGRAM

BK130856 Hanoi Domestic Service in Vietnamese 0400 GMT 13 Dec 80

[Text] In 1980, activities involving dike protection and typhoon and flood control have been carried out under conditions of repeated and extremely fierce natural calamities. During the year, there were 8 typhoons, 7 tropical depressions and 18 heavy rain spells. These typhoons and tropical depressions usually triggered heavy rainfalls, with sometimes as much as 600-700 millimeters of rain being recorded per day. The year 1980 has also witnessed many flashfloods, during which the levels on various rivers were reported to have swollen beyond the level that many dikes and dike supporting fences were designed to resist.

Overcoming countless ordeals and difficulties arising from a shortage of materials and means, various provinces and cities have made great efforts to prevent and combat typhoons and floods and to protect dikes. As of 30 November 1980, various provinces from Binh Tri Thien northward had built many dikes with the use of more than 2.877 million cubic meters of dirt, thus achieving 130 percent of the planned target. They set up 42 dike supporting fences with the use of 118,000 cubic meters of stone, thus achieving 108 percent of the planned target. And they planted approximately 135,000 bamboo bushes along river banks to hold back the water.

This year, in general, the construction of dikes and dike supporting fences has been done early in various provinces and cities. Many localities have been involved in dike construction since January. Activities involving dike construction and management and typhoon and flood control in 1980 have, however, still been fraught with numerous shortcomings. Patrols for detecting dike defects, dike supporting fences and sluices have not yet been scrupulously carried out. For instance, when teams detected some defects, they often failed to take timely steps to repair them, thus rendering repairwork more complex when the rainy and stormy season arrived.

The Ministry of Water Conservancy recently met with representatives from various provinces from Binh Tri Thien northward to draw on their experiences, to promote a determination to overcome shortcomings and to lay down measures so as to implement the 1981 plan for dike protection and typhoon and flood control satisfactorily. The conference requested that, as a first step, all localities conduct a survey of and examine the designs of various projects and then, on this basis, prepare a specific plan to build or repair these projects in such a way that they can cope with all bad weather situations in the forthcoming rainy and stormy season.

AGRICULTURAL MATERIAL SUPPLY CADRES MEET

BK131238 Hanoi Domestic Service in Vietnamese 0400 GMT 13 Dec 80

[Text] From 8 to 11 December, more than 450 representatives of the agricultural material supply sector, together with delegates from other sectors concerned, held a conference in Hai Hung Province to mark their sector's 20th founding anniversary and to review their activities, including the control and supply of materials and technical equipment, in support of agriculture over the past 5 years, 1976-80.

During the past 5 years, despite numerous difficulties arising from natural calamities and the threats posed by the enemy, the agricultural material supply sector has been able to serve agricultural production in an ever more satisfactory manner. Since 1976, the sector has carried out its activities in support of agricultural production under many different forms on a nationwide basis. To date the total supply value per year has increased by nearly four times--from 80 million dong to 300 million dong--over that during the period of the first 5-year 1961-65 plan; that of chemical fertilizer by 2 times, insecticide by 4 times, and draft buffalo and cattle by 1.5 times.

The guidelines and tasks set forth for the agricultural material supply sector in the days ahead involve the need to successfully create basic changes in the methods and quality of running business from the standpoint of organization. This is to combine production with consumption and industry with agriculture with the aim of encouraging increased production and overcoming the tendency of running business with simple methods. It is also necessary for the sector to intensify and improve its organization in a direction where it can satisfactorily implement the guidelines for classifying material supply stations in all districts while ensuring that the supply of materials is placed under the unified management of the sector. To achieve this goal, it is necessary to establish professional plans and programs as well as procedures and policies for implementation from the central level to the units using the materials supplied.

The supply of materials must be conducted in such a way as to help encourage production with the application of advanced science and technology, and consolidate and improve the new production relations in the north and carry out the socialist transformation of agriculture in the south.

COLLECTIVE FARMING SAID TO RAISE LIVING STANDARDS

OW060807 Hanoi VNA in English 0712 GMT 6 Jan 81

[Text] Hanoi, 6 Jan (VNA)--On an area pockmarked with shell and bomb craters from the resistance wars against the French and the U.S., the peasants of the production collective No 2 at Tram Vang Hamlet, Tay Ninh Province, some 100 kilometres northwest of Ho Chi Minh City, have grown more than 40 hectares of rice, averaging three tons per hectare per crop.

Huynh Thanh Pho, 46, head of the collective told us that collective farming has helped many peasant families avert famine in recent years.

Pho returned to Tram Vang after the liberation of South Vietnam in April 1975. Before liberation this hamlet was a strong revolutionary base and a "free fire" zone for U.S. and Saigon troops. Even several months after liberation, most villagers still had to depend on relief rice from the local administration because they could not start production on the heavily devastated land and also lacked farm tools and draught cattle.

At the start in March 1979, the collective athered 17 poor peasants working on 24 hectares of arid land. It now comprises more than 30 peasant households, almost 40 hectares. The fields have been reshaped to facilitate irrigation and a canal has been dug to make the fields yield two crops per year. A repair workshop, a sugar mill with a daily output of 750 kilos and several warehouses and drying yards have also been set up.

Do Van Hoa, who has just graduated from the Hanoi College of Agriculture was assigned to Tram Vang to initiate the peasants in the new farming techniques and experiment with new rice strains.

The income of the collective members is higher than that of individual peasants. The six-member family of Nguyen Van Tai now earns six times its previous income.

Funeral and wedding services are looked after by the collective which also foots the medical bills of its members. More and more individual peasants have joined the production collective.

Nguyen Van Vien, a 70-year-old peasant said: "I have lived here many years and gone through the years of war, but not until now has my familygot enough food and really known happiness. There's no doubt about the superiority of collective farming.

SOUTH VIETNAM 1981 WATER CONSERVANCY PLAN

Hanoi NHAN DAN in Vietnamese 19 Nov 80 pp 1, 4

[VNA News Release: "The 1981 Water Conservancy Plan of the Provinces of Former Nam Bo"]

[Text] Recently, in Ho Chi Minh City, the Ministry of Water Conservancy met with the comrades in charge of water conservancy work in the provinces of the Red River Delta and eastern Nam Bo to discuss measures for implementing the 1981 water conservancy plan, beginning with supporting the 1980-1981 winter-spring production season.

In the fall and 10th month seasons of 1980, practically all provinces of former Nam Bo that established their production areas on the basis of the planning of water conservancy areas exceeded their plan norms on the amount of area under cultivation and planted their crops on schedule. Frequently flooded areas, such as An Giang and Dong Thap Provinces and a portion of Hau Giang and Long An Provinces, constructed embankments and protected hundreds of thousands of hectares of rice from waterlogging. As a result of attaching importance to building embankments to retain water and building drainage projects, a number of acidic, saline areas in the districts of Can Duoc, Can Giuoc, Ben Thu and Tan Chau in Long An Province, the area once called in Soc Trang in Hau Giang Province and Vinh Loi and Gia Rai in Minh Hai Province still had good summer-fall rice crops this year and achieved rather high yields. The water conservancy sectors of the various provinces strengthened their management of farmland water conservancy projects, kept abreast of the drought and waterlogging situations, promptly mobilized pumps of the state and the people and coordinated the use of these pumps with the natural flow of water to irrigate nearly 437,000 of the 508,769 hectares of summer-fall rice that were transplanted.

The winter-spring season is suited for high yields, but there must be effective control of water in order to achieve stable yields. The 1980-1981 winter-spring plan of the provinces in former Nam Bo is higher than the 1979-1980 plan by 30,000 hectares, thus, the water conservancy sector must provide water for new production areas. In water conservancy work in support of the 1980-1981 winter-spring season, attention must be given to the following important measures: establishing an efficient schedule for each area and providing a supply of fresh water throughout the season; at places that have the habit of retaining rainwater and have ample water for rice crops, the management of the use of this water must be intensified and projects that make thorough use of natural sources of water must quickly be put into use; the construction of project systems must be continued in order to increase irrigation capacity; importance must be attached to projects that utilize the flow of the tides to provide water; and the main canals now being dredged must rapidly be completed in order to create the conditions for water to flow into fields.

The conference launched a movement among the people to build small-scale water conservancy projects, concentrate on continuing the construction of pump stations and the various levels of canals in order to deliver water to fields, organize the management and use of pump forces well and adopt a plan for repairing pumps.

'NHAN DAN' ON CHARACTERISTICS OF NAM BO PRODUCTION COLLECTIVES

BK290756 Hanoi Domestic Service in Vietnamese 2300 GMT 25 Dec 80

[NHAN DAN 26 December editorial: "Dominant Characteristics of Progressive Production Collectives in Nam Bo"]

[Text] Developing their tradition of solidarity, combat and production, the peasants in the southern part of our country have promptly embarked on the path of collective work, going from low-level, simple forms to the reorganization of production and labor on appropriate scale in order to do away with exploitation and its causes, develop their right to collective mastery and gradually advance toward large-scale socialist production.

The peasants in Nam Bo have, after steadily going through various preparatory steps, gradually expanded the movement and established production collectives and a number of medium-size cooperatives. At present there are almost 4,000 production collectives which are in fact small cooperatives, and 137 cooperatives drawing the participation of about 10 percent of the total number of peasants' families and working on about 7 percent of the total cultivated area. Despite difficulties and weaknesses that are unavoidable in the initial stage, the newly established production relations have been constantly consolidated, stabilized and gradually expanded.

Over the past 2 years the Mekong Delta has repeatedly reaped bumper crops. The rice output of 1980 increased by over 800,000 tons over 1979. Many types of industrial crops have been developed. These results are possible thanks to the impetus of the new revolutionary movement of the peasants.

In the process of building and developing the economy, progressive production collectives have emerged in ever greater numbers everywhere. The predominant feature of these units consists of their correct application of the line for cooperativization and agricultural development to the local conditions, and their simultaneous conduct of the three revolutions with the scientific and technical revolution serving as the kingpin to create a new production force. The production collectives have appropriately collectivized the main production materials; and, most important, have established the right to collective ownership over land. This change in the ownership system, coupled with the reorganization of production and the division of labor, has given rise to new production orientations, a new system of management and the application of the "to each according to his work" principle.

The progressive units have developed the strength of production relations together with small-scale irrigation designed to transform ricefields in order to gradually create the material factors for using new rice strains and, on this basis, to take advantage of favorable natural conditions to develop production along the line of intensive cultivation, multicropping and area expansion. The value of each manday is now generally estimated at 10 kg of paddy or more. The production collectives now have set up funds for capital accumulation to expand production and fulfill their grain obligation. A number of public welfare facilities have been built and a cultural life has been formed, bringing initial changes to the face of the countryside. Other activities have been carried out equally well.

Localities that have closely combined the building of the party and mass organizations with the movement for cooperativization have recorded good results. Although developing under different circumstances, the progressive production collectives are vivid images serving as proof of the distinct superiority of the new production collectives are vivid images serving as proof of the distinct superiority of the new production relations; they hold a persuasive power over the peasants, testify to the correctness of the party's line and negate all slanderous allegations against the movement for cooperativization. The progressive production collectives serve as a model for the New York method and a school of the movement for agricultural cooperativization in the initial stage in the Nam Bo provinces. From there, appropriate steps will be taken to gradually reach more complex forms.

An important task is to foster the progressive units so they will constantly score new achievements and always advance step by step to guide the overall movement. Attention must therefore be given to consolidating the weak establishments, helping those units which are lagging behind or encountering difficulties achieve good or outstanding ratings, and at the same time assisting solidarity production teams in creating the conditions for building themselves into production collectives. It is also necessary to overcome the disparity in labor productivity between strong and weak units and to popularize the work experience of progressive models among all establishments and units in order to create a new impetus for steadily advancing the movement for agricultural transformation.

Nam Bo, with its vast and fertile lands and its abundant labor, plays a vital role in the settlement of the problem of grain and food for the whole society, in the supply of raw material for industry and agricultural productions for export, and in the improvement of the people's life. By positively and firmly transforming agriculture along the socialist path while developing production, we will be able to create new forces strong enough to rapidly and exploit such rich economic potentials and abundant labor in order to build a new plentiful and happy life.

AGRICULTURE

BRIEFS

HAI HUNG WINTER CROP--As of 5 December, agricultural cooperatives in Hai Hung Province had harvested 92 percent of the 10th-month rice area and planted 53,914 hectares of winter crops, fulfilling 88 percent of the plan. Along with continuing to plant late winter rice and vegetables and caring for the winter crops already planted, the cooperatives are actively preparing for the 5th-month spring crop. The province has plowed 36,150 hectares, grown 2,690 hectares of rice seedlings, planted 1,360 hectares of duckweeds and prepared 152,100 tons of stable manure. [BK170303 Hanoi Domestic Service in Vietnamese 2300 GMT 11 Dec 80]

LONG AN WINTER-SPRING RICE--Vam Co, Ben Thu and Can Duoc districts and Tan An city in Long An Province completed the planting of 38,000 hectares of winter-spring rice crop in November using short-term, leafhopper-resistant strains. A number of production collectives and peasants in Ben Thu and Vam Co also planted dozens of hectares of duckweeds on winter-spring ricefields. [BK170303 Hanoi Domestic Service in Vietnamese 2300 GMT 11 Dec 80]

DONG THAP GRAIN COLLECTION--According to Dong Thap Paper, Dong Thap Province has to date collected nearly 27,000 tons of summer-fall grain, fulfilling 45 percent of the plan and bringing the total amount of grain collected in the province since early this year to 77,000 tons, or 74 percent of the annual target. Chau Thanh district and Sa Dec city set the pace, overfulfilling the plan by 4 to 19 percent. [Text] [BK170303 Hanoi Domestic Service in Vietnamese 0400 GMT 11 Dec 80]

TIEN GIANG RICE TRANSPLANTING--Last week Tien Giang Province transplanted 4,000 hectares of winter-spring rice, bringing the total area of rice planted since the beginning of the crop to more than 43,300 hectares, fulfilling 51 percent of the plan. Go Cong district set the pace, fulfilling 100 percent of the plan. Generally speaking, Tien Giang now stands as one of the two provinces in the Mekong River delta achieving the fastest winter-spring planting pace. However, because large areas are still flooded, a number of key winter-spring rice growing districts such as Cai Be and Cai Lay have planted only little rice. To attain the target of 85,000 hectares of winter-spring rice, the province is sending the bulk of its draft power, supplies and seeds to the key districts to help them plant rice as soon as flood water recedes. [BK170303 Hanoi Domestic Service in Vietnamese 1100 GMT 11 Dec 80]

TIEN GIANG PADDY COLLECTION--Since early this year, Tien Giang Province has collected more than 84,590 tons of paddy, fulfilling 84.59 percent of the annual plan. Doing well were Go Cong Dong district, fulfilling 90.8 percent of the plan; and Go Cong Tay district, 98.8 percent. Some districts, including Cai Lay, Cai Be and Chau Thanh, have collected from 16,500 to 21,000 tons each. Although still falling short of the target, the amount of grain collected by Tien Giang thus far represents almost a twofold increase over 1979. [BK170303 Hanoi Domestic Service in Vietnamese 2300 GMT 10 Dec 80]

1980 FLOOD WORK, PREVENTION REVIEWED--Hanoi, 25 Dec (VNA)--The year 1980 saw unusually high water levels in the Mekong River. The highest water mark on the Tien Giang, a tributary of the Mekong in An Giang Province, was 4.61 metres almost equal to the highest level in the 70's. Floods also occurred in many localities in the eastern part of the south. Almost 20,000 hectares of paddy fields and more than 1,500 hectares of industrial crops were submerged in Dong Nai, Lav Dong and Song Be provinces. The floods ruined or damaged eight irrigation systems of various sizes in these provinces. In Thuan Hai Province on the central coast, repeated floods in October, the worst so far in the province, caused substantial damage. Big efforts have been made to limit the damage caused by floods. In An Giang Province more than 130 dykes totalling some 100 kilometres have been built or repaired to protect more than 40,000 hectares of rice. Dong Thap Province has built more than 140 small dams to protect tens of thousands of hectares of rice. The central commission in charge of the fight against floods and storms recently met with its branches in the southern provinces to review the fight against floods in 1980 and work out more active measures to combat floods in the south especially in the Mekong River Delta in 1981. HEALTH, EDUCATION AND WELFARE

STRONG MEASURES URGED AGAINST DECADENT MUSIC

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 27 Sep 80 p 3

[Article by Pham Tuyen: "Be Vigilant Against Decadent Types of Songs"]

[Text] Our public health sector adheres to the slogan "an ounce of prevention is worth a pound of cure." Many dangerous diseases that once spread very rapidly have now been extinguished as a result of intensified disease prevention: germs no longer have a favorable environment in which to spread and everyone has been equipped with common knowledge that enables them to recognize the symptoms of disease and prevent diseases; at the same time, improving one's physical condition through moderate living and by participating in sports and physical culture is considered a measure of foremost importance.

I think that the guideline of the public health sector can also be applied in some areas of our musical activities at this time. It is very regrettable that the harm caused by the various types of sick music is generally not given appropriate attention; we feel nothing out of the ordinary in the face of the negative phenomena in this area at a time when the harm being caused is extremely deep and persistent. It will be too late if we wait until the poisons of this music have eaten into the souls of some youths and led them to mistakes in everyday life as well as political life. The experience of many socialist countries has clearly shown this to us. In the sharp struggle to build and protect our socialist fatherland, we cannot be so naive as to think that there are no insidious schemes of the reactionary powers in this field of entertainment. They have long attached importance to this psychological front and they do not lack experience in this area.

I would like to discuss the recent phenomenon of the reprinting and distribution, in a rather open and brazen manner, of old songs of the U.S.-puppet period and a number of other decadent songs. While our friends in the Ho Chi Minh City Youth Cultural Office are enthusiastically printing and distributing new songs about youth, about the success of the Vietnam-Soviet space flight and so forth to support the political song festival that was opened in the recent historic month of August, on the music market and at private book counters in the city, we see many individual pieces of music or albums recently printed by hand, including very many old songs, on sale. The most popular form, and the one that is most difficult to distinguish as decadent, is the "selected songs" collections numbered consecutively beginning with volume 1, which consist of an odd assortment of songs "selected" on the basis of no particular theme whatsoever. One does see a few songs about opposing expansion along the border, about the olympics and so forth or a few songs from the USSR, Cuba and the GDR mixed with old ballads of Saigon, songs from France, the United States and so forth. However, there are also albums that include a number of rather brazenly reprinted old songs (or new songs produced clandestinely) with such titles as "Because I Am a Catholic Priest," "Is There Anything New in Paris?", "The Scars of Hatred on the Back of the Wild Horse," etc.

I have not had the chance to listen to the songs mentioned above, but from reading the music and lyrics of the songs, I do not view them as songs expressing time honored sentiments or as light types of music with innocent themes. Even the most indifferent person can see their decadent political designs, their ambiguous words and all of this is being publicly displayed and sold along the sidewalks and at the book counters in the city.

We should not be unconcerned with the dissemination of these volumes of sheet music simply because they have appeared on a scattered basis in some southern provinces and in the North as well.

The disease organisms of this type of music can very easily find a place to hide in order to undermine the wholesome spiritual lives of our youth. It is our hope that the cultural agencies in Ho Chi Minh City as well as at other places will take strong measures against this illegal printing and dissemination of music. On the other hand, each of our youths must adopt the attitude of denouncing these decadent and harmful songs.

Of these various types of songs, it is difficult to thoroughly analyze each and every one; however, a common negative trend can be seen in them: practically all of them seek to exploit the sadness, the feeling of loss and so forth over a love not returned. When first heard, one might think that these are ordinary feelings, and even when we reach communism, the ups and downs of love will surely still remain. However, when there are dozens, even hundreds of love songs dealing with these negative, sad feelings, the problem assumes totally different proportions. What we lack are very good, very profound songs that have the effect of elevating the soul of those who sing them and deepening our love of life and confidence in the future. The danger of these types of songs is that they attack the "seven passions" of the young by means of vague, consoling tunes. "The sad person never knows joy." Moreover, there are persons who want to turn their own "seven passions" into a defeat for the revolution and wish to view life through the melancholy eyes of a person who has failed in love, which itself is enough to turn pure feelings into melancholy ones. And, the nurturing of a "yearning for the past" can also have other unwholesome motives.

Finally, we must make mention of a concept that is still vaguely understood by a number of youths who want to separate political life from art as if there were no link whatsoever between the two. They are apprehensive of some songs that deal to some extent with the political problems being faced in our society at this time (of course, we do not encourage jingles which, in the name of supporting politics, violate the minimum standards of art); this is a matter that must be raised in the training of youths in the viewpoint toward art in the club activities of youths at all places. In this positive significance, the first phase of the National Political Song Festival was opened in Ho Chi Minh City during the days we commemorated the 35th anniversary of the August Revolution and National Day, 2 September. Happily, this first festival achieved fine results. Of the 25 political song groups from 14 provinces, cities and army units in Nam Bo that participated, I would like to talk about a couple of aspects of the program presented by the political song group of the Ho Chi Minh City Shock Youth, the unit that was awarded the gold medal and whose six members received awards (3 gold medals and 3 silver medals), having received a unanimous vote from the examination committee as well as the support of practically everyone who participated in the festival. The program presented by them showed us the rich spiritual life of the youths of the city, showed their lofty dreams, their intense feelings, their deep love of life (as seen in the songs "Oh, Sweet Life," "Youths and Their Aspirations," "Our Song" and so forth), honest, deep thoughts and the happy, amusing aspects of the struggle to mold the new youth (as seen in the songs "I Walked Through the Arbor," "Why Didn't You Tell Me?", "I'm Joining the Army," "There's a Lad on My Street" and so forth). The political problem here is not a dry, remote one, but one that is closely linked to the feelings of everyone and it is herein that its artistic attraction originates. It is my hope that model units such as this group become increasingly numerous, beginning in Ho Chi Minh City, so that our youths have interesting, wholesome and happy musical activities; at the same time, this is one of the most positive measures that can be taken to help to repulse and eventually abolish the other negative phenomena in the musical activities of youths. And, we are fully capable of doing this in the near future.

HEALTH, EDUCATION AND WELFARE

PROBLEMS IN DISTRIBUTION DISCUSSED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 27 Sep 80 pp 1, 4

[Article by Van Quang: "The Circulation-Distribution Sector Discusses How To Provide Cadres and the People with Two Meals Per Day"]

[Text] This was the central theme which 120 representatives of the circulation and distribution sector intensely debated during 2 days of serious, urgent work and concerning which they contributed their opinions for incorporation in the outline of the draft resolution of the 2nd Party Organization Congress.

With a fervent desire to contribute their opinions to the party, the representatives contributed many opinions of value concerning a number of issues. As regards evaluating the city's situation since the 1st Party Organization Congress, particularly with regard to the commerce sector, the representatives observed: the evaluations contained in the draft are consistent with reality but not truly complete. Although many efforts have been made, socialist commerce still does not control the sources of goods and does not meet the requirements of production, consequently, many difficulties are encountered in organizing purchases.

Abandoning the Administrative-Supply Style of Management in Commerce and Gradually Overcoming Obstacles

The administrative-supply style of business together with inadequacies in management and specialized skills have prevented us from meeting assigned norms and also caused production to develop slowly. Concerning this matter, many representatives stated that the draft resolution should more strongly emphasize the shortcomings and weaknesses of the commerce sector in order to heighten the sense of responsibility of the various units.

The draft resolution of the 2nd Party Organization Congress comes into being at the same time resolution 26 of the Political Bureau is being implemented, thereby opening fine, new prospects. One representative enthusiastically observed: this is a time when the obstacles facing our sector will be overcome, the things that have slowed production and not had a positive impact will be eliminated, the road forward has widened and we must move rapidly forward on the basis of the present situation.

Legal Norms Must Be Established for Every Product

In section 5, the atmosphere surrounding the discussion was very intense. Everyone wanted to contribute opinions concerning the draft, consequently, everyone had to register so that they could express their opinions in order. One representative raised the following question: "Why does the Vegetable and Fruit Corporation have a specific purchasing norm of 50,000 tons of vegetables per year but Food Products Corporation Number 1 and Food Products Corporation Number 3 have no specific norms included in the draft resolution?"

The representative of the marine products sector expressed the following opinion: "Following the 1st Party Organization Congress, the norm assigned by the upper level to Food Products Corporation Number 3 was 15,000 tons of fish per year. We are very capable of meeting this norm, but we have not met this norm in any one of the past 3 years; should we not determine the reasons why we have failed to meet this norm?"

The representative of Food Products Corporation Number 3 also stated: "If assigned norms are fully implemented, if losses are compensated for at actual prices, if a correct price policy is adopted and if appropriate bonuses are offered, the norm of 15,000 tons of fish will surely be met."

And, what should be done concerning the purchasing of pork? Many opinions were expressed concerning this matter. Everyone agreed that the city can only establish a partial balance between livestock production and crop production. Specialized vegetable production areas have been established and collective livestock production installations and the household livestock production movement have been encouraged; however, potentials have not been fully developed, and breeding stock, bran and so forth are not under the control of the commerce sector, consequently, it encounters difficulties managing and purchasing pork. One representative expressed the following opinion: if the city party committee were to concentrate on providing guidance in this area, the commerce sector would promise to provide a full supply of pork for sale to the people. The opinion was also expressed that providing incentive for agencies and enterprises to raise and slaughter their own hogs for distribution to their workers with the state supplying the balance of the pork needed is impractical. Because, if this were done, agencies and units would have to construct many livestock pens, concern themselves with breeding stock and bran and perform many other jobs that would adversely affect their specialized work.

The representatives unanimously agreed that investing in the development of production is the correct direction to take; this, in conjunction with adopting a series of business and management measures, receiving centralized guidance and adopting strict regulations and laws, will surely lead to high and stable economic returns.

On the basis of the analyses presented above, the representatives suggested the practice of allocating the balance of the vegetables, fish and meat needed be re-examined as there are still many complicated problems regarding this practice that must be resolved.

It Is Necessary To Change the Mode of Business by Organizing Purchases and Distribution and Raising the Professional Qualifications of the Persons Engaged in Commerce Work

The representatives of the various sections expressed the following opinion: at a time when the old mode of business cannot be immediately abolished, attention must be given to the assignment of purchasing norms. The outline must state: it is necessary to change the mode of business in all three areas: the organization of purchases and the organization of distribution in conjunction with constantly improving the ability to manage the economy, specialized skills and the ability to manage the market.

In party building, the commerce sector has learned many important lessons concerning the use of cadres; many cadres and party members possess good qualities but, because they hold leadership positions and because their management and specialized skills are weak, work has progressed slowly, business matters have been neglected, losses have been incurred and products have been damaged. Many representatives suggested that the draft of the resolution propose a policy that gives preferential treatment to veteran cadres who have satisfactorily served the revolution while boldly putting young, competent cadres in leadership positions at the various business units. On this basis, a skilled corps of cadres can be trained for the party to perform circulation and distribution work.

As regards the distribution of goods, the representatives unanimously agreed that distribution must be fair and reasonable, that products must be distributed to the proper persons and that distribution must comply with standards, be timely and convenient while combating the practices of distributing goods on the basis of averages and on the basis of subsidies. Recent facts have shown that there are still very many shortcomings in the distribution of goods. The viewpoint of the party is that circulation and distribution must have a strong impact upon production and everyday life. The policy of the party is a very correct one but the measures that have been implemented have not been effective. One comrade from one corporation expressed the following opinion: at present, distribution is very bureaucratic, very arbitrary and goods do not reach the hands of workers. The sale of food products to cadres, manual workers and civil servants is not convenient. A number of stores allocate their high quality goods for sale at high prices in order to raise their business revenues while distributing poor quality goods to cadres, manual workers and civil servants. Someone else expressed another opinion: some agencies and units are not concerned with managing their purchasing records well and, as a result, have allowed decadent personnel to take advantage of the purchasing of high quality goods and slip them onto the market.

The representatives suggested that the mode of distribution of goods be improved so that goods reach the hands of the persons for whom they are intended in a convenient and fair manner.

HANOI'S REVIEW OF EVENTS FOR 16 JUL-15 AUG 80

Hanoi VIETNAM COURIER in English Sep 80 pp 32-31

[Text] **(16 July — 15 August 1980)**

July

16. Prime Minister Pham Van Dong receives a Soviet Party and Government delegation led by N.V. Talydin, member of the CC of the CPSU and Minister of Communications.

— Inauguration of the Hoa Sen (Lotus) satellite ground station built with Soviet assistance.

17. According to the Vietnam Commission of Inquiry into Crimes Committed by the Chinese Expansionists and Hegemonists during their War of Aggression in the first 6 months of 1980, the Chinese side were responsible for 1,120 armed provocations including 500 raids and ambushes on Vietnam's territory; more than 300 flights of jet fighters violating Vietnam's air space to a depth of 15-20 km; 350 armed vessels violating the territorial waters of Vietnam from Quang Ninh to Quang Nam — Da Nang provinces. The Chinese aggressors killed and wounded 100 Vietnamese civilians and caused great losses of life and production.

— A large meeting in celebration of the 25th anniversary of the signing of the agreement on economic co-operation between Vietnam and the USSR is held in Hanoi.

18. The conference of Foreign Ministers of Laos, Kampuchea and Vietnam held in Vientiane on 17 August is successfully concluded, adopting a statement on problems concerning the three countries and a resolution on international problems.

19. Opening of the Moscow 1980 Olympics. Vietnam attends the games for the first time.

22. At the 26th international geological conference held recently in Paris, the Vietnamese delegation confirmed that Hoang Sa and Truong Sa Archipelagoes are Vietnamese territory.

— Foreign Minister Nguyen Co Thach receives Robert Jackson, special envoy of the UN Secretary-General for the co-ordination of aid to Kampuchea.

23. The Soviet Union launches the "Soyuz-37" spaceship from Baikonur Cosmodrome. The international crew includes the commander of the ship.

the Soviet pilot-cosmonaut V.V. Gorbatko and the Vietnamese cosmonaut Pham Tuan. Vietnamese Party and Government delegation led by General Vo Nguyen Giap attends the launching of the spaceship.

24. The spokesman of the Foreign Ministry issues a statement rejecting arrogant allegations by a Chinese Foreign Ministry spokesman on 21 July concerning Vietnam—Soviet co-operation in oil and gas exploration and exploitation on Vietnam's southern continental shelf.

25. Signing in Berlin of the minutes on the exchange of instruments of the ratification of the consular agreement between Vietnam and the GDR.

30. Deputy Prime Minister To Huu receives a delegation of the UN International Children Funds (UNICEF) led by its Director General James P. Grant.

31. After 8 days in space, the Vietnamese and Soviet cosmonauts return safely to earth. The Vietnamese State decides to bestow on them the titles of Hero of Labour and the Ho Chi Minh Order. The Soviet State decides to award the Order of Lenin to V.V. Gorbatko and the title of Soviet Hero, the Order of Lenin and the Gold Star Medal to Pham Tuan.

— Prime Minister Pham Van Dong sends a message of greetings to Indian Prime Minister I. Gandhi on India's success in launching the Rohini satellite.

— The SRV decides to recognize the Republic of Vanuatu.

August

2. *Nhan Dan* publishes the full text of the memorandum issued by the Kampuchean Foreign Ministry on the present tension along the Kampuchean—Thai border.

— The spokesman of the Kampuchean Foreign Ministry issues a statement protesting against continued Thai violations of Kampuchea's independence, sovereignty and territorial integrity.

3. Prime Minister Pham Van Dong receives Kurt Waldheim, UN Secretary-General.

— Foreign Minister Nguyen Co Thach holds talks with UN Secretary-General Kurt Waldheim.

5. *SPK* (Kampuchean News Agency): Long An province (Vietnam) has donated to Svay Rieng province 355 tons of seeds and helped it train hundreds of tractor drivers and plant protection workers. Ben Tre province has helped Kandal province build two pumping stations with a total capacity of 4,300 cubic metres per hour.

6. The Vietnamese Foreign Ministry issues a statement strongly condemning Israel's decision to make Jerusalem its national capital and demanding it to rescind this decision and fully respect the various UN resolutions on the status of Jerusalem.

CSO: 4220

— The spokesman of the Kampuchean Foreign Ministry issues a statement to the effect that "ASEAN's 12-point proposal" only causes a tense situation along the Thai-Kampuchean border.

— Acting President Nguyen Huu Tho issues an appeal on the occasion of the International Year of the Disabled.

8. *AFP*: A UNICEF representative in Geneva states that all international aid to Kampuchea has reached the population.

9. A large meetting in celebration of the 25th anniversary of the establishment of economic and trade relations between Vietnam and Czechoslovakia is held in Hanoi.

10. *SPK* (Kampuchea New Agency) denounces Bangkok for using the question of refugees as a pretext to serve Beijing's and Washington's dark schemes.

11. *VNA*: On the occasion of the 35th anniversary of the August Revolution and the National Day, Su That (Truth) Publishing House publishes Prime Minister Pham Van Dong's works entitled: "Some Problems of the State."

— *SPK* (Kampuchean News Agency): The delegation of the Kampuchean People's Revolutionary Council led by Foreign Minister Hun Sen concluded its visits to several countries in Western Asia, Latin America and Africa. During the visits, many countries expressed strong support for the Kampuchean people in national defence and construction.

— Arrival of a delegation of the Ministry of Agriculture of the People's Republic of Kampuchea led by its Minister Men Chhan.

— The SRV Ministry of Foreign Affairs hands a note to the Ambassador of the Philippines in Vietnam protesting against the Philippines' seizing of Comodore Reef in the Vietnamese archipelago of Truong Sa.

— An economic delegation of the SRV Government, led by Deputy Prime Minister Do Muoi, leaves Hanoi for Bucharest to attend the 6th session of the Commission for Economic, Scientific and Technological Co-operation between Vietnam and Rumania.

— Foreign Minister Nguyen Co Thach leaves Hanoi for an official visit to the People's Republic of Kampuchea.

13. The spokesman of the SRV Ministry of Foreign Affairs issues a statement rejecting the US slander that Vietnam is using toxic chemical in Laos and Kampuchea.

14. *VNA*: Twenty solidarity organizations of the United States, Canada and the American Friends' Service demand the ousting of the Pol Pot clique from the United Nations.

— Acting President Nguyen Huu Tho sends a reply to Madagascar's President: "Vietnam is ready to attend a Summit Conference of all countries concerned with peace in the Indian Ocean."

— A delegation of the Swedish Workers' Communist Party led by its Chairman Rolf Hagel, arrives in Vietnam on a friendship visit.

— Inauguration of the first Lao film processing workshop built with the help of the Vietnamese film industry.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

KNOWLEDGE OF TRIBAL LANGUAGE HELPS BORDER SECURITY SOLDIER

Hanoi QUAN DOI NHAN DAN in Vietnamese 10 Nov 80 p 3

[Article by Vu Manh Tuong: "Today's Youth: Learning the H'mong Language"]

[Text] That afternoon, as Senior Sergeant Pham Van Tinh (post number 41, the Thanh Hoa Provincial Border Security Troops), half soaked from the rain, placed his knapsack down inside the house of a revolutionary family in Keo Huan Village, a woman spoke a long sentence in the local tongue and pointed her finger toward the border. Tinh, who did not comprehend a word she was saying, stood there stupefied. Realizing this, she repeated the words "Chi pau a" over and over again and pointed toward the border repeatedly. From the concerned look on her face and her pointing toward the forest, Tinh guessed that something was wrong. He quickly followed her over a few hills and ran to a spot near the border. There, he discovered what she was talking about: several minutes earlier, some decadent elements stole her only water buffalo and took it across the border. She looked despondent. That night, Tinh did not sleep a wink. The expression on the woman's face kept coming back to him, an expression that implored him for help and caused him to think. Would it not be invaluable for him to know their language so that he could mobilize and help the people when they encounter difficulties? After giving the matter some more thought, he reached a conclusion: in order to protect the border well, a soldier must know the local language. Only in this way can he mix among the people and feel what they feel. Tinh turned on his lamp and wrote in his notebook the words spoken by the H'mong woman that day, "Chi pau," which mean "I do not know." From that night on, every time he visited a village for a meeting or worked with the people making slash and burn fields, he asked them about everything he saw. When the people answered in H'mong, he repeated what they said a few times until he could pronounce it well. At home at nights, he wrote the words in his notebook so that he would not forget them. Tinh decided to learn 10 to 15 words before going to bed each night. At the same time, he became deeply involved in the work of the locality, helped youths organize meetings and even took part in clearing land and making upland fields. Through this practical work, he became ever more closely attached to the local people. Knowing that Tinh liked to learn the H'mong language, the youths of the village took turns helping him, and one person even forgot his meals as he sat teaching him how to pronounce and speak the H'mong language. To repay the kindness of the people, Tinh studied hard and worked diligently in order to gain the confidence of the masses and, in this way, learned their language. Soon, Tinh was speaking H'mong rather fluently. Recently, reactionaries tried, through propaganda, to draw the

H'mong to the other side of the border. Using his ability to speak H'mong, he explained the insidious nature of the enemy's scheme to the people. They said: "Cadre Tinh is speaking the truth. We are not going anywhere. The ethnic Vietnamese, the Muong and the Dao have come up to protect our H'mong villages; they speak our language and work in our villages, so, why would we abandon our villages?

As a result of knowing the local language and achieving a feeling of true closeness to the people, Tinh won their love and respect. The people have given him much important information. Now, Keo Huan Village, which is the area of which Tinh is in charge, instead of having an average security movement, has a good movement.

Pham Van Tinh is always diligently studying the language of the local tribes. In addition to being fluent in the H'mong language, he also knows the Thai and Dao languages.

EDITORIAL DISCUSSES RECRUIT TRAINING GUIDEINES

Hanoi QUAN DOI NHAN DAN in Vietnamese 10 Nov 80 pp 1, 4

[Editorial: "The Training of New Soldiers"]

[Text] Each year, in conjunction with military recruiting, new soldier basic training classes are carried out at the various training centers or in the military corps, divisions and so forth. This is a very important part of building a modern, regular force army and increasing the fighting strength of the entire army.

In order for the training of new soldiers to be of high quality, particular importance must be attached to providing cadres with advanced training, improving the organization and methods of training and organizing everyday life well.

The quality of training is, above everything else, dependent upon the corps of cadres. The cadres who train new soldiers must possess all the necessary qualities and skills, must have received some basic, regular force training or have experience in actual combat and the buildup of the armed forces and been trained in the program for the training of new soldiers. The advanced training of cadres must be comprehensive; we must avoid only placing emphasis upon training in technical subjects, avoid giving light attention to marksmanship training, avoid giving light attention to training in political work, ideological work, the management of troops, the implementation of orders, etc. Squad, platoon and company cadres who directly command, train and manage new soldiers must receive even more thorough training so that they display a good leadership and command style, have a firm grasp of requirements, practice what they tell others to do, are proficient in techniques and are skilled in applying the methods of training.

Of key importance in the organization and methods of training is insuring that new soldiers learn all that they need to learn within the specified amount of time and have a firm grasp of each training lesson. Theory must be taught in a clear and comprehensive but concise manner in an effort to allocate much time for practical application. Training lessons in the field should be conducted for individual training platoons, squads and teams so that soldiers can easily learn what is being taught, many persons can train at the same time, soldiers can help and observe one another and cadres can easily detect and correct mistakes. The quality of troop training not only requires firm adherence to basic training methods, the forging of soldiers in a detailed, specific and precise manner and the achievement of an increasingly high level of proficiency, but also requires that we make full use of training time, actively implement the guideline of learning new subjects and reviewing old subjects, coordinate political education and with military training, coordinate technical, tactical and physical training with complying with orders and closely link the cultivation of willpower with the forging of skills. Insuring that new soldiers comply with the Code of Discipline from the time they first join the army is a requirement to which particular importance must be attached. Therefore, every effort must be made to accelerate the movement to act in accordance with orders and to incorporate the forging of discipline, compliance with official duties, the implementation of regular force orders and the effort to combat negative phenomena in everyday training, work and life. It is necessary to heighten the responsibility of the commanders of units to teach and manage troops; on the other hand, importance must be attached to tapping the sense of collective ownership of the masses and developing the role played by the solidarity teams, the chapters of the Youth Union and the Military Personnel Council while seeking the assistance and coordination of the local government, mass organizations, people and the families of soldiers in order to do a good job of teaching and managing troops. Only in this way can we forge new soldiers well as soon as they enter the army and gradually mold within them the habit of upholding the self-imposed, strict discipline of the army. Every effort must be made to prevent every manifestation of rightism, lax discipline, impetuousness or arrogance in the training and management of new soldiers.

Thoroughly organizing the spiritual and material lives of new soldiers, insuring that everyone receives the food and clothing required by standards, has a good place in which to live and has the essentials needed for everyday life and having soldiers read the newspaper, listen to the radio and participate in cultural, art, athletic and recreational activities following their training lessons are jobs that cannot be given light attention and are of very important significance in insuring that everyone is more enthusiastic, has peace of mind, loves the army, is close to his unit, struggles in a self-conscious manner and forges himself in order to rapidly become a good soldier of the people's army.

BRIEFS

LANG SON TROOP RECRUITMENT--As of 13 December, Lang Son Province had overfulfilled ahead of schedule the norm set for the delivery of recruits for induction in 1980 by 0.13 percent. In the second phase of troop recruitment in 1980 alone, 26 establishments and organs overfulfilled the recruits delivery norm by 4.2 percent. Learning from the first recruits delivery phase, the provincial party and people's committees concentrated on satisfactorily leading various establishments, organs and sectors and organizing for cadres, workers, civil servants and youth to study the new situation and tasks. CEMA ANNIVERSARY EXHIBITION--Hanoi 10 Dec (VNA)--An exhibition opened here today to mark the 30th anniversary of the Council for Mutual Economic Assistance. The exhibition entitled "Under the Banner of Socialism" is jointly sponsored by the Vietnamese Ministry of Information and Culture, the Soviet Ministry of Culture, the Vietnam Museum of the Revolution and the Soviet Central Museum of the Revolution. The opening ceremony was attended by Vice-Minister of Information and Culture Nong Quoc Chan, Deputy Foreign Minister Hoang An Tuan and representatives of public offices and mass organizations in Hanoi. Soviet Counsellor Minister Ior Ognetov and representatives of the embassies of the other CEMA countries in Hanoi were present. [Text] [OW170453 Hanoi VNA in English 1549 GMT 10 Dec 80]

JAPANESE FRIENDSHIP DELEGATION--Hanoi 13 Dec (VNA)--The delegation of the Japan-Vietnam Friendship Association led by its deputy director general, Ito Yoshinori visited Ho Chi Minh City from 9 to 11 December. The guests were received by leaders of the People's Committee, the Front Committee and the Committee for Solidarity and Friendship with peoples of other countreis. The delegation also visited the Children's House of Culture, the Cho Ray Hospital, the Motor Spare Parts Factory No 2, the Pham Van Hai state farm on the city outskirts and several cultural establishments. The delegation left for home on 11 December. [Text] [OW170453 Hanoi VNA in English 0233 GMT 13 Dec 80]

EDUCATION DELEGATION IN FRANCE--Hanoi, 16 Dec (VNA)--A delegation of the Vietnam Education Ministry led by Professor Doctor Nguyen Canh Toan has visited France under the plan of cultural, scientific and technical cooperation between the Socialist Republic of Vietnam and the French Republic. During its stay, the delegation had cordial contacts with officials from the general department for cultural, scientific and technical cooperation under the Foreign Ministry, and various services, research centers and educational institutions under the Education Ministry. These contacts resulted in better mutual understanding and increased the prospect of further cooperation between the educational services of the two countries in 1981 and the following years. [Text] [OW170453 Hanoi VNA in English 1632 GMT 16 Dec 80]

PRK EDUCATION DELEGATION--Hanoi, 17 Dec (VNA)--A delegation of the Education Service of Phnom Penh led by its director Um Huong visited Ho Chi Minh City from 8 to 16 December. During its stay in the city, the delegation had meetings with the education officials of the city and the standing committee of various trade unions of educational workers. The Kampuchean guests also toured a number of general schools, complementary education schools, kindergartens, schools for children of war dead, printing factories and the children's cultural house of the city. The delegation attended a reception given by the city education service. [Text] [OW170523 Hanoi VNA in English 0238 GMT 17 Dec 80]

GDR SCHOOL--Hanoi VNA 21 Dec--The senior high school No 47 in Erfurt, the German Democratic Republic was named after the late president Ho Chi Minh, reports VNA's correspondent in Berlin. More than 600 pioneers and young members of the free German youth league have studied President Ho Chi Minh's biography and ideas and have learned about the people's struggle and the life of children in Vietnam. Since early this school year, the students of the school have collected 7,000 bottles and 800 kilos of discarded materials for the solidarity fund to support the Vietnamese young pioneers and other children in the world. SOVIET AVIATION MINISTER DECORATED--Hanoi 27 Dec (VNA)--Empowered by the Vietnamese Government, Vietnamese Ambassador to the Soviet Union Nguyen Huu Mai on 25 December conferred the Friendship Order on B.P. Bugayev, member of the Communist Party of the Soviet Union Central Committee and minister of civil aviation, for his active contributions to the Vietnam Civil Aviation Service. B.P. Bugayev expressed his pleasure at the award and thanked the Vietnamese party and government for their high appreciation of his services. He pledged to do his best to further promote political, economic and cultural relations between the two countries. [Text] [OW291037 Hanoi VNA in English 0702 GMT 27 Dec 80]

ART ENSEMBLE'S INDIAN TOUR--Hanoi, 27 Dec (VNA)--The Vietnamese National Art Ensemble yesterday left Hanoi for a tour of India in the framework of an agreement for 1980-1981 between the Vietnamese Ministry of Culture and Information and the Indian Ministry of Culture. The delegation comprises 25 artists led by Pham Dinh Sau, head of the Music and Dance Department. [Text] [OW291037 Hanoi VNA in English 1500 GMT 27 Dec 80]

SOVIET WOMEN ACTIVIST'S DECORATION--Hanoi, 27 Dec (VNA)--The Vietnam Women's Union has conferred its medal "For the liberation of women" on eight Soviet women activists, among them Valentina Nikolayeva Tereshkova, president of the Soviet Women's Committee. The decoration was made in Moscow yesterday by Nguyen Thi Dinh, president of the VWU. [Text] [OW291037 Hanoi VNA in English 1502 GMT 27 Dec 80]

SOVIET MINISTER'S DECORATION--Hanoi, 31 Dec (VNA)--On behalf of the Vietnamese Government, Vietnamese Ambassador to the Soviet Union Nguyen Huu Mai yesterday conferred the Friendship Order on S.S. Pavlov, first vice minister of civil aviation, for his active contribution to the development of the Vietnamese civil aviation. Present at the conferment were representatives of the Soviet commission for external relations of the CPSU Central Committee, Foreign Ministry and Civil Aviation Ministry. Vietnamese Ambassador Nguyen Huu Mai praised the great and valuable assistance of the Soviet people, including the Soviet Civil Aviation Service, to the Vietnamese people during both war and peace. He warmly congratulated S.S. Pavlov for the award and wished him and the Soviet Civil Aviation Service further success. [Text] [OW311153 Hanoi VNA in English 0817 GMT 31 Dec 80]

SOVIET ELECTRONIC GAMES EXHIBIT--Hanoi, 2 Jan (VNA)--An exhibition of children's electronic games from the Soviet Union is being held here by the Hanoi Culture and Information Service. The exhibits, gifts of the Soviet Ministry of Culture, are tropicalized gadgets for such games as shooting, driving, hunting and basketball which help quicken reaction. [Text] [Hanoi VNA in English 0716 GMT 2 Jan 81]

FAO AID--Hanoi, 5 Jan (VNA)--The Food and Agriculture Organization (FAO) will give Vietnam 7,500 tonnes of flour and rice worth 2.5 million U.S. dollars to overcome the consequences of floods and typhoons last year. A decision to this effect has been made by FAO director-general, following a recommendation by Garrison Nathaniel Vogen, executive director of World Food Program. This is part of the WFP aid package to Vietnam for 1980, which amounts to 19,120 tonnes of food worth 5,581,600 U.S. dollars. [Text] [OW060931 Hanoi VNA in English 1500 GMT 5 Jan 81]

FRG FRIENDSHIP AID--Hanoi, 5 Jan (VNA)--The FRG-Vietnam Friendship Association has reviewed its assistance to Vietnam in 1980. A report presented to the organization's conference, in Duesseldorf, said that members in Bremen collected 34,000 D.M. for Vietnam. Doctors and hospitals contributed 400,000 D.M. worth of medicines and medical apparatus. In August and September, the association and other organizations held a labour drive with the participation of young people from 16 countries, collecting 14,000 D.M. for the construction of a kindergarten in Ha Dong west of Hanoi. The report also condemned war crimes by U.S. imperialism and the Beijing leadership, and pointed to the responsibility of the U.S. and other Western countries, including the FRG to contribute to healing the wounds of war in Vietnam. Theology Professor Collwitzer in a recent televised speech reminded the FRG Government of its promise of 80 million D.M. for Vietnam. "I think we must help Vietnam, because it has been heavily devastated by war," he said. [Text] [OW060931 Hanoi VNA in English 1501 GMT 5 Jan 81]

THEATRICAL EXCHANGE WITH USSR--A delegation of Soviet stage artists has visited our country and has signed an agreement on the exchange of theatrical knowledge between the Soviet Union and Vietnam. On this occasion, the Vietnam Stage Artists Association has invited Comrade (Gibakov), a member of the delegation and also a stage performance critic, to speak about the growth of the Soviet stage performance sector since the October Revolution. [BK230531 Hanoi Domestic Service in Vietnamese 0400 GMT 14 Dec 80]

MUSIC COOPERATION WITH CSSR--At the invitation of the Vietnam Musicians Association, a deletation of the CSSR Musicians Association has paid a friendship visit to our country. Representatives of the two associations on 16 December signed an agreement on music cooperation between the two associations for the period 1981-85. HANOI REVIEWS 4 YEARS OF BUILDING DUC TRONG NEZ

Hanoi QUAN DOI NHAN DAN in Vietnamese 9 Nov 80 pp 1, 4

[Article by P.V.(reporter): "In Hanoi's Duc Trong New Economic Zone: More Than 3,000 Hectares of Wilderness Cleared and Nearly 14 Million Dong Earned in 4 Years"]

[Text] Recently, on 4 and 5 November, the Hanoi Municipal People's Committee reviewed the 4 years of the campaign to mobilize people to go build the Duc Trong new economic zone in Lam Dong Province.

Over the past 4 years, clearly aware of the position and importance of clearing land and building new economic zones in order to redistribute the labor force, help to build the mountain economy and strengthen the national defense system, Hanoi has been conducting an intense campaign among the cadres and people in both the city and its outskirts. With a spirit of determination and willing to assume responsibility for the lives of the people going to clear land, the various sectors and echelons in Hanoi made good preparations at the very outset and assigned competent cadres to the new economic committee; they gradually carried out investigations, planned the area and organized good advance units to prepare housing for the people. The various wards and districts established land clearing funds and, together with the city, adopted a policy providing appropriate subsidies for laborers and their families volunteering to go build the new economic zone. The city made efficient use of the sources of capital of the locality, of capital provided by the central level and of capital provided by Lam Dong Province to build a well coordinated system of material-technical bases for the area, which encompass everything from roads and production and processing support facilities to public welfare and cultural projects, such as a hospital, school, library and so forth, in order to insure that the people there have a relatively stable life and can protect and put under cultivation all land that is cleared.

To date, following 4 years of construction, the new economic zone of Hanoi in Duc Trong has cleared and put into production more than 3,000 hectares of land and built two state farms, nine agricultural production cooperatives and nine enterprises and experimental farms. As of October 1980, there were 1,783 families consisting of 9,904 persons in the zone, including 4,995 who have taken up permanent residence and are confidently building the new economic zone. The zone has produced products worth a total of nearly 14 million dong. Many state farms and cooperatives have developed rather well; for example, the value of 1 manday at the Dong Anh Cooperative was 0.2 dong in 1979 and 1.28 dong in 1980; at the Thanh Tri Cooperative, the value of 1 manday was a -0.64 dong in 1979 but 1.45 dong this year. The subsidiary economy, in which many families participate, earns from 5,000 to 10,000 dong per year.

Although the results of production are not large and although not many products are being produced, the largest victories that have been achieved in the zone are that the life of the people has been stabilized, initial material-technical bases have been constructed, the conditions have been created for production to develop rapidly in the coming period and valuable lessons have been learned about building a new economic zone.

Developing upon the achievements that have been recorded, the cadres and people of Hanoi are making every effort to correct their shortcomings and overcome their difficulties in order to intensify the campaign, in an effort to meet the norm of the 1980-1981 two year plan of sending 10,000 persons, including 5,000 laborers, to clear land and build the Duc Trong new economic zone into a model new economic zone of the entire country.

HANOI HAVING TROUBLE MEETING FUEL NEEDS

Hanoi NHAN DAN in Vietnamese 27 Nov 80 p 2

[Article by Cong Tuan, the Ministry of Home Trade: "Fuel in the City"]

[Text] The newly established Hanoi Fuel Corporation lacks means of transportation and material bases. Since the start of the year, it has received, processed and distributed nearly 100,000 tons of fuel to the people of the city. This represents a significant effort.

Distribution Is Still Not Convenient

There is an adequate supply of fuel oil to meet ration standard requirements. Recently, as a result of encountering transportation difficulties, the Level I Corporation has been unable to provide Hanoi with a regular supply of oil, only meeting 15 percent of consumer demand some days. Worth mentioning here is that on the days that they have not had oil to sell, stores, instead of posting clear, specific notices, put up signs saying: "oil has not arrived yet." Thinking that the stores' oil would be arriving late, customers have stood in line and waited, wasting much time.

Consumers also complain about being shorted by some sales persons. The corporation has equipped the various counters with 20 oil measuring machines. This type of machine has a glass container, is accurate, can be conveniently checked by customers and prevents the shorting of customers. Recently, however, a number of these machines broke down and were not promptly repaired, or the stores intentionally broke and failed to repair them, so the stores returned to the practice of measuring oil by the tankard, as a result of which unscrupulous personnel have found it easy to short customers. According to the fuel corporation, the average sales person shorts the customer by 3 to 5 percent. In view of the fact that the corporation sells 2,000 tons of oil per month, the amount of oil by which customers are shorted is not small.

When picking up oil at the depot, a number of drivers fill all three of the necks on their tanks to the very top, thereby allowing themselves to pilfer 45 liters per trip. Drivers conspire with state store personnel to market the stolen oil by the following method: not delivering the oil to the specified place and not delivering the same amount to each counter, as a result of which some have surplus oil to sell while some have no oil to sell at all.

The supplying of coal for use as a fuel is also marked by much that is inefficient and inconvenient. In the past, coal was delivered to Hanoi at five sites spread throughout the city. Now, coal is only delivered to one place in Dong Anh; customers from Thach That, Thanh Tri and Gia Lam must travel to Dong Anh to pick up their coal, thus paying higher transportation costs.

Still Far From Meeting Needs

At present, more than 60 percent of the households within the city use firewood and coal as fuel. The demand for these products is very high. The corporation has tried to organize sources of these products. Its 4th quarter plan called for the transportation of 50,000 tons of coal, firewood and peat, but the corporation only has 14 trucks and was only able to meet 15 percent of its transportation plan quota. To overcome this problem, the corporation has added additional shifts and is making active use of rudimentary vehicles. Many units, such as the Dong Da, Ba Dinh, Hai Ba and other fuel stores, use rudimentary vehicles exclusively and still meet the consumer needs of the locality.

In the processing of coal and firewood, obstacles have also been encountered, namely, the poorly coordinated supply of raw materials and the unstable supply of electric power. Electricity service is frequently interrupted, coal mixing machines cannot be operated and workers must perform this work by hand. The corporation has so far processed 49,000 tons of mixed coal, thus exceeding its plan for 1980 by more than 5,000 tons. The processing shop weighs and measures the raw materials, insures that coal and peat are mixed at the proper ratio and has improved the quality of mixed coal. The corporation has equipped with seven firewood splitting machines and firewood saws that have the capacity of 200 manual workers. With the machines, the firewood is split into small pieces that are convenient for consumers. Large pieces of firewood are no longer sold.

However, since the start of the year, only 30 percent of the need for firewood and 40 percent of the need for coal of the people of the city have been met. During the first 8 months of the year, the farmers who specialize in vegetables were not supplied with fuel. Many child care centers and collective kitchens have also lacked firewood.

Meanwhile, rather large local sources of fuel are not being tapped. Many factories and enterprises that have coal that has already been burned, scrap wood, sawdust, rice husks and so forth are not fully complying with directive number 193-CP on selling these materials to the state-operated commerce sector for distribution to the people of the city for use as fuel. At the Yen Phu Power Plant, the percentage of coal that is not completely burned is 30 percent; the power plant has about 40,000 tons of this coal each year but has never sold the fuel corporation as much as 2,000 tons. In one morning alone, the morning of 8 November, the power plant sold, in addition to five truckloads, 8 oxcarts and 12 horsecarts full of already burned coal, for a total of 51 tons. Meanwhile, the plant only delivered to the corporation two-thirds of the amount of coal required for that day under its contract and four of the corporations trucks returned empty. In general, the fuel corporation only purchases about 40 percent of the already burned coal of 50 plants. The 16 wooden furniture factories annually have more than 20,000 steres of scrap wood but, since the start of the year, only 7,000 steres have been sold to the fuel corporation by eight factories. Practically all factories hold on to their firewood in order to sell it to other units in a form of "two way trade" and to distribute it internally. Nearly 10,000 households are being distributed coal, firewood and sawdust by these factories while still receiving ration cards to buy fuel. These households sell their surplus fuel.

Effective Measures

The fuel need of Hanoi in 1981 is 337,000 tons, in coal equivalent, an increase of nearly 50,000 tons over last year. How can this need be met? Many proposals have been discussed. There is one practical measure that must be given appropriate attention, using low energy coal.

The results of research conducted by the Institute researching the integrated processing of coal show that it is possible to use 50 percent already burned coal or 50 percent number 7 coal dust mixed with 50 percent peat to process a beehive coal that is very good for cooking purposes. The average temperature of this coal is 1,080 degrees, which meets temperature standards. Yen Phong District in Ha Bac Province has been making widespread use of this type of coal to bake bricks and tiles. Using beehive coal processed from low energy coal as a fuel within the household is also convenient. The coal burns for 10 to 15 minutes. The production cost of one brick of coal, which is enough to cook one meal for one family of five persons, is 12 xu. The production of beehive coal, which is based on simple, manual methods, can be widely organized in the precincts, thereby supplying local needs. The police officers school, the security school and the 10+2 teachers school are using low energy coal and have reduced their fuel costs per meal from 6 xu to 1 xu. Kitchens are cleaner when mixed coal is used.

The sources of low energy coal in Hanoi are rather abundant. The districts of Dong Anh, Thach That, Ba Vi and so forth have sources of peat. By means of manual methods, we can annually excavate from 50,000 to 70,000 tons. Making full use of the already burned coal at power plants will also provide more than 60,000 tons per year. The sources of low energy coal in the provinces around Hanoi, such as peat in Vinh Phu, the already burned coal of the Ninh Binh Power Plant and so forth, can also be developed and conveniently transported. With these sources of coal, if attention is given to developing them, Hanoi can process more than 100,000 tons of beehive coal each year, thereby taking the initiative and meeting one-third of the localities' fuel needs.

In addition, Hanoi and a number of other localities should relaunch the movement to plant sesbania on area and plot embankments; the leaves of the plant can be used as green manure and the stalks can be used as firewood. The planting of trees for firewood must be planned in order to create a belt supplying firewood to the city. Another effective measure is for the sidewalk service teams to broaden their businesses in boiling water and cooking meals. The 2,000 collective dining halls must be strengthened and the quality of their service must be improved so that they attract additional diners and help to economize on fuel.

HANOI FACING VEGETABLE SHORTAGE

Hanoi PHU NU VIETNAM in Vietnamese 12-18 Nov 80 p 2

[Article by Tung Lam: "Implementing the Resolution on Distribution and Circulation: Is There Anything Worth Talking About in the Distribution of Vegetables in Hanoi?"]

[Text] The Key Issue

Recently, I had a chance to revisit the Ham Tu Quan vegetable and fruit counter, a model unit of the Hanoi Vegetable and Fruit Corporation.

The first thing that took us by surprise when we entered this stand was that vegetables and fruit were not as plentiful as they were in previous years.

This scarcity is not only occurring at the Ham Tu Quan vegetable stand, it is a common situation at all of the vegetable stands in Hanoi at this time.

In past years, the Hanoi Vegetable and Fruit Corporation made many efforts to control the sources of green vegetables through purchases. In 1979, the corporation purchased 82,000 tons of vegetables. This represented an increase of more than 5,000 tons compared to 1975. During the first 9 months of this year, despite waterlogging, difficulties in vegetable production and a decline in the sources of vegetables, the corporation still managed to purchase 60,000 tons of vegetables, 1 percent more than it had purchased during the same period of time last year. However, this was only enough to meet two-thirds of the consumer needs of the people of the city. Moreover, vegetables have not been purchased on a regular basis. Many cooperatives that raise vegetables have entered into output contracts with households; however, they have not taken measures to closely manage products, consequently, vegetable scarcities frequently occur as cooperative members sell their vegetables on the outside at high prices. Vegetables are only delivered to state stores during the main season when vegetables are inexpensive. Therefore, during the period between seasons, the quantity of vegetables purchased by the corporation has declined, thereby significantly affecting the plan for providing meals to the people of the city. The city requires an average of 300 tons of vegetables per day but, during the recent between season period, the state store sector was only selling 50 tons on some days.

On the other hand, vegetable production is still heavily dependent upon crop seasons. Recently, typhoon number 4 destroyed more than 100 hectares of vegetables. It has been estimated that nearly 7,000 tons of vegetables were lost. Meanwhile, we lack a suitable policy on storing and processing vegetables, consequently, the quantity of stored and processed vegetables has declined with each passing day. In 1979, the vegetable corporation stored more than 2,000 tons of various types of vegetables. In 1980, only slightly more than 1,000 tons were put into storage. The Phu Thuy Cooperative in the outskirts of Hanoi is a unit that has the habit of producing and processing pickled onions. Each year, the cooperative supplies nearly 200 tons to the state store sector. This year, however, it has not sold 1 kilogram to the state.

The Ham Tu Quan vegetable counter once led the corporation in the processing of vegetables. At this time each year, the workers at the counter had five or six processed products and condiments acquired on the outside market. This year, however, the several dozen jars and containers of the store are empty. This situation exists because the vegetable and fruit corporation has established unreasonable purchasing prices and these prices have resulted in a shortage of products. The purchasing price established by the corporation is only one-fifth the market price, consequently, state store personnel cannot purchase products and their supply of products has constantly declined.

Improving Distribution

The sources at which the Hanoi Vegetable and Fruit Corporation purchases vegetables are unstable; therefore, many difficulties and problems are involved in vegetable distribution. Taking advantage of this situation, some state store personnel have conspired with other persons to bring in products from the outside at a time when there is a scarcity of vegetables. Many cadres, manual workers and civil servants who do not have vegetables to eat must purchase them on the outside at a price four to five times as high and some persons still purchase vegetables to feed to their hogs. At the Cau Giay Vegetable Store, at a time when a hospital is only distributed 7 kilograms of spinach, some state store personnel are keeping 140 kilograms of vegetables for internal distribution. In a conversation with Kieu Thi Van, the head of the Hanoi Vegetable and Fruit Corporation, we were informed that the corporation is aware of shortcomings in management and is taking positive steps to improve the mode of distribution in order to deliver an ample quantity of fresh vegetables to the hands of consumers.

The vegetable growing cooperatives in the outskirts of Hanoi generally contract with cooperative members for the harvesting of vegetables; however, harvesting is not tightly managed in terms of the specifications and quality of vegetables. Therefore, a situation has developed wherein cooperative members are only concerned with workpoints and use sickles to quickly cut vegetables and achieve high productivity, consequently, the vegetables they harvest are mixed with many weeds. As many as 50 percent of the vegetables they harvest must be thrown away, thereby harming the consumer.

In order to correct this situation, the corporation has requested that some vegetable growing cooperatives in Thanh Tri District harvest their vegetables by hand and tie them in bundles. Results have shown that this measure insures fresh vegetables of higher quality; in addition, the percentage of vegetables that must be thrown away by the consumer is insignificant.

Delivering products to agencies and enterprises is an effort now being made by the Hanoi Vegetable and Fruit Corporation. However, this mode also has many drawbacks. Administrative agencies are able to buy many products. However, persons who work shift work, persons who work and live in the outskirts of the city and retired cadres are unable to purchase vegetables. On the other hand, much production and work time is lost when waiting to buy vegetables.

It is widely hoped by consumers that, in addition to delivering vegetables to agencies and enterprises, the Hanoi commerce sector will establish suitable modes of service in order to insure fair and convenient distribution as stated in the sector's motto.

ECONOMIC PLANNING, TRADE AND FINANCE

BRIEFS

URBAN ADMINISTRATIVE DIVISIONS--Based on Articles 113 and 107 of the SRV Constitution and Article 3 of the 18 December 1980 National Assembly Resolution setting forth a number of points in implementing the SRV Constitution, the Council of Ministers decides the following: Henceforth, administrative units inside municipalities directly under the central authority are uniformly called precincts [quaanj]. Grassroots administrative units inside municipalities and cities subordinate to provinces and inside towns and precincts are called wards [phwowngf]. In places where ward people's councils and people's committees have not yet been set up, the people's committees of provinces and municipalities directly under the central authority are responsible for helping people's committees of cities subordinate to provinces, towns and precincts to temporarily appoint ward people's committees to assume the functions of the grassroots administrative echelons until the ward people's councils and people's committees are elected according to law. A ward people's committee consists of a chairman, one or two vice chairmen, a secretary and one or two members. [Text] [BK071208 Hanoi Domestic Service in Vietnamese 2300 GMT 5 Jan 81]

SRV PREMIER'S DIRECTIVE ON REORGANIZING FISHERY SECTOR

BK061531 Hanoi Domestic Service in Vietnamese 0400 GMT 3 Jan 81

[Text] In order to reorganize the fishery sector in strict accordance with the party's line and policies, the premier of the government recently issued a directive on the transformation and development of sea fishery, requesting that the marine products sector concentrate efforts on satisfactorily carrying out the following tasks:

1. The entire sector and every province, district and village must firmly grasp the situation, correctly evaluate resources and production capability and on this basis, determine appropriate production orientations, and specific tasks and targets for each area and each type of cooperative. It is necessary to formulate annual and 5-year plans for exploiting, breeding and growing marine products; and to rationally organize and use labor at sea, on land, in districts and villages, at waterway entrances and on islands.

In planning the development of fishery, attention must be given to combining the development of the agricultural economy with the development of other economic sectors, developing the state-run and collective economies and satisfactorily making use of the economy of individual workers.

2. We must continue consolidating and perfecting the socialist production relations in the north and transforming production relations in the south; and reorganize production in the sea fishery sector.

In the north, it is necessary to continue consolidating and perfecting the socialist production relations; inspect and classify cooperatives to develop specific orientations and plans for consolidating and improving management; strive to firmly maintain the existing mechanized force; and intensively invest in the mechanization of major cooperatives in important areas while developing and fully exploiting traditional manual labor in order to achieve an annual labor output of 4 to 5 tons or more. In localities where shore fishing is practiced, it is necessary to concentrate chiefly on developing manual labor, use small-size machinery and combine fishery with agricultural and other activities in order to rationally employ the available work force.

With regard to organizational forms and scales, we must, depending on specific local conditions, the availability of material and technical bases and the organizational and managerial proficiency of cadres, organize exclusive fishing cooperatives, fishery cooperatives or fishing units in agricultural cooperatives. Each cooperative should not employ more than 200 workers and attention must be given to forming production units into fleets.

We must reorganize weak or lagging cooperatives into small cooperatives or production units to suit the production conditions, the proficiency and capability of cadres and the availability of material and technical bases.

We must guide and control the economy of individual workers in accordance with state regulations on the registration of businesses.

In the south, we must continue transformation and construction efforts in an active and stable manner. In the next 5-year plan, it is necessary to basically finish transformation work with the establishment of solidarity production teams being the dominant form; and to set up cooperatives only in localities where conditions permit. Organizational scales must be appropriately determined on the basis of the local conditions and the managerial capability of cadres; and they must be gradually expanded. In the initial stage, we must organize production units generally comprised of 2 to 6 boats.

In localities where shore fishing is practiced, attention must be shifted to strongly developing manual labor, maintaining small-size machinery and combining fishery with agricultural and other activities.

Localities that have set up cooperation teams and large-size cooperatives and placed production materials under collective control but have shown poor managerial performance must consolidate and reorganize production based on appropriate organizational scales that are consistent with the characteristics of fishery, the managerial capability of cadres and with the aspirations of the people.

With regard to other economic sectors consisting of boat owners and individual production households, it is necessary to control them through the registration of their businesses so as to guide them in developing production in the right direction.

Efforts must be made to maintain existing equipment and fishing fleets and vigorously invest in mechanization in major areas such as waterway entrances and offshore islands located near highly productive fishing grounds. Priority must be given to providing equipment for socialist collective economic units that have maintained a good managerial pattern and achieved good economic results.

Concerning distribution, the fishing fleet must be considered as the unit for giving out contractual work. The managerial board is responsible for guiding production orientations, formulating plans, organizing logistical supply and performing supervisory tasks; and when conditions permit, they will assume control over all activities.

3. We must gradually build the material and technical bases and logistical facilities. Efforts must be concentrated on building and consolidating the management of fishing ports and other facilities for supplying materials, fuel, provisions and service in support of exploitation, breeding, planting and collection and

purchase of products. Attention must be given first of all to building and consolidating major facilities. At the same time, it is necessary to build ship building and repairing facilities and manufacture and restore spare parts and accessories. We must mobilize the various types of spare parts still under private ownership and import them from foreign countries along with making full use of the production capacity of cooperatives, cooperation teams and the individual sector.

Concerning processing work, we must use the capability of state-run and joint public-private enterprises as the mainstay and develop the capability of cooperation teams and the people in order to step up the processing of products, widen their variety, improve the value of goods and increase the income of fishermen.

Concerning distribution and circulation, we must consolidate the state supply, collection and purchase, and services organizations to control the sources of goods; continue eliminating middle men traders; and use small merchants and fish peddlers as distributors and give them processing orders to generate employment and control them.

4. We must improve the managerial system and the organizational structure. It is necessary to eliminate the managerial system patterned after the administration of subsidies toward production establishments. First of all, the marine products sector must study the revision of inflexible managerial regulations that inconvenience the producers and improve its own managerial systems in order to develop the initiatives and production, business and distribution activities of cooperatives, cooperation teams and fishermen.

The Ministry of Maritime Products, together with other ministries and the sectors concerned, must discuss measures to implement the premier's directive No 291-TTG and, together with the various localities, efficiently organize the management of fishery in accordance with sectors and territorial divisions so as to support production in the most satisfactory manner.

5. We must intensify the training of fishery cadres. The Ministry of Maritime Products, working in coordination with the Ministry of Education, the Ministry of Higher Education and Vocational Middle Schools and the sectors concerned, must prepare and submit to the government for promulgation policies for training children of sea fishermen into fishery cadres; send technical and professional cadres to work in fishing cooperatives; and appropriately employ fishery experts.

6. We must closely combine the economy with national defense. It is necessary to closely link the perfection of fishery production relations in the north, the socialist transformation of fishery in the south and the reorganization of production with the consolidation of national defense, the building and consolidation of militia and self-defense forces and the establishment of political organizations among the fishing masses. Cooperatives engaging in sea fishery must organize their fleets into formations to support one another in production and stand ready for combat to defend their fishing grounds, maintain public order and security, prevent the reactionaries from seizing boats and escaping by sea, and counter the enemy's espionage and intelligence activities.

AGRICULTURE

SRV DAILY ON PROSPECTS FOR DEVELOPING AGRICULTURE

BK071136 Hanoi Domestic Service in Vietnamese 2300 GMT 4 Jan 81

[NHAN DAN 5 January editorial: "Agricultural Front"]

[Text] The resolution of the Party Central Committee's Ninth Plenum on the guidelines for the 1981 economic and social welfare tasks points out: Our first and foremost task is to step up agricultural production in all areas throughout the country in order to solve the grain and food problems, obtain raw materials for industry and quickly increase the export of farm produce.

This is a very important guideline which indicates the way for economic development set forth by the Fourth Party Congress. It is based on the most important characteristic of our country's revolution; namely, advancing from small production to large-scale socialist production.

In a situation in which our country does not have a developed industry nor enjoys broad international cooperation, it is necessary for it to advance through agricultural production in order to ensure enough grain for the people and simultaneously to achieve initial capital accumulation for socialist industrialization. If agricultural production, especially the production of grain, declines, this would lead to thousands of other problems affecting the people's lives as well as other fields of social activities.

Our entire party, people and armed forces are dutybound to do their utmost to achieve all the targets on the agricultural production front in 1981. One major step is to tap and use in a most satisfactory manner our potential in land and manpower. Simultaneously striving to carry out intensive cultivation and multicropping and expanding the acreage of all kinds of crops are the most suitable means in the current situation in our country.

Each production unit and locality must carry out intensive cultivation and multicropping on their own land. They must not let any piece of land lie fallow, and must ensure that every piece of land can yield still larger quantities of products.

Our cultivated area is now very small. That is why we must seek ways to increase our cultivated area to twice the present size, as our capabilities now permit. The Mekong Delta will be the key area. There, efforts will be made to expand cultivated areas to first of all solve the grain and food problems and then advance toward expanding industrial crop lands.

We possess another precious asset, which is manpower. Our agricultural development potential is very great. Because we have more than 20 million laboring people and only some 5 million hectares of cultivated land available, the number of surplus laboring people is very large, and has not yet been used effectively.

Labor productivity in our industrial sector is still very low. If we double the intensity of use of our 5 million hectares of cultivated land, there will be much work to do and many more laboring people will be needed.

In each district, due to a great shortage of manpower in many areas, it is necessary to reexamine and redistribute the agricultural work force, rebalance the work forces between the cultivation and animal husbandry sectors, achieve a division of labor among various branches and trades and redistribute manpower on a national scale.

Along with the duties of staying combat ready and fighting well, the armed forces are also charged with engaging in economic construction. This is nothing new for the armed forces. What is new at present is that the armed forces will no longer carry out farm production in accordance with their own self-sufficiency plan, but will participate in economic construction in accordance with the collective plan of the state and its various economic and technical stipulations. The productive labor potential of our armed forces is very great, for they have many able-bodied and disciplined members who, with good education, will be able to contribute importantly to implementing this year's state plan.

Developing the laboring people's collective mastery is very important. It is necessary to ensure that the working masses can truly become masters in production, firmly control all collective production materials, successfully prevent any piece of land from being left uncultivated, participate in the organizational management of production, and truly control the distribution of the products of labor.

During the transitional period of socialism, especially in its initial steps, it is very necessary to promote increased labor productivity through material benefits. This will help develop the strength of the collective and also make full use of all the creativities of each individual. Experience shows that a correct agricultural policy will help ensure a perfect combination among the three interests of the state, the collective and the individual working peasants and remove all obstacles to efforts to stimulate economic development.

In order to make full use of land and manpower, we must change our economic management system by bringing into full play the right to self-control of various production establishments. We must expand the exercise and perfection of all forms of contracting agricultural product manufacturing on the principles of ensuring increased production, consolidating socialist production relations and satisfactorily fulfilling obligatory duties toward the state. We must attach great importance to both the collective economy and the economies of cooperative member families.

With the many correct policies of the party and the state and with the mass revolutionary movements, there are many new factors, new progress and a new momentum on the agricultural production front. By exploiting these potentials, correctly observing objective law, meeting the laboring people's aspirations and correctly determining various managerial institutions and methods, we will have a great chance to overcome difficulties to advance toward more new developments in agriculture.

HANOI DISCUSSES WINTER-SPRING CROP PRODUCTION

Hanoi NHAN DAN in Vietnamese 27 Nov 80 p 1

[Article from HANOI MOI Newspaper: "Hanoi Discusses the Guidelines for Winter-Spring Production, the Strengthening of Cooperatives and Contract Work"]

[Text] The Standing Committee of the Hanoi Municipal Party Committee has held a meeting with the secretaries and heads of the agricultural committees of the 12 districts and cities, the directors of the agricultural sector, the water conservancy sector, the public projects sector and so forth to disseminate and discuss the program for the acceleration of 1980-1981 winter-spring production, the strengthening of cooperatives and contract work within agricultural cooperatives.

In the discussion, all of the delegates unanimously agreed with the evaluation of the situation and the norms as well as the measures for the upcoming winter-spring season, namely, planting 124,807 hectares (including 85,300 hectares of grain crops) and producing 117,650 tons of grain in order to help overcome the difficulties with grain and food products in 1980, a year of major shortages due to natural disasters. Depending upon the field situation, the early rice crop will be increased to about 30 percent of the land under cultivation by using such high yield rice varieties as 75-2 (424), VN 10 and VN 20, thereby creating the conditions for rapidly increasing the size of the early 10th month rice crop and cultivating many long-term winter crops of high economic value. In the final months of this year, marked progress has been made in the production of vegetables, but particular importance must be attached to vegetable production during the main and late winter-spring seasons so that we have many vegetables to supply to the city in February, March and April of the coming year.

Many of the delegates stated that the slow development of production in the weak, deficient cooperatives is not entirely the result of the very large scale of their production; however, it is very necessary to study each place in detail in order to establish a suitable scale of production and create the conditions for cooperatives to develop in a comprehensive manner. The delegates also stated that strengthening the production units, primarily by dividing very large production units into smaller ones, and training unit commanders are very necessary, pressing jobs. The above mentioned jobs must be performed in a good and systematic manner so that they have an impact in 1981.

As regards the two forms of contracts (abbreviated as forms 1 and 2), the districts had differing opinions; however, they all agreed that it is necessary to research both forms in a truly objective manner and to fully comply with the opinions expressed in notice number 22 of the Party Secretariat and directive 01 of the Standing Committee of the Municipal Party Committee.

Summarizing the conference, Le Quang Dao, deputy secretary of the Municipal Party Committee, explained a number of additional points:

Concerning the 1980-1981 winter-spring season, it is necessary to establish a suitable allocation of rice varieties and improve the allocation of the four varieties used as seed in order to have ample reserve seed, with attention also given to the various varieties of vegetables and the other crops and species of livestock for this season and subsequent years. As regards fertilizer, livestock manure and green manure, especially duckweed and green leaves, must be produced in abundance; we must also provide a good supply of seed for these crops, organize production forces and adopt policies that provide incentive for the production of these crops. The planting of legumes to provide food for humans and improve the soil must be accelerated during the upcoming winter-spring season.

As regards the size of cooperatives and production units, the delegates unanimously agreed with the thinking of the districts. It is necessary to reorganize a number of cooperatives that are too large; however, this step must be deemed necessary, must be carefully considered by the district and must be approved by the Municipal Party Committee. The separation of one cooperative into two cooperatives must be requested by the masses and only carried out when it has been determined that production might develop better. Training unit cadres and dividing a number of production units that are too large into smaller units are jobs that also must be done, but they must be done in a rapid and systematic manner in order to quickly stabilize and develop production.

As regards contract work, Le Quang Dao offered the following analysis: managing the state-operated and collective economy is very difficult and complex work. It is constantly changing and developing depending upon the level of management and the level of technology during each period of time, within each locality and in the production of each different product. As a result, we must constantly search for the most effective methods of working. We cannot be inflexible. We must firmly adhere to basic principles, but the forms and methods of our work must constantly be improved and developed. We must uphold the present method of contracting, that is, the cooperative contracting with the production unit for a specific product and the production unit contracting with a group of laborers or cooperative members using either form 1 or form 2 contracts. We must vigorously oppose the use of non-specific contracts. Contracting method number 1, under which the cooperative contracts with the production unit for a specific product and the unit contracts with a group of laborers or cooperative members for the performance of a specific job, is the method of contracting that is suited to the level of development of collective production and is the one that has been and is being used by advanced cooperatives. However, it also has many drawbacks and does not closely link the final product to the laborer, consequently, cooperative members are not very concerned with the final product produced by them. It is dependent upon the material-technical base and the level of management. Generally speaking, it is not consistent with the universal level of development and size of cooperatives. As a result, we often see the appearance of "underhanded" methods of contracting and if we continue to exert pressure, contracting method number 1 will pose an obstacle to the development of production. It was against this background that contracting method number 2 emerged--the method of contracting with cooperative members for specific products. Actually, this method is, for the foreseeable future, consistent with the objective situation. However, this is not a simple method either and still has many drawbacks that we must continue to research. Every form of management requires a period of time in order to be perfected and we should not quickly abandon a form of management because it has shortcomings, rather, we must implement and improve it. The method of contracting that is used must answer seven questions: how are contract quotas established? Which jobs are to be performed under contracts? How is cropland to be assigned? How is the product to be managed? What kind of incentive is provided to specialized units? How are material-technical bases used? What insures that products are produced in accordance with the plan? As a result, contract form number 1 must be implemented, improved and developed upon. Contract form number 2 must also be implemented depending upon the requirements of each place. In the use of these two methods, we should avoid placing sole emphasis upon either one. The method that is used must be requested by the masses and evaluated and guided by the party committee echelon. However, we must firmly adhere to our method of working, provide close leadership and guard against deviations. It is necessary to guard against three tendencies: only wanting to use method number 1, only wanting to use method number 2 and, instead of providing close leadership, always being inclined to meet the requests of the masses. It is necessary to engage in democratic discussion with cooperative members and to avoid exerting pressure upon them. On the other hand, it is very necessary that we oppose the use of non-specific contracts in both forms (because, if either of these methods is loosely managed and if leadership is given light attention, non-specific contracting will be the result). It is necessary to train cadres, gain experience and take specific measures regarding policies and organization in order to fully satisfy all three interests (the interests of the state, collective and cooperative members). It is possible to make use of both forms of contracting within the same cooperative, consequently, we should not be inflexible or pressure cooperatives into using but one form. As regards livestock production, places that raise livestock on a regular basis and have experience must continue to use the method of contract quotas with workpoint bonuses and contracting with livestock production families, depending upon the conditions at each place. However, within the collective livestock production sector, we must establish quotas that are truly accurate before we can contract with livestock production households. We must be determined not to assign cropland (15 percent) to families.

Le Quang Dao concluded: notice 22 of the Secretariat is based on the actual situation and the experience at many places. It is necessary to scrupulously implement notice 22 and directive 01 of the Standing Committee of the Municipal Party Committee and gain experience and make improvements while performing our work.

BRIEFS

QUANG NAM-DANANG RICE--As of 10 December, Quang Nam-Danang Province had been able to plow only about 37,000 hectares and plant only 7,500 hectares of rice out of the planned 50,000 hectares. The provincial agricultural sector has sent cadres to various localities to help grassroots-level organizations work out sowing schedules. [BK230551 Hanoi Domestic Service in Vietnamese 0400 GMT 15 Dec 80]

CUU LONG GRAIN TAX--Cuu Long is one of the two provinces in the Mekong Delta which have completed its 1980 agricultural tax collection. The province is directing various subordinate districts to audit tax records and urge peasants to honestly declare their cultivated areas. [BK230551 Hanoi Domestic Service in Vietnamese 1100 GMT 15 Dec 80]

DONG NAI PRODUCTION COLLECTIVES--There are now 887 production collectives in Dong Nai Province, including 15 progressive and 133 good ones. However, more than 520 of them still rate as weak and poor performers. To promote the steady development of the production collective movement, the province is motivating all sectors and echelons to contribute to strengthening the collectives. The provincial agricultural transformation committee has sent cadres to work together with various villages in evaluating and classifying production collectives and assist the weak ones in surveying their labor force, land and production tools again and in formulating production plans. At the same time, the province has opened several classes to train cadres for various collectives. [Text] [BK230541 Hanoi Domestic Service in Vietnamese 0400 GMT 17 Dec 80]

THANH HOA RICE--Thanh Hoa Province is directing various cooperatives to produce enough rice seedlings for transplanting 110,000 hectares of 5th-month rice. The province has so far sown more than 4,000 tons of rice seeds of all sorts including the "314" and "424" rice varieties. This amount of rice seeds will produce enough seedlings for transplanting 40 percent of the planned acreage. [BK230551 Hanoi Domestic Service in Vietnamese 1100 GMT 17 Dec 80]

NGHIA BINH COOPERATIVE MEETING--Nghia Binh Province recently held a meeting with representatives of the various districts and cities and key cooperatives to discuss measures to strengthen cooperatives and implement the piece-work system in agriculture. In the current winter-spring crop, Nghia Binh has instructed 18 key cooperatives to implement on an experimental basis the piece-work system in the production of rice, subsidiary food crops and industrial plants and in animal husbandry. An emulation movement has been launched throughout the province to promote the strengthening of cooperatives. [BK230541 Hanoi Domestic Service in Vietnamese 0400 GMT 18 Dec 80]

HA BAC COOPERATIVE CONFERENCE--Ha Bac Province recently held a conference of frontrank cooperatives to discuss measures to consolidate basic production units and put a check on the implementation of unauthorized work contracts in agricultural cooperatives. The province recently transformed 14 large-scale cooperatives into 47 cooperatives of a more adequate size and assigned more economic and technical managers to 34 weak cooperatives. [BK230541 Hanoi Domestic Service in Vietnamese 1100 GMT 18 Dec 80]

PHU KHANH RICE PLANTING--As of 15 December, peasants in Phu Khanh Province had planted 17,000 hectares of winter-spring rice, fulfilling 47 percent of the plan. Most of the areas already transplanted had been plowed and harrowed two or three times and had received more than 2 tons of stable manure per hectares. The local cooperatives and production collectives assigned people to regularly visit ricefields so as to promptly detect harmful insects and diseases in the newly transplanted areas. [BK230551 Hanoi Domestic Service in Vietnamese 2300 GMT 18 Dec 80]

THUAN HAI GRAIN COLLECTION--As of 30 November, Thuan Hai Province had delivered 34,000 tons of grain to state granaries, overfulfilling the annual grain collection plan by 1 percent. In the previous years, the amount of grain sold by local peasants to the state under two-way economic contracts and at agreed-upon prices was negligible. This year, however, this amount has reached more than 20,400 tons. After fulfilling the 1980 grain collection plan, the local production collectives and agricultural cooperatives are shifting to harvesting the 10th-month rice and discharging the 1980 10th-month grain obligation. [BK230551 Hanoi Domestic Service in Vietnamese 2300 GMT 19 Dec 80]

VINH PHU DISTRICTS REALIGNMENT--The Council of Ministers recently made a decision to readjust the boundary of Song Thao, Song Lo and Phong Chau Districts of Vinh Phu Province as follows: 1) Divide Song Thao District into two districts and rename them Song Thao and Yen Lap Districts. 2) Divide Song Lo District into two districts and rename them Thanh Hoa and Doan Hung Districts; and combine the remaining four villages of Song Lo District with Phong Chau District of the same province. [Text] [BK010915 Hanoi Domestic Service in Vietnamese 0400 GMT 25 Dec 80]

MINH HAI GRAIN COLLECTION--The paper NHAN DAN recently carried an article dealing with grain collection in Minh Hai Province in 1980. The article says: As a leading major rice producing province in the Mekong River delta region, Minh Hai since 1975 has contributed large quantities of agricultural products and food, such as paddy, pork, fish and shrimps, to the state. In 1980, Minh Hai has delivered as many as 183,616 tons of grain to state granaries, thus overfulfilling the planned norm by 2 percent. [BK071031 Hanoi Domestic Service in Vietnamese 0400 GMT 26 Dec 80] As of 25 December Minh Hai Province had reaped 65,000 ha of 10th-month rice, representing 27 percent of the cultivated acreage. As of the same date the province had also collected 13,000 tons of paddy. [BK071031 Hanoi Domestic Service in Vietnamese 1100 GMT 2 Jan 81]

THUAN HAI GRAIN COLLECTION--During the first 20 days of December Thuan Hai Province delivered 1,700 tons of grain to state granaries. Along with intensively reaping the 10th-month rice, cooperatives in the province are stepping up the collection of grain so as to fulfill the norm set for 27,000 tons ahead of schedule. [BK071031

Hanoi Domestic Service in Vietnamese 1100 GMT 28 Dec 80] Thuan Hai Province has harvested nearly 15,000 ha of 10th-month rice, fulfilling 45 percent of the cultivated area, with a yield of 2.2 to 2.5 tons per ha. Along with reaping the 10th-month rice, the province has also planted other crops on more than 7,600 ha. [BK071031 Hanoi Domestic Service in Vietnamese 0400 GMT 6 Jan 81]

NGHE TINH POTATOES--As of 15 December Nghe Tinh Province had planted 26,295 ha of winter potatoes--an increase of 3,000 ha over last year--and 5,290 ha of spring sweet potatoes. Taking advantage of favorable weather conditions, cooperatives in the province are accelerating soil preparation striving to plant 60,500 ha of winter-spring sweet potatoes, some 10,000 ha more than the area planted with this crop in the previous winter-spring crop season. [BK071031 Hanoi Domestic Service in Vietnamese 2300 GMT 29 Dec 80]

NORTHERN SOYBEAN PLANTING--Recently in Hai Hung Province, the Ministry of Agriculture met with leading agricultural cadres from 17 provinces and 25 districts in the north to discuss measures to expand the soybean area. In 1980, the entire country planted some 48,000 ha of soybeans, including 23,724 ha planted by the northern provinces. To meet the needs arising from the people's livelihood, in 1981 the entire country will strive to plant 82,000 ha with the northern provinces accounting for 36,000 ha. [BK071031 Hanoi Domestic Service in Vietnamese 0400 GMT 30 Dec 80]

HOANG LIEN SON GRAIN COLLECTION--As of 20 December people of various ethnic minority groups in Hoang Lien Son Province had overfulfilled their 1980 grain collection plan by 1.2 percent. In addition to delivering grain to state granaries, they also sold 200 tons of paddy to the state at agreed-upon prices. [BK071031 Hanoi Domestic Service 1100 GMT 30 Dec 80]

NGHIA BINH WINTER-SPRING RICE--By the end of December Nghia Binh Province had transplanted winter-spring rice on nearly 55 percent of the planned area, producing an increase of some 10,000 ha over the same period last year. Besides transplanting rice, cooperatives in some localities have also planted more than 2,000 ha of sweet potatoes. [BK071031 Hanoi Domestic Service in Vietnamese 0400 GMT 1 Jan 81]

LAM DONG RESETTLEMENT--During the last week of December, some 178 families comprising 803 people and 378 laborers left Hanoi for resettlement in new economic zones in Lam Dong Province. The arrival of these families has brought to 5,400 the total number of the people coming from Hanoi to resettle in Lam Dong Province in 1980. [Hanoi Domestic Service in Vietnamese 1100 GMT 2 Jan 81]

QUANG NAM-DANANG WINTER-SPRING RICE--By late December Quang Nam-Danang Province had planted winter-spring rice on 42,000 ha, representing 88 percent of the planned norm, and winter crops on 8,200 ha. The province is also expanding the areas of subsidiary crops, especially sweet potatoes and manioc, in an effort to increase its grain output. [BK071031 Hanoi Domestic Service in Vietnamese 2300 GMT 2 Jan 81]

HAU GIANG WINTER-SPRING RICE--By the end of December Hau Giang Province had transplanted winter-spring rice on more than 27,000 ha, thus basically completing the cultivation of this rice. Production collectives and peasants in the province are intensively caring for the riceplants against drought. [BK071031 Hanoi Domestic Service in Vietnamese 0400 GMT 3 Jan 81]

WATER CONSERVANCY WORK TEAMS--The Ministry of Water Conservancy has sent nine work teams consisting of engineers with good experience in designing and planning work to the Mekong River Delta Province to restudy and decide on water conservancy plans for the 1981-85 period. Despite numerous difficulties, these teams have quickly studied the local situation and coordinated with the local authorities in establishing specific plans for 1981. In the immediate future, they will work in localities having water sources and adequate means to draw water into the ricefields to support the 1980-81 winter-spring crop cultivation. [BK071031 Hanoi Domestic Service in Vietnamese 0400 GMT 7 Jan 81]

PIG BREEDING IN SOUTH--Hanoi VNA 19 Dec--The pig herd in the southern provinces of Vietnam has reached 3,326,000 head, 6.7 percent more than that planned for. The figure includes 503,000 sows. The pig herds in the 3 provinces of Thuan Hai, An Giang and Long An have increased by more than 50 percent. The southern provinces have also built more animal feed factories, breeding pig farms and vaccinated their pig herd against epizootic diseases. Apart from developing pig breeding, the southern provinces have 502,000 buffaloes and 957,000 oxen. The draught cattle herd has also been developed for agricultural cultivation. [Text] [OW200441 Hanoi VNA in English 0441 GMT 19 Dec 80]

LAND RECLAMATION IN SOUTH--Hanoi VNA 20 Dec--The state farms in the Mekong River Delta Province of Long An this year have reclaimed 10,000 hectares of land for rice and [word indistinct] term industrial crop cultivation, a tenfold increase over last year. By combining manual work with mechanized means, the "Lua Vang" rice farm has opened 9,000 hectares of land for main rice cultivation. Two other farms specialized in pineapple and sugarcane planting have restored 300 more hectares to cultivation, bringing the total acreage under these crops to more than 1,000 hectares. The southern most province of Minh Hai, one of the major rice-growing areas in the south has reclaimed 26,000 hectares of which 25,000 hectares have been put under cultivation. [Text] [OW220639 Hanoi VNA in English 0233 GMT 20 Dec 80]

THAI BINH JUTE CROP--Hanoi VNA 22 Dec--A large area has been set aside for jute and rush growing in Thai Binh Province, about 100 kms southeast of Hanoi. The area covering almost 5,000 hectares includes fertile fields in Hung Ha, Vu Thu and Quynh Phu Districts along the Red River. The first jute crop yielded 2.5 tonnes per hectare. Thai Binh produces hundreds of thousands of square meters of jute carpets a year for export. It has just built a jute fibre processing establishment with an annual capacity of 7,000 tonnes. Rush weaving is also a traditional trade in the province. In the past it was practiced only as a sideline occupation by peasant families. Now it has become a large-scale production line involving more than 10,000 people working in 3 sectors: State-run, collective and family. Thai Binh plans to expand the rush-growing area to 2,800 hectares in the next few years, 20 times the area of 2 decades ago. Over recent years Thai Binh has moved millions of cubic metres of earth to build sea dykes and expand polders for growing rush. More than 1,000 hectares newly reclaimed from littoral areas have been turned into rush fields with an annual output of five tonnes of dry rush per hectare. High voltage transmission lines have been installed to supply power for rush-processing enterprises. [OW220639 Hanoi VNA in English 0310 GMT 22 Dec 80]

AGRICULTURAL PRODUCTS EXPORTS--Hanoi VNA 30 Dec--The northern border province of Lang Son this year has achieved the highest export quota of agricultural and forestry products including more than 2,500 tonnes of aniseed, 700 tonnes of tobacco and 200 tonnes of ginger. The local authorities have applied policies to encourage the growing and harvest of agricultural and forest products. In 1981, Lang Son will extend the areas under tobacco, aniseed, ginger and pineapple. [Text] [OW311153 Hanoi VNA in English 0722 GMT 30 Dec 80]

LAND SURVEY--Hanoi VNA 5 Jan--More than one third of Vietnam's land area is still uncultivated, including almost 3.6 million hectares suitable for agriculture and more than 6.5 million more suitable for forestry. These statistics are published in a report by the Central Survey Commission on the general land survey conducted throughout the country from 1977-1979. Of the total 6,953,880 hectares of agricultural land, about 6 million are under annual crops, including rice (4.6 million), subsidiary starch-bearing plants, vegetables and short-term industrial crops. Rice acreage alone covers more than 639,000 hectares in the Red River Delta and more than 2.2 million hectares in the Mekong River Delta. Forest land currently in use totals more than 13.4 million hectares of natural forests. The area reserved exclusively for capital construction, irrigation projects and reeds covers 4.25 percent of the total land area. [Text] [OW060931 Hanoi VNA in English 0717 GMT 5 Jan 81]

PIG INCREASE--Hanoi VNA 5 Jan--By the end of 1980 the pig herd in Vietnam totalled nearly 9.1 million, including 5 million sows, up by 5 percent over 1979. In South Vietnam alone, the pig herd rose to 3.3 million head against 2.2 million at the time of liberation in 1975. A network of pig-breeding farms has been established down to district level to supply swine for collective farms and peasant families. Many foreign breeds of pig have been acclimatized to the local conditions or crossed with the local breeds. The hybridisation rate of pigs in the country keeps increasing, reaching as high as 40 and even 60 percent in some localities, such as Ha Bac Province and Hanoi suburbs. Artificial insemination has been widely practised at the pig farms as well as private pigstyes. The veterinary institutes and animal drug factories have turned out several drugs which have helped increase a pig weight by from 15 to 20 percent. In addition, the veterinary service has produced many kinds of vaccines for pigs. [Text] [OW060931 Hanoi VNA in English 1456 GMT 5 Jan 81]

PHU KHANH WINTER-SPRING RICE--As of 25 December Phu Khanh Province had transplanted winter-spring rice on more than 23,500 ha. This figure represents more than 65 percent of the planned norm and shows an increase over the same period last year. Thanks to favorable weather conditions, Tuy Hoa District was able to complete the cultivation of this rice on nearly 16,000 ha in 20 days. [BK071031 Hanoi Domestic Service in Vietnamese 0400 GMT 3 Jan 81]

NORTHERN GRAIN QUOTAS--As of 31 December the northern provinces had achieved 80 percent of the grain obligation for 10th-month rice and 87 percent of the prescribed quota for 1980. Son La, Ha Bac, Nghe Tinh, Ha Son Binh, Hoang Lien Son Provinces and Haiphong City fulfilled or overfulfilled the prescribed quotas. Ha Bac and Nghe Tinh Provinces also fulfilled the norm for selling grain to the state at agreed-upon price, while 78 districts and 1,800 agricultural cooperatives from various provinces fulfilled their grain obligations. [BK071031 Hanoi Domestic Service in Vietnamese 1100 GMT 4 Jan 81]

COOPERATIVE REFINES ALUMINUM FROM DOMESTIC RAW MATERIALS

Hanoi QUAN DOI NHAN DAN in Vietnamese 10 Nov 80 p 1

/Article by Quang Dau: "Aluminum Refined from Domestic Raw Materials"/

/Text/ Aluminum is an important material in industry. At present, practically all of the aluminum used in the factories and enterprises of our country is imported. After liberation day, Joint Geological Projects Group Number 6 (the Geological Projects General Department) discovered a large deposit of bauxite in the South, one that will permit us to build large-scale aluminum refining plants in the future. However, the pressing, immediate requirement is to use some bauxite ore to support the national economy. The Tan Binh Chemical Plant (CO-PHA-TA) in Ho Chi Minh City has been using Lam Dong bauxite to produce aluminum hydroxide, primarily for supply to the various water works; the plant has a capacity of 3,500 tons per year.

Recently, under the guidance of the city party committee and the city people's committee and after 91 days of diligent research, Nguyen Nhu Truyen and the collective of the Phuoc Thanh Cooperative in Ho Chi Minh City achieved success in refining aluminum from aluminum hydroxide of CO-PHA-TA using a hand-operated furnace they constructed.

The furnace operates on the principle of the electric arc furnaces commonly used throughout the world. The positive pole is a block of graphite measuring 15 centimeters in diameter which is raised and lowered by means of a screw and nut assembly. The exterior of the smelting crucible is constructed of brick, the bottom is lined with a layer of graphite and the interior measures 30 x 30 centimeters. In the electric arc process, a flow of 10 volts is maintained at a maximum intensity of 1,800 amperes; the intensity of the flow of electricity during the electric arc process is from 1.7 to 2 amperes per square centimeter.

During the past 3 months, the Phuoc Thanh Cooperative has experimented with many different procedures; in the 12 batches it has produced, it used about 150 kilograms of raw materials and produced 70 kilograms of refined aluminum. Analyses of samples by the labor Safety Institute of the General Federation of Trade Unions and the testing laboratory of Joint Geological Projects Group Number 6 showed: the amount of aluminum in a recent batch was 88.2 percent. This percentage approaches that of the aluminum hydroxide imported from Japan. According to initial calculations, the energy consumed in the production of 1 kilogram of aluminum is 30 kilowatts/hours; the experimental production cost is 19.9 dong per kilogram of aluminum. Of course, this production cost will be significantly reduced once large-scale production has been started.

Soon, with an investment of electricity from the industrial power network of the state, the Phuoc Thanh Cooperative will open a production shop producing from 200 to 1,000 kilograms of refined aluminum per day.

The initial success of Phuoc Thanh opens the prospect of using domestic supplies and raw materials to refine aluminum in an economically profitable manner.

CHEMICAL PLANTS BOOST PRODUCTION

Hanoi QUAN DOI NHAN DAN in Vietnamese 10 Nov 80 p 1

[Article by Nguyen Huu Loc: "The Plants Within the Chemicals Sector Overcome Their Difficulties and Accelerate Production"]

[Text] Since the start of the year, despite encountering difficulties with supplies, raw materials, equipment, electric power and means of transportation, many of the plants within the chemicals sector have been endeavoring to overcome their difficulties and accelerate production.

The Lam Thao Superphosphate Plant, as a result of organizing its production in a manner consistent with the difficulties being encountered with coal and electric power, has been able to maintain production and recently produced more than 107,000 tons of superphosphate, a two-fold increase compared to the same period of time last year. The plant has also made full use of local discarded materials and produced nearly 330 tons of insecticide for use in fields. In order to further increase the output of fertilizer, the plant has accelerated its production while building additional capacity in order to increase its present output 1.5 times by 1983.

Since the start of the year, the Van Dien Phosphate Fertilizer Plant, the Ninh Binh Phosphate fertilizer Plant, the Hai Hung, Ninh Binh, Binh Tri Thien and Da Nang Apatite Grinding Plants, the Southern Fertilizer Corporation and so forth have produced tens of thousands of tons of products including NPK fertilizer, organic fertilizer, ground limestone, ground dolomite and baked lime to support agricultural production and the improvement of fields in Ha Son Binh, Hai Hung, Ha Nam Ninh and Quang Nam-Da Nang Provinces and the Mekong River Delta, which greatly appreciate receiving these products.

In order to overcome the difficulties with raw materials and supplies, especially imported supplies that have not arrived on time, the Southern Insecticide Corporation, the Viet Tri Chemical Plant and the Vinh Thinh Chemical Plant have made many efforts to procure raw materials and supplies to maintain production. The Southern Insecticide Corporation has successfully researched and produced many new types of insecticide of scientific value: ba-sa [Vietnamese phonetics] insecticide for rice stem borers and ba-xin 78 [Vietnamese phonetics] insecticide for large pests of vegetables; it has also used DDVP to produce various types of household pesticides to kill rats and a worm medicine for livestock called TGS.

HEAVY INDUSTRY AND CONSTRUCTION

BRIEFS

ELECTRIC PUMPING STATION--Hanoi, 1 Jan (VNA)--Another electric pumping station, the second biggest in Ho Chi Minh City, has been built at Ba Gia in the suburban district of Cu Chi. The station's 30 mechanical pumps have an aggregate capacity of 3,000 cubic meters per hour. They will water 2,000 hectares of the Pham Van Coi state farm. The station is already supplying water to 500 hectares of subsidiary food crops in the current winter-spring crop. [Text] [OW031241 Hanoi VNA in English 0721 GMT 1 Jan 81]

NONFERROUS METAL PRODUCTION--Over the past 11 months, the southern nonferrous metals sector has produced nearly 26 million meters of electric wires and 120 tons of other products. The sector has expeditiously received supplies turned over by the state while actively exploiting raw materials lying stagnant in warehouses and buying from its customers in various localities more than 600 tons of copper and more than 10 tons of nonconductive varnishes so as to firmly maintain production. [BK230541 Hanoi Domestic Service in Vietnamese 2300 GMT 11 Dec 80]

SOVIET-AIDED REPAIR WORKSHOP--The construction of a farm machinery repair workshop was completed recently in Duc Linh District, Thuan Hai Province. This is a project built with Soviet assistance to better serve the repair and maintenance of farm machinery and equipment on a district scale. The workshop is capable of repairing various types of existing farm machines and improving work tools for use in land reclamation, irrigation and intensive cultivation. [BK071011 Hanoi Domestic Service in Vietnamese 2300 GMT 25 Dec 80]

NEW TOWBOAT--The Bach Dang shipyard in Haiphong has recently launched an 800-horse power towboat capable of pushing a 2,000-tonnage barge along the coastline at a speed of 7 nautical miles per hour. This is the largest towboat ever built for the General Maritime Department to transport cargo on the Haiphong-Ho Chi Minh City route. The shipyard has also assembled and turned over a 500-cubic meter/hour dredger designed and built by the Soviet Union to the corporation responsible for the construction of the Song Da hydroelectric project. [Hanoi Domestic Service in Vietnamese 1100 GMT 5 Jan 81]

COAL PRODUCTION--In 1980, the Deo Nai coal mine of the Hon Gai Coal Corporation in Quang Ninh Province actively implemented all of its plans in line with its production capabilities and conditions while concentrating on exploiting all available sources of coal and improving the coal sorting system. As a result, the coal mine was able to increase its coal output to 120,000 tons. [Hanoi Domestic Service in Vietnamese 0400 GMT 7 Jan 81]

LIGHT INDUSTRY

SHORTAGE OF AGRICULTURAL PRODUCTS SLOWS PROCESSING

Hanoi NHAN DAN in Vietnamese 27 Nov 80 p 1

[Editorial: "The Processing Industry and the Raw Material Base"]

[Text] Due to the shortage of agricultural raw materials, many grain, food product and consumer goods processing enterprises have had to reduce their level of production or cease operations. Equipment and machinery capacity is not being fully utilized. Plants do not have adequate raw materials because, when they were constructed, they were not coordinated with the installations producing raw materials. At a time when agricultural products are not in abundant supply and the sources of raw materials for the processing industry are not centralized, a significant quantity of these raw materials are still being circulated on the unorganized market. Purchasing activities still involve many different centers. A number of local state-operated installations and collective installations are engaged in disputes with central state-operated enterprises over the sources of goods. Small merchants are engaging in speculation and competing for raw materials by raising prices, thereby disrupting both the market and prices.

Organizing the supply of agricultural raw materials well is a decisive element in the utilization of the existing production capacity of industry. The Tran Phu Agro-Industrial Federated Tea Enterprise has taken the initiative and closely linked the tea growing area of state farms to the processing plant, thereby stabilizing production and raising output. The Vinh Phu Exported Canned Fruit Processing Plant has achieved stable production as a result of planning the planting of more than 4,000 hectares of pineapples in the three districts of Tam Dao, Lap Thach and Tam Thanh. The Thai Binh Jute Fiber Plant was constructed in such a way that it is closely linked to the 4,400 hectare jute growing area within the locality and was able to immediately go into operation. The Southern Tobacco Federated Enterprise, which has implemented a flexible mode of purchasing and flexible prices this year, now controls twice as many raw materials as it once did. Many other industrial installations have developed better sources of agricultural products through economic contracts and purchases outside the plan at negotiated prices.

The experience of the enterprises that have taken the initiative and resolved the raw material problem is that they have, on the one hand, organized purchasing activities in order to control the sources of agricultural products and, on the other hand, have constructed stable raw material production areas. The new decision by the Council of Ministers concerning the policy on stabilizing the obligation of agricultural cooperatives, production collectives and farm households to sell agricultural products to the state gives the industrial enterprises or the agro-industrial federated enterprises the authority to directly purchase agricultural products in centralized, specialized farming areas for use as raw materials in processing. Purchases are made through two-way economic contracts and at directed prices. The trading of commodities insures the centralization of sources of raw materials for state-operated enterprises and will gradually eliminate the activities of private buyers and sellers from the rural market.

The installations of the processing industry must be closely linked to raw material production areas and sources. The construction of new capacity and the expansion of existing installations must be coordinated with the construction of raw material production areas within a well coordinated investment plan which insures that processing plants can go into stable operation as soon as they are constructed. As regards enterprises now in operation, investments must be investments in depth, which consist of investments in equipment for crop production, harvesting, transportation, storage and pre-processing. Depending upon the specific situation, effective modes should be employed which closely link raw material production areas to processing plants, such as closely coordinating raw material production installations with processing installations managed by the state in agro-industrial federated enterprises or through economic contract relations between processing plants and state-farms, agricultural cooperatives and production collectives in accordance with the production planning and plans and the division of purchasing areas of the districts and province.

In conjunction with building raw material production areas, the enterprises and supply organizations have the responsibility of creating favorable conditions for economic contracts to be implemented and providing incentive for installations and localities to expand their production and sell raw materials to the state.

BRIEFS

SWEDISH AID PAPER MILL--Hanoi VNA 22 Dec--The Vinh Phu Paper Plant built and equipped by Sweden has turned out its first rolls of paper. This modern paper complex which will have a capacity out of 55,000 thousand tonnes per year is being built in the province of Vinh Phu, some 100 kms northwest of Hanoi. The first phase of construction was completed at the end of November 1980. Vu Duc Yen, director of the mill said that the completion of the first phase of construction and of machine installation is a vivid expression of Sweden's cooperation and assistance. At present Vietnamese and Swedish specialists and workers have put into operation the first paper machine with an output of 27,000 tons per year. Part of the 16,000 kw power station, a system of water treatment plants, an engineering workshop and a 12 kilometer railway are already functioning. Next year, the mill will supply the home market with 10,000 tonnes of writing, printing and wrapping paper. [OW220639 Hanoi VNA in English 0315 GMT 22 Dec 80]

FARM MACHINERY REPAIR SHOP--Hanoi VNA 31 Dec--Ho Chi Minh City's first farm machine repair was recently inaugurated in the suburban district of Thu Duc. Built with aid from the commercial service of the Foreign Trade Ministry of the Soviet Union, the workshop is composed of two production and reconditioning of tractor spare parts. The workshop is capable of maintaining hundreds of tractors and of undertaking major repair work on at least 30 others per year. [Text] [OW311153 Hanoi VNA in English 0301 GMT 31 Dec 80]

CONTROLS TIGHTENED IN TRANSPORTATION UNIT

Hanoi QUAN DOI NHAN DAN in Vietnamese 11 Nov 80 p 1

[Article by Hoang Tien: "Transport Group 11(the Truong Son Military Corps) Strictly Maintains Specific Regulations on Transportation and Promptly Praises Good Persons and Good Work"]

[Text] Transport Group 11 (the Truong Son Military Corps) has taken many specific measures to build its unit on the basis of regular force procedures and combat negative phenomena within the unit.

The group has adopted specific regulations for each route, established fuel consumption ceilings for each vehicle and established specific rest stops for the drivers on long-distance routes. The group has also established detailed regulations concerning orderly duty at garages and maintenance facilities; it maintains strict procedures when vehicles depart, namely, a cadre assigns the driver a specific task and informs him of the pertinent regulations; when a vehicle is about to pass through the gate, a cadre on duty inspects it and immediately detains it if it is hauling something not recorded on the manifest; when the vehicles returns, the driver must immediately report on the results of his trip. The group takes decisive action regarding incidents that occur on the road, promptly praising "good persons and good work." One battalion or company cadre is in charge of every five trucks or more that are taking the same route or carrying important cargo.

Each day, the garage duty section closely observes the persons and vehicles that enter and leave the garage and directs drivers to the stipulated place to park their vehicles. Drivers who want to repair their trucks must receive permission from the duty section; there is a separate repair section for vehicles, which has served to prevent mistakes and the loss of spare parts.

The group's force of youths, which has been trained well, displays good revolutionary qualities, displays the spirit of bravely protecting socialist property that was displayed by Dinh Trong Lich and Le The Bui, has heightened its spirit of collective ownership and has cultivated the virtues of the socialist driver.

They have also organized "the construction of a 1,800 square meter garage after work hours"; all drivers within the unit have been trained in the technology of gasoline powered trucks and diesel trucks in order to achieve "technical uniformity."

As a result, drivers can undertake technical work when on jobs by themselves and can replace one another when necessary.

The group has kept its vehicles in regular operation; has reduced disciplinary violations and the display of a liberal, undisciplined style to the lowest possible level; has reduced the damage to and loss of cargo due to a lack of a spirit of responsibility; and has completed its routine and emergency transportation plans well. As of October, it had transported 551,818 tons/kilometer to the correct destinations, on schedule and with no loss of cargo or its quality.

HANOI PORT TIGHTENS MANAGEMENT

Hanoi DOC LAP in Vietnamese 15 Oct 80 p 6

/VNA News Release: "The Struggle Against Negative Phenomena in the Hanoi Port"/

/Text/ The Hanoi port is a large river port which, in addition to the hundreds of thousands of dong worth of means and equipment it has, regularly has many commodities and supplies in its warehouses and storage yards needed for production and everyday life, such as coal, sand, gravel, cement, fertilizer, metals, chemicals, grain, food products and so forth.

Each day, thousands of tons of means of river transportation enter the port to deliver their cargo and leave and, along its shore, 600 to 700 trucks and rudimentary vehicles enter and leave the port. At night, thousands of persons live in the port complex. For these reasons, the port was very disorganized in recent years: production areas were mixed among living areas, cargo handling areas were mixed among construction areas and large numbers of persons entered and left the port without being managed. Many decadent elements inundated the warehouses and storage yards to take coal and steal goods belonging to the state. Although the management of the port was revamped each year, there were still many loopholes, internal regulations and management regulations were not specific and responsibilities were not clearly defined, consequently, for a long period of time there was waste and the loss of much cargo belonging to the state.

Since the start of this year, in keeping with directive 81 of the Party Secretariat and joint Ministry of Communications and Transportation-Ministry of Interior resolution, the Hanoi port has formulated a plan and taken comprehensive measures to prevent and eventually eliminate negative phenomena. The port has concentrated on combating and preventing major thefts and putting an end to bribery and theft in cargo handling, transportation and the shipping and receiving of goods. The port has been closely managing movement to and from wharves and gangplanks, thus preventing persons from stealing coal and goods belonging to the state. Strengthening the party organization and making each party chapter a strong, solid party chapter have become the way of thinking and are the best ways to overcome each of the negative phenomena that occurs on a daily basis within the port. The port party organization has also been determined to expel from the party persons who have become deviant.

Having formulated a plan for combating negative phenomena, the Hanoi port had all key cadres of the party, government, Trade Union and Youth Union carefully study and discuss the plan and then expanded this effort to workers. The port has classified each echelon and attached importance to classifying the workers that handle incoming cargo and cargo that has been dropped in order to adopt a plan for educating them. The port has conducted an investigation of the various areas of management, especially the management of shipping and receiving and the management of supplies, and looked for loopholes in order to close them and re-establish efficient operating procedures.

The Hanoi port has also closely coordinated with the public security agency in order to transfer persons who have made mistakes in security work and has assigned 13 newly trained public security troops to security work; it has strengthened the inspection stations at the two entrances to the port. As a result, the port has gradually restored order. The port has reorganized the stevedore force, intensified inspections by section chiefs and deployed the force of workers within warehouses and on barges in a rotating manner instead of on a permanent basis as it once did. Upholding the right of collective ownership of the masses, the port has prosecuted a number of workers who were caught violating socialist property, such as Le Quang Chanh, Nguyen Xuan Vinh, Do Cong Trien, Dinh Son Hai and so forth. Pilfering and extortion by the members of boat crews have disappeared. Many manual workers, such as Vu Van Mau, Nguyen Van Ly and Tran Thanh Hiep, have denounced thieves and persons who have offered bribes.

Together with taking disciplinary action against criminals and rapidly acting upon the complaints filed by cadres and manual workers, the Hanoi port has attached particular importance to shipping and receiving and the storage of cargo; it has republished shipping and receiving regulations and made it mandatory upon shipping and receiving personnel to comply with the stipulations within internal regulations; it regularly holds meetings with the owners of cargo, inspects the circulation of documentation when cargo is being shipped and received and so forth.

The struggle against negative phenomena in the Hanoi port has begun to achieve good results. The number of thefts of coal and cargo belonging to the state has definitely declined; bribery is gradually decreasing. The campaign against negative phenomena has helped to raise the productivity of cargo handling in the port. In the imported cargo area, there are many broken and torn cement bags, however, the stevedore units have still managed to handle from 120 to 130 tons per shift, 10 to 20 tons per shift more than their quota; they have exceeded their quota on the handling of flour by 50 to 60 tons per shift. The various units have rescheduled their work time and coordinated between shift rest periods with the electric power generating section, thereby insuring the implementation of their plan and increasing their production time by 1 hour per day.

In particular, when they have encountered difficulties due to circumstances beyond their control, port cadres hold discussions with the related parties and look for ways to overcome these difficulties in order to rapidly move ships from the port. Since the start of the year, ships have been moved from the port 15 to 20 hours faster.

Since the start of the year, in addition to handling 370,000 tons of cargo consisting of coal, rice, cement and food products, the cadres and manual workers of the port have also excavated 30,000 tons of sand to meet construction needs. To develop upon its initial success, the Hanoi port has adopted a plan for continuing to combat negative phenomena and accelerate production in order to complete the 1980 plan well.

HANOI'S REVIEW OF EVENTS FOR 16 AUG-15 SEP 80

Hanoi VIETNAM COURIER in English No 10, 1980 p 32

[Text]

August

16. A meeting to mark the 35th founding anniversary of the People's Public Security Force of Vietnam and the conferment of the Gold Star Order on it is held in Hanoi.

– Signing in Bucharest of the minutes of the 6th session of the Joint Vietnamese – Romanian Governmental Committee for Economic, Scientific and Technological Co-operation.

17. Prime Minister Pham Van Dong receives Lao Vice-Premier and Minister of Foreign Affairs Phoun Sipaseuth.

18. Signing in Phnom Penh of an agreement on Vietnam's non-refundable economic aid to Kampuchea for 1980.

20. Kampuchean News Agency *(SPK)*: The Kampuchean People's Revolutionary Council has just formed a Constitution Drafting Committee headed by President Heng Samrin and Vice- President Penn Sovan.

21. The spokesman of the SRV Ministry of Foreign Affairs issues a statement on the Chinese authorities' threats in an interview granted to the Japanese News Agency *Kyodo* on 20 August 1980 in Beijing : "China reserves itself the right to attack Vietnam again."

22. The spokesman of the SRV Ministry of Foreign Affairs issues a statement protesting against the US impudent decision to annex the Panama Canal to US territory.

– *VNA*: Representatives of the UN Disaster Relief Organization (UNDRO) arrive in Vietnam to assess the damage caused by typhoon number 4 (JOE).

23. The Political Bureau of the Swedish Workers' Communist Party calls on all its organizations to help Vietnam overcome the damage caused by the recent typhoon and flood.

– Prime Minister Pham Van Dong receives the delegation of the All-India Peace and Solidarity Organization (AIPSO) led by its President Chandrajit Yadav.

– Signing in Managua of an agreement on co-operation and exchange of information, photographs and professional and technical experiences between the Vietnam News Agency and the Nicaraguan News Agency.

26. The SRV decides to establish diplomatic relations at ambassadorial level with Jordan.

– The SRV Ministry of Foreign Affairs publishes a memorandum on the tense situation in Southeast Asia and states that the appropriate way to ease it is through peaceful negotiations.

– The spokesman of the Vietnamese Ministry of Foreign Affairs issues a statement fully supporting the just stand of the Government of the Democratic Republic of Afghanistan as expressed in its statement of 19 August which condemned all criminal actions of the US imperialists, the Chinese expansionists and other reactionary forces against the Afghan people and firmly demanding them to stop these criminal actions immediately.

28. Hun Sen, Foreign Minister of the People's Republic of Kampuchea, states that Kampuchea completely supports the correct stand of the 26 August 1980 Memorandum of the SRV Ministry of Foreign Affairs.

– Prime Minister Pham Van Dong receives the Cuban Government trade delegation led by Minister of Foreign Trade Ricardo Cabrisas which had come for talks on the signing of a trade agreement and an agreement on goods exchange for 1981–1985 between the two countries.

– On the 35th National Day of Vietnam, the *Su That* (Truth) Publishing House published Truong-Chinh's works: "President Ho Chi Minh, his great cause and eternal example."

29. A delegation of the Kampuchean Propaganda and Training Commission of the National United Front for the Salvation of Kampuchea led by its President Boun Thong arrives for a visit to Vietnam.

31. The hydraulic engineering factory No. 276 of Ho Chi Minh City helped the People's Republic of Kampuchea build seven irrigation projects in the provinces of Battambang, Kompong Speu, Takeo and Pursat.

September

1. A grand meeting to mark the 35th anniversary of the August Revolution and Vietnam's National Day (2 September) is held in Hanoi. Prime Minister Pham Van Dong delivers an important speech.

– The spokesman of the Vietnamese Ministry of Foreign Affairs issues a statement demanding the US to dismantle its military bases and withdraw its armed forces out of the Arabian Sea, the Horn of Africa and the Indian Ocean.

3. A meeting of the countries providing aid within the programme of humanitarian aid for the Kampuchean people held in New York highly praises the effective aid of Vietnam, the Soviet Union and other socialist countries.

4. The SRV decides to confer the title of Labour Hero of Vietnam and the Ho Chi Minh Order, First Class on Soviet Air Force Lieutenant-General V.A. Shatalov, Deputy Commander of the Soviet Air Force, in charge of cosmonaut training; the Ho Chi Minh Order, Second Class on Bui Thanh Liem, major, member of the Soviet-Vietnam stand-in flight team.

5 Nearly 15 million nursery and general education school pupils throughout the country begin the 1980-1981 school year.

– *Nhan Dan*: The SRV Government decides to set up an organization committee for the celebration of the 1,300th founding anniversary of the Bulgarian State.

6. Foreign Minister Nguyen Co Thach leaves Hanoi for an official friendship visit to the USSR and other countries.

8. Acting-President Nguyen Huu Tho receives Lao Industry and Trade delegation led by Acting-Minister Vanthong Lisomphou.

9. A delegation of the Popular Front for the Liberation of Palestine led by Abu Ali Moustafa, Political Bureau member and Deputy General Secretary, arrives in Vietnam on a friendship visit.

10. Signing in Hanoi of an agreement on increasing the transit of Lao imports and exports through Vietnam.

11. *VNA* : The Hungarian Red Cross Society decides to give the Vietnamese victims in storm - and flood-stricken areas relief goods of food, clothes and medicines worth 1.5 million forints.

12. *VNA* : The publishing house of the Communist Party of India has just published President Ho Chi Minh's "Prison Diary".

– The Vietnamese Ministry of Foreign Affairs sends a note to the Chinese Foreign Ministry suggesting a 3rd round of Vietnam-China talks.

13. The spokesman of the Vietnamese Ministry of Foreign Affairs issues a statement rejecting Thai Premier Prem Tinsulanond's slanders against Vietnam on 10 September 1980.

15. Signing in New Dehli of a protocol on the Indian Government's grant of an interest-free food loan to Vietnam.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

ARMY GROUP MAINTAINS CLOSE TIES WITH POPULACE

Hanoi QUAN DOI NHAN DAN in Vietnamese 16 Nov 80 p 1

[Article by Phan Thai: "The Song Cau Group of the Pac Bo Military Corps Actively Helps the People in Production and Everyday Life"]

[Text] In the performance of their task on the frontline of the fatherland, the cadres and soldiers of the Song Cau Group (the Pac Bo Military Corps) have achieved the objective of "the army and the people sharing the same will," have mobilized the people well and have received the wholehearted love and assistance of the people.

The group maintains close ties with the local party organization and government and the various agencies located in the area in which its troops are stationed, coordinates the performance of its combat and combat readiness tasks with educating negative elements within the locality and has mobilized the people to be vigilant in the face of the schemes and tricks of the enemy. The group has sent many cadres to help the locality train the militia and self-defense forces and improve the technical and tactical proficiency of the local armed forces. The units working on the frontlines have closely coordinated with the militia, conduct regular patrols along the border and through the various villages and have constructed fences and erected obstacles along strategically important roads.

As a result of being thoroughly educated, all of the cadres and soldiers of the Song Cau Group scrupulously adhere to the 12-point code of discipline concerning relations between the army and the people. Although it is busy with very many jobs, the group has still managed to spend much time helping the people to rebuild their homes, build water conservancy ditches and canals, build potable water reservoirs and perform sanitation work in the villages; it spent more than 5,000 mandays helping the people harvest their rice and plant their 10th month crop. During the first 6 months of 1980, in the face of the difficulties being encountered by the people with grain, the units of the group voluntarily reduced their eating standard and supplied the local people with 5,400 kilograms of grain. These units have also conducted many supplementary education classes for the people and organized 36 talks on contemporary affairs in order to propagandize and mobilize the people to implement the policies of the party and state, talks that were attended by 2,870 persons. One hundred percent of the group's Youth Union chapters and joint chapters have established brotherhoods with the local Youth Union chapters and begun to build a number of projects of significance, such as playgrounds, schools, clubs, youth bookcases, youth afforestation hills and so forth.

In particular, the 10th Company, the unit tasked with security work at M. Pass, having noticed several large forest fires in the area in which its troops were stationed, promptly mobilized the unit to fight the fire, saving hundreds of hectares of pine forests and winning the warm praise of the local government and people.

LANG SON WORKS WITH PEOPLE TO DEFEND BORDER

Hanoi QUAN DOI NHAN DAN in Vietnamese 17 Nov 80 p 1

[VNA News Release: "Lang Son Province: the Border District of Van Lang Successfully Carries Out the 'Army and the People Share the Same Will' Campaign"]

[Text] Vang Lang is one of the mountain districts of Lang Son that is successfully carrying out the "army and the people share the same will" campaign, thereby intensifying production, stabilizing the life of the ethnic minorities, maintaining combat readiness and protecting the border.

The unified military command of the district has guided the various military units and villages in broadening the brotherhood between the army and the people so that they can coordinate with and help one another maintain combat readiness and win victory in a fight against the Chinese agrressor army. Each month, the army-civilian brotherhood committees hold a meeting to resolve specific problems arising in the relationship between the army and civilians. The people of the various ethnic minorities, together with their armed units, have reinforced their trenches, built combat positions and exchanged combat plans with the villages and combat clusters within their area. Practically all villages have established and strengthened Associations of Soldiers' Mothers to help sew and mend uniforms and visit and encourage troops.

The armed units stationed in the locality have agreed to sponsor militia and self-defense units. Having been helped by the armed units with training, the militia and self-defense units of the entire district have completed their military training program for all of 1980 and completed it in a manner reflecting high quality.

As a result of being trained, the militia and self-defense forces have closely coordinated with the armed forces in patrols and guard duty and have arrested dozens of spies as soon as they entered the locality.

The units have also sent cadres and soldiers to the various villages to help build cooperatives, reorganize production, plant and harvest crops on schedule and organize guard duty to protect the people in production.

As a result of carrying out the campaign well, the unity between the army and the people has been strengthened, political security and the safety of society in the border area have been firmly maintained and the people of the various ethnic minorities are confidently and enthusiastically accelerating production and are vigilant in the face of every psychological warfare argument of the enemy.

EDITORIAL REVIEWS COMBAT READINESS REQUIREMENTS

Hanoi QUAN DOI NHAN DAN in Vietnamese 17 Nov 80 p 1

/Editorial: "The Order and Discipline of Combat Readiness"/

/Text/ Constantly raising the level of combat readiness and maintaining a high state of combat readiness is a requirement in the nature of a principle of the armed forces in every period, when the country is at war as well as in peace time. This requirement must be fully met in all of the ideological and organizational work of units to insure that our troops, be they on the frontlines or in the rear area, can, regardless of what task they are performing, be it training, productive labor or economic construction, take the initiative and promptly retaliate against and win victory over every aggressive attack by the enemy as soon as that attack is launched.

In order to achieve a high level of combat readiness, it is necessary to perform very good ideological and organizational work and provide very good combat training as well as fully implement the various regulations on combat readiness. Importance must regularly be attached to educational work so that every cadre and soldier has a deep understanding of the revolutionary situation and task and the combat task of the unit, is clearly aware of the insidious schemes and cunning actions of the enemy, struggles against complacency and laxity and builds his determination to fight and a high spirit of revolutionary vigilance.

Educational work must be closely linked to inspecting the level of combat readiness of the unit, to making every effort to develop upon strengths and overcome weaknesses, learning practical lessons and constantly raising the level of combat readiness.

Together with improving the quality of training and becoming familiar with combat plans through training, it is of utmost importance to implement the various combat readiness regulations well. Depending upon the specific task and requirements of each echelon, line, branch and service, units must tightly organize and strictly maintain the orderly duty, duty watch and combat alert systems, always know their troop strength and weapon inventory and prepare both command and support activities well. The commanders and the staffs on the various echelons must conduct both scheduled and unscheduled inspections and use maneuvers and practice alerts to put combat readiness on a regular basis and achieve good coordination throughout the entire organization, from the highest commander of the unit to the combat soldiers and the combat support forces.

THANH HOA BORDER FORCES REVIEW EMULATION MOVEMENT

Hanoi QUAN DOI NHAN DAN in Vietnamese 17 Nov 80 p 1

[Article by Nguyen Khac Thuan: "The Thanh Hoa Border Defense Forces Review the 'Follow the Example of Dinh Trong Lich, Study Le The Bui' Movement"]

[Text] The Thanh Hoa Provincial Border defense forces recently conducted a review of the "follow the example of Dinh Trong Lich, study Le The Bui and build border defenses that are strong in every respect" movement.

In this intense emulation movement, every agency, unit, cadre and soldier has had specific norms regarding each weakness, has developed upon their strengths and has successfully achieved the objectives of the campaign while building a strong border security defense line. The units recorded many achievements and completed the eight training lessons in border security work, tactics, military arts, supplementary training for platoon leaders, foreign languages and so forth for more than 500 cadres, all of whom recorded good and above average grades (69-73 percent recorded above average grades). The border defense units in the mountains stood shoulder to shoulder with the local people and cooperated with friendly units to formulate combat plans for protecting the border. In inspections by the upper echelon, border defense posts 37, 39, 41 and 43 were found to have met the standards for being a combat ready unit. During the recent typhoons, the cadres and soldiers of units 80, 72, 74 and 78 saved hundreds of homes, rescued 136 injured civilians and cadres, transported hundreds of tons of property belonging to the state and the people to safe locations, maintained security during the typhoons and won the praise of the local government and people.

In the movement to thwart and repulse negative, backward phenomena, all movements have actively participated, achieved marked results, served as a firm foundation for the masses to expose decadent elements and arrested them. When, in the performance of their tasks, they have encountered decadent elements who have attempted to bribe them in every way possible, hundreds of soldiers have maintained their fine qualities; for example Dinh Trong Lich and Le The Bui confiscated for the state many precious metals and many scarce goods worth hundreds of thousands of dong. Every station has established many "Dinh Trong Lich guard towers and sections" and conducts "Le The Bui patrols."

On the basis of the tasks and requirements of border defense work in the new period, the border defense stations have stood shoulder to shoulder with the militia and self-defense forces and with friendly units, serving as the staff of the local party committee and government in the construction of border defenses and the building of a strong people's war battle position. Border patrols and guard duty are increasingly being put on a regular basis. Together with the combat alert militia and self-defense forces, the border defense stations have conducted many scheduled and unscheduled patrols during which they have arrested many persons for border violations and reclaimed tens of thousands of dong for the state. All stations have established additional mass security installations, many of which are leading banners in the maintenance of local security. The mountain border defense posts have mobilized the people of the various ethnic minorities to save and send to the lowlands more than 300 tons of grain to help the flood-stricken localities. Every unit in the province has completed from one to four projects in the "army and the people share the same will" campaign. Some 56 outstanding Youth Union members have been accepted into the party, 45 Youth Union members have been introduced to party chapters and recognized as candidates for acceptance into the party and everyone is enthusiastically beginning the new emulation campaign to follow the examples set by the heroes Dinh Trong Lich and Le The Bui and record many new achievements in commemoration of 22 December.

TAY NINH FORCES MAINTAIN BORDER SECURITY

Hanoi QUAN DOI NHAN DAN in Vietnamese 24 Nov 80 p 1

[Article by Ngo Manh Sieu: "Tay Ninh Armed Forces Promote Maintenance of Order and Security"]

[Text] While carrying out military training and specialized study, the regular, militia, and self-defense units of Tay Ninh cooperated closely with people's public security forces to do a good job of maintaining political security and social order.

In its assigned sphere of operations, each unit has plans for coordinating with the other units, continually patrol and stand guard, and positively pursure and mop up the reactionaries. The units have made many all-out efforts to contribute to organizing and encouraging the masses to participate in maintaining order and security. With the broad participation of the people, the mass associations and armed forces and discovered and punished reactionaries who appeared to engage in sabotage operations, captured tens of reactionaries engaging in counterrevolutionary activities, and captured six weapons, two grenades, and a number of documents, while stopping a number of armed robberies, capturing 36 people, and confiscating a number of weapons, grenades, and daggers. The units defending the border uncovered and stopped a number of instances of blackmarketing, captured a number of people who had infiltrated from another country to engage in intelligence activities, prevented a number of bad people from fleeing abroad by sea, maintained security along the border and, along with the country bordering ours, created a border area of peace and friendship. The Tay Ninh armed forces also uncovered six instances of the theft of socialist property and positively participated in eliminating the evils of collusion and illegal livelihood, and the other negative phenomena in society.

Developing the accomplishments they have achieved during the recent period, the Tay Ninh armed forces are clutching their weapons night and day, are always sharpening their vigilance, and are prepared to punish the reactionaries and the bad elements which refuse to reform and to, along with the mass associations and people in the province oppose the negative manifestations and acts in the units and in society.

BEN TRE YOUTHS ENTHUSIASTICALLY ENLIST

Hanoi QUAN DOI NHAN DAN in Vietnamese 18 Nov 80 p 1

[Article by Nguyen Khac Xue: "Tens of Thousands of Ben Tre Youths Enthusiastically Set Out to Defend the Homeland"]

[Text] The provincial military organ and Ho Chi Minh Communist Youth Union of Ben Tre are concentrating their leadership on the "Ben Tre youths enthusiastically set out to defend the homeland"movement in order to victoriouslly fulfill the 1980 troop recruitment norm.

In comparison to previous years, this year troop recruitment in Ben Tre has undergone many transformations, which have assured high quality and that troops are delivered rapidly and efficiently.

When carrying out the second-cycle troop recruitment task, the Communist Youth Union of Ben Tre has taken the initiative in accepting norms from the provincial party committee and the Military Draft Council, in order to recommend plans and measures for educating and encouraging youths to set a good example by registering and enthusiastically fulfilling their glowious desting of defending the homeland. The "Ben Tre youths enthusiastically set out to defend the homeland" movement has developed widely and seethingly everywhere. The districts of Thanh Phu, Mo Cay, and Cho Lach have also organized evening discussion periods on the topic "what can youths do to make the greatest possible contribution to the enterprise of developing and defending the homeland?" Many valuable opinions have been contributed to the basic Youth Union chapters which have had the effect of holding up model, progressive examples and struggling against and criticizing negative, backward manifestations on the part of some youths. The Youth Union chapters of Giong Trom District, Ba Tri District, and the cities of Chau Thanh and Binh Dai have positively carried out propaganda so that the masses could clearly understand the military obligation law which all citizens must obey. The district chapters of Mo Cay and Thanh Phu sent cadres to each hamlet and village to encourage the youths to take their preinduction physicials at the specified time and place. Thousands of Ben Tre youths registered to take their pre-induction physicals.

Because it knew how to combine troop recruitment with consolidating the Youth Union bases, Ben Tre has done a good job of all aspects in order to fulfill the annual troop recruitment norm and maintain the tradition of taking the lead for many continuous years in the troop recruitment movement of Military Region 9.

MILITARY AFFAIRS AND PUBLIC SECURITY

SON LA PROVINCE IMPLEMENTS SECURITY DIRECTIVE

Hanoi QUAN DOI NHAN DAN in Vietnamese 18 Nov 80 p 3

[Article by Phuc Nguyen: "Son La in the Movement to Maintain the Security of the Homeland: Directive 01 is Implemented"]

[Text] On the roads passing through Son La Province one may very easily encounter joint control teams fulfilling their missions. The teams are made up of public security policemen, regular troops, and personnel of the forestry control and tax sectors. Those control teams have the mission of uncovering and bringing to justice counterrevolutionaries, people who steal socialist property, and people who collude with state personnel and engage in illegal livelihoods, and of stopping the activities of hooligans, thugs, and trouble makers who disturb order and security in the various areas. They are positive troops on the front against negativism.

Before listening to a report regarding the encouraging results attained during the 2 months of the control teams' activities, we listened to a rather large number of opinions expressed by people in the province: "Since the regular troops and the public security police have intensified their control, the situation in the hamlets and villages has become much more secure." The comrades of the Transportation Service informed us that "There are far fewer instances of the transporting of stolen goods and blackmarket goods, and of truck drivers engaging in illegal livelihoods, than during the past few months."

After the Ministry of National Defense and the Ministry of Interior issued interministerial directive No 01 regarding "Heightening responsibility and strengthening the solidarity and close cooperation between the People Army and the public security forces," the provincial party committee and people's committee of Son La Province guided the Public Security Service and the provincial military organ in cooperating in the drafting of a plan of action. Only a few days after receiving the directive a guidance committee headed by the chairman of the provincial peopl people's committee was formed. Immediately thereafter joint control teams were formed. Units N 20, B 19, and H 92, the provincial military organ, and the districts selected people to participate in the control teams, along with the forces of the pbulic security police and the forestry control and tax sectors. The forces participating in the first cycle totalled 1,039 people. In 72 basic units (7 cities and towns, 2 wards, and 63 villages) control teams were quickly formed. On the major roads there were set up 16 control stations, which operate night and day. Since the control teams are made up of many components, each sector works within the sphere of its authority. The regular troops inspect the carrying out of orders on the part of the cadres and enlisted men, and the transportation facilities managed by the army. The public security police inspect the papers, drivers, and vehicles of all types of transportation facilities passing through their area of operations, the carrying out of orders by public security policemen, violations of law, instances of illegal, dishonest livelihood, etc. Forestry control and tax cadres are present on the spot in order to promptly deal with the illegal possession of goods and the possession of stolen goods by dishonest merchants, blackmarketeers, etc. With regard to the main-force units and the local troops stationed in Son La Province, in addition to disseminating and explaining to each person the contents of Directive 01 of the Ministry of National Defense and the Ministry of Interior, supplementary classes were held for the men participating in the joint control teams, the principal contents of which were studying the policies and laws of the state and the objectives of the control work.

During the 2 months of their activities the control teams have dealt with 189 instances in which the regular troops have violated orders (from among the 2,700 inspected), principally because of identification papers not being in order, hair and dress not being in correct accordance with the style of military personnel, and the careless use of weapons. Of the 5,888 vehicles inspected, there we hundreds of instances of the illegal transporting goods, the transporting of stolen goods, the use of state facilities to transport black market goods, and drivers without papers. Goods confiscated from those engaged in illegal liveligood are valued at hundreds of thousands of dong. Due to inspections made on the roads, we confiscated 16 tons of nitrogenous fertilizer, 307 kilograms of MSG, thousands of meters of cloth, tens of tons of foodstuffs, etc. The control teams cooperated closely with the militia and self-defense forces and along with the positive participation of the youth and women's mass associations in the locality created a combined strength with which to further the struggle movement against negativism in social life. An initial result of the first cycle was that there were uncovered and dealt with 10 gangs of thieves, hooligans, blackmarketeers, and gamblers which had caused much damage in the locality.

The positive activities of the control teams have demonstrated that if the contents of Directive 01 are strictly carried out, then not only will the negative phenomena be reduced and local order and security be assured, but the confidence of the people in the troops and the public security forces will become increasingly strong. Among the criminals uncovered and brought to justice there were many who disguised themselves as soldiers. They took advantage of stolen military uniforms or insignia to engage in illegal activities, and adversely affected the troops and public security forces who were cooperating in opposing negative phenomena. The people have even more confidence in and love of the two principal dictatorship forces of the socialist state. Since the activities in accordance with Directive 01 began to be carried out in a big way the ethnic minority groups of Son La have expressed sympathy and support in all respects for the troops and public security police. Many families recommended that they be allowed to contribute money and rice to support the control teams operating in distant, difficult areas or working at night. Those sentiments prove that the solidarity and the cooperation in activity of the army and public security forces have the complete sympathy and support of the people.

In Son La City, Moc Chau District, and Thuan Chau District the implementation of Directive 01 had effect from the very first day. Within the city the control teams cooperated with the Assault Youth units in maintaining security and order in public places, discovered and arrested people engaged in illegal trading, and positively struggled against thievery, especially by wayward youths. At the points leading into the province, the control teams in Moc Chau District discovered and confiscated a large quantity of goods being transported, sold, or possessed illegally, which were valued at more than 100,000 dong. In such complicated areas as Thuan Chau District the army and public security forces arrested and brought to justice many hooligans, gamblers, opium smokers, and moonshiners, which helped the order and security situation to undergo many good transformations.

Son La Province is stressing the implementation of Directive 01 in the high-altitude districts. In those joint control teams additional local public security forces and militiamen, who know those areas well and grasp the local situation participate in their activities. In addition to uncovering and dealing with the selling and transporting of blackmarket goods and stopping illegal livelihood and negative phenomena in the localities, the control teams also have the missions of maintaining order and security, contributing effectively to maintaining political security, and preventing the enemy from causing trouble and creating disturbances in the high-altitude areas and along the border. A long-range plan has been drafted. The regular units in the province are continuing to teach and explain Directive 01 to the cadres and enlisted men. With the experiences that have been learned by the actual activities during the recent period it is certain that even greater results will be attained.

MILITARY ARRAIRS AND PUBLIC SECURITY

'QUAN DOI NHAN DAN' REPORTER VISITS LONG XUYEN CITY

Hanoi QUAN DOI NHAN DAN in Vietnamese 18 Nov 80 p 3

[Article by Ngoc Thi: "Changes in Long Xuyen City"]

[Text] I arrived at Long Xuyen City in An Giang Province in the afternoon. Many people and vehicles were going about busily and happily. On the street, there were three soldiers who wore red armbands with gold letters which read, "Military Personnel Control." One, who wore the insignia of a corporal and a pistol, took the lead, followed by two soldiers who wore PFC insignia and carried AK rifles.

The corporal saluted a comrade who wore officers' insignia and was going in the opposite direction, then said, "Captain, your cap is not on straight. I recommend that you straighten it."

The officer returned the salute, then straightened his soft cap.

As I was crossing over the Hoang Dieu bridge I encountered two female soldiers who wore corporal's insignia and were riding tandem on a bicycle. The one who sat in the rear wore a soft "lotus" cap, to which was affixed a military insignia. The comrade leading the patrol squad signaled for the bicycle to halt. He saluted the two female soldiers and asked to see their papers.

After inspecting their papers he recommended that she not wear a "floppy" hat in public, for it did not conform to regulations. The female soldier pleasantly admitted her error, saluted, then turned onto Hung Vuong Street at the Vuon Trau intersection.

That night I stayed in Long Xuyen City. At 2100 I accompanied Captain Nguyen Van Ut and aspirant Nam, cadres of the military organ of Long Xuyen City. We passed by the flower garden in the center of the city. The electric lights lit up the area, as young men and women filled the stone benches and coffee shops. But there was not a soldier to be seen. When we reached Bach Dang street we encountered three soldiers who were wearing "Military Personnel Control" armbands. I asked comrade Ut, "Is that a patrol of the city military organ or of your unit?"

Comrade Ut replied, "It's one of ours."

I observed that during the day I had encountered many young soldiers but at night had seen not one in a coffee shop or sitting on the stone benches in the park.

The Captain said that in the past there were many of them, but since the launching of the "Develop the fine qualities and increase fighting strength" movement, and especially since the "The entire army acts in accordance with order" campaign, there have been no more instances of loitering in the coffee shops. With regard those from distant units, the city military organ worked with the authorities to provide ample billets for them, so there have been no further instances of loitering on the sidewalks.

Recently Long Xuyen has arrested a rather large number of armed robbers and reactionaries attempting to flee abroad, and has done a rather good job of maintaining order and security in the locality. One of the reasons for success there has been that the local troops, militia, and self-defense members know how to rely on the people and use the people as their eyes and ears, and thus have categorized the bad elements in order to concentrate on reforming and educating them. Since order and security have been maintained, the local tasks have been carried out well and very effectively. The 1980 first-cycle troop recruitment norm was surpassed and the local troops, militia, and self-defense members served as the hard-core in selling grain to the state and protecting state property.

The city military organ knew how to rely on the resolution of the provincial party committee and the work policies of the local military organ, and took the initiative in establishing relationships with the other organs and sectors in the city. By that means it confirmed that the maintenance of order and security in the city is the common the responsibility of the party committees and the local government and is carried out by the managing military organ, with the all-out assistance of the sectors. At the same time, it paid attention to building up the corps of base-level cadres of the villages and hamlets.

The base-level cadres are both people who perform tasks and the eyes and ears of the people. They inform the local military organ of the bad points and the good points, so that it can develop the good points and overcome the deficiencies. The local military organ has adopted the policies of "grasping the situation" and of holding regular discussion sessions and press conferences with the local people. On the basis of grasping the situation, it has adopted appropriate work policies and methods.

In the course of two years of carrying out the campaign to maintain order and security in Long Xuyen City much progress has been made, but there are still a number of deficiencies. The military organ must make even greater efforts to meet the requirements of the new situation.

A few days later I went to the Long Xuyen bus station. The new bus station is located in the outskirts of the city, and is no longer in its center. The new bus station is rather large. There were many people, the buses were parked in an orderly manner. At the ticket stand there was a sign stating "Ho Chi Minh City, Can Tho, Chau Doc, Rach Gia, etc." and there was a window which sold priority tickets to wounded soldiers, troops, and people with small children.

Long Xuyen City is bustling and is orderly, neat, and clean. I once again encountered the members of the "military personnel contro" unit, the member of which wore yellow shirts and red armbands, which was on patrol. The troops and the public security police cooperated to maintain security and social order, and to protect the peaceful labor of the people.

PEOPLE'S ARMY NEWSPAPER STRESSES COMBAT TRAINING RECAPITULATION

Hanoi QUAN DOI NHAN DAN in Vietnamese 26 Nov 80 p 1

[Editorial: "Recapitulate Combat Training"]

[Text] To date the units throughout the army have essentially completed their 1980 training programs. Carrying out a recapitulation of training and correctly evaluating the results of study and training of the cadres and enlisted men during the past year, in order to gain practical experience, is an extremely important task in order to contribute to further improving the quality of the coming training year.

In accordance with the combat training orders of the Minister of Defense and the orders of the upper echelons, and on the basis of its training tasks and plans during the past year, each echelon must carry out a strict recapitulation. The contents of the recapitulation must center on the key points which illuminate the problems that are yet to be resolved in combat training, and learn useful lessons. It is necessary to avoid the method of recapitulation that covers everything, with no problems being less important or more important, or making only general observations or only listing results and accomplishments.

The quality of training recapitulation demands that all cadres and enlisted men manifest a spirit of criticism and self-criticism, affirm the true nature of the good results that have been attained, and correctly evaluate the true nature of the combat strength that has been added to during the training year, while also strictly pointing out the remaining weaknesses in both knowledge and action, organizing implementation, correctly determining the reasons, and clearly determining the responsibility of each echelon and individual.

The 1980 training year took place under the circumstances of our troops having to maintain a high degree of combat readiness, having to carry out many other urgent missions, and having certain difficulties. Those difficulties are real and are not easily avoided, but we have very basic advantages. Therefore, important matters in recapitulation are the necessity to enter deeply into reviewing the subjective efforts of the troops, first of all the cadres of the various echelons, to understand the situation and tasks, develop the advantages, resolutely overcome the difficulties, limit the effect of objective factors by means of a revolutionary offensive will, and the organization of clever, rational, flexible, and scientific implementation, in order to assure the fulfillment of training programs with the best possible results.

The commanders at the echelons directly organizing the recapitulation of their units must clearly determine the objectives and requirements, point out the important contents, and guide the organs in making full and accurate preparations, develop the collective mastership right of the lower echelon and the elisted men, respect and listen closely to the opinions of the masses, adequately respond to the problems that are brought up in the recapitulation process, etc. Only thereby can we isolate useful experiences for the new training year.

ILLEGAL EMIGRE ORGANIZATION TRIED

Hanoi QUAN DOI NHAN DAN in Vietnamese 14 Nov 80 p 4

[VNA News Release: "Ho Chi Minh City Harshly Punishes Group That Enticed Persons To Flee Overseas"]

[Text] The Ho Chi Minh City People's Court recently tried a group of persons for the crime of "enticing and alluring others into fleeing the country for counter-revolutionary purposes."

The group consisted of Tran Quang Bieu, the chief of Binh Son District (in former Quang Ngai Province) and member of the puppet Internal Control Department; Nguyen Huu Tien, captain in the puppet army; Vu Toan Tu, a member of the Central Committee of the Nationalist Party; Phan Manh Luong, a worker at the U.S. Information Service; Pham Dinh Thang, an English language specialist at the puppet Ministry of Education; Vu Bao Cham, a worker at the U.S. Information Service; and Ton That Sam, a captain in the puppet army.

After liberation day, these persons were granted clemency by the revolution and allowed to return to their families to live and work. Some were given jobs consistent with their abilities. But they continued to "follow the old ways." When the U.S. imperialists and the Chinese reactionaries invented the "evacuation" ruse to undermine the revolution, these persons raised the banner of a "Van Lang community," of a "new Vietnam" overseas in order to encourage others to leave the country. They found ways to establish communications with and received opinions from the American ambassador in Thailand. In an even more dangerous act, Tran Quang Bieu, one of the leaders of the group, impersonated a representative of an international organization in order to deceive and entice other persons into going overseas. Many families that were deceived by them sold their houses and everything they used to earn a living and sat waiting for the time to leave. With information and help received from the people, the Security Agency arrested the entire group and compiled all the necessary evidence. In court, they had no choice but to confess to their crimes. The court sentenced Tran Van Bieu to 14 years in prison, Nguyen Huu Tien, Vu Toan Tu and Phan Manh Luong to 12 years in prison and Vu Bao Cham, Pham Dinh Thang and Ton That Sam to 3 to 6 years in prison.

MILITARY AFFAIRS AND PUBLIC SECURITY

GANG STEALING LIMES FROM STATE FARM CAPTURED

Hanoi QUAN DOI NHAN DAN in Vietnamese 27 Nov 80 p 3

[Article by Xuan Dien: "Emulate Dinh Trong Lich and Le The Bui: Praised By the People and Van Du State Farm"]

[Text] In the morning, the communications detachment of unit 5, led by squad leader Pham Dinh Thoa, received the task of going to obtain firewood.

The men followed the road past Ha Long Village in Ha Trung District, Thanh Hoa Province, and entered the forest. When they were about 800 meters beyond Dung Village, they encountered a group of about 15 to 17 wearing backpacks and carrying heavy loads on carrying poles. Vu Khac Duong, one of the men in the detachment, was suspicious and cleverly asked them for a lime. They nonchalently took four large limes from their backpacks.

At the market,the price of limes was rising, so why were they so generous? It was evident that they had stolen the limes from the Van Du state farm. For several years many limes,oranges, and pineapples had been stolen from the state farm. The state had lost goods amounting to tens of thousands of dong. It was necessary to capture the crooks and return the limes to the state farm. But how? The gang of thieves was rather large, and nearly all were armed. As he was pondering the situation, two more men wearing heavily laden backpacks arrived. The six-man detachment ordered the two men to halt. Knowing that they couldn't escape, the two threateningly pulled out knives and said, "Troops do not have the right to arrest people."

Our men remained calm and one of them said, "We are revolutionary military men who never arrest people withou reason, but we resolutely arrest thieves in order to protect socialist property."

At that time Private Nguyen Quang Tu quickly took a long, sharp knife from one of the thieves. Disarmed and confronted by our resolute soldiers, the two thieves had to return with their backpacks to the state farm.

Before they had gone 100 meters they encountered another group of six or seven men who also wore backpacks weighted down with limes. The two thieves who had just been arrested spoke with their new cohorts, then the whole gang, shouting, rushed forward to slash and stap our men. Dang Quang Cuong used a knife and a carrying pole to attack Nguyen Van Quyen, then fled. Comrades Doan Van Toai, Phan Dinh Thoa, Quang Tu, and Khac Duong continued to resist.

With the help of the local people and governmental administration, our men found and arrested the two gang leaders, Dao Van Tiep and Nguyen Van Canh. Tiep had previously been sentenced to 3 years imprionment for thievery. Faced with incontrovertible evidence, they had to admit their guilt.

The people of Ha Long Village and the cadres and personnel of the Van Du state farm strongly praised the sense of responsibility and consciousness of protecting socialist property of those six soldiers.

PARTY ACTIVITIES AND GOVERNMENT

YOUTH UNION REPORT TO 4TH CONGRESS

Hanoi NHAN DAN in Vietnamese 21 and 22 Nov 80 p 2

[Excerpts from the Report by the Central Committee of the Ho Chi Minh Communist Youth Union at the 4th Congress of Delegates: "The Young Generation of Vietnam Promises To Be the Loyal and Outstanding Inheritors of the Glorious Revolutionary Cause of the Party and Nation"]

[21 Nov 80, p 2]

[Text] Dear Le Duan, general secretary of the Central Committee of the Vietnam Communist Party,

Dear leaders of the party and state,

Dear representatives of the World Democratic Youth Brigade, the International Federation of College Students and the Communist Youth Unions of the fraternal countries,

Dear delegates,

During these hours overflowing with the revolutionary spirit of historic Ba Dinh today, our hearts overflow with excitement and enthusiasm.

Uncle Ho lives forever in our work, in our hearts. And, today, it is as though he is with us once again, bringing his boundless love and affection to us.

The leaders of the party and state have joined us, bringing their boundless love, unparalleled intelligence and thoughtful concern for us and giving us the entire future, giving us hope.

Our brothers and friends from throughout the world have joined us, bringing to us the noble international spirit and their wholehearted support and assistance for the glorious revolutionary undertaking of our youths and our people.

The communist youths of previous generations have joined us, bringing to us their warm feelings and inspiring us to further enhance the glorious tradition of the Youth Union.

The very loyal and faithful Vietnamese mothers of thousands of heroes have joined us, giving to us their boundless love and affection and immeasurable inspiration. We shall forever be grateful to the women who bore and raised us, who smiled the first smile we ever saw, who taught us the first things we learned, who helped us grow to maturity.

To repay these noble sentiments, our young generation promises to never betray the trust of our party, our state, our people and our friends and brothers throughout the world.

Here, we can relate one of the special characteristics of the Vietnamese revolution: in the Vietnamese revolution, as many of the leaders of our party have said, youths have always played the important role. Our party, the great Vietnam Communist Party, was born in the organization of the Association of Vietnamese Revolutionary Youth. In the wars of resistance against the French colonialists and the U.S. imperialists and in the fight against the Chinese aggressor army, the forces who took the lead and directly fought the enemy were youths. Youths also constitute the majority of the Vietnamese working class, the leading, vanguard class. In the 30 years of fighting and sacrifice, many beloved sons of the fatherland gave their lives and many persons grew old, but our youths are still very youthful and full of strength and possess abundant willpower, abundant energies and abundant potentials with which to advance into the future.

Now, the Ho Chi Minh Communist Youth Union and the young generation of our entire country are sending their troops into battle in a new period of implementing the lofty revolutionary ideals of the party, a period in which they have an extremely large and glorious historic mission: taking the lead in successfully building socialism and firmly protecting the socialist Vietnamese fatherland.

The 4th Congress of the Youth Union is a political activity of especially important significance. Under the light of the resolution of the 4th Congress of the Party and the resolutions of the party plenums, this congress of our Youth Union is:

The congress praising the outstanding contributions and the growth of the Vietnamese young generation;

The congress upholding the right of socialist collective ownership of the young generation to take the lead in creating socialist society and firmly protecting the socialist Vietnamese fatherland;

The congress of the young generation that is faithfully and excellently continuing the glorious revolutionary cause of the party.

Part I: The Outstanding Contributions and Extraordinary Growth of the Vietnamese Young Generation

Dear comrades,

Since the 3rd Congress of the Youth Union, our nation has experienced an extremely brilliant period of history. Under the wise leadership of the glorious Vietnam

Communist Party, the ship of the Vietnamese revolution has weathered countless gales, travelled through turbulent waters and reached a glorious shore. Using a just cause to triumph over an unjust cause, using civilization to triumph over cruelty, using revolutionary heroism to overcome difficulties and challenges, our people ultimately won victory over the U.S. imperialists, the aggressor of our times, won back their independence and freedom and reunified the fatherland.

The victory of the war of resistance against the United States for national salvation, as summarized by the party, "will forever be recorded in the nation's history as one of the most brilliant feats of arms, as a shining example of the revolutionary heroism and intelligence of man and will be recorded in the history of the world as a great feat of arms of the 20th Century, as an event of great international importance and profound epochal significance."

The victory of socialist construction in the North has eloquently proven the invincible strength of our superior social system in the war of liberation, a system which, today, is the base of the entire country's advance to socialism.

In the brilliant victory of the Socialist Republic of Vietnam against the Beijing expansionist, aggressor army and the Pol Pot-Ieng Sary executioners further enhanced our image as a heroic people.

The great victories of the Vietnamese revolution have resounded in history and will reverberate into the future.

The brilliant success of the first Vietnamese to fly in space in the two-man, Vietnamese-Soviet flight crew of Pham Tuan and V.V. Go-ro-bat-co /Vietnamese phonetics/ which is a great honor and a tremendous source of pride to our nation and our country's young generation, proves the ability of the Vietnamese intellect to learn and has been recorded as a remarkable achievement of Vietnamese-Soviet cooperation.

During these glorious hours, the hearts of millions of Vietnamese youths sadly remember the boundlessly revered Uncle Ho, the person who gave his entire life to the people, to the country, to the happiness of future generations, to the ideals of liberating the oppressed nations and liberating mankind. He devoted himself to working with our party to nurture and cultivate our Youth Union and our country's young generation, from the first seeds of the revolution nearly one-half century ago to the growth and maturity of today. Uncle Ho shall live forever in our work, in the hearts of our youths. The Youth Union, the Teenagers' Unit and the Children's Unit of our country are extremely honored to bear his name. The young generation promises to always live, fight, work and study in the example set by Uncle Ho inorder to be worthy of and bring greater glory to the young generation of the age of Ho Chi Minh, be worthy of the noble title of a member of the Youth Union, the Teenagers' Unit and the Children's Unit that bear the great name of Uncle Ho.

We are extremely proud of the glorious Vietnam Communist Party, led by the revered General Secretary Le Duan, and the wise, experienced and determined Political Bureau and Party Central Committee that have guided our people in writing the immortal epic of our times, guided our young generation in its growth and maturation. During these historic hours, our congress expresses the boundless gratitude, boundless confidence and unquestioning loyalty of the young generation of Vietnam to the revered party.

We are extremely proud of the independent, unified and socialist Vietnamese fatherland, proud to be the citizens, the young collective masters of the glorious Socialist Republic of Vietnam.

"When drinking water, remember the source"; with this in mind, we shall never forget and shall always be grateful to the heroes, war dead and countless compatriots and comrades who gave their lives for the great victory of the nation. Their feats of arms and heroic deeds shall always be a bright example for us to follow, always be a source of inspiration to us to record new feats of arms and achievements.

On this major holiday, from the capital Hanoi, we express our militant solidarity with, our feeling of warm friendship toward and our sincere gratitude to the World Democratic Youth Brigade, the International Federation of College Students, the Lenin Communist Youth Union and the youths of the Soviet Union, the Lao People's Revolutionary Youth Union, the Youth Association for National Salvation of Kampuchea, the Communist Youth Unions of the countries in the socialist community, the youths in the national liberation movement and the peace and justice loving youths of the world for their extremely valuable and important sympathy, support and help to the people and youths of Vietnam in the resistance against the United States for national salvation and the fight against the Chinese expansionist aggressors as well as in today's socialist construction and protection of the fatherland.

After presenting the tremendous contributions of the young generation in the great war of resistance against the United States for national salvation, the report continued:

"The great victory of the war of resistance against the United States for national salvation ushered in the new era of an independent and unified Vietnam advancing to socialism.

However, before the wounds of the war could heal, the Beijing reactionary authorities, pursuing a long held, sinister scheme, openly opposed our country. They used the Pol Pot-Ieng Sary lackeys to unleash a war on the southwestern border of our fatherland immediately after we won victory over the United States. When this war was smashed by our army and people, the Pol Pot clique was toppled by the people of Kampuchea and the genocidal regime in Kampuchea, a child of Chinese expansionism and big country hegemony, was buried, the Beijing expansionists brazenly sent troops to commit aggression against our country.

In 30 days and nights of extremely fierce fighting, our army and people, employing the combined strength of the local people's war, defeated the more than 600,000 man aggressor army equipped with hundreds of tanks and thousands of artillery pieces, thereby writing a new and extremely glorious feat of arms in the history of the nation.

Following the example of Le Dinh Chinh, the young slain hero who obstinately fought the enemy and defended the border, countless bright examples of revolutionary heroism emerged. The unparalleled images of Le Din Chinh, Nguyen Ba Lai, Hoang Thi Hong Chiem, Dao Van Quan, Vang A Sinh, Tran Ngoc Giao, Ma Van Cho...and thousands of collectives and tens of thousands of other outstanding individuals will forever be part of the history of our country's youth movement, the history of our Youth Union and inspire us to move forward.

In the face of the task of opposing Chinese aggressive expansionism and protecting the socialist fatherland, the youth of the entire country arose as one in the "three assaults of collective ownership" movement. In only a short period of time, 9 million young men and women, from the mountains to the lowlands, from the borders to the islands, voluntarily joined the "shock youth force building and protecting the fatherland." Tens of millions of youths working at various jobs marched into the streets, enthusiastically responding to the appeal by the Party Central Committee and the general mobilization order of the state; they eagerly joined the armed forces, participated in military training, built defense lines, maintained their readiness to fight and protect the fatherland and fulfilled their international obligation.

Together with the victories on the military front, the youth of the entire country, displaying a high spirit of revolutionary vigilance, thwarted many insidious schemes of the Beijing reactionaries to oppose and undermine our country. In particular, the youths of the ethnic minorities in the mountains, upholding the traditions of patriotism and unity of all the people, smashed every psychological warfare argument, every attempt to divide the nationalities and every espionage maneuver of the enemy.

Dear comrades,

Today, socialism is no longer a dream, it has become the immediate goal in our country. In this undertaking, the youths of the North are very proud to have made outstanding contributions in creative labor, in building and developing the economy, the culture and science and technology, thereby helping to truly make the North the large, solid rear area of the resistance against the United States for national salvation and, today, the base of the entire country's advance to socialism.

Since the day that the South was totally liberated, the fatherland was totally reunified and the entire country began advancing to socialism, youths have enthusiastically participated in the "voluntary labor to exceed state plan quotas" movement and the "voluntary labor to build the fatherland" movement. The "three assaults of collective ownership" movement became an intense revolutionary movement, attracting the youths of the entire country to take the lead in the three revolutions, socialist transformation and socialist construction while bearing arms against the Chinese expansionist aggressors.

Young farmers have been the assault force in the development of agricultural production.

Hundreds of thousands of youths have volunteered to go the mountains and build new economic zones. Hundreds of thousands of youths in the lowlands and cities have enthusiastically joined the assault youth and shock youth units and taken the lead in redistributing labor, clearing land, restoring fields to production and building many new economic zones.

On the road of building a system of agricultural production characterized by specialized cultivation, intensive cultivation and comprehensive development along the lines of large-scale socialist production, youths are the force taking the lead in working collectively, in building and strengthening cooperatives. Youths have taken the lead on the water conservancy front, undertaking the construction of thousands of canals, ditches. dams and dikes bearing the name youth project; they have bravely fought natural disasters and protected and restored production. Youths are also the main force in the movement to make organic fertilizer and the main force in the specialized units, which have begun to successfully apply many of the achievements of the "green revolution" and scientific and technical measures in crop and livestock production. In 1979, in keeping with the policy of the Youth Union Central Committee and the Ministry of Agriculture, the Youths of the entire country produced 31 million tons of organic fertilizer and they are now intensely carrying out a campaign to raise 500,000 hectares of green manure crops. The "5-10 ton fields for victory over the United States," "high yield fields for victory over expansionist aggression" and "high yield hog herds" are becoming increasingly widespread. Our youths are proud to have made a worthy contribution to the creation of numerous cooperatives, districts and provinces that have average yields of 5 to 7 tons of rice per hectare and have raised both the yield and output of crops and livestock.

In the face of the requirements of socialist industrialization, the force of youths has constantly supplemented the working class, thereby causing our country's corps of manual workers to grow rapidly in both size and quality.

On every front, young workers are always the key force of the youth movement and the shock force of the working class, are always in the forefront of socialist construction and the protection of the fatherland. In the resistance against the United States for national salvation, young workers bravely remained at their machines, in their mine shafts and on their bridges and roads to maintain and protect production, to maintain communications and transportation. In the difficulties and hardships in restoring and developing production after the war, young workers have been the leading force in creative labor. The project to restore the Thong Nhat Railroad line, which was carried out with a labor force of 70 percent youths, completed 1,681 kilometers of track and 160 bridges in only 1 year. Young workers have eagerly registered to participate in the voluntary work to exceed plan quotas movement; many collectives and individuals routinely complete their plans ahead of schedule. Youth projects, youth vehicles and youth machines have become widespread in the various enterprises, factories and worksites and have yielded many practical returns. Emulating the Bim Son Cement Plant construction site, the youths of the various construction sites exceeded the goal of the campaign to reclaim 5 million cement bags in 1979 and are continuing to intensely carry out the campaign to reclaim 6 million cement bags. The "manual skill training and testing" movement has had the effect of encouraging young workers to emulate, study and cultivate their manual skills; as a result, more than 20,000 young workers are considered for promotions and recognized as skilled workers each year. The "creative youth" movement has inspired young workers to make innovations, make technological improvements and rationalize production; this movement is symbolized by the Youth Union organization at the Tia Sang Electric Storage Battery Factory in Haiphong, which has taken creative steps to resolve its difficulties with raw materials and equipment, the

Youth Union organization at the Yen Vien Machine Works which has recorded an average of one innovation per youth and so forth. Of the 90 youth projects that participated in the three creative youth exhibits in the socialist countries, 65 were awarded medals and letters of commendation.

In the struggle to abolish the compradore bourgeoisie and transform private, capitalist industry and commerce in the southern provinces, youths clearly played the assault role and clearly displayed the weapon of struggle. Some 700,000 youths in the cities went into the streets to participate in propaganda and agitation, inspected and took inventories of the property of bourgeois families in industry and commerce, protected socialist property, established socialist production relations and accelerated production. The vast majority of the youths in industry, commerce and the artisan and handicraft trades have displayed an attitude of determination to follow the course of socialism and have enthusiastically mobilized their families and everyone else to comply with the program and policy of the party and state regarding socialist transformation.

Under the roof of the socialist school, the corps of young scientific and technical cadres has constantly grown and made large contributions. The young scientific and technical cadres in the newly liberated areas, displaying patriotism and love of socialism, have made an effort to contribute their talents to the fatherland and have made continuous progress. The young scientific and technical cadres have tried to become involved in the realities of everyday life and have achieved much success in researching and applying the achievements of science and technology to the conditions of our country, in creatively and intelligently resolving many pressing problems in combat, production, communications and transportation, thereby helping to defeat the U.S. imperialists and accelerating the scientific-technological revolution in our country.

The Youth Union Congress warmly praises the tremendous achievements recorded by the youths of the entire country, young workers, young collective farmers, young socialist intellectuals and the other strata of youths, who have made positive contributions to restoring and developing the economy, stabilizing the life of the people and building the material-technical bases of socialism."

After praising the tremendous achievements of youths on the cultural and educational fronts, achievements which have made positive contributions to the development of the national socialist system of education and the new socialist culture, the report continued:

"Our Vietnamese youths who live overseas, although far from the country, always have the beloved fatherland in their hearts and are extremely proud of their country, their nation. They have displayed a high spirit of patriotism and unity, organized many intense, practical activities and made worthy contributions to the liberation of the nation, the protection of the fatherland, the restoration and development of the economy and the building of the country. The Youth Union Congress hereby conveys heartfelt greetings and warm feelings to the Vietnamese youths, teenagers and children overseas and warmly praises the worthy contributions made by them to the building and protection of the fatherland.

Youths are the persons taking the lead in building the new culture, the new life. The cultural, literary and art movement is widespread. The "sound of singing drowns out the noise of the bombs" movement was an indication of the spiritual life filled with revolutionary optimism of the young during the days of fierce fighting. The collective singing movement, the literary and art festivals and, in particular, the "shock music" and "political songs" have been expanded through songs praising the party and fatherland, the new system, the new life and the new man and have attracted the participation of large numbers of youths. Club activities, the reading of books and the composing of songs and poems have become a need of the youths in the countryside, at factories, schools and army units. In the socialist garden of culture and art, many young talents are blossoming. Recently, in Warsaw, Dang Thai Son, a Communist Youth Union member, through artistic labor and creative talent, reached the pinnacles of music in the international piano contest bearing the name F. Chopin; praised as a "Chopin born again in a Vietnamese youth," he brought back to the nation the highest honor for piano performance.

After the country was totally liberated, the youths in the cities of the South became the force taking the lead in eradicating the poisons of neo-colonialism, confiscating reactionary, decadent cultural products, books and magazines and accelerating revolutionary cultural and art activities. The movement to build the new life has had a positive effect in helping to establish a civilized, wholesome lifestyle.

The physical education and sports movement has achieved results worthy of enthusiasm, thereby helping to improve the health of youths so that they can work and protect the fatherland.

Dear comrades,

The realities of the revolutionary struggle in the recent past have been a great school forging our country's young generation. The appearance of one generation of revolutionary youths after another who possess good qualities is one of the major achievements of the revolutionary undertaking of our party, of the socialist system.

The distinguishing revolutionary qualities of the young generation are unquestioning confidence in and boundless loyalty to the glorious party, the socialist Vietnamese fatherland and the revered Uncle Ho. The foundations of this unshakeable confidence and loyalty are the ideals of independence, freedom and socialism, the perfect blending of socialist patriotism with the proletarian international spirit, a deep love of one's compatriots and comrades and a deep hatred of aggressors and their lackeys. All of these factors have created a tremendous spiritual strength and helped the young generation to correctly resolve many problems faced in life and combat, be ready to give their lives for the country, be ready to go anywhere and do anything required by the fatherland, be ready to overcome every difficulty and hardship, excellently complete every task, triumph over every enemy and always place the interests of the fatherland, the people and the collective above personal interests.

Vietnamese revolutionary heroism originates in the 4,000 year tradition of the nation combined with the thinking of our times, which has reached a pinnacle of brilliant development in the young generation. Revolutionary-offensive thinking, the spirit of giving one's life for ideals, the spirit of fighting bravely, tenaciously, intelligently, resourcefully and creatively, the spirit of self-reliance, the spirit of revolutionary optimism, love of one's compatriots and comrades, genuine and warm friendship and the spirit of sharing joys and sorrows with one another are the beautiful images seen in every unit on the frontlines as well as in the rear area. The militant life of our young generation is always a life of brilliant heroism.

The blossoming of the spirit of collective ownership and the constant improvement in the ability to exercise this ownership are new and extremely important factors among our country's young generation. The distinguishing characteristic of today's young generation is that their political, cultural, scientific-technical, economic management and occupational qualifications have been markedly raised. In particular, practically all of the youths in the North have completed their level II education, more and more young scientific, technical and economic management cadres have a middle school, college or post-graduate education and the corps of young technical workers is constantly growing. This is a foundation upon which our youths can exercise their right of collective ownership and fulfill their assault, creative role in building socialism and protecting the fatherland.

Together with the growth of youths, the corps of teenagers and children, the future youths of the country, has constantly grown in every respect and wave after wave of unit members have been educated and forged and become members of the Ho Chi Minh Communist Youth Union upon the expiration of their service in the Teenagers' Unit.

The beautiful qualities mentioned above reflect the revolutionary nature, the heroic nature of our country's young generation. They are the result of the care and education provided by the party, Uncle Ho and the socialist state, the result of the Youth Union's educational work, the result of the efforts of the youths of the entire country to learn and forge themselves.

However, at this turning point in history and in the face of the tremendous requirements of the revolutionary tasks of the new period, the young generation realizes that it still has many weaknesses and shortcomings. We cannot be satisfied for 1 moment with the achievements and progress that have been recorded; to the contrary, we must be willing to engage in forthright self-criticism and make every effort to rectify our shortcomings and overcome our weaknesses. This is the truly revolutionary attitude, is the attitude that reflects the desire of youths to make progress. The factor that is preventing the young generation from making many more contributions and growing even more rapidly is the fact that their communist awareness, socialist awareness, working class awareness and spirit of collective ownership are still low. While millions of our youths live lives dedicated to noble ideals, it regrettable that a small percentage of youths has not established a raison d'etre, is being enticed and poisoned by the poisons of hostile powers, is living a selfish, pragmatic and aimless life and harbors illusions about a strange society in a far-off land. In the initial stage of socialist construction in our country, in the face of the basic advantages in our favor and the inevitable, tremendous difficulties and the challenge that must be overcome, the young generation does not fully realize the nature of the struggle between the two ways of life, consequently, the attitude of the young concerning many of the problems involved in this struggle is still a passive attitude instead of an attitude of strongly and bravely struggling to protect the truth; some youths are not truly steadfast and firm in the face of these difficulties and challenges and their revolutionary will and energies have declined. Because we have not firmly established a system of revolutionary and scientific viewpoints in labor, work, education, training and the building of the new life, the young generation is still influenced, to differing degrees, by schools of thinking, psychologies and habits that are contrary to socialism. The strength of the young lies in organization and organizational skills; at present, however, the young generation has not been tightly reorganized in order to utilize its strength of collective ownership; generally speaking, their sense of organization and discipline is still weak and liberalism and disorganization are still widespread; among some youths, the spirit of revolutionary vigilance in the face of the psychological warfare arguments and espionage warfare of the enemy and their spirit of reasiness to fight in defense of the fatherland are not high.

We were very happy when, after the South was totally liberated, millions of youths who were victims of neo-colonialism joined the people and placed themselves within the immense corps of youths of the entire country, eagerly participating in socialist construction, socialist transformation and the protection of the fatherland on every revolutionary front. However, it is truly regrettable that some youths are still unable to part with the lifestyle of the old society, have not established a place for themselves in the new system.

And, it truly hurts to see a small percentage of youths who have been poisoned, who have yielded to temptation and become deviant but are unwilling to forge themselves, who have separated themselves from the militant corps of youths and live a life of self-gratification and decadence. Some youths thoughtlessly and blindly pursue fashion and copy styles that are alien and strange for the sake of presenting a smart appearance but, on the inside, their souls are empty and cold! If backward youths who live aimless lives, neglect their obligations, lead a selfish, pleasure-seeking style of life...are not promptly enlightened, it will be difficult for them to avoid falling into the abyss of mistakes and even crime. They will not be worthy of being youths, will be ashamed of the persons who gave their lives for the fatherland will commit major offenses against the fatherland and the people if they foresake the noble raison d'etre for a wayward, demeaning life at a time when the rest of the young generation is enthusiastically moving forward!

Dear comrades,

In the recent stage of history, the Ho Chi Minh Communist Youth Union recorded large achievements and the youth Union organization was constantly built and strengthened.

The growth of the Youth Union can be seen in the facts that it has always responded to the new situation on the basis of the political task of the party in each period and has established various forms of organization, measures, slogans and movements based on the characteristics, the thoughts and the aspirations of the young with a view toward having the mass of youths serve as the assault force in the successful performance of each revolutionary task of the party. The distinguishing achievement of the Youth Union has been that it has educated, organized and mobilized millions of Youth Union members and youths to take part in the fight filled with hardships and sacrifices, make excellent contributions to the total victory over the U.S. pirate aggressors, serve as the assault force overcoming every difficulty, go into battle in the three revolutions and successfully carry out the tasks of socialist transformation and socialist construction.

The growth of the Youth Union is also seen in the constant importance attached to the teaching of youths, to fulfilling the Youth Union's function as the school of communism of the young. Our Youth Union is proud to have helped the party forge new generations of youths who possess beautiful qualities. In its educational work, the Youth Union has attached importance to gaining the participation of youths in the realities of the revolutionary struggle in order to forge them. The revolutionary activity movements launched by the Youth Union have become a school for forging youths. Our Youth Union has given its attention to propagandizing and organizing youths in studying the revolutionary line of the party as well as the situation and tasks of the revolution; we have begun to organize basic political training for Youth Union members, regularly teach Youth Union members and youths to struggle and forge themselves in the examples set by the great Uncle Ho, teach the traditions of the nation and the revolution and encourage youths to study and follow the examples of model units and heroes. In particular, in 1980, our Youth Union conducted many educational activities for youths concerning Marxism-Leninism, revolutionary tradition and pride in the fatherland on the occasion of the major holidays we celebrated this year: the 50th anniversary of the founding of the Vietnam Communist Party, the 110th anniversary of the birth of V.I. Lenin, the 90th anniversary of the birth of Uncle Ho and the 35th National Day of Vietnam. The coordination between the Youth Union and the various departments and sectors of the party and state in many educational activities for youths has yielded fine results. The propaganda and training sections on the various levels and the press, publishing and radio and television program agencies of the Youth Union have made positive contributions to the training of the young generation. We would like to take this opportunity to warmly congratulate TIEN PHONG Newspaper, THIEU NIEN TIEN PHONG Newspaper, Thanh Nien Publishing House and Kim Dong Publishing House on the Labor Medals awarded them by the state.

The growth of the Youth Union is also seen in the fact that the Youth Union's organization throughout the country has constantly been strengthened and developed. We are extremely proud of our youth unit, the militant vanguard unit of the young generation, which has experienced countless challenges and continuously grown and developed, from 780,000 Youth Union members at the time of the 3rd Congress and 2.8 million members at the conclusion of the war of resistance against the United States for national salvation to 4,400,000 Youth Union members and 5 million members in the Teenagers' and Children's Units today; the basic organizations of the Youth Union are now found in every village, hamlet, enterprise and ward. In the South, despite enemy control, fierce attacks and many difficulties in building its organization, our Youth Union steadfastly clung to installations, patiently built and strengthened its organization and created many forms of organization that widely rallied and united youths.

[22 Nov 80, p 3]

[Text] In the North, although wave after wave of outstanding Youth Union members left for the frontlines, the Youth Union organization in the rear was, generally speaking, maintained and strengthened. Our Youth Union regularly gave its attention to strengthening its basic organizations by means of the campaign to "build Youth Union chapters and subchapters of the four goods" and the campaign to establish revolutionary action programs so that the basic Youth Union organizations constantly grew and the quality of Youth Union members was improved.

The corps of Youth Union cadres has been forged and challenged. Many efforts have been made to train these cadres. Many of them bravely gave their lives in combat and in the prisons of the enemy. Youth Union cadres have displayed a spirit of devotion and have contributed their utmost to the cause of the revolution and to the young generation. In one wave after another, hundreds of thousands of cadres have matured and been assigned tasks by the party, state and people's armed forces; the Youth Union's corps of cadres is truly the reserve force supplying cadres to the party and state.

The growth of the Youth Union has made our union truly worthy of being the reliable reserve unit of the party. The organizations of the Youth Union have constantly displayed a high spirit of responsibility with regard to participating in the building of the party. From 70 to 80 percent, more than 90 percent in 1979, of the new members accepted into the party each year have been Youth Union members and youths. "The entire Youth Union participates in party building" campaign being conducted on the occasion of the commemoration of the 50th anniversary of the founding of the Vietnam Communist Party, which has the goal of introducing to the party in the 2 years 1979 and 1980 500,000 outstanding Youth Union members for acceptance into the party, is a significant event in the political lives of youths. To date, the Youth Union has introduced more than 470,000 outstanding Youth Union members to the party and more than 140,000 of them have achieved the honor of being included in the militant corps of the party. In recent years, the Youth Union has provided the party with hundreds of thousands of young members, thereby bringing new vitality, new fighting strength to the party and helping to build an increasingly solid and strong party.

The growth of our Youth Union has truly made it the central organization in the effort to rally, unite and organize youths in a broad front within the Vietnam Federation of Youths. The federation has grown by 2 million members since the day the South was totally liberated; federation committees have been established and expanded in the provinces and municipalities of the South. The policy of rapidly reorganizing the entire young generation into a force exercising socialist collective ownership has yielded encouraging results over the past several years in the work of assembling and organizing the entire young generation within youth organizations and in widespread mass activities.

As the organization directly responsible for work among teenagers and children, our Youth Union has adopted correct policies in each period of the revolution and promptly changed the direction of the activities of the Teenagers' Unit and the Children's Unit. The 5th and 12th Conferences of the Youth Union Central Committee set forth separate resolutions on work among teenagers and children. Recently, the Youth Union Central Committee and the Ministry of Education issued a joint resolution designed to accelerate the teenagers' and children's movement and intensify the building of their units. The educational work and the activities of these two units have been broken down by school year. The corps of cadres in charge of the units, which is the most important element in this work, has been and is being strengthened; in particular, the government has officially established the staff of the system of persons in charge of the units within the general schools and promulgated a number of regulations regarding them.

Our youth movement and the international activities of the Youth Union have made positive contributions to the common struggle of the people and youths of the world against imperialism and the international reactionaries for peace, national independence, democracy and social progress; they have helped to tighten our special relationship with the youths of Laos and Kampuchea, consolidate and strengthen the close unity and comprehensive cooperation with the youths of the Soviet Union and the other fraternal socialist countries, strengthen the international united youth front and won tremendous sympathy and support from the youths of the world for our people's resistance against the United States for national salvation, the fight against the Chinese expansionist aggressors and the construction of socialism, thereby helping to successfully carry out the foreign policy of the party.

On the basis of its constant growth, our Youth Union has become the militant vanguard unit of the youths of Vietnam, the revolutionary assault unit of the people of Vietnam and the competent right hand and the reliable reserve unit of the party as stated in the praise given the union by the Party Central Committee on the 45th anniversary of the founding of the Youth Union.

Dear comrades,

While confirming the growth of the Youth Union's organization, we cannot give light attention to the weaknesses that still exist. Generally speaking, all of the educational work of the Youth Union only has the effect of mobilizing Youth Union members and youths to perform immediate tasks; this work has not achieved the objective of molding within youths all of the viewpoints, qualities and abilities of the new, socialist, collective master. Political and ideological education is not thorough and has not given attention to fully teaching about the struggle between the two ways of life and the reactionary nature and the comprehensive scheme of the enemy aggressor that is opposing and trying to undermine our country; education is only provided to progressive youths and has not deeply penetrated the entire stratum of youths, especially backward youths. The Youth Union has not promptly guided youths in waging a sharp struggle against every distorted argument and the psychological war of the enemy; it has not done everything possible to expose the true nature and the decadence of capitalism to youths in order to help them avoid their very cunning deceptions. Youth Union educational work among backward youths still reflects much confusion, overall coordination with society concerning this matter has not been researched or organized and positive measures have yet to be taken. In many Youth Union organizations, importance has not been attached to teaching the fundamentals of Marxism-Leninism to Youth Union members; educational activities are neither persuasive nor interesting to youths, they still involve much that is administrative and dry, consequently, the returns from this work are low and we have not used revolutionary activities as a vehicle for conducting interesting educational activities.

We have made many innovations and launched many good revolutionary movements but they have lacked thorough guidance and steadfast support, consequently, these movements have not been intense, continuous or widespread. The system of guidance employed by the Youth Union is not uniform from top to bottom. We have yet to establish close relations with the various sectors of the state and have not fully concerned ourselves with the requirements, aspirations and interests of youths.

At many places, the Youth Union organization has not kept pace with the requirements of its task. Many basic Youth Union organizations only play an assault role in labor, not in the struggle between the two ways of life or in the struggle against negative phenomena nor have they truly become the school of communism of youths. The Youth Union installations in the South, the mountains and areas with high concentrations of religious followers are still thin and weak. Youth front work and the effort to widely organize and rally youths in the new situation have not been timely and, when policies have been proposed concerning this work, many places have implemented them slowly. Light attention is still being given to building and strengthening the Teenagers' Unit and the Children's Unit. Although efforts have been made to provide cadres with elementary and advanced training, these efforts have not met requirements and are still piecemeal in nature. Our style of work is still bureaucratic and administrative.

Dear comrades,

In the realities of the revolutionary movement of the young generation, especially in the war of resistance against the United States for national salvation, our Youth Union, under the leadership of the party, achieved success in educating, organizing and mobilizing the young generation of the entire country to excellently complete its tasks for the fatherland and the people. The lessons learned and the experiences gained in Youth Union work and the youth movement are very diverse, so diverse that we can only mention a few salient points here:

Since the time our party was born and began leading the revolution, four successive generations of youths have fought and died for independence, freedom and socialism. The outstanding contributions made by the young generation to the victories of the revolution are a measurement of the development and growth of the young generation. The success in the mobilization of youths, in general, and of the Youth Union, in particular, has been that we have always correctly evaluated and had confidence in the revolutionary and heroic nature of our country's young generation. This has been both the starting point and an important foundation in the formulation of correct policies and positions, the formulation of suitable methods and forms of organization for tapping the strength and tremendous potentials of the young. Correctly evaluating youths means having confidence in their revolutionary nature while being aware of the shortcomings and weaknesses of the young; it means promptly exposing the schemes and tricks of the enemy regarding youths in order to take determined steps to combat them. The purpose of pointing out the shortcomings of youths is to fully realize the responsibility of the Youth Union, of society and show youths that they must more closely link themselves to the revolutionary ideals and undertaking of the party if they wish to make rapid progress. In view of our country's conditions, a correct evaluation of the revolutionary nature of the young generation cannot be divorced from the struggle to overcome the manifestations of narrowmindedness, prejudice and the remnants of feudal thinking, class thinking and paternalism.

Both the outstanding contributions and the growth of our country's young generation originate in the independent, autonomous, correct and creative revolutionary line of the party. It is the line of brandishing the two banners of national independence and socialism. Youths thirst for ideals but only Marxism-Leninism and the vanguard party provide them with lofty revolutionary ideals. The success achieved by our Youth Union in the nearly one-half century of fighting has been that the Youth Union has always brandished the banner of national independence and socialism of the party, perfectly combined genuine patriotism with pure internationalism and rallied and united the entire young generation around the party to take the lead in the struggle to carry out the glorious revolutionary work of the party. In the various stages of the revolution, our Youth Union taught and molded thinking in a widespread and continuous manner by means of many campaigns and diverse methods that caused the revolutionary line of the party and the thinking "there is nothing more precious than independence and freedom" to deeply permeate the thinking and feelings of youths and become the raison d'etre and the combat objective of the young generation. Now, the enemy of national independence and socialism, the Beijing reactionary authorities, have collaborated with the imperialists and other reactionary powers and are resorting to every extremely insidious and dangerous trick possible in a vain attempt to poison our youths and draw them away from the revolution, from the fatherland and the people. Therefore, in the new period, it is even more necessary for our Youth Union to brandish the banners of national independence and socialism and lead our country's entire young generation forward under the banner of the party, determined to thwart every cunning scheme of the enemy.

Our country's young generation is close to and trusts the Youth Union, considering it to be the militant vanguard unit of the young. The lessons and experiences that have been learned and gained in the building of the Youth Union show that we must build a Youth Union that is solid and strong politically, ideologically and organizationally, must fully comprehend and implement very well the various functions of the Youth Union and widely rally and unite youths so that the entire young generation is organized into a strong and solid force. The Youth Union organization must truly be the organization of communist youths and must fulfill its functions as the organization closest to the party, as the competent right arm and the reliable reserve unit of the party, as the school of communism and the militant vanguard unit of the young, as the nucleus uniting and organizing the entire young generation, as the representative of the right of collective ownership of youths and as the organization directly in charge of the Teenagers' Unit and the Children's Unit. The building of the Youth Union and Youth Union activities must coordinate three factors: education, action, and organizing youths into a unified entity in order to achieve returns in the three fields of completing the tasks of the revolution, teaching and training the young generation and building a large and strong Youth Union organization. At present, more than a few basic Youth Union organizations and economic units are only attaching importance to mobilizing and using the ability of youths to work while giving light attention to educational activities and organizational development. Practice has shown that a Youth Union organization which does not represent or uphold the right of collective ownership of youths severs its ties with youths. The strength of a Youth Union organization lies not only in its own organizational strength, but also in its close ties to youths, teenagers and children, in the reorganization of the entire young generation.

At present, our party is in power throughout the country and the mobilization of youths is the common work of the state, sectors, mass organizations, families and all of society under the leadership of the party, with our Youth Union serving as the nucleus of this effort. Our Youth Union has made initial efforts to tap the spirit of initiative and action of the Youth Union organizations in closely coordinating with the agencies of the state, the mass organizations and the other organizations within the dictatorship of the proletariat and closely link the activities of the Youth Union and the youth movement to the activities of all of society. Facts have shown that, in order to mobilize the entire young generation to take part in socialist construction, the protection of the fatherland and the training of the new stratum of youths, it is necessary to utilize the organization and activities of the Youth Union and the Youth Union must take full initiative and closely coordinate with the state, mass organizations, social organizations and families in order to achieve a unified policy and take well coordinated measures. In the new period, in order to uphold the collective ownership role of youths, our Youth Union must work with the agencies of the state, the mass organizations and the social organizations to build a specific system designed to guarantee the right of collective ownership of youths and the political role and position of the Youth Union within the dictatorship of the proletariat.

Part II: The Historic Mission of the Youth Union and Young Generation of Vietnam in the New Period

Dear comrades,

The Ho Chi Minh Communist Youth Union and the young generation of our country are today in a new period of implementing the lofty ideals of the party, a period that has an extremely large and glorious historic mission.

The endlessly revered Uncle Ho gave us the great truth "there is nothing more precious than independence and freedom" and told us that once final victory had been won "our people wil rebuild the country to be grander and more beautiful." In our beloved country, which is now totally independent, free and unified, the 4th Congress of the Party, in keeping with the great thinking of Uncle Ho, adopted the platform of the socialist revolution in the North. This revolutionary platform charts a scientific course for making our country a prosperous and strong socialist country and bringing our people a life of happiness and comfort.

The 4th Congress of the Party set forth the common line of the socialist revolution in the new stage in our country as: "Firmly maintaining the dictatorship of the proletariat and upholding the right of collective ownership of the working people while carrying out the three revolutions: the production relations revolution, the scientific-technological revolution and the ideological and cultural revolution, the key one being the scientific-technological revolution; accelerating socialist industrialization, the central task throughout the period of transition to socialism; building the system of socialist collective ownership, building the system of large-scale socialist production, building the new culture and molding the new, socialist man; abolishing the exploitation of man by man, abolishing poverty and backwardness; constantly displaying high vigilance, regularly strengthening the national defense system and maintaining political security and social order; successfully building a Vietnamese fatherland of peace, independence, unity and socialism; and making a positive contribution to the struggle by the people of the world for peace, national independence, democracy and socialism."

The socialist revolutionary platform of the party opens a brilliant future for the Vietnamese fatherland and a bright future for our young generation and the generations of tomorrow.

By successfully implementing the revolutionary line of the party and travelling the course charted for the next several decades, the face of our country will undergo remarkable changes from the countryside to the cities. The poverty and backwardness that are closely linked to small-scale production will gradually be pushed into the past. Socialist society, the combined result of the three revolutions, will be built and exert an increasingly strong attraction. The system of socialist collective ownership, the system of large-scale socialist production, the new culture and the new socialist man will be established. Our youths will have all of the favorable conditions needed to develop their intelligence, talents and energies and make contributions to the fatherland.

It can be said that the platform adopted by the 4th Congress of the Party is a youth platform because it fully expresses the thinking, dreams and ardent aspirations of the young. On the other hand, this platform is being implemented through the creative labor of the young generation. The 4th Congress of the Party asserted: "The brilliant future of the Vietnamese fatherland lies in the hands of youths, teenagers and children." This is an extremely large and glorious historic mission assigned to the Youth Union and the young generation of our country by the party.

In order to reach the bright future that lies before us, we have no other choice but to make our way through this initial stage filled with difficulties and challenges. The resolutions of the 5th and 6th Party Plenums established our strategic and pressing tasks as: accelerating production while stabilizing and maintaining the standard of living of the people; strengthening the national defense and security systems and maintaining our readiness to fight aggression and protect the fatherland; continuing to build the material and technical bases of socialism; waging a determined struggle to overcome negative phenomena in economic and social activities.

Our youths are deeply aware that the course to be followed by our country involves a process of comprehensive, continuous, profound and thorough revolutionary change. Building socialism on the basis of a poor and backward economy characterized by small-scale production, an economy of a country ravaged by war which still must fight and be ready to fight is an extremely difficult, long, arduous and complex undertaking. The struggle between the two ways of life is an extremely complicated political, economic, ideological, cultural and social struggle. The next 20 years, especially these first years, will be a period of extremely arduous and decisive revolutionary struggle in which we must overcome numerous difficulties, hardships and challenges and win victory over dangerous and insidious enemies. It will be a great march to abolish the exploitation of man by man, triumph over poverty and backwardness, triumph over every enemy opposing and undermining our country in order to build and protect the socialist fatherland. Youth is the age of triumphing over difficulties and challenges. Anyone who flees in the face of difficulties and challenges is not worthy of being a youth. Not fearing hardships, not fearing sacrifices and always facing difficulties squarely in order to triumph over them, this is the revolutionary style of life and the militant tradition of our youths. There is no smooth road for us to follow into the future. Nor do we hold any illusions about some kind of miracle occurring. The youth of our country have a weapon, have an invincible strength, a strength stronger than any miracle in mythology. This weapon, this strength is the socialist revolutionary platform of our party.

This platform is the only line we can follow to successfully build socialism in our country. Today, only Marxism-Leninism, no other philosophy, can fan the flames of revolution, light the light of science in the hearts and minds of the young and guide them in the struggle to abolish the old world and build the new. Only the socialist path, no other, especially the capitalist path, can lead man to genuine happiness in independence and freedom. The oppressed and exploited society, the maladies and frustrations of capitalism, regardless of the forms they assume, still represent a cursed social system that will inevitably collapse. Our youths have closely linked themselves to socialism and we understand that we will surely build a prosperous and strong socialist Vietnamese fatherland, not in some far off land, but here on the soil of our beloved Vietnamese fatherland, soil soaked with the blood and sweat of countless generations, build it through our own selfless and creative labor using the rich natural resources of our country, even though we might not have all the food or all the clothing we want today.

Our people and youths, firmly adhering to the stand of Marxism-Leninism and proletarian internationalism, have closely observed the hostile schemes and actions of the Beijing reactionary authorities against Vietnam for a long time. They disguised themselves as Marxists-Leninists in order to oppose Marxism-Leninism and tried to use their assistance to Vietnam to gradually carry out their scheme of annexing Vietnam. In actions once covert but now overt, they have long pursued a hostile policy toward Vietnam...

Our enemies, the Beijing reactionaries and the imperialists, in pursuit of their long held scheme against our country, are using extremely insidious and cunning tricks to propagandize hostile thinking, spread their degenerate, decadent style of life... and scheming to win over and corrupt some of our youths in a vain attempt to tarnish the tradition of the revolution, weaken their will to fight and cause them to be unconcerned with the destiny of the country, the happiness of the people. They maintain that, as they have done in their own country, poisoning a stratum of youths is to undermine a revolution. Therefore, our youth Union and our country's young generation must display a high spirit of revolutionary vigilance and be determined to take the initiative and defeat each of their insidious schemes...

The report continued:

We stand before a great period in history. Our party and people have very much confidence in the Youth Union and the young generation and have assigned us the historic mission of taking the lead in building and protecting the socialist Vietnamese fatherland and fulfilling our obligations to the nation as well as our international obligation.

Our Youth Union and the young generation of our country are very excited and proud to be given this historic mission, considering fulfilling it to be their raison d'etre, their great honor, their great source of happiness. We promise to devote our knowledge, talents, energies and, when necessary, even our youth, to the great revolutionary undertaking of the party, to the glorious fatherland. Regardless of the situation, we remain determined to sucessfully build socialism, protect the peaceful labors of our people and firmly safeguard the independence, sovereignty and territorial integrity of our country. Regardless of the situation, we shall strengthen the close, militant unity with the people's of Laos and Kampuchea, with the great Soviet Union, with the fraternal socialist countries, thereby making positive contributions to the world revolutionary movement.

Under the socialist system, the young generation of our country is the collective master. The political role of the Youth Union and the right of collective ownership of the young are tremendous moving forces in socialist construction and the protection of the fatherland. In the community of working people exercising collective ownership, our country's young generation exercises collective ownership through the state, through the organizations of the young under the leadership of the party.

Our young generation must become the masters in every area in order to successfully carry out the three revolutions, successfully build socialism and firmly protect the fatherland. The right of collective ownership must be expressed in positive, voluntary actions on the part of each youth, each collective of youths in productive labor, combat, combat readiness, learning, training and the building of the new life, thereby launching a socialist emulation movement among youths.

The exercise of collective ownership by youths is primarily manifested in the character, the abilities and the energy to exercise ownership. Everyone must conscientiously uphold the right of collective ownership, build the system of socialist collective ownership and, at the same time, wage a determined struggle against violations of the right of collective ownership. Every attitude of wavering, of complacency, of fearing retaliation, which lead to nullifying the efforts made in the struggle, is contrary to the character and abilities of the collective master.

The exercise of collective ownership by youths must be expressed in making every effort to constantly improve their ability to exercise ownership, firmly adhering to the revolutionary line of the party and the laws of the state, have a knowledge of culture and their occupation, understand science, technology, economic management and military affairs and have the good health needed to be the masters of society, the masters of nature and the masters of themselves.

Youths who exercise collective ownership have both obligations and rights. The obligations of youths who exercise collective ownership consist of the obligation to work, the obligation to protect the fatherland, the obligation to study and train, the obligation to respect and protect socialist property and respect the laws and rules of social life and the obligation to struggle against negative phenomena and uphold the fine nature of the socialist system.

The rights of youths consist of the rights of citizens and personal rights, such as the right to work, the right to an education, the right to vote and be a candidate in elections, the right to supervise and inspect the work of the government, the right of equality among nationalities, the right of equality between the sexes, the right to freely marry and establish a family, the right to rest, recreation and entertainment and the right to develop one's talents.

Under the leadership of the party, our state has created the conditions for the Youth Union and youths to exercise their right of collective ownership and build a comprehensive and widespread system of ownership of the Youth Union and the young generation within the system of collective ownership. Our Youth Union must take the initiative and report and propose to the state and the agencies of the government matters related to the right of collective ownership of youths and must, together with the government, meet the legitimate requests and aspirations of the young in a manner consistent with the conditions of our country while inspecting the work of the government. This is the implementation of the right of collective ownership by means of the state.

The young generation also exercises collective ownership by means of the Youth Union organization and the other organizations of the young. The Ho Chi Minh Communist Youth Union is the representative of the right of collective ownership of youths. The Youth Union, which is an element of the dictatorship of the proletariat system, has the responsibility of participating in the formulation of laws, regulations and policies related to youths, mobilizing the young generation to take the lead in implementing the lines and policies of the party and the laws and plans of the state and inspecting the activities of the various agencies of the government in accordance with the function and methods of the Youth Union. The Youth Union must closely coordinate with the agencies of the government and, by means of methods and forms of organization suited to the characteristics of the young, launch emulation movements designed to uphold the right of collective ownership of the young, contribute as much as possible to the revolution and forging youths as rapidly as possible. The Youth Union has the responsibility of reporting and proposing to the party and state ways to meet the requirements and aspirations of the young and exposing and struggling against violations of the right of collective ownership of youths. The Youth Union must fully concern itself with the rights of youths, concern itself with the learning and working conditions and the cultural, literary, artistic and physical education and sports activities of youths, guide youths in correctly resolving problems related to lifestyle, friendship, love, marriage and the family...

The exercise of socialist collective ownership is a matter of extreme importance and is extremely diverse in content. Of decisive significance is the need to develop the political role of the Youth Union organization and uphold the right of collective ownership of the young in order to contribute as much as possible to the revolution, forge youths as rapidly as possible and gradually build a comprehensive and widespread collective ownership system. Our Youth Union and the young generation of our country are taking the lead in molding and displaying the superior nature of the system of socialist collective ownership while resolutely struggling against the influences of bourgeois democracy, of the neo-colonialist system and the remnants of feudal thinking.

In order to tap the strength of collective ownership with a view toward struggling to implement the socialist revolutionary platform of the party, the Central Committee of the Youth Union hereby proposes to the congress the following revolutionary goals of the Youth Union and the young generation of Vietnam in the new period:

Strongly developing the right of collective ownership and the assault and creative role of the young in order to successfully carry out the three revolutions, build socialism and firmly protect the socialist Vietnamese fatherland; being determined to learn and train in order to mature as rapidly as possible and become the new, well-developed socialist collective masters, become the loyal and outstanding inheritors of the glorious revolutionary cause of the party and the nation.

Our invincible strength in order to overcome every difficulty and challenge and triumph over every insidious scheme of the enemy, our strength to move mountains in order to carry out our great undertaking is the right of collective ownership of the young generation. All of the work of the Youth Union and the youth movement is designed to cultivate, organize and develop the strength of collective ownership of the young. To accomplish this, our Youth Union and the young generation of our country must firmly adhere to and successfully carry out the following three important jobs:

First, raising the awareness of communist ideals and the determination to study and train to become the new, well developed socialist collective master.

Our raison d'etre is independence, freedom, socialism and communism. This, the most beautiful raison d'etre of mankind, is consistent with the laws of evolution of society. Endeavoring to implement the socialist revolutionary platform of the party in order to successfully build socialism in our country and firmly protect the fatherland is the raison d'etre of our young generation.

Uncle Ho taught: "To build socialism, it is first of all necessary to have socialists." Our young generation is the collective master of the present and the collective master of the future. To exercise collective ownership, our young generation must make every effort to study and train in order to improve their qualities and their ability to exercise ownership and become the new, well developed socialist collective masters. These are persons who think correctly, feel beautiful sentiments and have both the intellect and the physical conditioning needed to be the masters of society, the masters of nature and the masters of themselves.

The new, socialist man is the most beautiful of persons. It is the beauty of someone who lives with lofty ideals, possesses a heroic character, possesses the sense of collective ownership and possesses an ardent spirit of socialist patriotism combined with a pure spirit of proletarian internationalism, which are expressed in selfless and creative labor, in tenaciously fighting to protect the fatherland. This is the beauty of a person filled with creative intellect and talents based on a high level of culture, science, technology, management, occupational skill and military art and expressed with abundant energy.

The new, socialist man is also the person who knows the greatest happiness, the happiness of a life lived in love and justice.

The new youth must be forged and must mature in the revolutionary action movement of the young. Our Youth Union has the responsibility of training the young generation to be new socialists. The young generation considers the Youth Union, the Teenagers' Unit and the Children's Unit to be their school of communism.

Secondly, upholding the right of collective ownership and launching a revolutionary action emulation movement of the young.

Youths are the assault and creative force in productive labor, combat, combat readiness, learning, training and the building of the new life. Only by upholding the right of collective ownership is it possible to launch intense, continuous and widespread emulation movements. To uphold the right of collective ownership and the assault, creative role of the young, our Youth Union and the young generation of our country must launch revolutionary action movement of the young in all localities and all fields of endeavor. We must be determined to dedicate our entire strength to carrying out the three revolutions and turning the revolutionary platform of the party, the resolutions of the Party Central Committee and the plan of the state into reality; we must always be vigilant, be ready to fight in defense of the fatherland, considering this to be the highest expression of our right of collective ownership. We must be determined to struggle to eradicate negative phenomena in everyday life and violations of the right of collective ownership of the people.

Developing upon the results achieved in the recent past, the Youth Union Congress hereby states its determination to further accelerate the "three assaults of collective ownership movement" and more widely organize the "shock youth force building and protecting the fatherland" in order to make the emulation movement of youths a revolutionary movement and help to intensify the common emulation movement of all the people.

Thirdly: rapidly reorganizing the entire young generation into a strong and solid force of collective ownership.

Today, our country's young generation, which possesses beautiful revolutionary qualities and abundant capabilities, is an extremely powerful force. However, whether or not we highly develop our strength of collective ownership depends upon whether or not we organize everything in an urgent and scientific manner. Therefore, the requirement of the revolution and of our young generation is to rapidly reorganize the entire young generation into a strong and solid force of collective ownership, into the revolutionary shock unit of the party and the people.

Reorganizing the entire young generation into the force of collective ownership is the law governing the activities of the Youth Union and the young generation of our country. We must combat prejudice and narrowmindedness in the evaluation of youths. Every youth in our country wants to have his right of collective ownership upheld, wants to contribute and mature. Reorganizing the entire young generation in a scientific manner and on a large scale is a pressing requirement in insuring that everyone has a position from which to exercise collective ownership in order to contribute his youth to the revolution, insuring that everyone is educated and trained so that he can mature.

In part III on the revolutionary action program of the Youth Union and youths, the report set forth the following seven takks:

1. Intensifying the teaching of communism to the young generation;
2. Youths fulfilling their shock, creative role in building socialism;
3. Youths being heroes in protecting the fatherland;
4. Reorganizing the entire young generation into a force of collective ownership;
5. The entire Youth Union cares for and teaches teenagers and children and builds their units.
6. The entire Youth Union actively participates in party building;
7. Smoothly combining socialist patriotism with proletarian internationalism.

ECONOMIC PLANNING, TRADE AND FINANCE

RELATIONSHIP BETWEEN STATE PLANNING, PRIVATE ECONOMY DISCUSSED

Hanoi NHAN DAN in Vietnamese 26 Nov 80 p 2

[Article by Dao Xuan Sam, Chairman of the Economic Management Faculty of the Nguyen Ai Quoc Advanced Party School: "Expanding the Planning Scale Under the Conditions of a Multi-Component Economy"]

[Text] One aspect of the present lack of uniformity of our country's economy is the existence of many economic components, among which the state component plays the leading role and the collective economy increasingly expands, while there continue to exist petty bourgeois small-scale industry, handicrafts, individual peasants, and small merchants. At present, in the southern provinces the private economic sector is still large, and the process of transforming industry and commerce and cooperativizing agriculture has not been completed. That situation inevitably results in the continued existence of production and market relationships of the old type, with their inherent laws, spontaneous nature, and disorganization, which we cannot yet manage. The spontaneous market which we cannot manage becomes even more complicated when we must, on a national scale, in order to stimulate the development of production, eliminate management and planning methods that are compulsive, fettering, and restrictive, and to expand the autonomy of the basic economic units and localities, expand the scope of the individual and secondary family economies, etc., before we have corresponding new management methods.

In actuality, there still exists a spontaneous market in which the producers and exchangers of goods include not only private individuals but also state and collective economic units which do bussiness "outside the plan" and which are in many instances outside the unified management of the state. In that market, of course the private merchants make big profits and the blackmarketeers, speculators, and those who engage in illegal activities hold sway and make big profits, while the producers themselves suffer losses. It is inevitable that that market relationship, when the state economy does not play the leading role and the state relaxes its management, spontaneously causes chaos, especially in the circulation of consumer goods, upsets the socialist distribution relationship, and increases the difficulties in the lives of wage-earners. It also attacks the collective and state economies and impedes the advance of the revolution in production relationship. Clearly, during the period of transition, while the private economy continues to exist, it is inevitable that it will continue to exist in the sphere of the market relationship of private commerce, which is regulated by the law of spontaneous value. In view of that situation, there is an opinion that that is a sphere in which the socialist economic laws cannot take effect, and that therefore it is outside the sphere of the unified economic plans of the state. There is also the view that even in the socialist economic sphere planning cannot encompass everything, especially during the present initial phase, and that therefore we must utilize that market relationship in that the self-regulating market must operate in spheres not covered by planning. Both of those opinions are related to the matter of limiting the scope of planning in order to create more space for the market. Those views are incorrect. We believe that under the conditions of an economy with many components, when examining the relationships among the economic components, among the various kinds of laws, and between planning and the use of market relationships, it is necessary to pay attention to the following matters of a methodological nature:

1. It is necessary to place the private economy in a reciprocal relationship with the socialist economy, with no fence separating them.

2. Placing the private economy in the transformation process is an historical inevitability. It cannot be regarded as something that continues unchanged, like a still life.

3. Planning must not eliminate or be in opposition to the goods-money relationship and the market relationship, but only oppose and eliminate the spontaneous nature of those relationships. Therefore, where there is no organization and planning (in the broad sense), there will be spontaneity, and vice versa. The actualities of the spontaneous market have demonstrated that the private economy and the socialist economy do not exist peacefully side-by-side but in a "who defeats whom" struggle. Before our eyes the state economy is being attacked, despite the fact that we possess economic strength and the strength of the state. As long as the private economy exists on such a large scale as at present, it will objectively be capable of capitalist spontaneity. At the same time, it will have the objective capability of developing along the lines of changing form and merging with the socialist economy, with the state economy and the socialist economic laws playing the decisive role. That has been affirmed in both in theory and practice.

With regard to the sphere of planning in our country's present economic situation, in which there are operating many elements of the new economic policy, it is very necessary to recall a view expressed by V.I. Lenin when he approved the book "Economic Problems of the Union of Soviet Socialist Republics and the Activities of the State Planning Commission," published in December 1921: "It would be possible (and I believe necessary) to add to nearly all chapters a page or two stating that the new economic policy does not change the unified economic plans of the state and does not extend beyond the limits of those plans, but does change the method of implementing those plans." *

Thus in the process of socialist revolution, from the very beginning of the period of transition, an objective inevitablility is placing the private economy on the path of socialist transformation, under the leadership of the socialist economy and

---

* V.I. Lenin, "complete Works," Vietnamese language edition, Progress Publishing House (Moscow), Vol.5, pp 130-131

its laws, and the unified planning of the state, with organizational contents and the true construction of the transformation, management, and planning concepts. That does not mean that transformation and management are easy. The opposite is true: often there is the negative effect that when transformation, cooperativization, management, and planning are expanded production declines, public property is depleted, and the lives of the workers become more difficult. Cooperativization and planning in fact have overlooked combining the three interests, which has worked to the detriment of the laboring masses. Therefore, in society there is the view that we should slow down and reduce the scale of the transformation, cooperativazation, management, and planning of the small private ownership economy, with the hope that the spontaneous market will stimulate production and the economy will advance more rapidly.

The adverse effects of transformation, cooperativization, and management are not caused by the negative nature of those spheres or by incorrect general lines and policies. The principal mistake is that the contents of transformation, coopertivization, management, and planning are understood and carried out in a very narrow, simplistic, and inflexible manner. Transformation and cooperativization usually are limited to changing the form of ownership.

And only when ownership is completely changed are transformation and cooperativization regarded as having been completed. It is not realized that if there is only public ownership then even that new system of ownership cannot develop but will weaken. Furthermore, it is not realized that is some instances, such as with regard to the petty bourgeoisie, some handicrafts, retailing, etc., transformation and cooperativization can be carried out by starting with the changing of production and management relationships and the changing of distribution relationships, and that it is not necessary to, and we should not now, directly change the system of ownership.

Management and planning also are normally limited to all-encompassing administrative measures, and are controlled directly and in detail. Thus transformation, cooperativization, management, and planning have been deprived of their most positive contents -- organization and development -- and therefore are no longer capable of stimulating the development of production, or of protecting the interests of the individual workers, the workers collectively, and the nation.

We will not enter deeply into transformation and cooperativization, but it must be said that to the extent that planning has been changed, an urgent task is the planning of transformation and cooperativization. In order to plan those in relationship to economic construction and development, we must base ourselves on fully implementing such organization and construction measures as plans to reorganize production, organize management, distribute income, prepare cadres, etc., in order to determine the rate of transformation and cooperativization. Nothing could be easier or simpler, but more harm may result than when limiting transformation and cooperativization to changing the form of ownership.

We have stressed that planning on the scale of the entire society is an objective inevitability, but it must be remembered that is only a potential and that naturally planning on the scale of the entire society cannot be fully developed from the very beginning. That must be a process of advancing from a low level to a high level and of gradually expanding the sphere of operations.

At present, the effective sphere of our planning is still very limited, and the sphere of spontaneous production and commerce is still very large. That is due in part to objective reasons but to a very important degree to the poverty and inflexibility of the planning forms and methods, and to the fact that planning pays scant attention to the three interests. The results are that it is difficult to expand the scale of planning and effectiveness is low, for workers and collectives always react and cope but never respond enthusiastically. Planning, therefore, has not become a facility and instrument which each unit and individual worker feels is indispensable in order to effectively organize tasks, for the benefit of them selves, the collective, and society.

In order to expand the scope of state management and planning, it is necessary to understand those tasks, which have ample contents and richer forms and methods. We manage and plan the economy on the basis of a multi-echelon system and in accordance with the principle of democratic centralism. Each echelon plans not only within the sphere assigned by the upper echelon but also plans all of its activities in accordance with state laws and under the unified management of the state. Each echelon not only manages plans within the sphere it directly balances, but must also manage the entire network of plans of the units and bases under its control. That system of unified and decentralized planning has great capabilities for expanding the over-all sphere. Commercial activities should not be placed outside the norms assigned by the upper echelon and term them "not covered by the plan."

Allowing the lower echelons and the base-level units to take the initiative in expanding production and commerce outside the legal plan tasks assigned by the upper echelon, including permission to engage in private commerce, does not mean giving permission to operate outside the planned management of the state. That is because all production and business activities of everyone engaged in commerce must obey the over-all plans and observe the policies and laws promulgated by the state. Furthermore, the state retains the right to make corrections in order to assure the implementation of state lines and plans. All commercial activities must be legally registered and are subject to state control. State organs have the right to make corrections and can restrict, adjust, and even prohibit when necessary, in correct accordance with current laws. It must be admitted that our economic management and planning methods are not sufficiently varied and rich. Therefore, when eliminating management methods which are compulsive and restricting there immediately occurs a relaxation and a reduction of the management and planning spheres due to a lack of, or shortage of, other means, especially because we are not accustomed to using economic levers in managing under the conditions of expanding the autonomy of the lower echelons and base-level units, and of allowing individuals to engage in legal commerce.

In a nation in which the social and production levels are still very low, such as our country, when the organizational relationships have not yet developed and the nature of direct social production is still limited, the sphere of direct planning is of course limited. Therefore, it is even more necessary to pay attention to indirect planning by means of the voluntary use of economic tools that are tied in with the market relationships, in order to bring all economic activities into the orbid of unified national economic planning.

Managing the spontaneous market of the private economy by prohibitive, purely administrative measures while the private economy continues to exist, is contrary to economic laws, and results in restricted production. When the party and state eliminate that incorrect management method, it will of course be necessary to promulgate new commercial laws. At the same time, it is imperative that the state economy, by means of organizational tools and economic incentive plans, play the leading role and struggle to limit, guide, and organize -- in fact to transform -- the private economy, limit and gradually eliminate its spontaneous capitalist tendency, and bring it into planned organizational relationships and market relaships and market relationships that are organically tied in with the state economy.

CONFERENCE HELD ON COOPERATIVIZATION IN CENTRAL VIETNAM, CENTRAL HIGHLANDS

Hanoi NHAN DAN in Vietnamese 26 Nov 80 pp 1,4

[VNA News Release: "Agricultural Cooperativization in the Central Vietnam and Central Highlands Provinces"]

[Text] Recently, in Phu Khanh Province the Southern Agricultural Transformation Committee met with leadership cadres of the central coast and Central Highlands provinces, and of the relevant central sectors, in order to evaluate the three-year agricultural cooperativization movement (1978 to 1980), explain the new situation, and discuss the directions and missions for consolidating the agricultural cooperativization movement during the coming period.

Comrade Vo Chi Cong, a member of the Party's Political Bureau, a Vice Premier, and head of the Agricultural Transformation Department of the Central Committee and the Government, presided over the conference.

To date the provinces from Binh Tri Thien to Thuan Hai and in the Central Highlands have set up 1,580 cooperatives and 3,188 production collectives, in which 90.8 percent of the peasant families participate, and 78.8 percent of the cultivated area has been collectivized (in the cooperative sector the family participation rate is 77.1 percent and the land that has been collectivized accounts for 63.9 percent of the total). Most of the machinery and draft animals have been collectivized, and the rest are managed and used for collective production.

The production of the cooperatives and production collectives has, in general, been maintained and developed, and between 60 and 70 percent of the cooperative member families have incomes equal to or higher than during the period when they were still earning their livings independently. Material-technical bases to serve production and collective welfare bases have also gradually been created. The principles and contents of socialist economic management have begun to be implemented. A rather large corps of cadres has been trained and cultivated in schools and in the actualities of mass revolutionary movements. Although they are still weak professionally and technically they have the confidence of the masses.

The party and government bases, and mass associations, have been set up and the other tasks in the rural areas, such as the cultural, social, security, and national defense tasks, and the task of fulfilling obligations to the state, have developed in a positive direction.

The movement is in some respects still weak and deficient and has not developed uniformly. The task of consolidating and perfecting the new production relations has been carried out slowly, has not attained the requirements, and is not yet specific. The production structure is not appropriate to the existing scale and capabilities of the bases. The scale of some cooperatives and production units is not yet appropriate to the material bases and the present managerial ability of the cadres. The material-technical bases are still few in number, have not yet met the requirements, and are still in disorder. The district echelon has not yet been bolstered so that it can be sufficiently strong to enter deeply into the economic management contents on the scale of the entire district, etc.

The direction and missions of the coming period is to concentrate forces on consolidating the cooperatives and the production collectives in all respects: the organization of production, the creation of material-technical bases, the rectification and improvement of management, the strengtheing of the political-ideological task, and the development of the collective mastership right of the masses. We must step up production, especially food production, so that during the next few years we can endeavor to gradually and essentially resolve the food problem and contribute to meeting the needs for raw materials for industry and export. On the basis of stepping up production, we must increase the incomes and improve the living conditions of cooperative and production collective members, increase accumulation and public welfare, and do a good job of meeting obligations to the state. We must stabilize the scale of the cooperatives and production collectives and gradually build material-technical bases, especially installations which actually serve production and projects which we can build ourselves, positively improve management, and get management on the right track. With regard to management, the conference studied and held enthusiastic discussions in order to apply the recent experiences in the north regarding the contracting out method, and reached unanimous agreement that it would be possible to employ both forms of contracting out: "contracting tasks" and "contracting output."

Expressing his opinions at the conference, comrade Vo Chi Cong praised the party committees and the governmental echelons for firmly grasping and creatively applying the party's cooperativization line to the specific conditions and circumstances of the localities, having a high degree of determination and concentrating their efforts on leading the transformation of agriculture, combining transformation with construction, strongly developing the movement, and exerting a good influence on many aspects -- economic, political, cultural, and social.

Comrade Vo Chi Cong spoke of the deficiencies and weaknesses of the movement and pointed out that the principal and most important task during the coming period will be to concentrate on consolidating the cooperatives and production collectives. That task is even more difficult and complicated than during the period of campaigning for and organizing the cooperativization movement. There must be close guidance by the party committees and governmental administrations, and the cooperation and positive assistance of the various sectors and mass associations.

The important matter in the immediate future is to quickly draft good plans. On the basis of district zoning and planning, we must determine the production directions of the cooperatives and production collectives along the lines of specialized cultivation, while also comprehensively developing agriculture in order to develop as much as possible the capabilities of labor, land, forests, seas, etc., which are strengths of the provinces of Central Vietnam and the Central Highlands. We must promote production, resolve the food problem, and create conditions for developing the strengths regarding industrial crops and developing forestry and livestock raising. On the basis of long-range plans we must determine production directions and paths of advance that are appropriate and practical, in order to attain high economic effectiveness.

The training and cultivation of cadres must be made an important, urgent task. Only if that task is carried out urgently can we meet the new requirements of the present cooperativization movement. By the end of 1981 all key cadres of the cooperatives and production collectives, and the leadership and guidance cadres must be trained in schools and in specialized management and technical classes. Attention must be paid to training cadres from the ethnic minority groups. There must be a division of labor among the central level, the provinces, the districts, and the sectors with regard to training and cultivating the various types of cadres for the cooperatives.

We must truly strengthen and develop the district, and develop the guidance role of the district with regard to the task of consolidating the cooperatives and production collectives.

Comrade Vo Chi Cong said, "The basic, long-range direction for consolidating the cooperatives and production collectives is to simultaneously carry out the three revolutions, develop the collective mastership night of the cooperative members, and stress the development of production forces accompanied by the reorganization of production and the all-round improvement of cooperative management.

Carefully analyzing contracting out in agriculture, comrade Vo Chi Cong said, "The cooperatives and production collectives must apply that method in a manner appropriate to the specific conditions of each base, and must base it on strict observance of the common principles of the socialist economic management. The various contracting out forms must be applied flexibly so that they may be appropriate to the actual situation of each place and the production characteristics of each type of crop and livestock, in order to encourage the production units and all laborers to produce enthusiastically. With regard to the form of contracting out final production quotas to the cooperative members, he spoke of the experiences of a number of places in the north.

He said that in actuality the cooperatives which have done a good job of "contracting out production quotas" have achieved very encouraging results and have been concerned with the three interests, especially that of the workers, while also satisfying the legitimate interests of "the collective and society." Because "the assignment of production" is related to the responsibilities and rights of the workers more directly with regard to final output, they have been able to fully utilize the labor of the cooperative member families and do a better job of developing a spirit of positive labor, a spirit of enthusiastically applying the technical measures, and consciousness of economizing in production expenses on the part of the cooperative members, while also employing additional means of the cooperative member families in production. Therefore, the yield and output of many crops on land on which the cooperative members have been contracted-out production quotas have increased rapidly. If that method of assignment is well applied, it will also contribute to overcoming the negative manifestations in production labor and in the distribution of income, and to reduce the number of people engaged indirectly in production and some management procedures, in order to do a better fob of serving production.

Comrade Vo Chi Cong discussed the basic principles which the echelons, sectors, and cooperatives must firmly grasp in order to organize guidance and must correctly implement when organizing the assignment of production. He stressed, "The cooperatives must closely manage the principal means of production, especially land, draft animals, implements, and the important material bases in order to carry out organized, planned production. We must continually strengthen the production forces of the cooperatives and introduce scientific-technical advances to production. In assigning production to workers and cooperative member families, with regard to all crops and livestock, there must be close guidance. We must resolutely overcome everything that weakens the socialist production relationships and oppose giving a "blank check" in any form, including giving "blank checks" to units and families. We must organize training and supplementation for the management cadres of the provincial, district, and cooperative management cadres, especially production unit cadres, to achieve unanimity from top to bottom, create conditions for doing a good job of contracting out at the base level, and gain much valuable experience for the localities and the central level.

Contracting out production quotas in agricultural production is something new. We are while applying that method also gaining experience in order to supplement and perfect that method. We are certain to take a significant step forward with regard to management in general and to the consolidation of agricultural cooperativize in particular, and practically and directly stimulate the development of production and stably advance the cooperativization movement.

AGRICULTURE

'NHAN DAN' EDITORIAL PROMOTES SUBSIDIARY FOOD PRODUCTION

Hanoi NHAN DAN in Vietnamese 26 Nov 80 p 1

[Editorial: "Rapidly Develop Subsidiary Food Production"]

[Text] In the part dealing with staple foods, the resolution of the Fourth Party Congress pointed out that "We must rapidly develop subsidiary food crops (corn, potatoes, manioc, white potatoes, and kaoliang), form concentrated, intensively cultivated subsidiary food crop areas, and accompany production with processing." The Party Central Committee and the Government have set forth many specific policies and measures to promote the growing of subsidiary food crops and the use of products made from them.

Subsidiary food crops, which had been secondary starchy crops used to make ordinary cakes or as supplementary foods during March, are gradually being promoted to a position corresponding to their economic value. Subsidiary food crops, as well as rice, are regarded as principal food crops. In our country, the food problem can be resolved well and certainly by promoting the production of subsidiary food crops, introducing subsidiary food crops into the daily diet, and increasing the ratio of subsidiary food crops in over-all food production -- at least 30 percent -- within the near future. Furthermore, large quantities of subsidiary foods are needed to provide feed for stock raising, raw materials for the food industry and light industry sectors, and commodities for export.

In comparison to 1976, subsidiary food crops area and output have nearly doubled, increasing from 940,000 hectares and 1,638,000 tons of subsidiary food (in terms of dry flour) in 1976 to 1.7 million hectares and 3.5 million tons in 1980. Concentrated subsidiary food crop areas are taking form on the basis of the natural subsidiary food crop areas and the new economic zones. The subsidiary food crop structure has been enriched by new crops with high economic value. In areas that are often flooded and waterlogged, the significance of subsidiary food crops is even more clear in that they contribute rapidly to restoring production, stabilizing living conditions, and maintaining the stock animal herds. After the liberation, the Nam Bo provinces began to promote the production of subsidiary food crops, at a more rapid rate in the Bac Bo provinces. Some areas long accustomed to eating rice have also begun to use subsidiary foods as food for people and feed for livestock, in place of rice.

In addition to those advances, subsidiary food crop production is also beset with urgent problems which must be resolved, regard to production, circulation, distribution, and use.

During the past several years the rate of development of subsidiary food crop production has slowed down, with regard to area, yields, and total output. The ratio of subsidiary food crops amounts to only 20 percent of total food production, which is 10 percent lower than the plan norm. The corn area has declined by 30,000 hectares (from 390,000 in 1977 to 360,000 in 1979). Something worthy of attention is the fact that subsidiary food crop yields, which are already low, are teding to decline. The developmental directions of subsidiary food crop production are not specific for each area, which has led to low results. Some features of the policies regarding prices, investment, etc., are not rational. The campaign to introduce subsidiary foods into daily diets has been neglected, makes only general appeals, and lacks specific, realistic plans.

Many types of subsidiary food products are easily damaged (manioc exudes sap, potatoes spoil, etc.) but their storage, transportation, and processing are deficient, and some tasks are practically at a stand-still.

Low-intensity cultivation is a widespread phenomenon, most of the subsidiary food crop area is planted without fertilizer, and the subsidiary food crop land is not protected, so it erodes and degenerates.

In general, the measures taken to resolve the subsidiary food problem are negligent, one-sided, patch-work, and incomplete. Knowledge regarding subsidiary food crops is still simplistic and backward. Transforming a food crop from a secondary position to the status of a principal crop, and from small-scale production to large-scale production is something new and difficult, so great efforts must be made and positive steps must be taken.

We are capable of overcoming those difficulties. The area planted in subsidiary food crops can be expanded by increasing the number of growing seasons and clearing wasteland, and it is possible to add millions of hectares in areas from the mountain region to the coastal region, and on the various kinds of soil, with appropriate crops. It is necessary to launch a mass movement to fully utilize all types of soil in order to grow subsidiary food crops extensively, in accordance with existing customs and on a small scale. It is also necessary to tie in the production of subsidiary foods with the reorganization of production, concentration, specialized cultivation, and intensive cultivation, with the provision of the material-technical bases necessary to produce a whole series of valuable products.

Subsidiary food crops are easily grown but also require the necessary intensive-cultivation techniques. Ordinarily, subsidiary food crops are grown on multi-crop land, fallow land, and land poor in nutritive elements, so sufficient fertilizer must be spread and steps must be taken to protect the fertility of the soil.

On land planted in subsidiary food crops in addition to the principal crops it is necessary to interplant crops of the legume family in order to have additional food products and a larger quantity of nitrogen-rich green fertilizer to spread on the spot.

In order to increase our intensive cultivation and soil improvement capabilities, we should apply widely and flexibly the form of assigning product quotas, while rationally assuring all three interests (those of the state, the collectives, and the workers).

We should rely principally on the form of processing subsidiary food crops on the spot. If there are no conditions for processing them into concentrated products, they should be processed into coarse products, such as sliced manioc, sliced potatoes, rough powder, etc., so facilitate storage, transportation, and use.

The consumption of subsidiary food crops should be accomplished in the localities, in the form of food for people and feed for livestock. We must improve the state purchasing of subsidiary food crops, with a purchasing network extending into all areas in order to assist the producers, especially in the mountain region, where communications and transportation are difficult.

Subsidiary food crop production will develop strongly if there is a suitable investment plan, positive measures, and correct policies, especially with regard to the concentrated subsidiary food crop areas and the important subsidiary food crops.

The winter-spring subsidiary food crop season has begun. It is the most important subsidiary food crop during the year, and accounts for 80 to 90 percent of the annual subsidiary food crop area and output. We must go all-out to have a successful harvest in order to contribute importantly to resolving the food problem.

'NHAN DAN' EDITORIAL URGES BALANCED FOREST EXPLOITATION

Hanoi NHAN DAN in Vietnamese 29 Nov 80 pp 1,4

[Editorial: "The Exploitation and Development of Forests"]

[Text] Forestry activities are responsible for managing the exploitation of forests and forest lands in order to meet the increasingly greater needs of the economic sectors and the people for wood and the other forestry products. During the past several years the exploitation plan norm has risen to nearly 2 million cubic meters of wood a year. In the future, the need for wood will become even greater, as the development rate of the national economy and the requirements for improving the people's living conditions increase.

The increasingly greater exploitation task must be accompanied by and be closely tied in with the development of forests. Those are two important aspects of forestry activities. The development of forests is regarded as the most basic concern of forestry, and is the basis of exploitation. The development of forests is concretized by means of afforestation, improvement, and protection. And even while exploiting forests it is necessary to also develop forests. That is the spirit of the resolution of the Fourth Party Congress, which stated with regard to forestry that "Forestry must be developed along the lines of large-scale socialist production. Attention must be paid to all aspects: afforestation, forest improvement, the protection of forests, and the exploitation of forests."

In that spirit, during the past several years forestry activities have attained a number of good results. Despite the limited material-technical bases, and especially despite unexpected floods that have created difficulties for forestry, exploitation has still amounted to nearly 2 million cubic meters of wood -- about equal to the plan norm -- and met an important part of the needs for state capital construction and consumer goods for the people. The overfulfillment of the plan to supply mine shaft support beams represented a great effort on the part of the forestry sector and the responsible localities. Each year about 100,000 hectares have been afforested, which has approximately equalled the plan norm, and there have been determined a number of appropriate trees which have high economic value with regard to both northern and southern forests.

The broad popular afforestation movement has continued to be developed, and has begun to be expanded in the southern province in the form of the movement to create "Uncle Ho's orchards." Such advanced models as the Huong Son, Thong Nhat, and Ke Bao state forests and such forestry cooperatives as the Ban Vuoc cooperative in

Hoang Lien Son, the Khuoi Nghien cooperative in Ha Tuyen, the Son Ha cooperative in Nghe Tinh, and the Binh Minh cooperative in Thanh Hoa have done a rather good job of both aspects -- exploiting and developing forests -- and have effectively combined forestry with agriculture and production with commerce.

In addition to those results, with regard to forestry activities there are still important and urgent problems which must be posed and resolved, as soon as possible. Some of them are alarmingly serious.

Two widespread phenomena are an imbalance between exploiting and developing forests and the waste of natural resources during exploitation. The requirements of state plans with regard to exploitation are increasingly great, but forest reserves have tended to decline to a worrisome degree. Of the 5 million hectares of lumber forests, about 2 million hectares are exploitable. But the wood reserves are not great, and are gradually becoming poorer. Millions of hectares of wood forests have, within the course of only a few years, become wasteland and scrub forests, and some have become denuded hills.

The development of forests by means of afforestation, upkeep and improvement, and protection has not amounted to much. Forestry activities tend heavily toward exploitation, usually exploitation of the "cut down trees wherever it's convenient" variety, with no respect being paid to the technical rules and regulations. It is estimated that in exploitation as much as 60 or 70 percent of the wood is wasted, principally bark, branches, and small trees which have utilization value but are allowed to not in the forest. In actuality, when one million cubic meters of wood are brought out of the forest that means that theree times as many trees have been cut down. Furthermore, forest fires, some in forests with valuable wood (ironwood trees, resin-producing pine trees, etc.) that extend over areas of thousands of hectares, break out during the dry season every year. The illegal cutting down of trees for personal benefit is widespread in nearly all forested areas.

In order to meet the needs for wood and the other forestry products according to plan, a measure of foremost importance is to achieve positive, solid balance between development and exploitation, with development serving as the basis. We must enable forest development to stabilize and to keep ahead of exploitation requirements.

All exploitation tasks must be closely tied in with the requirements of forest development. The drafting of sub-plans and plans is the first task in exploitation, and is intended to categorize forests as to which are of sufficient age to be exploitable, which are to be maintained, reafforested, improved, etc. Specific plans for each forest area and observance of regulations and rules in exploitation are also intended to protect and develop forests. We must only cut down trees that are of age, refrain from cutting down underage trees, refrain from damaging the other trees, and clean up and replant immediately after trees are harvested. All branches and treetops must be collected in order to fully utilize trees -- at least 70 to 80 percent of the total. Most of our country's wood forests are natural, wild forests which can rapidly be transformed into economic, man-made forests by means of appropriate, positive measures.

In addition to the forests now being exploited, it is necessary to expand the useful forest area by promoting reafforestation, maintenance, and the creation of new forests, and by gradually transforming wild, scrub forests -- of which there are now millions of hectares -- into forests with economic value. Forestry should be developed along the lines of large-scale socialist production, progressive commercial and technical measures should be taken, and forestry should be combined with agriculture, so that forests are regarded as being gardens.

The laws, statutes, and regulations regarding the protection of forests must be strictly observed. Illegal acts must be dealt with appropriately, and people who do a good job of protecting forests must be rewarded.

Forests are the property of the entire population. Everyone must munifest consciousness of collective mastery and, along with the responsible sectors, protect that valuable property. The existing 5 million hectares of forests, if well exploited and accompanied by increasingly greater forest development, will be a priceless natural resource of the nation.

The dry season, which has just begun, is also the forest explcitation season. The localities and forestry bases must go all-out to fulfill their forest exploitation and development plans, begin a new phase for forestry,and enter the 1981-1985 five-year plan period with good prospects.

GRANARY NETWORK BUILT IN MEKONG DELTA PROVINCES

Hanoi QUAN DOI NHAN DAN in Vietnamese 18 Nov 80 p 1

[VNA News Release: "Nine Mekong Delta Provinces Urgently Create a Network of Granaries"]

[Text] In addition to preparing the material bases to serve the mobilization of grain in 1981, nine provinces in the Mekong Delta are setting aside the various kinds of materials to construct a network of granaries and drying patios in the key rice-growing areas.

Kien Giang Province has a plan for constructing rice granaries with a capacity of 40,000 tons, which will increase the total storage capacity to 110,000 tons. On the average, each village will have an additional granary with a capacity of between 1,500 and 2,000 tons, and tens of thousands of square meters of drying patios. Dong Thap Province is urgently constructing granaries with an additional capacity of 15,000 tons in the districts in the Hong Ngu, Tam Nong, and Cao Lanh rice areas. In addition to restoring medium and small granaries with a capacity of 80,000 tons, Minh Hai Province is concentrating on the construction of many additional granaries to serve the mobilization of the main rice crop.

The provinces of the Mekong Delta are examining the existing bags and are mending the old, torn bags so that they can used to mobilize the main rice crop. The provinces of Hau Giang, Dong Thap, and Cuu Long have formed a force of porters, bag menders, and bag markers to assure sufficient bags when rice is transported to district and provincial granaries.

HEAVY INDUSTRY AND CONSTRUCTION

STATUS OF PHA LAI, DONG HOI POWER PLANTS REPORTED

Hanoi NHAN DAN in Vietnamese 29 Nov 80 p 1

[VNA News Release: "Construction Rate of Pha Lai Thermoelectric Plant Stepped Up, Construction of Dong Hoi Power Plant Completed"]

[Text] Construction Corporation No 18 and the units participating in the construction of the Pha Lai Thermoelectric Plant have concentrated their efforts on constructing such project items as the turbine building, generator No 1, smoke stacks, water circulation pumping stations, etc. They have simultaneously constructed housing, the consumers' water system, the network of construction roads, construction surface areas, etc. Thousands of square meters of housing have been brought into use. Additional tens of thousands of square meters of housing are being urgently constructed.

Materials have been prepared at a rate that keeps up with the construction rate. More than 2,500 cubic meters of granite for constructing smoke stacks were transported to the mixing station chute. Increasingly larger numbers of barges carrying iron and cement are arriving at the port. The transportation enterprise repaired three tow boats. In the past, the trucks transporting rocks at Yen Cu made only two to four trips a day, but now they make six trips. The enterprises participating in constructing the smoke stack of the pumping station excavated and transported 1,000 cubic meters of earth and rock, poured more than 370 cubic meters of foundation and structural concrete, and manufactured more than 200 tons of steel reinforcement rods.

Construction Enterprise No 7 of Coal Corporation No 3 of the Ministry of Power and Coal recently completed the construction of the Dong Hoi power plant, with a capacity of 14,000 kw, which the Soviet Union designed and equipped. The cadres and wo workers overcame many difficulties, organized transportation, stored and installed equipment, and brought the project into use before the deadline. The enterprise's construction unit for the first time installed a 4,000 KVA diesel gererator. It gained experience as it worked, had the all-out assistance of the Soviet technicians, and did a good job of meeting the economic and technical norms.

'NHAN DAN' EDITORIAL PROMOTES SALARY-ACCORDING-TO-OUTPUT SYSTEM

Hanoi NHAN DAN in Vietnamese 25 Nov 80 pp 1,4

[Editorial: "Salary Based On Output and Labor Productivity"]

[Text] In improving economic management and enterprise management, hundreds of state production bases in the different sectors have effectively utilized specific forms of paying salaries for work completed: paying collective groups for final output, paying collective groups in accordance with graduated unit prices, and paying for completed construction projects. Because they have done a good job of applying that form of salary payment, many enterprises have taken the initiative in continuing to increase production, have improved management at the base level, and have gradually increased the workers' income from salaries and bonuses. That is a step forward in combining planning with cost accounting and in using direct economic levers at the base level.

Due to incorrect understanding, some enterprises have applied the system of paying salaries according to output arbitrarily, and without making sufficient preparations. Some places regard the payment of salaries according to output as merely a disguised way to increase the income of workers, so they have lowered the labor expenditure norms, maintained outmoded norms in order to raise the unit value for paying salaries according to output, become lax in quality control and in testing products, etc. The result has been that salaries and bonuses have increased rapidly but production and labor productivity have not increased. The enterprises' salary expenses have exceeded their ability to meet those expenses; there is an imbalance between their production and their salary budget; and the enterprises' financial activities are chaotic. Therefore, such enterprises must usually juggle their books and deceive the upper-echelon management organ in order to obtain additional salary funds with which to pay salaries. Some places even use funds for capital construction and for purchasing raw materials to pay salaries, are dishonest in cost accounting, and distort figures in order to increase the volume of production, or lower the norm for delivering principal products to the state so that they can market the products themselves to obtain cash. The situation of concealing production capabilities, inflating the number of workers, etc., still exists in some places when drafting the 1981 plan. Those dishonest working methods in fact amount to the theft of socialist property and weaken the state economy. They must be resolutely overcome.

Further expanding the form of paying salaries according to output in the sectors is a progressive policy which has a positive effect on the production situation and on the lives of the workers. A matter of principle in implementing the system of paying salaries according to output is to, no matter in what form, cause the labor productivity rate to increase more rapidly than the average salary rate for the enterprise as a whole, and expenditures for salaries as part of the production costs of a unit of production must be sowered in comparison to the past and to the planned levels. And therefore, the income and salary of people paid according to output will be increased principally by efforts in labor, the rationalization of production, and the improvement of techniques, so that in a given unit of time it is possible to produce many high-quality products, economically use materials, and assure the safety of equipment.

If they are to do a good job of paying salaries based on output, the production units must carry out such principal tasks as establishing and perfecting progressive average labor expenditure norms, while assigning to workers a complete set of technical inspection, and the testing of products must be strengthened. In addition to justly and rationally distributing salaries it is necessary to apply a system of clear material responsibility with regard to collectives and individual workers. The management organs must pay attention to rectifying the organization of production, rationally organizing labor, improving working methods, and creating the necessary material conditions so that the workers can produce contentedly and do a good job of fulfilling the plan norms and tasks that are assigned. The combined use of political-ideological education, social psychology, and administrative measures, along with other economic stimulation measures, including concern for improving living conditions and expanding collective welfare for workers, are indispensable measures in the process of organizing the payment of salaries based on output.

The upper-echelon management organs play an important role in encouraging the bases to do a good job of paying salaries based on output by providing specific guidance and promptly improving such relevant management systems as those regarding the supplying of materials and raw materials, the planning of salary funds, and the management of payments from the enterprise salary funds.

BIOGRAPHIC

INFORMATION ON VIETNAMESE PERSONALITIES

[The following information on Vietnamese personalities has been extracted from Vietnamese-language sources published in Hanoi, unless otherwise indicated. Asterisked job title indicates that this is the first known press reference to this individual functioning in this capacity]

Triệu Văn Bé [TRIEEUJ VAWN BES]

*Chairman of the People's Committee, Tra Cu District, Cuu Long Province; his article "Tra Cu Did Well in Collecting Grains in 1980" appeared in the cited source. (NHAN DAN 26 Nov 80 p 2)

Huỳnh Dư Bì [HUYNHF ZUW BIF]

SRV Ambassador to the Republic of Guinea; on 4 Dec 80 he attended a reception for a SRV delegation headed by Vo Nguyen Giap. (NHAN DAN 10 Dec 80 p 4)

Nguyễn Thị Bình [NGUYEENX THIJ BINHF]

*Head of the Women's Federation; Minh Hai Province; her article about the mother of a war hero appeared in the cited source. (NHAN DAN 19 Nov 80 p 3)

Nguyễn Mạnh Cầm [NGUYEENX MANHJ CAAMF]

*SRV Ambassador to the Federal Republic of Germany; on 16 Nov 80 he attended a meeting of the Association of Vietnamese Residents in the Federal Republic of Germany. (NHAN DAN 20 Nov 80 p 4)

Cù Huy Cận [CUF HUY CAANJ]

Vice Chairman of the Vietnam Arts and Letters Association; on 27 Nov 80 he attended the arrival in the SRV of Chopin Prize Winner Dang Thai Son. (NHAN DAN 28 Nov 80 p 1)

Trần Hữu Dực [TRAANF HUWUX ZUWCJ]

Member of the Central Committee of the VCP; President of the Vietnam-Lao Friendship Association; on 1 Dec 80 he attended a meeting honoring Lao National Day. (NHAN DAN 2 Dec 80 p 1)

Hoàng Trọng Dại [HOANGF TRONGJ DAIJ]

Vice Minister of Foreign Trade; on 25 Nov 80 he attended the signing in Hungary of a treaty for Hungarian aid and loans to the SRV in 1981-85. (NHAN DAN 27 Nov 80 p 1)

Trần Văn Địch [TRAANF VAWN DICHJ], Deceased

Specialist in the Propaganda and Training Department of the VCP Central Committee; he died on 4 Dec 80 at age 65. He was in retirement at the time of his death. (NHAN DAN 5 Dec 80 p 4)

Phạm Xuân Đợi [PHAMJ XUAAN DOWTJ]

*Vice Minister of Forestry; his article "Rational Protection, Development and Exploitation of Forest Resources" appeared in the cited source. (NHAN DAN 28 Nov 80 p 2)

Võ Đông Giang [VOX DOONG GIANG]

Vice Minister of Foreign Affairs; on 29 Nov 80 he was the member of VCP and SRV Government Delegation that left for Laos to attend Lao National Day ceremonies. (NHAN DAN 30 Nov 80 p 4)

Phạm Văn Hai [PHAMJ VAWN HAI], AKA Ba Du [BA ZU], Deceased.

Vice Chairman of the Vietnam Stage Artists Association; former delegate to the 3rd National Assembly; Deputy Head of the Vietnam Stage Artists School; he died on 21 Nov 80 following a period of illness at age 77. (NHAN DAN 23 Nov 80 p 4)

Trần Quốc Hoàn [TRAANF QUOOCS HOANF]

Member of the Political Bureau of the Central Committee of the VCP; *Secretary of the Central Committee of the VCP; on 11 Dec 80 he left the SRV to attend the 2nd Congress of the Cuba Communist Party in Havana. (NHAN DAN 12 Dec 80 p 1)

Vũ Hoàng [VUX HOANGF]

*Head of the Overseas Vietnamese Department, Ministry of Foreign Affairs; on 25 Nov 80 he meet with the Thai Ambassador to the SRV to protest Thai allegations against the SRV. (NHAN DAN 27 Nov 80 p 4)

Nguyễn Duy Kinh [NGUYEENX ZUY KINH]

SRV Ambassador to Ethiopia; on 29 Nov 80 he attended the arrival of a SRV delegation head by Vo Nguyen Giap. (NHAN DAN 3 Dec 80 p 1)

Nguyễn Tử Lan [NGUYEENX TUW LAN], Deceased

Former Member of the Standing Committee of the VCP Committee, Yen Bai Province; Deputy Head of the Specialists Department, Ministry of Communications and Transportation; Deputy Head of the Transportation Committee of the Ministry of Communications and Transportation; he died of an unspecified illness on 9 Nov 80 at age 69. He was in retirement at the time of his death. (NHAN DAN 18 Nov 80 p 4)

Đỗ Đại Lộc [DOOX DAIJ LOOCJ]

Vice Minister of Engineering and Metals; on 24 Nov 80 he was in Prague to attend a meeting of the Vietnam-Czechoslovakia Committee on Economic and Scientific Cooperation. (NHAN DAN 27 Nov 80 p 1)

Nguyễn Hữu Ngô [NGUYEENX HUWUX NGOO]

SRV Ambassador to Cuba; on 11 Dec 80 he accompanied Political Bureau Member Tran Quoc Hoan to attend the 2nd Congress of the Cuba Communist Party in Havana. (NHAN DAN 12 Dec 80 p 1)

Đỗ Nhuận [DOOX NHUAANJ]

Secretary General of the Vietnam Musician Association; on 27 Nov 80 he attended the return to Hanoi of Chopin Prize Winner Dang Thai Son. (NHAN DAN 28 Nov 80 p 1)

Đoàn Phương [DOANF PHUWOWNG]

Vice Chairman of the State Science and Technology Commission; on 24 Nov 80 he was in Prague to attend a meeting of the Vietnam-Czechoslovakia Committee for Economic and Scientific Cooperation. (NHAN DAN 27 Nov 80 p 1)

Đào Xuân Sâm [DAOF XUAAN SAAM]

*Head of the Economic Management Department, Nguyen Ai Quoc Advanced [Vietnamese Communist] Party School; his article "Expanding the Scope of Planning Under Pluralistic Economic Conditions" appeared in the cited source. (NHAN DAN 26 Nov 80 p 2)

Nguyễn Xuân Tài [NGUYEENX XUAAN TAIF]

Deputy Head of the Vocational Training General Department; recently he attended the arrival of a delegation of the Soviet Vocational Training Committee. (NHAN DAN 2 Dec 80 p 1)
[NOTE: This individual was previously reported as Le Xuan Tai LEE XUAAN TAIF]

Nguyễn Tâm [NGUYEENX TAAM]

*Deputy Secretary General of the Vietnam Chamber of Commerce; on 24 Nov 80 he thanked the Algerian Government for a gift. (NHAN DAN 25 Nov 80 p 4)

Đinh Đức Thiện [DINH DUWCS THIEENJ]

Member of the Central Committee of the VCP; Minister of Communications and Transportation; on 8 Dec 80 he attended a reception for delegations from the Soviet and GDR Ministries of Construction. (NHAN DAN 10 Dec 80 p 1)

Đinh Quang Thụy [DINH QUANG THUYJ] aka Tố Thúc Dịch [TOO THUCS ZICHJ], Deceased

Born in 1902 at Thu Dien Hamlet, Tay Giang Village, Tien Hai District, Thai Binh Province; Member of the VCP since 1930; former Secretary of the VCP Committee, Bac Lieu Province; Member of the VCP Fraction and Chief of Cabinet of the Ministry of Public Health; He was in retirement at the time of his death from a serious illness on 4 Dec 80. (NHAN DAN 5 Dec 80 p 4)

Nguyễn Văn Tranh [NGUYEENX VAWN TRANH]

*Acting Chairman of the People's Committee, Tien Giang Province; he was mentioned in an article on agricultural production in his province. (QUAN DOI NHAN DAN 10 Nov 80 p 2)

Trần Trung [TRAANF TRUNG]

*Deputy Head of the China Department, Ministry of Foreign Affairs; on 3 Dec 80 he spoke with the PRC Ambassador to the SRV concerning the resumption of talks between the two nations. (NHAN DAN 4 Dec 80 p 1)

Nguyễn Ngọc Vũ [NGUYEENX NGOCJ VUX]

SRV Ambassador to Mozambique; on 15 Nov 80 he attended the arrival in Maputo of an SRV delegation headed by Vo Nguyen Giap. (NHAN DAN 21 Nov 80 p 4)

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

[VNA News Release: "Cao Bang Province Tries Chinese Lackeys for Engaging in Psychological Warfare"]

[Text] The People's Court of Cao Bang Province recently tried a group of Beijing lackeys for engaging in psychological warfare. The group consisted of Sam Van Phinh, Chu Van Lung and Nong Van Ho and was led by Chu Van Thon. All of them are from Keng Keo Hamlet in Tri Phuong Village, Tra Linh District, Cao Bang Province.

In early 1980, the Chinese reactionaries sent these lackeys across the border to Tri Phuong Village where they stole 16 buffalo and took them back to China. Chu Van Thon secretly travelled to China and met with Chu Van Van, the Chinese public security officer in charge of the area. Van sent Thon back across the border to the families that had lost the buffalo. He praised the Chinese reactionaries and, at the same time, collected money from them, saying it was to buy various products with which to get back the buffalo. Thon bought chickens and wine and, together with Sam Van Phinh and Chu Van Lung, took them to Chu Van Van in China. There, they took possession of the buffalo and secretly brought back with them three bags of documents, leaflets and psychological warfare items.

On 13 February 1980, Thon, Lung and Phinh persuaded Nong Van Ho and a number of other decadent elements to secretly travel to China where they met with Chu Van Van and were given nine more bags of psychological warfare leaflets and items. They scattered these leaflets and items at three sites in Tri Phuong Village and a number of other places in front of the Ban Ngan Market. They were observed by the local people, who exposed them and helped the security forces arrest them.

Chu Van Thon had harbored a number of Chinese reactionaries who were engaged in clandestine activities within the locality and then persuaded a number of his accomplices to steal property from the people of Lung Thien Village, thereby creating divisions among the people of the various nationalities in the border area.

The People's Court of Cao Bang Province handed down the following sentences: Chu Van Thon was sentenced to 12 years in prison, Sam Van Phinh and Chu Van Lung were sentenced to 5 years in prison and Nong Van Ho was sentenced to 2 years in prison.

The other persons who were bribed and deceived were given immunity from prosecution as a result of repenting their crimes and exposing the Chinese lackey reactionaries.

BETTER ARMY-PEOPLE UNITY URGED

OW132024 Hanoi Domestic Service in Vietnamese 1200 GMT 12 Jan 81

["Excerpt" of QUAN DOI NHAN DAN editorial: "Satisfactorily Carry Out the Civilian Proselytizing Task"--date not given]

[Text] Being loyal sons of our people, our armymen have always been greatly admired and cherished by our people, who consider them--Uncle Ho's troops--as their bloodsealed sons and brothers who trust, love, protect, and assist them to the best of their abilities in combat as well as in national construction.

No glorious victory of our army could have been achieved without our people's wholehearted assistance, fostering and care for our troops. One of the important and regular political tasks of party committee echelons and leaders is to build and consolidate the close, inseparable army-people relationship and to satisfactorily carry out the civilian proselytizing task under any circumstances.

Satisfactorily carrying out the civilian proselytizing task--a traditional political responsibility our army has consistently carried out--is a prerequisite for every military unit if it wants to carry out its tasks satisfactorily. We must discard the old concept of considering the civilian proselytizing task merely a measure for preventing offenses and shortcomings in army-people relations or for improving mutual material assistance. Civilian proselytizing is the responsibility of all combatants, leading cadres and party committee echelons which provide leadership and guidance on implementation of tasks now that our enemy is conducting psywar activities, seeking to arouse conflict and sow division between our army and people and among our ethnic minorities and religious community.

In view of our army's urgent, weighty task of remaining combat ready while carrying out its economic construction task, improving its training quality and participating in consolidating and strengthening the local armed forces, our army must satisfactorily carry out the civilian proselytizing task in order to further enhance the overall strength resulting from our people's unit and the army-people solidarity.

Satisfactorily carrying out the civilian proselytizing task under the present circumstances includes continuing to educate our cadres and combatants on the line concerning the all-people's national defense and people's war in defending and building our socialist fatherland. This is to make them clearly understand that our people's armed forces draw their invincible strength from the people. Once our cadres and troops understand the importance of that task, we can motivate them to enhance the image of Uncle Ho's troops among the people, strictly observe discipline in army-people relations and strive to carry out the civilian proselytizing task under any circumstances and in any place. Wherever a military unit is stationed, its party committee echelon and leaders must work out specific plans to meet and discuss with the local administration ways to satisfactorily carry out propaganda to make the local people thoroughly understand our party's and state's line and policies. They must also help them consolidate their militia, self-defense and reserves in order to properly maintain political security and public order and must help them discharge their cultural and economic construction tasks.

Concerning units stationed in border areas, coastal areas and on offshore islands, in performing the civilian proselytizing task they must particularly help the local people build good political bases and develop their armed forces well in order to smash all the enemy's evil schemes, acts of sabotage, psywar tricks and espionage activities.

As a routine task of every unit, civilian proselytizing must be systematized for better study of situations, army-people relations, monthly guidance on the implementation of the related tasks and so forth. Detailed plans must be worked out for assignment of tasks and responsibilities and control of the implementation of tasks. We must avoid giving general instructions and then leaving the companies fully in charge of the civilian proselytizing task. Every cadre and combatant must be further trained on civilian proselytizing as well as on the related methods and viewpoints. Every unit must develop the army's revolutionary tradition of loving, respecting the wholeheartedly assisting the local people. [sentence as printed] Every unit must also develop the tradition of satisfactorily carrying out the civilian proselytizing task in order to achieve better unity between the army and the people. Every unit must strive to become a good unit in civilian proselytizing and in observing discipline in army-people relations.

NGUYEN LAM READS ECONOMIC REPORT AT NATIONAL ASSEMBLY

BK140530 Hanoi NHAN DAN in Vietnamese 21 Dec 81 pp 2-4

[SRV Council of Ministers' report: "The Present Economic Situation and the Tasks of the 1981 State Plan"; read by Nguyen Lam, vice premier and chairman of the State Planning Commission, at the seventh session of the Sixth National Assembly--passages within slantlines denote boldface as published]

[Text] /The Presidium/,

/Comrade Deputies/,

The year 1980, the last year of the Second 5-Year Plan (1976-1980) is drawing to a close. We are about to enter 1981, the first year of the Third 5-Year Plan (1981-1985).

On behalf of the Council of Ministers, I would like to present to the National Assembly a report on /the present economic situation and the tasks of the 1981 State Plan/.

The report comprises three parts:

I. The situation of the implementation of the Second Five-Year State Plan (1976-1980) and the 1980 State Plan.

II. Economic orientation and tasks in the coming period and in the 1981 State Plan.

III. The strengthening and improvement of economic management and the successful implementation of the 1981 State Plan.

/Part One/

/The Situation of the Implementation of the Second Five-Year State Plan (1976-1980) and the 1980 State Plan/

/Comrade Deputies/,

The process of the 30-year war for liberation under the leadership of the glorious VCP illustriously concluded with the historic 1975 spring victory.

Our nation became totally independent and national unification was achieved with the change of the country's name to the Socialist Republic of Vietnam. The Fourth Party Congress traced the line for socialist revolution throughout the country, shedding light on the path of advance of the Vietnamese revolution. Within a short period of time, our people defeated the wars of aggression waged by the Beijing expansionists and their henchmen on the southwestern and northern borders of our country; supported and assisted the cause of national liberation of the Kampuchean people; and tightened the militant solidarity between Vietnam, Laos and Kampuchea, thereby turning it into a force for the defense of peace and stability in Southeast Asia against the expansionist and aggressive schemes of the Chinese authorities in collusion with the U.S. imperialists. With such momentous events as the signing of the treaties of cooperation and friendship with the Soviet Union and other socialist countries, and by uniting with various countries in the world for peace and friendship among nations, we won important victories on the diplomatic front, stirring up fresh enthusiasm among our people in postwar economic construction.

Over the past 5 years, we have obtained notable achievements. Industrial enterprises and dwelling houses in urban centers heavily devastated by bombs and shells have basically been restored. War damage in agriculture, industry, communications and transportation and other sectors has been overcome. Large-scale socialist transformation has been effected in the south, which helped to basically abolish the exploiting classes, eliminate neocolonialist vestiges, and initially establish new, socialist socioeconomic relations. Hundreds of important material bases of the various sectors of the national economy have been built. Production in all sectors and localities has been stepped up, and so forth. Healing the wounds of war and further developing the national economy was a great success of our people in the economic and social fields. Thanks to this, both the gross national product and national income in 1980 were higher than in 1975.

In agriculture, the output value increased by 18.7 percent, over half a million hectares of wasted land were reclaimed and 650,000 hectares of virgin land were cleared. New areas of concentrated production of coffee, rubber, tobacco and fruit trees have taken shape. Land reclamation and crop expansion increased the total cultivated area by 1.8 million hectares. The irrigated area increased by 600,000 hectares and the area serviced by drainage systems, by 180,000 hectares. The material and technical bases of agriculture were strengthened. In the five years from 1976 to 1980, many new tractor stations were set up and 12,700 high-power tractors and 10,000 smaller ones were supplied to agriculture, raising the rate of mechanized plowing to about 37 percent of the total cultivated area, of which the Mekong River delta accounted for 43 percent and the Red River delta, 42 percent. Another 570,000 hectares of forest were planted. Over 4 million more laborers were attracted into agricultural and forestry production.

In 1980, the industrial output value increased by 17.3 percent over 1975. In particular, that of the engineering industry increased by 60 percent. Production capacity rose in many sectors including the energy, coal, building materials and light industries.

The volume of freight by all means of transportation has increased. The communications and transportation network has been restored and expanded. The loading and unloading capacity of all ports has also improved. Nearly 15,00 km of railroad, 40,000 meters of bridge and more than 4,000 meters of wharf have been restored or built. A total of 70 locomotives, nearly 3,000 rail carriages, a gross tonnage of ship totaling 200,000 and of barges totaling 140,000 have been built.

The building industry has also developed and its establishments have been strengthened with new equipment. The newly-built enterprises have increased the production capacity of the building industry in the coming 5-year plan.

Important achievements have been recorded in the social field. Culture, education, public health, mother and child care, and physical culture and sports have continued to develop. Many schools, hospitals, theaters and other cultural and educational establishments have been built in both the cities and the countryside. Enrollment in general schools, kindergartens, supplementary education courses and vocational schools has reached nearly 16 million. In other words, one out of every three people is going to school. The number of skilled workers has risen to 2 million, accounting for 8 percent of the social work force. The number of cadres with postgraduate and university degrees or graduating from secondary vocational schools accounts for 21 percent of the total number of workers and public employees. The system of free education and medical care, which is applied nationwide, represents a great effort on the part of the state.

There has been a great effort to create jobs for the laboring people, especially in the south where, after liberation, almost 3 million people, chiefly in the cities, were jobless. The state has applied several measures to help 1.2 million of these people take up agricultural production and other suitable occupations in the countryside. All told, 6 million people have been provided for during the said period.

The social structure of the population has changed in the sense that more and more people are joining the socialist economic sector. Socialist relations of production are continuing to be consolidated and improved in the north and are taking shape in the south where comprador capitalist enterprises have been nationalized and most private capitalist enterprises in industry, trade and transportation transformed through the system of joint state-private ventures. Socialist transformation of agriculture is being effected in the south. A total of 165 state farms, 1,300 cooperatives and more than 9,300 production collectives have been established. No less than 36 percent of the peasant households in the south have embarked on the road of collective production. In many provinces they account for 70 to 80 percent of the local peasant households. The cooperativization movement in artisan industry and handicrafts has also shown progress.

Along with these great efforts and achievements in economic and cultural transformation and development and in the improvement of the people's living conditions, we have strengthened and consolidated our defense capabilities and have firmly defended our socialist homeland.

Never before has our revolution been in such a firm position and possessed such strength. This is a firm guarantee for our people to overcome immediate difficulties, smash all schemes and acts of sabotage and aggression of the enemies and move forward to new victories.

The Council of Ministers solemnly proposes that the national assembly warmly commend our compatriots throughout the country, workers, peasants, intellectuals as well as other strata of laboring people, combatants in the people's armed forces and cadres in all sectors and at all echelons who have overcome untold difficulties and obstacles, have made every effort to fulfill their duties and have achieved many glorious victories in the cause of building and defending the socialist Vietnamese homeland.

We propose that the national assembly warmly commend the love for their homeland and their compatriots shown by overseas Vietnamese who have actively contributed their efforts and resources to the cause of national construction and national defense.

We express our sincere gratitude to the party, the government and the fraternal people of Laos and the government and fraternal people of Kampuchea for supporting our people in the fight for national defense and in economic and social construction and development. We warmly thank the communist parties, the governments and the peoples of the Soviet Union and other fraternal socialist countries for having given us their wholehearted and effective moral and material support and assistance in our economic rehabilitation and development, our cultural development and national defense consolidation.

We sincerely thank the communist and workers parties, the governments and peoples of other countries, and international organizations, for having given us their sympathy and supported our people's just cause.

/Comrade Deputies/,

In evaluating the situation in the past 5 years, we /should look back more specifically at the situation in 1980/ so as to provide a basis for the elaboration of the 1981 State Plan.

In 1980, our people throughout the country carried out the state plan in even more difficult circumstances. They had to boost production while preparing for the possible outbreak of war, overcome the consequences of serious natural calamities in the north and resolve major economic imbalances.

Surmounting these difficulties, our people throughout the country and all sectors and localities have made many efforts and recorded more /achievements and progress/ in implementing the state plan. Particularly since the adoption of the 6th resolution of the party Central Committee and the 26th resolution of the party Political Bureau, /an increasing number of new, positive factors has appeared, giving rise to a new spirit in production and trade, first of all in agricultural production, in the collection and purchase of food and other agricultural products and in a number of industrial and marine product establishments.

In /agriculture/, the northern provinces have actively combated natural calamities and overcome many difficulties to boost production. The provinces in former Nam Bo have harvested successive bumper crops. The production of more than 14 million tons of grain makes 1980 one of the two best years for agriculture in the 1976-1980 5-Year Plan.

The area under industrial crops is 12 percent larger than in 1979, with increases in both acreage and output for such crops as soybeans, jute, coffee and tobacco.

In /industry/, a number of factories have received regular supplies of raw materials and have begun to implement the system of payment according to the amount of work done and have accordingly increased their labor productivity and raised the quantity and quality of their products.

In /the distribution and circulation of goods/, the amount of grain collected has increased by 600,000 tons over 1979. In the Nam Bo provinces in particular, this amount has also doubled or tripled. The collection and purchase of soybeans, tobacco, coffee and other items have also increased over 1979. More attention is being paid to the collection on taxes and the registration of private industrial and trading businesses. The budgets of a number of localities have grown substantially.

In /economic management/, the experimental application of the new system of payment according to the amount of work done in agricultural cooperatives and payment according to products in state-run factories have brought satisfactory results: labor discipline has been strengthened; labor productivity has increased; economic efficiency has been markedly enhanced; the income of producers has risen; and living conditions have improved. The productive labor movement in those localities where the new payment systems were experimentally implemented has begun to display a strong vigor. Economic sluggishness has begun to be overcome as are the negative aspects.

This, however, is only an initial and not truly universal progress. In reality, despite some shortcomings and deviation which should be corrected, /the correct, the good, the positive and the healthy prevail/. This fact shows that the new policies of the party and the state regarding economic guidance and management have precisely met the demands of the situation and have had a positive impact on production and life. By fully implementing the line and policies of the party and the state, actively developing the positive factors and widely applying the lesson learned from the success of the new mode of production, we will surely be able to change the economic and social situation in the country.

Nevertheless, /the realization of the 1980 State Plan is still low in many fields/.

Grain output is 1 million tons below target, mainly due to the natural calamities in the north; the hog population increased by 6 percent over the previous year, but the collective herd of hogs decreased by 25 percent; and so on.

A total of 90,000 hectares of forest were planted, but the ratio of living trees was low, and the burning and destruction of forests remained serious. Timber output nearly met the target, but a number of localities failed to seriously turn over their products to meet the demands of the central level.

The output of saltwater fish decreased in comparison with the previous years.

The output of a number of important industrial products such as electricity, steel, nitrate fertilizer, fabrics, paper, and others did not increase. In particular, the output of electricity was too low and the irrational distribution of electricity presented tremendous hindrances to the various production and building sectors.

Only 88 percent of the plan for capital construction investment was fulfilled. A number of construction projects fell short of the target.

The transportation and unloading task at the various ports failed to meet the plan norm and the storage of goods was still unsatisfactory.

There was no truly drastic change in the distribution and circulation of goods, and the collection, purchase and control of goods fell short of the requirements.

/Dear Comrade Deputies/,

An overall look at the past 5 years indicates that, the great achievements recorded notwithstanding, the building and development of the economy has encountered great difficulties and problems yet to be resolved:

--The rate of agricultural production development has been slow whereas the rate of population growth has been high. Therefore, it has been very difficult to provide sufficient grain and food for society, especially the urban population.

--The slow development of the electricity and coal industries and a number of other industries has created tension in the supply of energy and raw material to the national economy. Consequently, many enterprises have had to operate at more than half capacity.

--Communications and transportation have remained weak and unable to meet demands. This has further aggravated the difficulties in supplying agriculture, industry and capital construction with fuel, raw material, supplies and equipment.

--The social workforce has not been fully employed; labor productivity has been low, and unable to meet the needs of consumption and accumulation. The number of state employees and the nonagricultural population have increased too fast; and the managerial apparatus has been cumbersome and ineffective.

--There have been many shortcomings in the distribution and circulation of goods; the market and prices have been unstable; speculative and smuggling activities have not been eliminated; and the wage system has not been improved.

--The slow development of production coupled with shortcomings in the distribution and circulation of goods has had negative effects on the life of the people, especially workers and state employees.

The above-mentioned difficulties are a result of many objective and subjective /causes/.

/Firstly,/ our country's social production system is chiefly characterized by /small-scale production/ and an economic structure made irrational in many respects by history; the productivity of social labor is very low; we rely on labor and land for advancement but the per-capita averages in arable and cultivated lands, especially in food crop land, are too ll.

/Secondly,/ the consequences of /30 years of war/, of the prolonged partition of the country and of the neocolonialist domination of half of the country are very grave. The war and neocolonialism in the south have made the economy heavily dependent on foreign countries. The switch from war to peace has also created great economic and social /changes/ whose impact is yet to be fully gauged through reality.

/Thirdly, the sabotage and war of aggression/ which were launched by the Beijing expansionists against our people at a time when we had not yet restored the economy following 30 years of war, have upset our original planning and posed great obstacles to our people's economic construction effort. The war has, on the one hand, caused heavy material destruction and on the other, forced us to rapidly increased our national defense budget and deploy a large force of productive labor, supplies and goods to meet the requirements of combat.

/Fourthly/, the repeated /natural calamities/ in the past few years have been detrimental to production and everyday life, especially since agriculture is still playing a key role in our country's economy.

In these extremely difficult objective conditions, our people, under the clear-sighted leadership of the party, have done their best and have recorded important achievements in transforming, restoring and developing the economy and culture as previously mentioned. This, once again, makes us more confident in the invincible strength of the Vietnamese nation and the vigorous vitality of the socialist system. We believe more and more in the stable leadership of our party--the glorious VCP.

We should not, however, seek only objective causes of the current difficulties. We must thoroughly review the /economic guidance and management/ administered by the state in order to draw necessary lessons for the future.

/Concerning the formulation and implementation of the plan,/ we have in the past failed to fully understand that the key economic task is to concentrate efforts in a harmonious manner on developing /agricultural/ production in a rational industrial-agricultural structure in order to resolve at all costs the problem of grain and food, build important export facilities and generate employment for social labor. In /industry/, attention has not been given to in-depth exploitation (namely consolidation of facilities, renewal of equipment and temporary suspension of operation of facilities found to be lacking in the conditions for production; and new facilities have been built without closely considering the scale, timing and location to better serve agriculture and the production of goods for consumption and export and to meet the actual conditions concerning energy, raw material and spare parts.

We have yet to evolve balanced and uniform measures concerning planning, management, policy and organization for bringing into play /labor and land/-- our two most precious sources of capital--in order to, primarily, resolve the problem of grain and food and create export sources, and from there, to create an initial balance in the development of the economy and accumulate capital for socialist industrialization.

We have not yet been able to satisfactorily carry out the line of building /the central economy/ while actively developing, organizing and satisfactorily managing /the local economies,/ and promptly clearing all the bottlenecks in the development of the local economies. In particular, we have failed to concretize in time the policy of considering the district as the main theater for organizing and employing labor, exploiting land and developing the various branches and trades while redistributing labor at the district level and on a national scale, and effectively building the new economic zones.

In /capital construction,/ the plan for gross investment has not been rational and investments have not been concentrated on key tasks. Too many targets have been set, resulting in the dispersal of materials, funds and the workforce. The use of investment capital, the management of construction work and especially survey work, the selection of sites, and designing and construction have incurred a great amount of waste and brought about poor results.

/Concerning economic management,/ the managerial system has been heavily patterned after the administration of subsidies. Consequently, it has been unable to create the motivating force for developing the economy, to effect the collective mastery system, and to develop the strength of the entire country, every establishment and every working person.

The /planning/ system has been unsuitable for an economy still comprised of many elements and undergoing complex changes. Planning work has failed to achieve a balance and develop potentials. Planning has not been combined with the use of market relations and economic incentives. Generally speaking, planning has not been used as a key tool to direct the economic activities of society.

The /economic policies/ set forth do not fully reflect the principle of combining the three types of interests of the society, the collectives and the individual workers; therefore, they have failed to promote production and fully motivate the ardor of workers.

/The organizational structure/ has been irrational, overlapped and cumbersome in many instances. The work system has been unscientific and uncharacteristic of the principle of democratic centralism. The division of labor and responsibilities has been unclear in many places and the relationship between sectors and echelons and between the central and local economies have not been fully defined. Consequently, we are still confronted with the need to overcome the manifestations of egoism, and parochialism. All this has hindered the development of the existing potentials of the economy. Socialist discipline and law have been taken lightly. In particular, efforts have not been made to satisfactorily elaborate and implement economic law in accordance with the party's economic line and policies. Many state cadres and employees either do not have a firm grasp of the law or have seriously violated the law. Control and inspection work has been haphazard; in many instances, violations of the law and irresponsible and undisciplined cadres who incorrectly carried out party and state policies or corrupt elements who oppressed the masses have not been promptly discovered and strictly deal with. The work related to cadres has not been able to meet the requirements of the new situation and tasks.

Each sector, echelon and unit must carry out strict criticisms and self-criticisms and adopt measures to correct the shortcomings mentioned above; urgently improve organization, management and guidance; and strengthen the contingent of cadres in order to change the situation and create the conditions for more rapid and concrete advancement in the coming years.

/Part Two/

/Economic Orientation and Tasks in the Coming Period and in the 1981 State Plan/

/Comrade Deputies/,

The next few years are extremely important in terms of the struggle of our party and people in the cause of socialist construction and national defense.

To correctly implement the line laid down by the fourth party congress and the ensuing resolutions of the party Central Committee, the following socioeconomic tasks are to be done:

1. Increase production, improve management and circulation of goods, gradually stabilize and develop the economy, reduce difficulties and gradually improve the people's living conditions;

2. Consolidate national defense, maintain political security and social order and safety, and stand ready to fight to defend the homeland;

3. Continue building, with emphasis on key points, the material and technical bases of socialism;

4. Accelerate socialist transformation in the south, and consolidate and perfect the socialist relations of production in the north; and

5. Consolidate our special relations with Laos and Kampuchea, increase our multi-faceted cooperation with the Soviet Union, and strengthen our economic relations with the other CEMA countries.

Despite the many immediate difficulties, we enjoy /basic advantages/ in carrying out these socioeconomic tasks.

We have the strength of the political and spiritual /unity and singlemindedness/ of the entire party and people based on the correct line of the party and the state. Our people are endowed with a tradition of industriousness and staunch struggle. Our cadres, generally speaking, are politically strong and have achieved considerable progress in leading and managing the economy.

Our country /has great potentials/. Aside from the latent potentials which will take time and require relatively large investments to bring into play, we now have real potentials which do not call for substantial investment in order to be effectively utilized. They are labor, land, handicrafts and artisan industry, the existing material and technical bases, a number of mineral resources and many other kinds of raw materials.

Many /new, positive factors/ have appeared recently in various sectors, localities and production establishments. The new economic positions and policies will vigorously stimulate the zeal for labor of millions of people and will accordingly bring about practical results in production and life. Our recent energetic and diversified economic activities have especially helped us to perceive various socioeconomic problems more clearly and find correct and effective ways to solve them, thereby creating a high unity of views among the large mass of cadres and people in perceiving the line, assessing the situation and determining the new mode of production.

We benefit from our /alliance and all-round cooperation with the Soviet Union, our special relations of solidarity with the Soviet Union, our special relations of solidarity and cooperation with fraternal Laos and Kampuchea, and the assistance and cooperation of other socialist countries/, which is reflected in the economic alliance between our country and the other CEMA states.

In order to stabilize and develop the economy gradually and to resolve all the above main tasks successfully, we must strive to follow the following guidelines:

/Firstly, we must step up the exploitation of our potentials in manpower and land, our potential in the application of scientific and technical findings in production and our potentials in organizational [word indistinct] and in the strict exercise of economy production, construction and consumption./

Our country's abundant source of manpower presently enables us to go ahead on a large scale with the opening of new lands for grain and industrial crop production, for carrying out irrigation, and for building roads and expanding branches and trades. In order to tap our potentials in /manpower and land/, first of all we must make the necessary rearrangements to secure the effective use of manpower in each enterprise and cooperative, reorganize and redistribute manpower at the district level and achieve a redivision of labor on a national scale in order to step up intensive cultivation and multi-cropping, expand the cultivated areas, develop animal husbandry and promote the increased use of locally available raw materials by the artisan and handicraft sector for export-oriented production. In various /cities/, we must organize manpower to produce consumer and export goods, build raw material bases in areas where conditions permit and set up work-study schools in order to provide employment for jobless youths. As for the workforce on state payrolls, we must examine it with an eye to making rearrangements and to streamlining its organization, especially its administrative organization. We must intensively improve working and wage systems in order to promote working enthusiasm. We must motivate everyone to work. We must effectively muster part of the armed forces to participate in capital construction and in the development of production. We must consider promulgating a /law on labor obligation/ and /law on land reform/ in order to exercise close control over these two precious assets and to use them in a most rational manner.

It is necessary to /tap our potential in the application of scientific and technical findings/ in production. This is to prove the effects of production and construction. We must attach great importance to the scientific and technical task and must try every way possible to introduce scientific and technical advances in production. If there is a plan for the application of technical advances, it must be a component part of the national economic plan and serve as a scientific and technical basis for the plan for the development of production. We must carry out scientific research programs and technical experiments constantly in order to obtain new findings to apply in production.

/Economy must be strictly carried out/ and must become a habit. It is necessary to establish specific targets for each sector, echelon, establishment and unit to economize on the use of gasoline, oil, coal, electricity, metal, steel, grain, chemical fertilizer and other imported chemical goods. This is an extremely important measure aimed at easing the present difficulties in technical materials and material means. It is necessary to re-examine present norms and establish more norms and to take appropriate financial and economic management measures if these norms are to be applied. It is necessary to draw up a policy to retrieve discarded materials and waste products, rebuild spare engine parts and innertubes, recycle lubricating oil and so forth. It is necessary to appropriately reward personnel for their economization achievements and severely punish those with shortcomings related to wastage and corruption.

/Second, we must rationally build up a structure for investments in capital construction/ along the following lines: concentrate the greatest efforts on agriculture, especially on the task of producing grain, food and consumer and export goods; explore for and exploit oil and gas; give appropriate attention to the electricity, coal, communications and transportation and machinery sectors in the implementation of the above tasks; give attention to an in-depth exploitation of and making small-scale investments to tap labor potential for meeting domestic demands and export requirements; ensure a balance between construction demands and capabilities; and guarantee economic results in construction. With this spirit, we must first of all re-examine all projects and then concentrate on quickly building those important projects which need to be put into production. We must intensify our initial preparatory task and our designing and building task. We must eliminate the situation where there are unplanned, prolonged, unfinished and wasteful construction activities.

We must achieve a rebalance between /raw materials processing and manufacturing industries/ in the direction of striving to develop the production of raw materials. The renovation of the processing industry will only be carried out when the present capacity of this industry has been used to the maximum. In the forthcoming period, there will be a need to provide jobs for millions of people and our capacities in gasoline, oil, vehicles and engines will be substantially limited. Therefore, along with mechanizing important works, we must concentrate on using manual labor.

It is also necessary to rearrange the number of nonagricultural people in order to suit actual economic growth. In order to reduce the size of the nonagricultural population, on the one hand, we must muster youths and other unemployed laborers in various cities as well as the surplus personnel of the state machinery to go participate in production at various state farms, forestry sites, new economic zones and especially at those export-oriented production centers dealing in rubber, coffee, tea and so forth. On the other hand, we must strive to limit the recruitment of laborers for urban economic activities, at least for the next few years.

/Third, we must effect a vigorous change on the distribution and circulation front./

We must firmly grasp the system of proletarian dictatorship, combine the three economic financial and educational measures to ensure that the state can satisfactorily control the market, goods and currency, especially grain; that it can gradually stabilize financial and monetary activities and improve the pricing system and wages; that it can distribute and rationally redistribute the income of the people of various strata; and that it can improve the livelihood of the laboring people, workers and civil servants.

We must organize in a more satisfactory manner /the technical materials supply network, the purchase and collection network, and the consumer goods wholesale and retail sales network/ aimed at closely linking purchasing with selling activities, ending the disruption between production and circulation, eradicating all unnecessary intermediary links, giving better service to production and life, ensuring that goods are firmly placed under state control and struggling to resolutely oppose all enemy sabotage on the circulation front.

/Fourth, we must change the socioeconomic management system./

The shortcomings in the current economic management system constitute a great obstacle to the exploitation of the latent and actual potentials of our national economy. Therefore, /improving economic management becomes a possibility/ with which we can increase labor productivity and further develop production without having to invest additional capital.

In changing the socioeconomic management system, we must, on the one hand, study the setting up of a fundamental system of new management for the entire national economy and on the other hand--this is a pressing and immediate matter--urgently resolve specific managerial problems that have a direct impact on production and everyday life such as the issue of contractual work and wages in cooperatives, the system of collecting and purchasing agricultural products, profits and loss accounting and the wage system in state-run enterprises, the relationship between the central and local economies, the export-import system and so forth. It is necessary to study and evaluate at an early date the specific problems of economic management that arise in the current situation, and the rich innovations of various establishments and localities for broad application in all sectors and echelons.

Appropriate attention must be given to elaborating on the economic law in order to institutionalize party policies into state law and create a new discipline in economic management; and making everybody firmly understand and vigorously implement it.

/Fifth, we must consolidate the organization, change the work system and strengthen and change the contingent of managerial cadres./

Efforts must be made to consolidate the organization of the leading echelons as well as staff organs, especially in the economic-technical field. We must resolutely streamline the machinery and clearly define the responsibility of every organization and every person; improve the work pattern by developing democracy and strengthening discipline to promote a work style that is both scientific and revolutionary; step up the training and fostering of cadres, especially leading and economic management cadres; and correctly deploy leading and managerial cadres in accordance with the requirements of the new tasks.

To exploit the potentials of the economy it is essential that each sector and locality maintain close control over the grassroots level (enterprises and cooperatives), especially the districts; and make an inventory to have a firm grasp of the situation concerning labor, land, equipment, machinery and the supply of materials and gas and oil so as to develop specific plans for exploiting potentials in the following spirit: /with the same sources of capital and supplies but by adopting correct orientations, satisfactorily organizing management, using appropriate, creative work methods, practicing thrift and aiming at high economic efficiency,/ all sectors, localities and establishments can achieve by themselves a balance to further increase production, meet the immediate demands and create a steady momentum for advancing forward. This has been confirmed by the recent emergence of progressive models and new factors in agriculture, industry, the maritime products sector and in the collection, purchase and supply of goods in various localities.

/Comrade Deputies,/

Based on the general orientations above and on the actual possibility for achieving a balance in 1981, /the specific tasks of the various economic sectors in the 1981 State Plan are as follows:/

/I. Agriculture/

All sectors, echelons and related organization must concentrate their efforts on developing agricultural production, especially the production of grain and food, raw material for industry and agricultural products for export. Solving the /grain problem/ is the most pressing and important demand for overcoming current economic difficulties and stabilizing the people's life. In 1981 we will strive to turn out at all costs 15 million tons of grain in paddy equivalent (including 12 million tons of rice and 3 million tons of subsidiary food crops).

To this end, great efforts must be focussed on promoting intensive cultivation, increasing crop yields and expanding the tilled acreage through crop multiplication and land reclamation, in order to rapidly increase the volume of agricultural products in fully irrigated areas.

We must consider /the Mekong delta as the most important area;/ develop to a high degree the capability for and tradition of intensive cultivation and crop multiplication of /the Red River delta;/ and at the same time, fully tap the capabilities of all other areas in order to create local sources of grain.

Each province, district and production establishment must adopt measures for cultivating the maximum amount of land in an effort to increase the area planted to grain crops by 8 percent over 1980 mainly by using land still lying in waste and fallow in the various localities, enlarging the cultivated area, multiplying crops and promptly cultivating newly reclaimed land.

Efforts must be concentrated on completing /irrigation/ projects now under construction and promoting the mass movement to build canals, ditches and ricefield embankments in the Mekong delta and other areas, in order to bring the irrigated rice area to 4 million hectares and the irrigated subsidiary crop area to 400,000 hectares.

We must expand to the maximum the production of stable manure, azolla and other types of organic and green fertilizer; pay attention to the rotation and companion cropping of /leguminous crops;/ and at the same time, rationally distribute and use chemical fertilizers, insecticides and other supplies to bring about the highest results with priority given to key highly productive rice-growing lowland areas in order to fulfill at all costs the task of procuring grain and other agricultural products for the state. In order to use nitrogen fertilizer more economically and effectively it is necessary to guide and encourage peasants to improve the method by which it is applied by making it into pellets or mixing it with stable manure.

We must develop and satisfactorily carry out the preparation of /seed/ at the production establishments and [word indistinct] the mixing of seed of different strains and the use of degenerating strains. Attention must be given to selecting appropriate new rice strains with high yield and strong resistance to acidity, salinity and harmful insects for each area. In areas where waterlogging often occurs, we must select rice strains that produce long-stemmed plants.

We must accelerate the building and consolidation of state farms; channel investments on a priority basis to state farms that are operating with planning, in accordance with preset production orientations and in a profitable manner; and set up 10 more rice-growing state farms in the Mekong delta.

We must improve and strengthen /agricultural management,/ especially the management of cooperatives and production collectives. It is necessary to continue studying the promulgation of policies designed to encourage production, promote full use of agricultural land and labor for the common interest as well as for the interests of the individual producers, and enhance the responsibility of members of agricultural cooperatives, state farm workers and individual peasants for increasing production and sell grain and food to the state.

We must increase the /food crop/ area by 19 percent over 1980. The Ministry of Agriculture and the various localities must plan and provide specific guidance to large areas so that in 1981 we will be able to successfully meet the demand for vegetables in support of large cities, industrial centers and export.

/Concerning industrial crops and fruit trees,/ we must concentrate on vigorously developing the cultivation of short-term industrial crops to ensure the supply of raw material for industry and rapidly increase exports.

We must closely guide the /planting of sugarcane/ in large areas and adopting appropriate policies of incentives to tap to the maximum the capacity of the existing state-run sugar mills. At the same time, it is necessary to control private sugar mills and help them improve technology in order to increase the production of sugar for domestic consumption.

We must expand the area, expeditiously increase the output and improve the quality of /tobacco/ while intensifying the collection and purchase of this product to supply to processing plants and boost exports.

We must vigorously develop the planting of /soybeans/, considering this an important measure to meet the demands for food (bean curd, soy sauce, and so on). In 1981, we must double the soybean area and increase soybean output by 150 percent over 1980. It is necessary to concentrate on guiding the intensive cultivation of soybeans on the area specializing in this crop in eastern Nam Bo, the Meking River delta and the north. It is necessary to study the adoption of adequate pricing and food supply policies so as to encourage the peasants to step up the planting of soybeans and to sell them to the state.

Concerning /perennial industrial plants/, first of all we must concentrate our efforts on exploiting and intensively cultivating the existing arable area so as to obtain the highest possible yields and output. We must lose no time in supplying sufficient manpower, ensuring adequate food supplies, providing housing and other facilities for workers and giving them all the materials and equipment necessary for carrying out intensive cultivation and fully harvesting and processing their crops. At the same time, we must strictly guide the planting of new rubber, coffee and tea on a large scale, ensuring that all the requirements of intensive cultivation are met from the outset, so as to, first of all, satisfactorily implement the various agreements on cooperation with the Soviet Union and other fraternal socialist countries. We must expand the area devoted to cotton, jute, mulberry and fruit trees. We must concentrate our efforts on stepping up the production of pineapple for export and open large areas to grow new varieties of coconut trees.

With regard to /livestock breeding/, we must satisfactorily implement the policy on animal husbandry already promulgated so as to stop the depletion of buffalo herds and ensure, by the end of 1981, a 2-percent increase over 1980. It is expected that cows and oxen will increase by 2 percent, the number of pigs will reach 10 million, a 3.3-percent increase, and the number of poultry will be up by 7 percent. We must encourage family stock breeding but we must also maintain and develop animal husbandry in the collective and state-run sectors.

Concerning /the opening of virgin land/, along with clearing new areas, it is necessary to continuously improve the areas reclaimed in the previous years and step up surveys and planning so as to prepare for pushing land reclamation in the following years. Measures must be adopted to mobilize sufficient manpower, provide sufficient food and ensure satisfactory living conditions for workers at state farms and people going to build new economic zones. In addition, wherever feasible, the people should be motivated to take the initiative in opening virgin land and expanding the cultivable area with partial assistance from the state. In carrying out land reclamation and expanding the cultivable area, we must practice intensive cultivation from the beginning and ensure high economic efficiency.

To satisfactorily carry out agricultural production, all sectors and localities must concentrate their efforts on effectively supporting agriculture. In 1981, 25 percent of all state investments must be set aside for agricultural and water conservancy projects. Utmost efforts must be made to meet the demands of agriculture for nitrate and phosphate fertilizers, insecticides, gasoline and oil, electricity, and so forth. More "Bong Sen" tractors, tractor-towed farm machines, water pumps and pumping boats must be provided. The demand for ordinary work tools must be met. Every effort must be made to increase the production of spare parts for farm machinery. We must actively strive to prevent and control epizootics and harmful insects and diseases affecting crops, especially rice, vegetables, tobacco and cotton.

In the 1981 State Plan, special importance is attached to /the collection of grain, foodstuffs and other agricultural products/ so as to overcome the difficulties regarding food in the state-run sector, ensure the supply of raw materials for industry and increase export goods. Through these efforts, we will strive to overcome some of our financial and monetary difficulties and ensure the stabilization of the workers' and public employees' living conditions.

It is necessary to urgently reorganize and strengthen the apparatus in charge of the collection of grain, foodstuffs and other agricultural products and promptly promulgate new policies on this task.

In 1981, the amount of grain to be collected must increase by 50 percent over 1980. To achieve this target, along with improving guidance over grain collection, especially in the Mekong River delta provinces, it is necessary to step up the building of grain stores in the southern provinces and organize transportation forces to meet the demand for the transportation of grain among the various regions in the country. The collection of pork must increase by 48 percent over 1980, fresh water fish by 50 percent, soybeans by 220 percent, raw peanuts by 38 percent, jute by 13 percent, tobacco leaves by 100 percent and sugar cane for sugar refineries by more than 100 percent.

/II. Forestry, Fishery/

We must begin developing the forest assets of each locality and the entire country by maintaining and protecting existing forests, by planting new ones and by paying attention to the transformation of natural forests.

In 1981, 70,000 more hectares will be afforested and mainly concentrated on the targeted areas where paper, yarn and mining pillars are produced and trees are planted for the protection of sea coasts and for some special products. It is necessary to vigorously launch and satisfactorily guide the tree-planting drives by collectives and the people in order to rationally use the forest land allocated to cooperatives and to create a local source of timber supply so that the local people's demands for woodenwares and firelogs can be met. The general guideline is to closely combine agriculture and forestry into a structure within primary production units (cooperatives, farms, afforestation sites) in districts and provinces. The Forestry Ministry is responsible for cooperating with localities in reorganizing the maintenance and conservation of forests, and must take positive actions to prevent the burning and destruction of forests.

We must continue to implement the task of settling nomads. The state must make proper investment in and pay attention to the allocation of conveniently located land to nomads, and must actively motivate nomads to settle their lives and take up farming.

We must struggle to fulfill the norms for timber exploitation in order to ensure an adequate supply of timber for mining and shipbuilding purposes, for the production of paper and yarn and for export, and to meet the urgent demands of capital construction, communications and transportation, and rural development. Firelogs must be provided for the people in urban areas and for industrial complexes. While exploiting all the sources of timber on newly reclaimed land, we must plant trees for such valuable forest products as resin, kamala powder, cinnamon, rattan, bamboo and wicker, and to grow oleaginous and medicinal plants in order to ensure that domestic production requirements can be met and that production can be increasingly stepped up to support export. All localities must fully utilize their manual work force and ordinary transport facilities to exploit all types of forest products including shrubs and small branches in order to meet local consumption demands, and must scrupulously fulfill the plan for delivering products to the central government.

With respect to fishery, we must quickly revamp management and reorganize production in the state-run installations as well as in cooperatives and among fishermen in order to expand fishing activities, ensure economic results and economize on fuel, oil and other materials, especially imported materials. We must actively expand fishing activities by using manually operated boats especially in the north and the Trung Bo area, in order to reserve fuel and oil for the targeted zones and those units using mechanized facilities efficiently. (One ton of fuel and oil used must give four tons of fish.)

Moreover, we must develop fresh and brackish water fish raising in order to create an increasingly abundant source of maritime products in localities, especially in the vicinity of cities and industrial complexes. This must be attentively considered a guideline for very effectively resolving the problem of food. At the same time, we must institute proper guidelines and organizations for vigorously accelerating the export of maritime products.

/III. Industry/

By providing appropriate incentives and using flexible forms of organization, we must actively mobilize the capabilities of all branches, localities and economic sectors, especially those of artisan industry, handicrafts and Hanoi and Hi Chi Minh City, in order to vigorously develop the production of consumer goods from local raw materials. At the same time, we must formulate correct guidelines for export and import so as to procure more raw materials for light industry. Necessary conditions must be created to maintain and promote the production of extremely important products such as electricity, coal, fertilizers and cement, and the production and repair of the means of transportation, spare parts and work tools.

With regard to /a number of consumer goods/, compared with 1980 the output of sugar will increase by 18 percent, with the output of the central sugar refineries going up by 100 percent. The output of processed tea will increase by 12 percent and cigarettes by 82 percent. We must quickly perfect the cotton yard production chains and reorganize the management of the textile sector so as to increase the output of cotton yarn by 20 percent, silk and cotton fabrics by 16 percent and knitwear by 33 percent. The production of cotton yarn under contract for foreign countries as well as the production and export of clothing, liquors and beer will be increased.

With regard to /electricity/, we must urgently perfect the Uong Bi Thermal Power Plant and make the fullest use of the capacities of other thermal and hydropower stations, diesel groups and part of the gas turbine plants so as to increase the output of electricity by 6 percent over 1980. We must adopt correct guidelines and policies regarding the distribution and use of electricity. We must carry out the transformation of the power grid in order to give priority to the task of ensuring an adequate supply of power for urgent tasks such as agricultural production, the building of key projects and the operations of important industrial enterprises and the Bim Son and Hoang Thach cement plants, which have begun production. Resolute measures must be applied to save electricity, especially electricity used in daily life.

With regard to /coal/, its output is expected to go up by 10 percent over 1980 and active preparations must be made to increase the mining capacity in the following year. Geological surveys must be intensified to find new mines as well as to enhance the mining of those already in operation. The use of high-capacity vehicles and machines at open-cast mines and the repair and supply of spare parts must be improved. Imbalances between mining and the transportation, loading and unloading of coal must be quickly overcome. Positive measures must be adopted to expand coal extraction at mines in various localities. Both the quantity and quality of coal must be raised; coal must be used more effectively; and the coal-saving system must be strengthened in transportation and daily consumption. In coal distribution, priority must be given to the electricity sector, important industrial and transportation enterprises and factories producing export goods. We must actively resolve the problem of processing coal for use as a kerosene substitute in urban centers.

With regard to /the engineering industry/, first of all we must give attention to increasing urgently needed products such as motorboats, tugboats, river and sea barges; to the repair of barges, rail carriages and machines; to the production of spare parts, work tools, and so forth.

We must urgently improve and expand the chains of production of export goods under contract for foreign countries (work tools, bicycles, fans, and so on). Engineering enterprises must be mobilized to participate in the repair of equipment, especially agricultural equipment and machinery. We should recheck the steel in stock and any amount kept at variance with the regulations must be used to produce more engineering products. The prices of supplies must be readjusted.

With regard to /metallurgy/, the extraction of fat coal at the Phan Me Mine and chromite at Co Dinh and the production of tin must be stepped up. Because of the limited amount of imported fat coal and coke, the output of iron and steel in general cannot yet be increased. We must, however, ensure the output of cast iron and steel for use in the making of soldering rods and tire casings according to the state plan norms so as to maintain the balance with other products.

With regard to chemicals, as compared against 1980, the production of phosphate fertilizer will increase by 10 percent, that of nitrogenous fertilizer will double, and that of raw materials for insecticide will increase by 67 percent and acetylene by 67 percent. The production level of dry batteries, batteries, welding rods and paint will be maintained at the 1980 level.

As for construction materials, the production of cement will increase by 67 percent over 1980. Efforts will be made to develop the production of gypsum in various salt marshes in Thuan Hai, Phu Khanh and Nghia Binh. Due to difficulties in the supply of coal, oil and other materials, the production of brick, tiles, stone, lime and cement in various localities will continue to be limited.

Regarding surveying and exploration for oil, gas and other mineral products, we must continue to step up exploration and exploitation in accordance with a program of cooperation with the Soviet Union. We must prepare all necessary conditions for building the Vung Tau oil and gas industrial complex. We must positively survey, explore for and determine the nation's potential in natural resources, concentrate our efforts on certain kinds of increasingly exploited mineral products, and meet urgent requirements and formulate cooperation policies with foreign countries. We must strengthen the material and technical basis of the geological sector and show greater concern for the livelihood of geological workers.

/IV. Communications, Transportation and Posts and Telegraph/

The main tasks of the communications and transportation sector are to ensure the receipt and transport of export and import goods; to provide transportation services along the north-south communications axis as well as to the northern border provinces and to key construction projects and new economic zones; to serve agricultural production; to ensure transportation of coal, cement, apatite and timber and for the exploitation of oil and gas; and to provide good transportation services for the Lao People's Democratic Republic and the People's Republic of Kampuchea.

In order to ensure the fulfillment of the above tasks, we must:

--Quickly reorganize and effectively improve the organizational management of the communications and transportation sector; rearrange the transportation force and achieve a rational division of the transportation force among the railroad, waterway and land route sectors, between the central governments and localities and between various sectors themselves in order to satisfactorily tap their existing capacities; and achieve a combination between mechanized transportation and partially mechanized transportation as well as between mechanized transportation and manual transportation.

--Concentrate on stepping up sea, river and railroad transportation; and intensively develop such rudimentary transportation means as sampans, animal-drawn carts and so forth in order to transport goods in localities.

--Quickly overcome such weaknesses as poor loading and unloading activities at various ports and railroad stations, and ineffectively clearing of backlogs on various key communications links; and increase the maintenance and repair of transport equipment. It is absolutely necessary to attain all economic and technical norms as was done before; and to concentrate on shortening the time needed for vehicles, trains and lighters to complete a travel cycle in order to increase the capacities of transportation means.

--Resolutely reduce vehicular transportation on those transportation lines along which there are railroads or riverways. Vehicular transportation must also be reduced on short distance trips. It is necessary to organize two-way transportation of goods and to formulate policies to encourage transportation of goods and the use of trailers.

/With regard to communications and posts and telegraph/:

We must perfect the construction of the Hoa Sen satellite communications station, install mutual axis and symmetric axis cable lines, complete building some important parts of the Hanoi-Ho Chi Minh Hai telecommunication line project as well as a number of inter-provincial telecommunications lines in the south. We must consolidate, renovate and improve the qualities and capacities of our existing communications networks.

We must ensure uninterrupted communications of high quality from the center down to various provinces, cities and special zones under the direct jurisdiction of the central government as well as to various key districts and towns, especially those districts along the northern border. All important economic zones, factories and worksites operated by the central government must have smooth communications to communicate with the provinces, districts or cities concerned. We must strive to meet requirements for the expansion of international communications, especially with the Lao People's Democratic Republic and the People's Republic of Kampuchea.

We must rely on our potential in terms of finance, materials, grain, and work forces to reserve appropriate funds for the exploration and exploitation of oil and natural gas and the construction of major projects for our national economy. We should arrange investment plans for capital construction in the following direction:

--Ensuring that investments are uniformly given to the agricultural, export goods production, oil and natural gas, electricity and coal, fertilizer, cement, and port sectors as well as a number of important projects. It is necessary to choose the objectives for investment in other sectors in a most austere manner.

--Rechecking the number of half-finished construction projects, resolutely stopping the construction of projects in excess of plans, projects without designs, and projects which cannot ensure investment results or are not in a good condition for operation upon completion.

Attention must be paid to inept investments with the aim at making the fullest use of the existing production capacity and narrowly limiting the construction of new projects while studying ways to install additional equipment in all existing establishments in order to make the fullest use of all available equipment and to save on their storage costs. Attention must also be paid to investments in the construction of projects which can be put into production at an early stage.

Based on the above, in 1981 we must actively invest in a number of the following economic sectors:

--/In the agricultural and water conservancy fields/, we must invest heavily in the production of grain and food and the cultivation of industrial crops in cooperation with other countries. It is necessary to accelerate the completion of water conservancy projects still under construction, continue to invest in land reclamation and afforestation in centralized areas, and adopt every measure possible to implement the whole investment plan reserved for agriculture and the sectors concerned.

--/In the industrial field/, we must concentrate on building the Pha Lai power plant, the oil and natural gas industrial complex, and various coal mines. We must also ensure that progress is made in the construction of the Hoa Binh hydroelectric plant, the Lao Cai apatite mine, the Lam Thao superphosphate plant, the Go Dam diesel engine factory, the Pha Rung ocean-going vessel repair workshop, the mining vehicles overhaul workshop, the Bai Bang paper mill, and the Tinh Tuc and Son Duong tin mines. It is necessary to complete the construction of the Hoang Thach and Bim Son cement factories and the expansion of the Haiphong cement factory, the Haiphong electroturbine plant, the Trang Kenh acetylene factory, and the Thang Loi yarn spinning factory.

--/In the communications and transportation field/, we must concentrate on developing Haiphong port and building the Chua Ve, Vat Cach and Cua Lo ports. It is also necessary to complete the construction of the Kep-Uong Bi railway section and the Hanoi and Nam Dinh River ports while ensuring that progress is made in the construction of the Thang Long and Duong bridges and the Uong Bi-Bai Chay railway section, and that work is continued on the construction of a suspension bridge over the Red River and is started on the construction of the Chi Linh-Pha Lai and Mai Pha-Na Duong railway sections. Attention must also be paid to investment in the building of loading and unloading facilities and storage terminals.

--/In the nonproduction sectors/, priority must be given to building living quarters for workers of factories which will soon be put into production as well as for workers assigned to various coal mines, state farms and new economic zones and, especially, to various establishments in the capital of Hanoi. It is necessary to build a number of hotels and continue to build such public welfare projects as creches, schools and hospitals with aid given by various international organizations. We should not build office buildings in these sectors.

It is necessary to continue to improve the management of the whole process of capital construction from the preparation and approval of economic and technical specifications and the preparation of blueprints to the construction and turnover of a project for operation. Special attention must also be paid to adopting necessary measures aimed at drastically reducing the number of half-finished construction projects, closely controlling the investment capital for projects under norms, improving construction quality, saving on construction funds and materials, and ensuring the completion and turnover of the projects for operation on schedule.

/VI. Export, Import and Economic Cooperation With Foreign Countries/

We must rapidly build and expand facilities for producing export goods and develop the capacity of the various sectors, localities and state-run, collective and private economic establishments in order to rapidly increase the production of goods for export, especially those items of high economic value. It is necessary to develop the various forms of export orders and services in order to increase foreign currency receipts; and strive to gradually narrow down the imbalance between imports and exports. At the same time, it is necessary to intensify investment and urgently prepare the necessary conditions for rapidly increasing the capabilities for producing export goods in the years to come.

--Export value in 1981 is planned to increase by 25 percent over 1980, in which agricultural products and processed farm produce will increase by 55 percent, maritime products by 15 percent, light industry and handicraft goods by 16 percent and heavy industrial products by 5 percent.

To boost exports in the current conditions of our country, we must quickly set up areas specializing in the cultivation of short-term industrial crops such as tobacco, castor-oil plants, jute, rush, peanuts, vegetables and fruits for canning, various types of essential oil plants and fresh fruits (orange, lemon, pineapples, watermelon, garlic and so forth). Concerning long-term industrial crops such as rubber, coffee, tea and so forth, we must fully exploit the existing areas in order to increase their export volume in 1981, and urgently set up large cultivation areas in order to increase exports in the plans that follow.

We must intensify organizational and managerial work and resolve exploitation and processing problems in order to increase the export of shrimps, squid, timber and other forestry products such as pine resin, mallotus phipippinensis and products made of wicker, bamboo, palm fronds and so forth.

We must strive to fulfill or overfulfill the plans for producing coal, cement, chrome and tin in order to increase their export volume.

An important measure for increasing foreign currency revenue and providing employment for the laboring people is to fully tap existing production capacities in order to expand to the maximum the production of goods on order from foreign countries such as fabrics, thread, clothing, engineering products, pharmaceuticals and so forth.

We must expand local export activities by promoting sea and air transport, postal services, tourism, services for sea-going vessels and services for foreign nationals.

Along with increasing investments to improve export capabilities, we must, in the field of leadership and management, carefully calculate the economic results of each type of export goods, strive to satisfactorily resolve the problem of packing, adopt policies and measures to encourage production for export and enhance the responsibility of the various ministries, general departments, localities and production establishments toward implementing the plans for supplying goods for export.

/Concerning import,/ we must closely calculate the amount and structure of imports, especially as our country's exports are still limited. All sectors, localities and production establishments must exert all-out efforts to exploit all domestic capabilities and strive their best to meet by themselves the demands for raw material, supplies, machinery, equipment and spare parts in order to reduce import demands. We will only import essential machinery, raw material and spare parts which cannot be produced or are produced in inadequate quantities at home. Efforts must be made to make full use of the capacity of existing equipment and machinery.

Concerning /economic relations with foreign countries,/ we must continue strengthening all-round cooperation with the Soviet Union and other fraternal socialist countries of CEMA, the LPDR and the PRK; and at the same time, expand trade relations and economic cooperation with other countries.

/VII. Distribution and Circulation/

A task of prime importance is to intensify collection and purchase activities by the state in order to boost production and serve the people's life. In 1981 efforts will be made to increase the procurement of goods inside the country by 17 percent over 1980, of which the volume of agricultural, forestry and maritime products will increase by 22 percent. State-run establishments and cooperatives contracting orders for goods from the state must scrupulously implement plans for the delivery of goods. The cooperatives, production collectives and peasants' households must fully and promptly discharge their obligation to pay tax and sell agricultural products to the state.

We must apply appropriate and convenient measures to ensure the two-way exchange of goods between the state and the peasants and, at the same time, rapidly develop the material facilities for collection and purchase in order to procure a large volume of goods for the state.

We must stabilize finances and the currency by intensively exploiting revenue sources, strengthening the control of revenue from the state-run economic sector, ensuring observance of the system of budget turnover and cash discipline, intensifying the collection of industrial, business and agricultural taxes, avoiding short collection of taxes and struggling against tax evasion. At the same time, every effort must be made to limit expenditures and increase the effectiveness of the capital used in production, construction and consumption. We must intensively control income and expenses in foreign currencies, use capital in foreign currencies in an economical and effective manner, and enhance the responsibility of the various sectors, echelons and units toward receiving or spending foreign currencies.

To stabilize the market it is necessary to improve the activities of the state-run trade sector; resolutely struggle against all attempts to disrupt the market and prices or evade state control, and against smuggling activities, speculation and price manipulation; ensure state control over trading activities of the various economic sectors, especially the private economic sector; and eliminate negative manifestations in the market.

We must boldly improve the method of goods distribution to ensure that goods will reach the consumers and especially, to ensure that essential commodities will be provided for workers and state employees. Attention will be given to distributing grain and food to cities, large industrial centers and major economic zones; better care will be accorded to the people's everyday life in the capital of Hanoi and Ho Chi Minh City; and rural areas, especially those places that sell agricultural products in large quantities to the state, will be supplied with industrial goods.

For workers and civil servants, the criteria for grain and food distribution for 1980 [as printed] will generally be maintained but it is necessary to organize distribution in a more satisfactory and regular manner without inconveniences to the consumer. On the basis of vigorously stepping up the production of soybeans, the beancurd and soy sauce rations will be increased. Along with catching, collecting and purchasing sea fish, we will strongly develop fresh and brackish water fish to supply to workers and civil servants in the cities and industrial centers. We must increase the production of vegetables in food belt areas in an effort to ensure a steady source of supply for the cities and industrial centers. We must increase the volume of sugar produced by state-run enterprises and step up the collection and purchase of sugar produced by small sugar mills in order to ensure supply.

In addition to this, efforts must be made to produce sufficient furniture, pottery, glasswares and rush mats for the people; writing paper and other school materials for students; medicines; bicycle spare parts, tires and inner tubes; family appliances; cultural, physical education and sports equipment, and so forth.

The sectors in charge of distributing and circulating goods will have the responsibility, together with the localities, of satisfactorily exploiting the sources of goods, taking flexible measures in distribution work and increasing the supply quotas for locally-made goods in an effort to stabilize the daily life of workers and civil servants.

/VIII. Labor and Training/

The worker-related task in 1981 and following years is mainly aimed at creating conditions for the more effective use of the abundant labor force in all branches of the national economy and in the various branches of the state economic sector.

Because our capabilities in attracting workers to the industrial and construction sectors are still limited, our main duty is to determine sound investment guidelines and policies in order to mobilize workers at all costs to participate in developing production and construction. These guidelines and policies are also designed to bring into full play potentials in localities, boost agricultural, forestry and fishery production and the production of consumer goods, expand professions and occupations at the district level, harmonize the relationship between mechanized labor and manual labor in all sectors, create more jobs for many people and further increase products for society.

We must initiate a productive labor movement, especially among youths who must be directed toward carrying out agricultural production, setting up new economic zones, expanding the areas where products are grown for export, and building the socialist countryside.

We must increase the number of technical workers and cadres and economic managers for agriculture and ensure sufficient manpower for intensive cultivation, for the increase in the yearly crops, for the breaking of virgin land and for the planting of industrial crops for export. Attention must also be paid to increasing manpower for state farms. Conditions must be created for the stabilization and effective use of the labor force in the new economic zones, especially on state farms. In 1981, some 40,000 workers will be assigned to rubber and coffee state farms in the central highlands and eastern Nam Bo and various rice-growing state farms in the Mekong River delta.

Arrangements must be made so that work will be provided for people in the urban areas to develop artisan industry and handicrafts, expand the food belt and economic and service organizations, boost the production of export goods, organize the production of export goods on contract and participate in building new economic zones. To stabilize and create more jobs for the urban people, there must be measures for exploiting sources of raw materials and materials in localities as well as other places. Efforts must be made to ensure the supply of raw materials and energy to maintain production in existing establishments.

With regard to workers of the state sector, more trained technical and professional workers must be recruited, and the number of young workers must be increased. We must constantly improve the quality of workers and reorganize the assignment of manpower in keeping with the requirements of production and construction, in order to increase labor productivity. The settlement of the question of excess manpower in the state sector must be basically based on the reorganization of production, and there must be appropriate policies to move this excess labor force to production organizations of the collective or individual economic sector, to motivate a number of workers who were just recruited 2 or 3 years ago to switch back to agricultural production and to send some technical cadres, economic managerial cadres and general workers to help agricultural cooperatives and artisan and small industry cooperatives (ensuring that their income will not be reduced but will probably be higher than before). It is necessary to reorganize the managerial apparatus, eliminate the subsidy-giving system, revise the manpower recruiting system and the social insurance system and to correctly and scrupulously implement the retirement and disability systems for those who are old and can no longer work or who are disabled.

To improve the labor productivity situation, each sector and locality must resolutely reorganize the production activities of corporations, enterprises, construction sites and trade stores consistent with existing capabilities. This is necessary to avoid wastage. It is necessary to transfer the excess manpower in production establishments to other sectors. The wage policy must be resolutely revised in order to achieve the payment of wages according to the degree of implementing production, construction and trade plans. The systems of paying wages according to products and contracts must be developed, while attention must be paid to improving the everyday life of workers and civil servants. The bonus system must also be improved in order to encourage workers to perform their production tasks well and be attached to enterprises.

The training of cadres and technical workers. In 1981 and in subsequent years, the training task must be replanned to cope with the requirements of economic and cultural development. Emphasis must be placed upon the quality of training. The number of students to be admitted into high schools, colleges and technical schools will remain the same as in 1980. Attention must be paid to the training of cadres for agriculture, petroleum, forestry, justice, public health and education, and workers and mechanics engaged in the manufacture and repair of machinery and transport.

Advanced training should be accelerated to improve the skills of technical workers directly engaged in production while specialized cadre training should be developed in the form of professional and in-service training. We must rearrange the network of schools, rationally assign branch and professional training jobs and issue regulations on the admission of students according to territorial divisions so that students can be distributed in accordance with the requirements of localities.

Agricultural and handicraft cooperatives should be encouraged to send their members to school in order to quickly increase the number of their scientific and technical cadres.

/IX. Technology/

Following are the main scientific and technical activities in 1981:

--Accelerate scientific survey and research and the application of technical innovations to production in order to create conditions for meeting the people's demands for grain and food; increase the quality and quantity of consumer goods and turn out many new and good quality products made of local raw materials in order to support the people's livelihood, production and export; participate in the thrift movement by increasing productivity and rationally using fuel, materials and energy, especially electricity, coal and gasoline; promote the use of other types of raw materials and new sources of energy; increase the domestic capability in manufacturing spare parts and equipment while increasing the utility rate of existing equipment and facilities; and protect the people's health while insuring their labor safety.

Efforts should be concentrated on vigorously accelerating the survey of those zones where grain crops and export industrial plants have been projected for expansion and where mineral products show promise for development. Scientific and technical activities should be conducted strongly and be aimed at improving the production and economic management of the agricultural, industrial and transportation and communications sectors.

--Formulate and publish the state policies on science and technology and various systems and procedures for scientific and technical management.

--Establish and implement the major state programs for scientific and technical progress and formulate the 1981-1985 plan for scientific and technical development.

--Intensify and consolidate the system of scientific and technical organization and management from the central down to the grassroots levels, especially in primary production installations and at the district level. Strengthen technical management at all levels and consider the application of industrial regulations and technical norms and standards as a disciplinary measure to increase labor productivity and product quality, and to insure labor safety.

/X. Education, Public Health, Culture and Society/

We will develop education in close connection with the situation in each region, continue to increase the quality of teaching and study and further improve the vocational orientation of senior students so that they can readily engage in productive labor after graduation. We must prepare the material condition for educational reform in subsequent years. We must step up the tasks of supplementary education and anti-illiteracy, especially in the northern mountainous provinces and the southern provinces.

Pre-school education enrollment for the 1981-1982 school year is expected to reach 1.7 million, a 3.2 percent increase over the 1980-1981 school year; general education enrollment is put at 12.1 million, a 2-percent increase (including 7.9 million of Level I, a 1.4-percent increase; 3.3 million of Level II, a 2.6-percent increase, and 730,000 of Level III, a 5.6-percent increase) and full-time further education enrollment at 84,000, a 3-percent increase.

The health and social services have to reduce and stamp out epidemics, particularly cholera, bubonic plague and dengue fever. Besides preventive innoculation, it is necessary to strengthen measures aimed at cleaning up the environment. It is necessary to bring into fuller play the role of the primary and district health services in order to take better care of the people's health.

The growing and exploitation of medicinal plants must be stepped up in localities. Along with expanding the movement to grow medicinal plants in schools, dispensaries and hospitals and at home in order to have medicines to cure ordinary diseases, all localities must establish plans to grow and exploit medicinal plants on a large scale in order to still better meet the people's demands for medicines.

The number of hospitals and sanatoria will be increased to 11,600, a 6-percent increase over 1980, and the number of hospital beds will reach 202,000, a 3-percent increase. The consolidation and perfection of installations in charge of caring for sick and wounded soldiers must be combined with the tasks of providing medical treatment and care for these soldiers, and of rehabilitating them. Confirmed disabled soldiers will gradually be moved to their home stations and families. We must study, supplement and improve the policies toward sick and wounded soldiers and correctly implement the policy of the army rear service.

Day-care centers must be steadily developed and qualitatively improved in close connection with the organization of production and construction. Enrollment at day-care centers is expected to increase by 4 percent over 1980.

The family planning movement must be resolutely broadened in order to lower the rate of population growth.

The cultural and information services should direct their activities toward the essential tasks of the state plan aimed at stimulating the mass movement for productive labor and thrift.

At present, the circulation of NHAN DAN and QUAN DOI NHAN DAN and the publication of general school books and economic management papers will be maintained at the present levels, while other books, magazines and journals will be circulated depending on the availability of paper.

Radio and television broadcasts will be consolidated and qualitatively improved. The number of radio broadcasting stations will be increased by 7 percent over 1980 and that of public loudspeakers by 8.5 percent. The quality of television broadcasts will also be improved.

Cultural, artistic, sports and physical training activities must be stepped up and aimed at educating the people on patriotism and love of socialism, promoting their combat will for national defense, mobilizing their labor zeal and building a new culture and new men. We must criticize and do away with negativism, bad habits and backwardness and must struggle to eliminate the noxious heritage of a slavery culture.

/Part Three/

/The Strengthening and Improvement of Economic Management and the Successful Implementation of the 1981 State Plan/

/Comrade Deputies/,

The 1981 State Plan was elaborated on the basis of a relatively tight calculation of our material resources, which will be concentrated on achieving the most important targets and meeting the most pressing demands so as to overcome some of the current difficulties and imbalances and, at the same time, to create favorable conditions for advancement in the following years. For this reason, we have boldly made some adjustments in production and consumption and in a number of capital construction projects considered unfeasible or beyond the capacity of our economy.

To implement the 1981 State Plan satisfactorily and to achieve initial progress in the process of advancing the economy, we must depend to a very large extent on the improvement of /organizational and managerial work/. In other words, the promotion of the exploitation of the country's existing potentials depends on the progress in the organizational and managerial work and in the guidance and operations of all sectors and levels.

The general orientation for improving economic management is to abolish the administrative nonaccounting system, vigorously switch to the mode of socialist business with planning as the central task, correctly handle merchandise-money relations, carry out economic accounting, ensure the concordance of the three interests and further promoting the interests of the laborers and the collectives.

In 1981 and during the next few years, we must concentrate on carrying out the following main tasks so as to further improve economic organization and management:

1. /Improve Planning/

We must strengthen the leadership in planning from the center to all sectors and echelons, including basic units. In elaborating and combining plans, /we must project the basic viewpoints of the party's economic line/ and set forth policies and measures to implement this line and ensure the concentration of all manpower, capital and supplies on our main tasks. We must correctly appraise the capabilities of all sectors and localities and of the national economy as a whole so as to formulate a well-balanced, positive and sound plan, make the best use of our real capabilities, satisfactorily meet the essential demands and achieve high economic efficiency.

To enhance the scientific character of plans and to be able to respond to the demands of economic management, we must build a well-founded /system of economic-technical norms/, paying special attention to establishing criteria for the assessment of product quality and labor productivity and determining the economic-technical standards of each sector and enterprise. At the same time, we must ensure /reliable information/, considering it as one of the necessary conditions for improving the quality of planning and economic management. We must reorganize the economic information system and the accounting and planning control system in enterprises, at work sites, in cooperatives and stores and throughout the national economy. The statistical organs have the duty of ensuring the supply of necessary information on the implementation of plans for the economic leadership and management organs at all levels.

In the system of balances, we must pay attention first of all to the /balances in labor and land/, in capital construction, supplies, raw materials and fuel, exports and imports, finance and money, and so forth. To enhance the positive balances of our plans, we must define our construction and production tasks in such a way as to make them consistent with our financial resources and supplies. We must gradually build up supply and foreign currency reserve funds, discover and promptly mobilize new capabilities in the economy, correctly apply the system of economic levers and incentives and flexibly utilize market relations.

We must seriously implement the /three-level/ planning system so as to steadily ensure the concentrated authority of the center over the main targets while broadly developing the independence and the sense of responsibility of the localities and grassroots level and achieving at all costs the formulation of plans at the grassroots level. We must firmly maintain planning discipline and seriously follow the top-to-bottom order in plan making in conformity with the general regulations.

2. /Stabilize and Improve Distribution and Circulation/

We must promptly devise additional concrete plans to implement Political Bureau Resolution No 26 on distribution and circulation. We must pay attention to the major tasks such as stabilizing the people's living conditions by meeting their minimum demands for food, clothing and other essential consumer goods; satisfactorily implementing the various collection and purchase policies to put goods under state control; strengthening market management; expanding the state-run and cooperative-run trade; restricting the free market, and combating speculation and smuggling. We must satisfactorily carry out the collection of industrial and commercial taxes and the registration of businesses. We must strive for budgetary and cash balance, strengthen discipline in the use of cash in all trade and production organizations and all state organs, and strengthen the regulatory role of finance and banking in production and trade operations. We must urgently study ways to improve our pricing and wage policies so as to bring into play the role of prices and wages as economic levers. We must apply more fully the principle of distribution according to labor and ensure the concordance of the three interests: the interests of society, of the collectives and of individual laborers.

3. /Broaden the State Enterprises' Business Independence/

Under the present conditions, we must strive to set aside sufficient supplies and energy for the key enterprises and ensure the balance and stability of their plans, thereby providing a basis for the full implementation of the various planning and accounting systems. With regard to those enterprises which are not provided with sufficient supplies and raw materials by the state, we must study and apply various appropriate planning and accounting policies and methods to make better use of their production capacity and increase their output. We must urgently study and widely apply the contractual, piece-work and bonus systems; promote the enterprises' financial and business independence; and resolutely oppose the administrative non-accounting management method.

In 1981, we must inventory and assess the value of our fixed assets, determine the rate of depreciation, define the authority and obligations of enterprises and management organs in the use of capital, establish the system of restoration and reproduction of fixed assets, revise the norms of liquid capital to suit the characteristics of each sector and enterprise, determine the amount of self-produced capital of all sectors and enterprises and the limits of bank credits they can obtain, and improve the calculation and assessment of the effectiveness of the use of fixed and liquid capital.

4. /Improve the Management of Agricultural Cooperatives/

We must improve the management of agricultural cooperatives by resolutely implementing the policy of stabilizing obligations (comprising taxes and the sale of products under two-way contracts). We must fully implement the system of three contracts for production units and broaden the system of contracting out the production of finished products to the households of cooperative members in accordance with the principle of increasing output and raising the income of cooperative members without hindering the building of new material and technical bases, weakening socialist production relations or reducing obligations toward the state. We must readjust the scale of cooperatives to suit their managerial standards; reorganize the production units and teams to make the fullest use of manpower, increase labor productivity and develop various branches and trades; and perfect the distribution system within the cooperatives to encourage labor. On the basis of motivating the masses, the cooperatives must base themselves on the spirit of the regulations for cooperatives already promulgated by the state to build at all costs a concrete operation and management system that will correctly reflect the real situation of the cooperatives themselves and be consistent with the road to large-scale socialist production. We must encourage the sidelines of cooperative member families and help them develop in the right direction. We must make every effort to build the districts along with consolidating the cooperatives.

5. /Continue the Socialist Transformation in the South/

With regard to /agriculture/, we must devise separate plans and measures for each region (the Mekong River delta, the central highlands and the central coastal provinces). We must define appropriate forms and steps to accelerate transformation, develop production, build the new countryside and tighten relations between the state and the peasants in production as well as in the circulation of goods.

With regard to /private industry and trade/, we must promulgate and implement policies aimed at encouraging the development of production in the right direction and along lines beneficial to society, while preventing and checking their inherent negative aspects. We must give priority to encouraging the production sector while boldly making use of all export business capabilities under the state management and monopoly in foreign trade and foreign exchange.

6. We must /broaden the independence of localities/ on the basis of implementing democratic centralism and building a unified economic structure. We must correctly determine the local economic structures and overcome the lack of cohesiveness in economic management between the center and the localities and among the localities themselves. On the basis of the structure thus determined and the unified economic plan, we should boldly create favorable conditions for the localities to exercise more independence in planning, budgeting, organization, staffing and so forth, thereby enabling them to bring into play their latent potentials so as to develop production, ensure the people's living conditions and satisfactorily discharge obligations to the state. On the one hand we must oppose bureaucratic centralism; on the other we must struggle against arbitrariness, failure to comply with state systems and policies, and the exceeding by the localities and grassroots level of their own decision-making authority.

7. We must /promulgate policies concerning scientific and technical cadres and intellectuals/so as to make use of their talents and expertise and encourage them to bring their creative powers into play in research, invention and discovery, thus effectively serving the building of the economy, culture and so forth.

Along with these practical and urgent tasks, we should continue to study so as to improve the economic management system in a more comprehensive manner, a task which must be closely combined with elaboration of the Third 5-Year State Plan (1981-1985).

/Comrade Deputies/,

We are about to enter 1981, the first year of the Third 5-Year Plan (1981-1985), which imposes on us very great tasks of socioeconomic building and development. With the strength of the unity and singlemindedness of the entire party, people and armed forces; with the tradition of bravery in combat and industriousness in labor of our people; with our existing capabilities and the newly-emerged positive factors in the economy; with the knowledge and experience in economic leadership and management which all levels and sectors and numerous cadres have accumulated; with the socialist emulation movement which is being launched in the Vietnam Confederation of Trade Unions, the Ho Chi Minh Communist Youth Union, the Vietnam Women's Union and other mass organizations, and with the new SRV Constitution which was recently adopted by the seventh session of the Sixth National Assembly and which constitutes a great encouragement for our people throughout the country, we already have firm guarantees for bringing about a new state of socioeconomic affairs, changing the present economic situation, successfully implementing the 1981 state plan and making vigorous advances in the subsequent years of the Third 5-Year Plan.

PARTY ACTIVITIES AND GOVERNMENT

BINH TRI THIEN HOLDS PARTY CONGRESS

BK131313 Hanoi Domestic Service in Vietnamese 2300 GMT 11 Jan 81

[Text] Amidst enthusiasm in welcoming the new constitution and the new year, the first year of the Third 5-Year State Plan and the year in which the 5th Party Congress will be held, the Binh Tri Thien provincial party organization recently held the second congress of its party delegates.

Le Duan, secretary general of the party Central Committee, sent a letter of greetings to the congress and Tran Quoc Hoan, member of the Political Bureau, attended the congress on behalf of the Secretariat.

The congress set forth guidelines for continually upholding a revolutionary offensive spirit in developing the integrated strength of the five zones--delta, hilly, mountainous, sea and urban--and the five strong positions of the province--agriculture, forestry, fisheries, mineral products and construction materials, and tourism--in order to build Binh Tri Thien into a province which is economically rich, politically firm, militarily strong for national defense and security, and culturally beautiful. Binh Tri Thien must become a cultural and touristic center and a scientific research center for central Vietnam.

In the coming years, the party organization and people of Binh Tri Thien Province will concentrate their efforts on implementing the tasks of developing the economy and culture, strengthening national defense and security, and intensifying international obligations. Of prime importance is the task of most satisfactorily exploiting all of our potentials in terms of land, manpower, professional sectors and existing material and technical bases in order to accelerate production.

We must primarily concentrate most of our efforts on agricultural production in order to resolve by all means the problems of grain, food and raw materials for industry, and to quickly increase the production of consumer and export goods. In 1981-1982, with a quantity of materials probably equal to or less than that of previous years, we must immediately turn out more and better quality products.

The new situation and tasks call for a profound revolutionary change in the viewpoints of developing, organizing and improving our managerial tasks.

We must bring the organizational task to a par with the political task in order to serve the requirements of the political mission well.

The congress discussed the party development task in order to enhance the militancy of party organizations, ensure internal unity and singlemindedness within various party committee echelons so that the people of all strata and all nationalities in the province can be united and mobilized to create vigorous changes in the revolutionary action movement following the congress.

VAN TIEN DUNG SPEECH AT 4th YOUTH CONGRESS

Hanoi NHAN DAN in Vietnamese 24 Nov 80 pp 1, 3

[Speech by Senior General Van Tien Dung, member of the Political Bureau, first deputy secretary of the Central Military Party Committee and minister of national defense, at the 4th National Congress of Delegates of the Ho Chi Minh Communist Youth Union: "The Young Generation of Vietnam and the Cause of Protecting the Socialist Fatherland"]

[Text] Dear presidium,

Dear delegates and friends,

Today, I am very excited to represent the Central Military Party Committee and the Ministry of National Defense at the 4th National Congress of Delegates of the Ho Chi Minh Communist Youth Union. Allow me to convey to the congress and, through it, to our heroic young generation throughout the country my greetings of love and determination to win.

Permit me to express my boundless joy over the scene in historic Ba Dinh Hall over the past several days, a scene that has never been as young. Your Youth Union Congress is very beautiful. I am sure that everyone who has followed the revolution since their youth under the banner of the glorious party and the great Uncle Ho shares this joy.

On this occasion, we would like to express our sincere gratitude to the compatriots of the entire country and the peoples of the various nationalities, from the North to the South, from the lowlands to mountains, who gave birth to and contributed many of their outstanding sons to the cause of national salvation and the work of building the armed forces so that we could achieve the great victories of the nation and hold this great festival of youths.

As you know, in the recent months, the army of youths has been and is promoting an intense emulation movement and has recorded many brilliant achievements to celebrate the congress. The 2nd All-Army Youth Union Congress held in October was a fine success; the youths of the army have warmly responded to and are deeply concerned with this extremely important national Youth Union Congress. Together with the compatriots of the entire country, the entire army is closely observing your work.

On behalf of the Vietnam People's Armed Forces, I would like to extend heartfelt congratulations to the youth delegations of the fraternal and friendly countries that are attending this congress, bringing to the youths of Vietnam the warm feeling of comrades-in-arms and a feeling of deep friendship. It is sincerely hoped that our comrades and friends will contribute many opinions and experiences to the youth movement of our country, which is to promptly meet the requirements of the tasks of the nation and the age.

I would also like to thank the progressive youths of the world who have warm international feelings for the people and youths of Vietnam and have given us valuable assistance in many areas of the struggle to liberate the nation as well as in the present work of protecting the fatherland.

This national youth congress comprehensively raises the matter of teaching, mobilizing and organizing the young generation of Vietnam to display its spirit of socialist collective ownership, its ability to exercise this ownership and successfully complete both tasks of building the country and protecting the fatherland and forging youths to be new socialists, to be the worthy inheritors of the great revolutionary cause of our people.

Having joined you here, I myself feel young again. Our youths of today are truly deserving of pride, possess abundant vitality and are truly beautiful.

On this occasion, I would like to express a number of thoughts concerning a matter with which you are particularly concerned and which was mentioned in the report of the Youth Union Central Committee. It is the matter of the young generation of Vietnam and the cause of protecting the fatherland.

Dear comrades and friends,

The war of resistance against the United States for national salvation ended in total victory. Our people won total independence, our fatherland was reunified. The entire country is advancing to socialism. The 4th Congress of the Party set forth a correct and creative revolutionary line for moving our nation strongly forward in the new era.

In the more than 30 years of war to liberate and defend the country, our generation, more than any other, as well as the comrades and people of the entire country desired to live in peace, to build the country and bring back a life of comfort and happiness. Many consecutive young generations bore arms in combat and gave their flesh and blood to the cause of national salvation. Our youths of today have the conditions needed to display their energies and talents, work, study, conduct research, be creative and join all the people in building a prosperous fatherland and bringing our nation of Vietnam in step with the times.

However, the reactionaries within Beijing ruling circles and their lackeys, collaborating with the imperialists, have not left us alone. Pursuing a hostile policy toward our people, they unleashed two cruel wars of aggression against our country. Our people, our youths again had to bear arms in combat to protect the fatherland, protect the fruits of the revolution.

The new aggressors met with tragic defeat. However, they have not abandoned their basic, long-range scheme of weakening and annexing our country, annexing all three countries of Indochina in order to open the way for expansion into Southeast Asia in a vain attempt to become the ruler of the world. We must be extremely vigilant! They are waging an insidious type of war of sabotage against us, trying to undermine us militarily, divide us politically and undermine us economically, ideologically and psychologically. They are scheming to poison our young generation. They have fabricated and provoked false antagonisms among the various strata of the people, undermine the solidarity among the various nationalities, divide the masses from their leaders, the army from the people. They are also scheming to separate Vietnam from Laos, Vietnam from Kampuchea, Vietnam from the Soviet Union, from the fraternal socialist countries, from the progressive forces in the world. They have routinely engaged in armed provocation and made threats of war. In this period or another, they might unleash other wars of aggression of different scales, even large-scale wars. By means of insidious and clever tricks, both short range and long range, they hope to achieve their savage ambition of forcing our people to yield. Although your generation has just entered the mainstream of life, you already know how vile the Beijing traitors are and you clearly see their counter-revolutionary face.

Therefore, protecting the fatherland is a very important and constant task of our nation and our youths and will continue to be for a long time to come. As long as the reactionaries within Beijing ruling circles continue to rule China and scheme to annex Vietnam, as long as there are imperialists and reactionaries in the world, our people and our youths must be highly vigilant, must constantly concern themselves with building a strong and solid national defense system and must maintain high combat readiness. We desire to live in peace, in friendship with all nations, with neighboring countries, with the people of China; however, we are determined to smash every act of aggression, every act of sabotage of the enemy. From Ly Thuong Kiet to Nguyen Quang Trung, generation after generation of our forefathers confirmed time and time again that this land is ours. As persons who won victory over the war of aggression of the U.S. imperialists, the ringleader of the imperialists of the world, our army and people fear no enemy. As the collective masters of our entire country, of its rivers and mountains, its skies and offshore waters, our people will surely win victory in the new historic conflict.

The cause of protecting the fatherland is always closely linked to building the country. Building the country in conjunction with defending it is a law in the existence and development of our nation; building socialism in conjunction with protecting the socialist fatherland is a universal law of the socialist revolution. We must build our fatherland so that it is strong economically, politically and militarily, must gradually stabilize and improve the material and spiritual lives of the people, must build the material and technical bases of socialism and must develop the tremendous potentials of the country. We must closely coordinate the economy with the national defense system, the national defense system with internal security; we must be strong in every situation in order to defeat the schemes of the enemy to weaken our country, in order to force them to think twice about an adventure to fulfill their scheme of aggression. And, the success or failure of this scheme does not depend solely upon the subjective desires of the enemy. Our ability to defend the country has never been greater than it is today. And, we must become stronger in every area in order to push back the threat of war and safeguard peace. If the enemy recklessly commits aggression against our country, our people are fully capable of defeating them so that our fatherland is always as solid as gold in the surging offensive tide of the three revolutionary currents in the world today.

Our people, our youths understand that firmly protecting the fatherland is, today, both a national task and an international task. The powerful and imposing Socialist Republic of Vietnam standing firmly on the shores of the Pacific will forever be a major obstacle to every attempt to unleash war, commit aggression and carry out sabotage of imperialism and the international reactionary powers in Southeast Asia. Our people, our youths, stand ready to make the greatest sacrifices in order to fulfill the sacred task of the nation and their noble international obligation to the fraternal nations.

We possess the high degree of determination and effort of all the people and the entire army, of the young generation of the entire country. We have the tight solidarity, the special friendship and the militant alliance of Vietnam, Laos and Kampuchea. We have the tremendous assistance and comprehensive cooperation of the Soviet Union and the sympathy, support and help of the community of fraternal socialist countries, of progressive mankind. Under the ever victorious banner of Marxism-Leninism and in the new offensive position of the three revolutionary currents, our nation will surely complete its important mission.

Dear comrades and friends,

President Ho Chi Minh taught: "Youths are the future masters of the country. In fact, whether the country is prosperous or poor, weak or strong depends primarily upon youths."

The history of the revolutionary struggle of our nation under the leadership of the party has shown that, in every stage of the revolution, our young generations, under the light of the ideal of fighting for independence, freedom and socialism, have always been the shock unit on every front, especially in the armed struggle. As persons who have been assigned various duties in the army by the party, we have had a good opportunity to get to know each stratum of youths right on the battlefield, as a result of which we have even greater confidence in and love for the youths of our fatherland.

The tremendous contributions and the rapid growth of the young generations over the past several decades, on the military front as well as in all other fields of the cause of liberating the nation and the work of building the new life, have proven that our youths are always loyal to the fatherland, the ideals of communism and the revolutionary undertaking of the people. Imbued with the truth "there is nothing more precious than independence and freedom," the youths of Vietnam are truly worthy of the heroic nation of Vietnam, of the glorious age of Ho Chi Minh. Countless numbers of our comrades fell in the sacred, long fight to the death against the enemy, willingly gave their flesh and blood and, with no thought to personal gain or loss, contributed the spring of their lives to the fatherland, for the sake of the task of the nation and its international obligation. Many comrades who were forged in the turbulent years of their youth have today become highly experienced cadres and hold different positions on the various levels of leadership of the party, the state and the army. Many comrades who are now old and frail, have retired to the quiet life of a citizen have the right to be legitimately proud of their contributions made from the time they were young to the revolution, including the generation to succeed them, a job with which many of them are still concerned on a daily basis.

Our youths of today enjoy the precious heritage of many preceding generations. This is the first generation of youths to live in a country that is independent, unified and advancing to socialism and the first to be cared for under the system of socialist collective ownership that is gradually being established and developed. The glorious path of the revolution charted by the party and Uncle Ho and made smooth by previous generations that overcame the difficulties that lie along a long stretch of this path, is now not free of difficulties but is smoother and broader. As today's generation follows this path, it has new and very large capabilities and many new and very favorable conditions. In our twenties, my generation went into combat amidst a situation in which the country had been lost and ravaged and the people were enslaved. Today, we are the collective masters of the beautiful Vietnamese fatherland. We still face many difficulties but the country has given and will continue to give us very much: independence and freedom, comfort and happiness, justice and love, civilization and intelligence, love of our compatriots, comradeship and international friendship. The desire of the new generation in the work of protecting the fatherland is greater and deeper than ever before. Under these conditions, everyone can clearly see that the capabilities of our youths in strengthening the national defense system, building the armed forces, building a regular force, modern revolutionary army and waging a people's war to protect the fatherland are stronger than ever before.

Within the army, the young generation has rapidly become the masters of modern weapons and equipment, created many new methods of fighting, become the masters of the country, become the masters of the battlefield in order to annihilate the enemy, annihilate the enemy in order to be the masters of the country and the masters of the battlefield and triumph over the new enemy aggressor. Many outstanding youths among manual workers, collective farmers and students and within the corps of intellectuals of the state have joined the army, made innovations and discoveries of value in the field of military science and technology and made positive contributions to accelerating the effort to build a modern, regular force army. The majority of youths display the fine nature of the people's army, have set many bright examples in their daily lives, their studies and productive labor, display the lifestyle of a cultured army, display the simple and modest style of living of the new socialist man. The inherent weaknesses of youths are gradually being overcome, shortcomings and negative phenomena are being harshly criticized.

The present young generation is a product of the past and the present; the product of the three revolutions, of the new system, of the new economy and the new culture; the product of the traditions of the nation and our times. We have very much confidence in youths and must develop a better understanding of them. At the recent all-army Youth Union congress, I had a chance to say to the leadership and command cadres of the army: "Join with your youths by means of your love, trust and respect, by means of thorough educational work, your ability to organize practical work and your example."

At present, the difficulties being faced in life easily cause some of our young friends to sometimes think thoughts that are not truly correct concerning their future in the great undertaking of the fatherland. Our youths must have confidence, must firmly adhere to the noble ideals for which they fight and must successfully implement the directive given by Le Duan during this congress: "Youths must take the position of masters, of revolutionary soldiers and heighten their will to struggle, be willing to make sacrifices and endure hardships for the survival of the fatherland, for the great cause of the people; they must display a high desire to make progress, look the enemy squarely in the face, clearly realize the difficulties that exist, dare to attack and only attack, never retreat." It is hoped that our young friends will continue to forge themselves to be new socialists, display a high spirit of collective ownership, a high ability to exercise collective ownership, improve their qualifications in every area, not be satisfied with their achievements and not have a feeling of superiority; it is hoped that they will respect the valuable experiences of those who went before them and humbly study in order to constantly make progress.

The historic task of our people at this time as well as until the end of this decade is to struggle to implement the socialist revolutionary platform in our country set forth by the party. This responsibility primarily falls upon the shoulders of our young generation. You belong to the generation of persons building and protecting the socialist fatherland. Being roughly 20 years of age, it is you who are the shock unit, the reserve unit of the party in the successful construction of socialism and the victorious fight over the Chinese aggressors, who are collaborating with the imperialists. May you devote the full energy and talents of the young, be ready to fight and die and give the most beautiful years of your lives to this noble cause. A new country of Vietnam built in accordance with the socialist revolutionary line of the party will be born through your efforts and you will witness this birth. By the end of this century, when you are roughly 40 years of age, you will become cadres who possess increasingly deep knowledge, are highly experienced and hold different positions in the apparata of the party and state, in the various sectors of the national economy; many of you will become high level and middle level cadres within the army. You are the persons who have the responsibility for training vanguard teenagers, for training the generation that will take your place at the start of the next century, thereby insuring the continuity of the revolutionary corps, of the peoples armed forces in the process of development of the socialist Vietnamese fatherland and the world revolution.

Dear comrades and friends,

In order to directly participate in the protection of the fatherland, all youths of military age who meet the standards set forth in the law will be drafted into the standing army to fulfill their military obligation. This is the obligation as well as the right of the citizen. Youths will thus enter the great school of the young.

The great school of the young, the army, is close to the people of the entire country, close to the compatriots of the various nationalities and close to the generations of youths. Because, our army is an army of, by and for the people that is closely led by the party, nurtured and cared for by the people and supported and helped by our friends and brothers throughout the world. Because, in the long fight to liberate the nation and protect the country, a fight in which all the people fought the enemy, in which the entire country went into battle, not one Vietnamese family failed to send a loved one into the army.

Our army is an army that fights tenaciously against aggressors. The test of strength with the enemy is a very good environment for training and forging the young heroic generations so that they possess lofty ideals for which to fight and are ready to give their lives for the independence and freedom of the fatherland, for socialism, for the happiness of the people, for their noble international obligation. Here, there is no room for cowardice or selfishness. We must be brave, must possess the virtue of selflessness and possess a deep, warm love of and be ready to give our lives for our compatriots, comrades and the other members of our unit in order to overcome every stern challenge and triumph over the enemy.

Ours is an army that works and produces. As a military organization that performs economic work, our army is able to train youths to work in an organized, disciplined and technical manner, achieve high productivity and always be ready to fight. Working diligently, raising labor productivity and practicing economy are the precious virtues of the worker, virtues that are very necessary in the work of building the country and the army. They are the total opposite of laziness, waste and corruption.

Our army is a revolutionary, regular force and modern army. The work of leading, organizing, commanding and managing many forces as well as resolving complex and difficult problems in military science and art, in modern military science and technology demand that our youths have a knowledge of many areas, have an increasingly deep knowledge of culture, science and technology. Therefore, when our youths enter the army, they have the conditions needed to study in a comprehensive manner, develop their talents and apply the knowledge and experience gained in the socialist school and the realities of social life. Here, too, we cannot tolerate being too lazy to study, being satisfied with one's achievements and not trying to make progress because, in military work, in combat and in the maintenance and use of weapons, a lack of knowledge will lead to losses, frequently to very large losses.

Our army is a strong, solid collective that possesses a fine nature and fine traditions, has a tightly structured leadership and command system and has clear orders and discipline. In the army, our youths are forged in the sense of organization and discipline, the spirit of socialist collective ownership, the wholesome and civilized style of life and have cultivated within them the beauty of the revolutionary soldier, beauty in both soul and bearing. Youths are taught the proper viewpoints toward aesthetics; no one sympathizes with or likes styles of life that are aimless, strange and unwholesome.

Thus, it can be said that the army is a school that trains youths in every area of life: their personal qualities, their skills and physical conditioning; their knowledge of military affairs, politics, economics, the culture, science, technology, literature, art and physical culture.

The training provided within the army is of very important significance in the entire life of each youth, each citizen. The various leadership and command levels within the army have a heavy responsibility in insuring that this school is built very well; they must consider the mobilization of youths to be a matter of strategic importance, must constantly concern themselves with teaching youths and must guide and organize every activity of the young so that they are truly intense, practical and useful. The young men and women who join the army also have a responsibility in building thie school well; young soldiers and young officers must make every effort to study and forge themselves, must endeavor to become outstanding revolutionary military personnel.

On the occasion of the commemoration of the 35th anniversary of the founding of our army, Le Duan said: "The people's army must truly be a large school that attracts the young generation, forges youths to be new persons who fight well, produce well, possess lofty ideals, possess robust health, possess the spirit of discipline and an urgent style, have the ability to organize and the ability to work and know how to establish the proper relationships among one person and another and trains good laborers, good cadres for the work of building socialism."

We are enthusiastic over and shall scrupulously implement this directive of the general secretary.

Dear comrades and friends,

The tremendous contributions made by and the extraordinary growth of our youths in the revolutionary struggle, in the work of liberating the nation and protecting the fatherland have always been closely linked to the leadership of the party, to the care provided them by all the people, by the agencies of the government, the mass organizations and the Youth Union.

In the various periods of history, the Youth Union, going by different names, has always struggled to be worthy of being the militant vanguard unit of Vietnamese youths, the school of communism of the young, the competent right arm and reserve unit of the party. It is the place that teaches beautiful revolutionary ideals to youths, trains youths to be outstanding citizens, outstanding military personnel, to be communist party members, and trains the future corps of cadres of the party in the various sectors of the state and in the people's armed forces.

On behalf of the Central Military Party Committee and the Ministry of National Defense, I hereby extend our sincere thanks to the agencies of the party and government, the mass organizations and the Central Committee of the Ho Chi Mihh Communist Youth Union for caring for, mobilizing and inspiring the army and the youths within it, for educating and organizing the young generation of the entire country as well as the young generation within each locality to fulfill their military obligation and participate in building the armed forces, strengthening the national defense system and protecting the fatherland.

Every leadership and command cadre within the army deeply understands that the soldiers of whom he is very proud and whom he loves very much are the products of the new social system that were prepared for the army by the work of the Teenagers' Unit and Children's Unit, the work of the Youth Union and the education provided by the socialist school and the family. As we grow to love soldiers more and more, we become increasingly grateful to the organizations of the Units and Youth Union as well as grateful to each teacher, parent, good, kind, brave and responsible mother who gave birth to and raised our outstanding youths and given them to the fatherland, to the work of building the army and strengthening the national defense system. We are especially grateful to the mothers of heroes who sit in the chairs of honor of this congress, thus symbolizing the heroic mothers of the nation of Vietnam.

We applaud the cadres and party members in the leadership agencies on the various levels of the party and state, from top to bottom, as well as the mothers and fathers who set the example by having their sons fulfill their military obligation and have constantly concerned themselves with teaching youths to be ready to join the army and fulfill the obligation of patriotic youths, of citizens of the Socialist Republic of Vietnam.

Everyone who is ardent about the destiny of the country, about the right of collective ownership of the working people, about the future of their children agrees with youths that there must be an end to the lack of fairness and reason in military recruiting as well as to the shortcomings in the implementation of the army's rear area policies. We completely agree that the Ho Chi Minh Communist Youth Union on all levels must have a voice in the military recruiting councils.

Dear comrades and friends,

"The path of revolutionary youths, of communists, as symbolized by the great Uncle Ho, is the path of struggling for independence, freedom and happiness."(1) For this reason, after 35 years, after four continuous wars and virtually not 1 day of complete peace, our country is still not entirely at peace and our people, our youths, one generation after another has continued to bear arms in combat and defeat every enemy.

Many difficulties are still faced in building the economy, building socialism, healing the wounds of the war and stabilizing and improving the standard of living of the people. However, the compatriots of our entire country, the youths of our entire country are unswervingly following the revolutionary course of the party, determined to triumph over poverty and backwardness.

We are confident that this Youth Union Congress will create a new revolutionary movement, one that will cause our entire young generation to enthusiastically take the lead in the forefronts of the struggle to successfully carry out the pressing tasks set forth by the party.

Our congress will surely have a major impact in rallying and uniting each widespread force among youths and highly developing the zeal and intelligence of the young, thereby making positive contributions to building a prosperous and strong country, firmly protecting the beloved fatherland, gradually bringing back a life of comfort and happiness and constantly developing the precious spiritual values of the nation, of the young in the new age among the generations of today and tomorrow.

This congress is the congress of the spirit of socialist collective ownership of the youths of the entire country in the new era.

It is also the congress of the new spirit of determination to win.

In order to express our heartfelt praise for and inspire the young generation of the entire country in the cause of protecting the fatherland and building socialism, the Ministry of National Defense hereby respectfully presents to the 4th National Congress of Delegates of the Ho Chi Minh Communist Youth Union the Determined To Win Banner of the heroic Vietnam People's Army, which has and shall continue to always win victory!

ECONOMIC PLANNING, TRADE AND FINANCE

CONTRACTS CREDITED FOR IMPROVING PRODUCTION

Hanoi NHAN DAN in Vietnamese 4 Dec 80 p 1

[Editorial: "Economic Contracts and Plans"]

[Text] Over the past several years, in keeping with the official regulations on economic contracts, the signing of contracts has been implemented to varying degrees in all fields of agriculture, industry, the handicraft industry, building, transportation and commerce and in both the state-operated economy and the collective economy.

In the face of the present situation in which the economy is unbalanced and there is a shortage of supplies and raw materials, many basic units are still actively searching for sources of supplies, assessing the needs of the market and establishing contract relations with supply and marketing units, thereby creating the conditions for formulating and implementing plans while insuring that the interests of the state, the unit and the worker are met. Units that have performed good economic contract work, such as the Luong My State Farm in Ha Son Binh Province, the Quan Chu State Farm and Tea Processing Plant in Bac Thai Province, the Song Dao Machine Enterprise in Ha Nam Ninh Province, the Duc Giang Chemical Corporation under the Ministry of Supply and so forth have upheld the independence of installations in production and business, implemented the principle of centralization and democracy in planning and coordinated planning with the use of market relations.

Through the implementation of economic contracts, installations have shifted from the administrative-subsidy style of work to management based on the mode of business. Encouraging results have been achieved: activities have been improved and returns are higher; the shortage of supplies, the waste of equipment capacity, the stagnation of products and the stagnation of capital have decreased markedly.

The universal situation at this time is that the various levels, sectors and basic economic units have not given appropriate attention to economic contracts. Many places do not truly consider economic contracts to be an effective legal tool of the state in building and developing the planned economy. As a result, they separate the plan from contracts and do not formulate, defend, approve or implement plans on the basis of the signing of economic contracts. Plan discipline and contract discipline are not high. At some places, the signing of contracts is done in a "form for form's sake" manner after which no one is responsible for the implementation of contracts. Contract violations are usually defended as being caused by objective circumstances and are not dealt with promptly.

In order to truly manage the economy in accordance with the socialist mode of business, it is necessary to implement the economic contract system. This is an element of planning. Economic contract work must be closely coordinated with planning throughout the planning process, from the formulation of plans to the guidance of their implementation, from the evaluation of the completion of plans to bonuses and penalties regarding the implementation of plans. Economic contracts must become the form through which the commodity-money relations are applied in accordance with the plan.

In order to prepare for formulating well balanced, sound plans for 1981 and the third 5-year plan, the basic economic units and the management agencies on the various levels must guide the signing of economic contracts, beginning with the control figures. Each unit should only record in its draft plan those norms that are related to other units when economic contracts have been signed in order to insure the conditions exist for their implementation. In the guidance of planning, every installation has the responsibility of implementing the various forms of material resources norms in exact accordance with the economic contracts that have been signed. As regards products that are not directly managed by the state by means of legal norms, the correct implementation of the economic contract system is considered an effective measure in insuring that production and circulation on the market are increasingly organized in order to support production and everyday life.

The process of signing and fulfilling contract obligations and settling contracts is closely linked to the strict implementation of the system of material responsibility. Cases of disputes and contract violations arising in the process of formulating and implementing plans must be examined by the responsible economic arbitration agency.

READER CALLS FOR GROWTH OF MARKETING CO-OPS

Hanoi NHAN DAN in Vietnamese 11 Dec 80 p 3

[Readers' Opinions column: "The Marketing Cooperatives in the Villages"]

[Text] This year, especially since the middle of this year, the purchasing of grain and agricultural products in the southern provinces has improved, increasing significantly compared to 1979. However, it is very regrettable that some farmers have taken their rice to sell but had to return with their rice because there was no one to purchase it. The rice purchasing stations of the grain sector, which are located at specific sites, wait for everyone who has rice to sell to arrive but sometimes must stop purchasing rice due to a shortage of storage space or a lack of money. At many places, village governments must organize the purchasing of rice, thereby disrupting functions and tasks. In Hau Giang and Long An Provinces, a number of marketing cooperatives have not only done a good job of purchasing grain and agricultural products, but also sell goods to the people. These cooperatives keep abreast of the amount of surplus grain among the people; if someone needs to sell a few dozen kilograms of rice, they buy it and, generally speaking, buy it at a price lower than the market price and store it well. The cooperatives also sell goods to the right persons and in exact accordance with policies. For example, the Thuan Hung Cooperative in Hau Giang Province purchased the following quantities above its norms: 35 percent more rice, 27 percent more hogs, 150 percent more eggs, 33 percent more soybeans and 47 percent more coconuts. The cooperative has also purchased 1 ton of green beans and 1.2 tons of chickens and ducks outside its plan.

From the experience of Hau Giang, Long An and the other provinces in the North, we suggest that the home trade sector and the various provinces attach importance to organizing, strengthening and utilizing village marketing cooperatives. It is necessary to adopt plans for training cadres and gradually build the material-technical bases of marketing cooperatives. In addition to the task of purchasing grain and agricultural products and selling consumer goods, these cooperatives should also be given the additional task of purchasing discarded materials in the countryside for supply to the handicraft cooperatives that produce many consumer goods and export goods.

Socialist commerce consists of state stores and marketing cooperatives. Strengthening and developing village market cooperatives will help to broaden the socialist commerce network, transform agriculture, build the new countryside and insure economic and social development in the countryside.

INVENTORY OF ASSETS IMPROVES MANAGEMENT

Hanoi NHAN DAN in Vietnamese 11 Dec 80 p 1

[Editorial: "The Inventory and Utilization of Assets"]

[Text] The general inventory conducted over the past several months has yielded initial results. Several tens of thousands of units of the central and local levels participated in the inventory.

As a result of making relatively thorough preparations, the results that have been achieved have helped units to fully assess their material resources and the present state of their assets. A number of units found hundreds of vehicles and machines that were either forgotten during the war time evacuation or being used by other units. Many enterprises discovered many assets that were not recorded in their books or were stored in warehouses without anyone knowing it. Some places discovered surpluses, shortages and losses involving dozens of tons of petroleum products and hundreds of commodities. On the basis of the inventory data of each unit and installation, many sectors and localities relatively accurately evaluated the overall capacity of their sector and locality. The redetermination of the prices of the various types of assets in accordance with a unified, nationwide price system has created favorable conditions for the enterprises and sectors to compute production costs and income as well as economic returns more precisely, thereby helping to raise the level of management. The mobilization of the mass of cadres, workers and personnel to participate in the inventory is a concrete expression of the right of collective ownership of the worker in economic management.

Although results have been achieved at installations, the inventory has not concluded. The various sectors and localities must accurately integrate information on the situation and recheck the various types of data at units; they must verify, reach conclusions and deal with cases involving surpluses, shortages or the loss of commodities and supplies. After fully assessing the situation surrounding assets and production capacity, it is of utmost importance to adopt a correct plan for utilizing them. Each enterprise, management agency, sector on the central level, province and municipality must adopt positive measures for mobilizing and redistributing supplies, commodities, equipment and assets so that they are utilized as effectively as possible, beginning with the 1981 plan. Integrated warehouse inventory data must be considered a basis upon which planning agencies and related sectors re-examine and rebalance their supply plans in order not to allow any type of supply or commodity to become stagnated anywhere. A plan must be adopted for redistributing supplies and commodities from places where surpluses exist to places experiencing shortages and for repairing broken machinery and equipment in order to put it into use. Cases involving installations working beyond their ability and authority must be resolved by the upper level. Cases involving sectors and localities working beyond their ability and authority must be resolved in accordance with the common plan of the state.

The inventory must be the beginning and the basis for all units, sectors and localities to further reorganize and gradually put asset management on a regular basis. In the immediate future, it is necessary to reorganize and rearrange warehouses, wharves and storage yards, implement the regulations on maintenance and repair work, adopt effective management measures and eliminate theft, conspiracy, abuse of authority and bribery. The combined results of the inventory will make an important contribution to maintaining the principles of socialist management and raising our level of economic management.

ECONOMIC PLANNING, TRADE AND FINANCE

BRIEFS

ECONOMIC CONTRACT DISPUTES--The SRV Council of Ministers recently issued a decision on the economic arbitration council's jurisdiction over disputes on economic contracts. In order to promptly deal with disputes on economic contracts in accordance with law, to protect socialist assets and the legal benefits of signatories, and to contribute to fulfilling the state plan, the Council of Ministers decides the following: The economic arbitration council will deal only with disputes on economic contracts between the state-run or joint state and private-owned organizations and enterprises, state agencies, army unit, social associations and organizations, and cooperatives authorized to run their business and hold bank accounts. With respect to those disputes on economic contracts which involve production collectives and teams and individual households or private businessmen on one side, and the other signatory who is not authorized to run the business and hold no bank accounts, they must be judged by the people's courts. AGRICULTURE

RECENT AGRICULTURAL DEVELOPMENTS REPORTED

BK121506 Hanoi Domestic Service in Vietnamese 2300 GMT 10 Jan 81

[Review of agricultural news for the past 10 days]

[Summary] Due to the current cold spell, the first 10 days of 1981 saw a slow pace in agricultural production. However, to date, northern provinces have basically completed the sowing of the 5th-month spring rice seedlings.

"According to the General Statistics Department, northern provinces and cities have sown more than 100,000 hectares of 5th-month rice seedlings, achieving more than 80 percent of the plan norms. However, these seedlings are adequate for transplanting only on 80-85 percent of the planned areas. The remaining 15 percent will be transplanted by seedlings sown on adjacent ground."

To ensure a good crop, peasants in various areas have worked hard to prevent seedlings from dying due to the current cold spell, especially those sown after 10 December last year. Along with caring for these seedlings, many localities last week accelerated the pace of plowing ricefields and improving their irrigation systems.

"To date, the northern provinces have transplanted more than 110,000 hectares of the 5th-month spring rice, achieving more than 10 percent of the planned areas. Binh Tri Thien transplanted more than 35 percent of its planned areas; Nghe Tinh, 13 percent; Thanh Hoa, 11 percent; Vinh Phu, 18 percent; Ha Bac, 14 percent; and provinces in the plain areas, from 3 to 4 percent."

Many localities are now waiting for an improvement in weather conditions to accelerate their transplantation, especially when the cold spell departs their areas.

"One of the urgent tasks at present is the supply of fertilizer. According to the General Statistics Department, the northern provinces and cities have produced more than 5.8 million tons of organic fertilizer, but 50 percent of this has been used up for the winter crops and the 5th-month seedlings."

As a result, many localities are expanding areas for growing duckweed to increase the production of fertilizer to meet the current demand.

"Meanwhile, the southern provinces and cities last week continued harvesting the 10th-month rice, transplanting rice and planting subsidiary and industrial crops. To date, these provinces and cities have harvested almost 50 percent of the 10th-month rice areas. Provinces in the former fifth zone have basically completed their harvest."

Along with the harvest work, these provinces and cities have continued their transplanting of the winter-spring rice. To date, they have transplanted almost 60 percent of the planned areas, or 10,000 hectares more than in the same period last year. However, the overall pace was still slow, taking into account the current fine weather conditions in the south.

With regard to the planting of vegetable and industrial crops, the whole country to date has grown almost 440,000 hectares for the spring season, an increase of 30,000 hectares during the past 10 days. The northern provinces have also begun harvesting sweet potatoes, potatoes and watermelons.

According to the Meteorological and Hydrological General Department, the cold spell will remain in many localities for sometime and temperatures during the early days of this week may fall below 15 C. Thus localities must satisfactorily carry out the following tasks:

Northern provinces must concentrate their efforts on caring for rice seedlings, improving irrigation work and expanding areas for duckweed growing. They must closely follow up changes in weather conditions to promptly distribute manpower for transplanting the 5th-month spring rice. The harvest of the winter subsidiary crops must be done quickly to make room for the planting of the spring crops.

Southern provinces, while continuing their harvest of the 10th-month crops, must accelerate the transplanting of winter-spring rice. Localities which were set back in transplanting must concentrate their manpower and equipment on accelerating their pace by three-fold to fulfill the plan norms.

In mountainous midland areas, localities must ensure good health for herds of cattle, especially draft cattle, and see to it that they have adequate food and that the animals sleep in warm stables to prevent them from dying due to the cold.

NORTH VIETNAM HARVEST REPORT

Hanoi NHAN DAN in Vietnamese 11 Dec 80 p 1

[VNA News Release: "The North Completes the Harvesting of 10th Month Rice and Begins Transplanting 5th Month Rice and Sowing Spring Vegetables and Subsidiary Food Crops; An Giang Province Strengthens the Guidance and Management Apparatus of Cooperatives and Production Collectives"]

[Text] As of 5 December, according to the Statistics General Department, the provinces of the North had virtually finished the harvesting of 10th month rice and were beginning to transplant 5th month rice, sow spring seedlings and sow spring vegetables and subsidiary food crops.

Fifth month seedlings had been planted and, with the warm, sunny weather, have grown quickly; some seedling plantings have passed transplanting age. All localities are harrowing and irrigating their fields in order to bring the transplanting of 5th month rice. The various localities are also sowing spring seedlings during the proper season.

The dry weather has been favorable for the plowing of fields by machine but, generally speaking, the rate of plowing has been slow, having fallen 120,000 hectares behind last year's rate. Many localities have finished harvesting their 10th month rice but only plowed a small amount of land (Thanh Hoa, Thai Binh and Hai Hung Provinces have only plowed from 15 to slightly more than 20 percent of their land while Ha Bac Province has only plowed about 6 percent). Some localities, as a result of concentrating the use of their draft power and labor on winter crop production, have not plowed their fields promptly and the ground has become so dry that it cannot be turned over.

Some 4.783 million tons of organic fertilizer have been prepared (nearly 240,000 tons less than the same period of time last year). About 70 percent of this fertilizer has been applied to subsidiary food crops and seedlings; the remaining has been applied to rice crops at the average of only 2.1 tons per hectare. The localities are now making additional fertilizer in order to have enough to apply side dressing.

More than 14,490 hectares of duckweed have been raised, twice as much as the same period of time last year. The provinces that have much duckweed are Ha Nam Ninh, which has 6,519 hectares, Nghe Tinh, which has 2,275, Hai Hung, which has 1,364, Thai Binh, which has 1,359 hectares, and Ha Bac, which has 723 hectares.

The provinces of the North have planted 304,000 hectares of vegetables, subsidiary food crops and industrial crops, which is slightly less than the amount planted this time last year. More corn, sweet potatoes, vegetables and legumes have been planted but fewer potatoes have been planted, only 51 percent of the plan quota, and the potato planting season has come to an end. A rather large amount of soybeans has been planted, more than 3,300 hectares, four times as much as had been planted by this time last year. All places are attaching importance to the cultivation of vegetables and subsidiary food crops. Ha Bac has cultivated nearly all of its corn and sweet potato fields. Thanh Hoa has cultivated 70 percent of its sweet potatoes, 68 percent of its western potatoes and 64 percent of its corn crops. The vegetables and subsidiary food crops that were planted early were cultivated promptly and are growing well.

Winter corn and sweet potato crop yields might be rather high. The western potatoes that were planted early are now producing tubers. The vegetable and subsidiary food crops in many localities are in need of irrigation. Many cooperatives do not have the conditions needed to provide water, lack electricity and lack fuel, consequently, the people have been using buckets to irrigate fields. The various localities have also begun to plant spring subsidiary food crops.

An Giang Province has conducted a review of agricultural transformation and discussed the plan for the upcoming winter-spring production season, a plan that calls for focusing efforts on strengthening the corps of management and leadership cadres from the district to the cooperative and production collective levels.

The agricultural transformation committees of Phu Tan District, Cho Moi District, Phu Chau District, Long Xuyen City and so forth have been strengthened. The various districts and cities have strengthened their village production committees in order to directly guide and supervise the cooperatives and production collectives so that production develops in the correct direction. The two districts of Thoai Son and Phu Chau have completed the strengthening of their 10 village production committees.

The Agricultural Cooperativization School of the province has trained 64 students to supplement the districts of Phu Tan, Phu Chau, Tri Ton and so forth. Cho Moi District has also provided training for the planning cadres of the production collectives so that they can successfully carry out summer-fall distribution and prepare plans for the upcoming winter-spring season. Long Xuyen City has held a forum with the sectors related to agricultural transformation and the cadres of the production collectives in order to unify the measures and discuss the actual experiences of the good production collectives.

PREMIER CALLS FOR INCREASED WATER CONSERVATION

BK101006 Hanoi NHAN DAN in Vietnamese 22 Dec 80 pp 1, 4

[Text] According to a forecast by the General Department of Meteorology and Hydrology, it is likely that the rainfall and the mean precipitation levels in the rivers in the 1980-81 winter-spring season will be lower than the average levels of previous years.

The premier has directed sectors and the people's committees at all levels to intensify their farmland water conservancy projects.

In anticipation of drought, it is necessary to compute closely the area for dry-land cultivation and shift to wet-land cultivation; and to conserve water as quickly as possible while its source is still abundant. We must also actively take preventive measures against cold in the early part and in the middle of the crop season, effectively use all the presently available projects, outfits, equipment and materials, and closely combine the use of various electric and oil-operated pumping projects with the mass movement to conserve water and economize on water, electricity and oil.

The water conservancy sector will guide various farmland water conservancy corporations in inspecting the sources of water from lakes, dams and sluices evaluate the operational capacity of pumping stations and balance it with the demand for water in order to determine irrigation plans for the winter crops and formulate plans to irrigate ricefields in line with the rates of production and the crop schedules. In those areas irrigated by water from lakes, dams, sluices and rising tides, measures must be taken to most economically use water so that the crops can be irrigated throughout the season.

In those areas where electric and oil-operated water pumps are used for irrigation, electricity output and allocated quantities of oil must be taken into account when providing priority supplies to large and small electric pumping stations and oil-operated pumping stations in order to insure the effective operation of these stations. Work forces should be organized and urged to repair various projects by dredging canals and ditches and by embanking rice plots and main canals before plowing land and ricefields for aeration. Investment in farmland water conservancy projects must be intensive, concentrated and targeted so that the results of existing projects can be developed.

The agricultural sector must check its planned allocation of rice seeds and its 5th-month spring rice crop schedules and direct basic production units to arrange their crop cultivation patterns in line with the conditions of the supporting water conservancy systems at a time when electricity and oil are limited. Cooperatives must be controlled and guided in determining the areas to be wet plowed, and in planning for dry-land cultivation in line with the plans formulated by farmland water conservancy management units and the plowing forces of tractor units and cooperatives themselves. Production units should closely coordinate with one another to avoid waste of water and manpower and to ensure that crops are planted on schedule.

The agricultural sector should coordinate with the water conservancy sector to consolidate specialized water conservancy teams, repair canals and embankments and implement the technical regulations on irrigation and drainage in combination with other intensive cultivation measures in order to increase crop yield.

The meteorology and hydrology sector should closely watch the weather and water situation so that all other sectors and localities can be promptly informed of the situation and be guided in performing the technical measures of production well.

The coal and power sector must inspect and repair the entire supply network, transformers and other electrical equipment of pumping stations. Together with the water conservancy sector, it must ensure proper distribution and rational use of electricity for the right objectives and eliminate all rural households using electricity improperly from the agricultural electricity network.

The State Planning Commission and the engineering and metallurgy and material supply sectors must ensure that materials, spare parts, pump assemblies, electrical appliances and fuel are provided to the highest degree in order to meet production requirements.

AGRICULTURE

EDITORIAL DISCUSSES CONTRACTS IN AGRICULTURE

Hanoi NHAN DAN in Vietnamese 3 Dec 80 pp 1, 4

[Editorial: "Closely Guiding the Reorganization of Production at Agricultural Cooperatives"]

[Text] After placing cropland under public ownership and reorganizing farmers, the basic and long range guideline for strengthening agricultural cooperatives is to simultaneously accelerate the three revolutions, uphold the right of collective ownership of cooperative members, improve management, strengthen the new production relations, build material-technical bases, develop production and raise the standard of living of laborers.

Organizing production and contracting with laborers are one of the elements of the cooperative management system. Grain production cooperatives have implemented three contracts for production units and production units are contracting with groups of laborers and cooperative members. This contracting method has begun to coordinate obligations and rights and correct the use of averages in the payment of wages to laborers. In addition to its strongpoints, this method of contracting has the drawbacks of failing to cause laborers to be concerned with the final product produced by them, causing them to place heavy emphasis upon workpoints, do not give full attention to the results of production; some technical regulations are not being implemented and the practice of awarding more workpoints than required and the failure to economize on production costs are rather widespread. Contracts for a number of related jobs that closely link the laborer to the final product in rice production (called product contracts) are being implemented to rectify the shortcomings in the previous method of contracting, help to improve contract work and insure the implementation of the principle of fair distribution to the laborer.

A number of localities have conducted pilot projects or begun to expand the use of this method. Cooperatives have, on the basis of their production guidelines, allocation of crops, technical regulations and quotas, contracted with production units and worked with them to guide such important technical jobs as the preparation of fields, the propagation and selection of seeds, the regulation of water and fertilizer, the prevention and control of pests and diseases and the protection of crops; production units have assigned laborers a number of related jobs, such as transplanting, cultivating and harvesting, thereby closely linking the responsibility of the cooperative member to the final product. Developing upon the good aspects of management, this new contracting method is an added measure designed to perfect contracting methods. At places where it is used correctly and where principles are upheld, the right of collective ownership of the instruments of production is upheld, materials-technical bases are constantly strengthened, the organization of labor is more efficient, distribution is unified, production areas are maintained and technical regulations are fully implemented. The clearest result is that the work time of cooperative members is utilized better and the quality of their work has improved. Production costs (including the costs of labor and supplies) are lower. As a result, labor productivity has increased, the cost of producing products has declined, cooperative output has increased and distribution satisfies all three interests: the interests of the laborer, the collective and society. Besides the places that have implemented this method well, a number of places have not immediately implemented it correctly. As a result of not fully understanding the new method or because they have simplified this method of contracting, some places perform every job they have under contracts; this has the immediate effect of creating enthusiasm on the part of laborers but, over the long range, it affects the rate at which new technological advances are introduced in production.

Closely linking each unit and each laborer to the final product is a progressive method of contracting that has the purpose of heightening the sense of responsibility of the collective and of each individual and defining in detail the system of collective ownership as it applies to each person, production unit and cooperative. The various forms of contracting must insure that cooperatives tightly manage the primary instruments of production, primarily cropland, draft power, fertilizer, tools and material-technical bases in order to carry out production in an organized and planned manner that results in high yields, constantly strengthen production forces and widely apply scientific-technical advances. Cooperatives must manage and organize their labor well, display the superior nature of the cooperative and division of labor of collective labor and, at the same time, provide incentive for everyone to work, thereby closely linking everyone to the final product and causing them to be concerned with it. Cooperatives must carry out production in accordance with the planning of economic-technical zones; on the other hand, the units that accept contracts must carry out production in accordance with the allocation of crops, the seasonal schedule, the production plans and the quotas and production regulations stipulated by the cooperative. The cooperative must manage all or the major portion of the product that is produced in order to carry out unified distribution that serves all three interests. These are the principles that must be upheld to insure that production installations implement the two forms of contracts (work contracts or contracts for a number of jobs with laborers that closely link them to the final product), both of which are elements in the implementation of the socialist mode of management.

The forms of contracts must be applied in a flexible manner consistent with each crop and species of livestock, with the organization of labor, the material-technical bases and the level of management of each unit instead of automatically adopting one form or implementing it under pressure. The practice of only emphasizing or only seeing the positive aspects of one form but not seeing the weaknesses of it that must be corrected is inconsistent with the flexibility of agricultural production.

Labor and product contract work must be carried out within the various relationships (the relationship between the state and the cooperative, the relationship between the cooperative and the production unit and the relationship between the production unit and the laborer) that are embodied in fully complying with the policies of the party and state and in all management work of the cooperative. To perform contract work well, it is necessary to perform, in a well coordinated manner, the various jobs designed to strengthen cooperatives, such as organizing the size of the cooperative and production unit in an efficient manner, improving planning, correctly establishing economic-technical quotas, implementing the policy on the stabilization of the grain obligation, regularly giving attention to cadre training, building the district level and so forth; on the other hand, contract work causes the jobs mentioned above to be performed better.

Every new management method requires time to be tested and gradually improved. Every job must be performed on the basis of specific conditions. After establishing guidelines, the establishment of suitable methods and stages of development is necessary. Not accepting something new that has yielded clear results and denying the value of good jobs that have been performed or giving light attention to guidance are incorrect tendencies. In collective production and business, practical economic returns are manifested in the gross social product, labor productivity, the accumulation of capital for the cooperative, obligations to the state, the standard of living of cooperative members and the gradual construction of material-technical bases in order to advance agriculture from small-scale production to large-scale production; these are the most correct measurements of a method of management.

THANH HOA REDUCES SIZE OF COOPERATIVES

Hanoi NHAN DAN in Vietnamese 11 Dec 80 p 1

[VNA News Release: "Thanh Hoa Province Adjusts the Size of Cooperatives"]

[Text] Thanh Hoa Province recently adjusted the size of 74 large cooperatives in the nine lowland districts by establishing 208 cooperatives whose size is better suited to the level of management of cadres and the production conditions of the locality.

Before taking this action, the province studied and gained a thorough grasp of Party Secretariat notice number 22 while re-evaluating the cooperativization movement in the recent past. There were nearly 100 deficient cooperatives at which production was developing slowly due to many reasons, one of them being the fact that the size of these cooperatives was too large compared to the management capabilities of cadres.

When the adjustments were being made, all cooperatives adopted specific plans and the masses engaged in democratic discussion in order not to commit such shortcomings as decentralizing assets, unnecessarily disrupting the organization of production and so forth.

The district of Tung Son and Tinh Gia, working in a systematic manner, stabilized production as soon as new cooperatives were established.

Thanh Hoa has attached importance to adjusting the size of production units and has taken this occasion to define the role of the production unit in the final product of the cooperative. The province has 8,000 production units, the average size of which is 20 to 25 hectares of farmland and 50 to 60 laborers in the lowlands.

The province and its districts are holding training classes to improve the skills of cooperative management cadres, from the production units to the management board.

HEAVY INDUSTRY AND CONSTRUCTION

INDUSTRIAL ACHIEVEMENTS FOR 1981 DESCRIBED

OW140813 Hanoi VNA in English 0713 GMT 14 Jan 81

[Text] Hanoi VNA January 14--In the new year, Vietnamese industry has commissioned a number of new factories and begun to turn out many new products.

--The Xuan Hoa Bicycle Spare Parts Factory, north of Hanoi, built with the assistance of the French Seri Compagni has commissioned four of its seven production lines. These include chains, axles, spokes and spoke nuts.

Under the contract signed with the Vietnamese foreign trade service, the French company will send more equipment and specialists to help the Xuan Hoa Factory complete the assembly of the remaining production lines including equipment for the production of rims, for semi-automatic assembly of rims and for plating.

The Xuan Hoa Factory when in full operation will be able to provide enough spare parts to assemble 200,000 bicycles annually.

--The Uong Bi Turpentine Processing Factory built with the assistance of the German Democratic Republic in Quang Ninh Province, 100 kilometres north-East of Hanoi, has begun operating.

The factory has an annual capacity of 41,000 tonnes of turpentine.

--The Huong Canh Animal-Feed Factory built with Yugoslav assistance in Vinh Phu Province, 80 kilometres north-west of Hanoi, has been commissioned.

The factory, which produces both pellets and powdered feed, has a production capacity of ten tonnes per hour.

--An 800 h.p. tug-boat was launched recently in Haiphong port.

The boat, 29.7 metres long and 8.3 metres wide, can push a barge with a 2,000-tonne load along the coast at a speed of seven nautical miles per hour.

This is Vietnam's largest tug-boat, it was built at the Bach Dang shipyard at Haiphong.

--A Soviet dredge used for the construction of the Hoa Binh Hydro Power Electric Plant on the Da River has been assembled at the Bach Dang shipyard.

The dredge, weighing 75.2 tonnes and measuring 59 metres long and 10.2 metres wide, can bring up mud from a depth of five to fifteen metres.

--45 kilovolt porcelain insulators each weighing 30 kilograms were recently produced for the first time at the Hai Duong Porcelain Factory, the biggest of its kind in northern Vietnam.

The factory has set up a workshop for mass production of formerly imported 45-kilovolt insulators for high-voltage lines.

BUILDING A CITY WORTHY OF BEARING THE NAME OF THE GREAT PRESIDENT HO

BK190521 Hanoi Domestic Service in Vietnamese 1100, 0400 GMT 17, 18 Oct 80

[Address by comrade Le Duan at the second congress of the Ho Chi Minh City party organization on 15 October 1980, published in Hanoi TAP CHI CONG SAN in Vietnamese No 11, Nov 80 pp 1-12; Hanoi Domestic Service version previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 206, 22 Oct 80, pp K4-K14]

[Text] Dear comrades delegates: On behalf of the party Central Committee, I cordially extend the most heartfelt greetings of the party Central Committee to the second Ho Chi Minh City party organization congress, and through the comrade delegates, to all party members and compatriots of all strata in the city.

Our congress is being held 5 years after the total liberation of Saigon and the South. The date 30 April 1975 has entered the history of our country forever as a golden landmark, marking the absolute end of colonialist rule and the opening up of a new era in our fatherland--an era in which Vietnam has achieved total independence and unification and is advancing along the socialist path.

Looking back from this landmark over the road we have travelled, we feel very proud of the great contributions made by Saigon-Gia Dinh to our nation's extremely heroic revolutionary struggle which was full of hardships and sacrifices. Over the past 100 years, Saigon-Gia Dinh has always stood at the forefront of the national liberation struggle. It was known for the armed uprisings of Truong Dinh and Nguyen Trung Truc's forces, the uprising of the 18 betel planting hamlets in the late 19th Century and then the many national democratic movements early this century.

When the party was founded, Saigon-Gia Dinh had the honor of being the first headquarters of the party Central Committee. Led by the party, the revolutionary flame flared up, rising up ever higher and spreading more widely.

During the period of the Indochinese Democratic Front, a congress was held in Saigon, and word of this congress quickly spread throughout the country. The autumn of 1945 witnessed the 25 August Saigon uprising which erupted with earthshaking clamor and which, in coordination with the uprisings of Hanoi and Hue as well as other localities, completely restored the helm of the administration into the people's hands.

When the French colonialists were back for another war, Saigon, firmly living up to its vow for independence, rose up to fire the first shots, opening up the resistance of the Nam Bo compatriots.

On 19 March 1950, when the U.S. imperialists first interfered in Vietnam, the Saigon compatriots dealt an appropriate pre-emptive blow to them. During the anti-U.S. national salvation resistance, Saigon-Gia Dinh fought staunchly. It greatly contributed to the "Year of the Monkey" spring victory and joined with the compatriots nationwide in winning the last battle in the historic Ho Chi Minh campaign, gloriously winding up the most heroic resistance of the nation.

The heroic Vietnamese people's glowing combat exploits-studded flower garden will be eternally scented with the many velvet colored flowers of Saigon-Gia Dinh, Ba Son, Di An, Khanh Hoi, Nha Be, Hoc Mon, Nha Be, Hoc Mon Ba Diem, Cho Dem, Vuon Thom, Bung Sat, An Phu Dong "Cu Chi, the steel-like land" and so forth.

The entire country is proud of those exemplary sons of Saigon-Gia Dinh during the two wars of resistance such as (L Van Tam), (Tran Van On), (Thai Van Lung), Nguyen Van Trio, (Tran Van Dang), (Le Thi Rieng), (Tran Van Kieu), (Tran Quang Cu), Thich Quang Duc, Quach Thi Trang, (Pham Van Hai); (Pham Van Coi) and the many other fallen heroes who have burnished the glorious tradition of the fatherland's brass fortress.

The party Central Committee highly appraises the heroic struggle and the outstanding contributions made by the party organization and the compatriots of Saigon-Gia Dinh to the national democratic revolution.

Because of its unswerving loyalty and dauntlessness, despite the fact that it was the center of the colonialists' stronghold, and because all of its battles were fought with the blood and the minds and energy of the soldiers and compatriots from all parts of the fatherland, Saigon-Gia Dinh has won the confidence and love of our people throughout the country. Since liberation, entering the stage of socialist transformation together with the South to build a new life, Saigon-Gia Dinh--now named after venerated and beloved Uncle Ho--has undergone significant changes in the offensive tempo of our people in the new stage.

Because it was a former center of the war and the ruling machine of colonialism, old and new, and its lackey puppet regime, post-war production and the life of the people of various strata in the city were seriously upset. However, thanks to the efforts of the local party organization and people, the city has undergone significant changes during the past 5 years. By carrying out socialist transformation on a large scale, the city has been able to eliminate bourgeois traders, basically transform the bourgeois industrialists and put a large number of artisan industrial and handicraft laborers to work under various forms of cooperativization.

Along with initially transforming the small merchants, the city has established a network of state-operated trade, consumer and marketing cooperatives and formed an economy consisting of five sectors, of which the socialist economic sector is constantly growing. Some progressive enterprises have markedly developed the guiding role of the state-run economy.

In the suburbs, agricultural transformation has achieved initial results in leading peasants onto the road of collective production. On the production front, some industrial and agricultural sectors have restored, developed and reorganized production. Communications and transportation, handicraft and the artisan industry have been strongly promoted. The export goods industry has been given due attention. In the rural area, multicropping, the reclamation of fallow land and the opening of virgin land have been stepped up. The production of grain crops, industrial plants and animal husbandry has begun to develop. This has enabled the city to find employment for a fairly large number of jobless persons.

Education, public health, culture, social welfare, maternity care, child rearing and so forth have developed relatively widely, contributing to meeting the cultural needs of the people and stabilizing their life. Socialist culture has begun to play a guiding role in the spiritual life of the laboring masses, thereby making a notable contribution to cultivating the way of thinking, sentiments and ethics of the new socialist man and to the struggle to abolish the vestiges of the reactionary colonialist culture.

Examples of good people and good deeds typical of the new socialist man and new socialist lifestyle have emerged in ever larger numbers among the people of all strata. Since liberation, many revolutionary movements of the masses have been launched, motivating various localities to fulfill their political tasks. The revolutionary administration at the grassroots level has been built and consolidated and has recently shown notable maturity. Thanks to this, the city as a whole has been able to firmly maintain political security and social order despite its many difficulties and even in tense and complex situations. At the same time, it has actively contributed to consolidating national defense and has joined the southern provinces in satisfactorily playing the role of the great rear area of the entire country and fulfilling the international duty.

These initial achievements were the results of the untiring and ceaseless efforts made by the Ho Chi Minh City party organization in implementing the line and policies of the party Central Committee and government, especially in translating the line and policies of the higher echelons into targets to be attained by the grassroots level and into revolutionary actions by the large masses of people.

Many progressive models have emerged in industry and agriculture and in various enterprises, wards and villages, such as the Caric, Sivico and Simco enterprises; the No 13, Phong Phu, Binh Minh and Thanh Cong textile factories; the fifth ward in Binh Thanh precinct, the 20th ward in the first precinct, the 10th ward in the third precinct, the first ward in Tan Binh precinct, and the third ward in the fifth precinct; Tan Thoi Hiep village in Hoc Mon District, Tam Binh village in Thu Duc District, An Lac village in Binh Chan District, Tan Thong Hoi village in Cu Chi District, Pinh Khanh village in Duyen Hai District, and so forth.

The achievements recorded by these typical units clearly show that in the present situation where difficulties exist in many fields, if we know how to develop the creative energy of the greassroots level and enhance the right to collective mastery of the masses, it is totally possible to find the correct orientations for organizing labor, developing production and improving technology to increase productivity, production volume and the workers' income; for satisfactorily organizing distribution to gradually improve the workers' life; and at the same time, for satisfactorily ensuring labor safety, political security, social order and national defense.

On behalf of the party Central Committee, I warmly commend the city party organization for the achievements already recorded. I particularly praise the great efforts and outstanding successes of the progressive models in the hope that these good seeds will be multiplied manyfold in all spheres of activity in order to expand and develop the city's revolutionary movement and effectively overcome weaknesses and shortcomings, so that more valuable contributions will be made to the revolutionary cause of the entire country.

Dear comrades, after 30 years of war, our people's only desire now is to fully concentrate on healing the wounds of war, transforming and developing the economy and culture in accordance with the principles of socialism, building a new life and defending the country and, at the same time, to expand our relations of peace, friendship and cooperation with other nations in the world. But the reactionary Beijing clique, in pursuit of its big-nation expansionism and hegemonism, is blatantly carrying out a hostile policy towards Vietnam. They unleashed their henchmen--the Pol Pot-Ieng Sary clique--in attacks on the southwestern part of Vietnam and later brazenly used 600,000 troops in aggression against the entire northern frontier of our country.

Though suffering bitter setbacks at the hands of our people, the reactionary Chinese ruling circles have not abandoned their aggressive schemes against our country. They are allying themselves with imperialism, especially U.S. and Japanese imperialism, and drawing the worst reactionary forces into opposition to the Vietnamese revolution and the revolutions of our two fraternal neighbors on the Indochinese peninsula. They are bent on undermining our people's efforts for socialist construction by all means--political, military, economic and diplomatic--in the hope of weakening and eventually annexing our country and the rest of Indochina and using it as a springboard for aggression against all of Southeast Asia.

This is why our country, though living in peace, must guard against a possible war. We must be constantly on guard against the evil schemes and brutal nature of the ruling clique at Zhongnanhai. Yet, we believe more strongly than ever before that with the might of our people and army, the Vietnam-Lao-Kampuchea militant alliance, the all-round assistance and cooperation of the Soviet Union and the socialist community as a whole, and the support of all peace and justice-loving peoples, our people are sufficiently strong to firmly defend the Socialist Vietnamese fatherland.

The political task of our country's revolution at present is to successfully carry out the struggle for the victory of socialism over capitalism, abolish the exploitation of man by man and develop our small-scale production into large-scale socialist production. At the same time, we must fulfill our historic mission to resolutely struggle to foil all the schemes of aggression and sabotage by the reactionaries in the Beijing leadership and firmly preserve the revolutionary gains which our people have achieved at the cost of their own blood.

In the immediate future, while intensifying national defense and putting a part of the country in combat readiness, we must mobilize to a high degree the capabilities and efforts of the whole country, in all branches of activities and at all levels, to stabilize and develop the economy, gradually normalize and improve the people's life, and at the same time prepare for a vigorous future advance to successfully build socialism.

While advancing directly from small-scale to large-scale socialist production--a new and difficult historic task--we must firmly grasp the fundamental characteristics of the situation in our country so as to correctly solve a series of problems of strategic significance as expounded in the general line and the economic policy adopted at the fourth party congress. According to this line, our country will in the future have generally three big industrial cities, and a number of industrial complexes will take shape. A number of provinces will be built into industrial-agricultural units with some 400 districts to be made agroindustrial units.

Ho Chi Minh City is one of these three big cities. War and neocolonialism left the city with grave consequences: an economy completely dependent on U.S. aid; an industry--mainly a processing one--dependent on imported materials; a great part of the population dependent on war and aid with a living standard beyond the means of domestic production; and a culture giving rise to many social evils and leaving long-term bad effects.

Yet history has also provided the city with great advantages. The city used to be the industrial heart of the U.S.-puppet regime. Its fixed assets constitute a fifth of that of the whole country, and its industrial output value accounts for a fourth of the gross national industrial output. The capability to produce consumer and export goods is better here than in other places. A number of industrial establishments, especially processing establishments, are relatively well equipped with modern machinery. There is a large number of skilled workers and artisans capable of producing diverse goods, and the professional qualifications of technicians and managers are relatively high.

The city has 120,000 hectares of arable land and many forests and rivers. Close to the sea, it is situated in a fertile region bordering the Mekong River Delta, eastern Nam Bo and the Central Highland. The city is also an important communications junction connecting various areas of the country and many other countries.

With these advantages, Ho Chi Minh City must and does have all the necessary conditions to become a great industrial center with such key industries as ship building, agricultural engineering, fishing and forestry engineering, consumer goods, food processing and so forth. It must also become a cultural, scientific and technical center, and a center for exchanges with foreign countries.

The city's economic tasks in the next 5 years consist of intensively stabilizing the economy and the people's life; stepping up industrial, artisan and handicraft production by firmly controlling production capabilities, bringing into full play the capacities of the existing equipment and work force, paying attention to in-depth investments and gradually further equipping and expanding the necessary production establishments in order to constantly increase labor productivity; pushing agricultural production ahead to achieve the high productivity typical of the southern provinces; and building a stable belt of food and fresh vegetables for the city. It is also necessary to fully tap the capabilities of industry in order to expand the exploitation and processing of maritime products; combine the development of production forces with the establishment and consolidation of the new production relations; and strive to basically finish socialist transformation and rationally reorganize the various economic sectors while improving economic management in order to develop production and constantly increase labor productivity and economic results.

The city must continue to improve distribution and circulation. It must struggle to gain control over the bulk of goods produced by the local industrial, artisan industrial and handicraft sectors; strengthen its control over agricultural products to be used as raw materials for industry; struggle against speculation, smuggling and disruption of the market; intensify the collection of industrial-commercial taxes; increase revenue and reduce expenditures; practice thrift; continue to find employment for the jobless; and ensure a steady supply of staple goods for cadres, workers and civil servants of the state.

The city must bring its industrial strengths into play to support agriculture in the suburbs, the Mekong Delta provinces and other southern provinces. It must promote grain and food production and open industrial crop areas so as to ensure a steady supply of raw materials for industry, artisan industry and handicrafts.

In short, the city must closely link its industry with agriculture in the southern provinces, use industry to promote the development of agriculture and, on the other hand, use agriculture as the basis for the development of industry, especially those industrial sectors which rely on agriculture for raw materials.

Ho Chi Minh City can and must become one of the two largest exporter cities of the country. It must take advantage of all its forces and favorable conditions and bring into play all the initiatives and experience of its skilled workers, craftsmen patriotic businessmen and exporters so as to establish numerous trades producing export goods. It must study production organization and business methods more profoundly so as to create large quantities of major products of high quality that will win the trust of customers. It must fight against shoddy work and forgery. It must strive to use exports and imports to meet an important part of its own demands for technical supplies, raw materials, materials and spare parts for its industry, artisan industry and handicrafts.

The determination of the role of Ho Chi Minh City and the formulation of its immediate tasks as well as its guidelines for long-range economic development are not the exclusive task of the city's party organization and administration, nor are they related only to the role and responsibility of the party organization Executive Committee and the People's Committee of the city. These tasks are an important part of the plan for economic development and labor distribution on the nationwide scale. At the same time, they are closely linked with the policy of international division of labor and cooperation. For this reason, these tasks are also the responsibility of the party Central Committee and the Council of Ministers.

All sectors at the central level must clearly realize the objective role of Ho Chi Minh City from the standpoint of common interests so as to join its party and people's committees in devising plans for the maximum exploitation of the city's economic potentials. This is aimed at supporting the cause of socialist industrialization in the country. On the other hand, the Ho Chi Minh City Party Committee and People's Committee must also proceed from the national standpoint so as to coordinate the city's economic development efforts with the general plan for economic development throughout the country.

In the task of reorganizing and developing industrial production and improving economic management, we must proceed from the national standpoint and from our common interests in order to correctly handle the relations between Ho Chi Minh City and various production and management sectors at the central level, as well as the city's relations with other provinces, especially with regard to the division of management responsibilities and the division of labor and cooperation in production.

Dear comrades, along with the central task of transforming and developing the economy to build a large-scale socialist production system, we must wage a broad struggle to build a new regime, a new culture and a new type of man; firmly maintain political security; and consolidate the national defense. Our new regime is a socialist regime in which the laboring people have the right to collective mastery--a highly developed regime that will insure that man can master society, nature and his own self, or, in other words, a regime that will insure that man can shift from the realm of inevitability to the realm of freedom and thereby regain his genuine value.

The rhetoric of freedom and human rights as frequently used by the capitalist and imperialists is nothing but empty words; for a capitalist society can never insure the laboring people's mastery in all of the three aforesaid domains. Establishing the laboring people's right to collective mastery in all fields--political, economic, cultural and social--constitutes the final goal of our socialist cause. However, mastery is not only the goal but also the means and the motive of the socialist revolution in the first stage of the transitional period. After completing the national democratic revolution and embarking on the socialist revolution, we must immediately realize the laboring people's right to mastery in the political field at all level, especially at the grassroots level, and bring into play this mastery to effect revolutionary changes in the economic fields so as to reorganize production and improve the people's life.

To realize this right to mastery we must first of all adopt a correct viewpoint toward evaluating the masses in the areas formerly under the enemy's control. As we all know, to oppose and sabotage the revolution the U.S. imperialists and their henchmen corrupted virtually all the people under their control by all kinds of tricky and forcible measures and by all means, including the use of religious teachings. After smashing the enemy's ruling machinery, we must liberate the masses from all forms of ideological and spiritual bondage, draw them toward the light of the revolution and transform them from the enslaved and oppressed into masters and free people.

We must always guard against the schemes of the reactionary forces to oppose and sabotage the revolution. Nevertheless, only by truly insuring the masses' genuine right to mastery will we be able to detect and foil the schemes and acts of counterrevolutionary elements. At present, as our people are faced with heavy tasks and our country is still beset with many difficulties, it is all the more necessary for us to motivate the masses satisfactorily to realize the laboring people's right to collective mastery.

In industrial enterprises, workers must exercise mastery over their factories. As the vanguard class of the revolution and the main force of socialist industrialization, the workers must act as a spearhead in the struggle for the victory of socialism over capitalism, the struggle to do away with poverty and backwardness, and the struggle against the Chinese expansionists and hegemonists. They must clearly display their revolutionary nature and ability at a time when the country is facing critical challenges. The voice and role of the working class and the trade unions must be truly respected by the party organizations and the administration; and they must be reflected in the plans for production, business and welfare of every enterprise, as well as in the plans for the transformation and construction of the city.

In the countryside, peasants must exercise mastery over production collectives and cooperatives. It is both necessary and more satisfactory to indoctrinate, educate and organize the peasants and actively create conditions for them to develop their patriotic tradition and their confidence in and closeness to the party so that they can make worthy contributions to agricultural cooperativization, socialist industrialization and national defense.

At the grassroots level, the communists must, together with the laboring people, exercise mastery over every city ward and every village so as to find the best measures for developing production and caring for the material and cultural life of the people to ensure that all able-bodied persons are employed, that all unsupported elderly or handicapped persons and orphans are taken care of, and that no one suffers from hunger, cold or privation. At the same time, they must always stand firm in the struggle against the enemy's maneuvers of sabotage in the political, economic, cultural and ideological fields.

Our youths serve as the mainstay in socialist construction and the defense of the country and the city. The party organization must pay special attention to leading the youth union. Schools, society and families must closely coordinate with one another to manage and educate the city youths satisfactorily and must encourage them to live, struggle and forge themselves in accordance with the examples set by Ly Tu Trong, Tran Van On and Nguyen Van Troi so that they can uphold the glorious tradition of Vietnamese youth in all spheres of activities as called for by the fatherland and the party.

The intellectuals constitute a valuable national asset. Their knowledge and talents must be highly appreciated. It is necessary to give them appropriate assistance in their professional pursuits as well as in their lives and to mobilize them for employment in research on economic plwns and scientific and technical subjects, thus creating conditions for them to make better contributions to the scientific and technical revolution and to the building of a new culture and a new type of man.

During the national democratic revolution, the Vietnamese women organized themselves into a massive revolutionary force. In the socialist revolution, women play a very important role. It is necessary to educate, mobilize and organize them for participation in the three revolutions--exercising their right to mastery, achieving equality between man and woman, and carrying out social liberation and the liberation of woman.

For followers of the various faiths, our unswerving policy is to respect the freedom of religion and achieve unity between believers and nonbelievers in order to transform and develop the economy, promote production, organize a new life and firmly defend the fatherland. Our goal to fight for the independence of the nation and the happiness of the people is completely consistent with the profound aspirations of the religious masses, and, therefore, we believe that followers of the various religions will always share the same road with us in striving to achieve this lofty goal.

It is necessary to perfect the institutions of collective mastery at various levels, especially at the grassroots level; consolidate and enhance the quality of leadership of party organizations and party chapters; constantly consolidate and perfect the administrative machinery at all levels, especially at the level of city ward and village administration; and improve the organization and activities of mass organizations. Efforts must be made to improve the form and contents of meetings and other activities so as to make it practical and convenient for the masses to contribute their views about all problems related to their interests and right to mastery.

We must build a new culture and a new type of man. During their rule of more than a century in our country, the imperialists carried out an extremely perfidious cultural policy aimed at dividing and humiliating our nation, eroding our people's patriotism, trampling on the lofty Vietnamese moral values, generating admiration for and fear of imperialism, and giving rise to a class of people who love to adopt foreign ways and forget their own origin, who lead a parasitic and depraved life, who despise labor and who run after the basest and most selfish interests of individualism.

In the protracted struggle for national liberation, our city's compatriots have heightened revolutionary heroism. However, a number of the city's inhabitants have inevitably acquired the bad habits of the enemy's decadent culture. Over the past 5 years Ho Chi Minh City has scored many commendable achievements in its struggle to reform those who were victimized by the former regime, and in its patient efforts to build a new type of man in various strata,thereby creating the fundamental spiritual and cultural bases for a new way of life.

However, complexity still prevails in the city's struggle for cultural and ideological building. Along with the good things, good people and good deeds, which are increasing, bad things, vicious people and vestiges of the decadent culture still prevail in certain groups among the people.

Therefore, party committees and administrative echelons must always firmly grasp the cultural and ideological front, coordinate all forces and facilities to carry out formulated plans which are applicable to each objective and consistent with the thoughts, feelings and aspirations of all circles, age-groups and social classes. This can be done not only by education and propaganda, but also by various forms of mass cultural work and through the masses' revolutionary movement in order to, on one hand, build new culture and a new type of man, and on the other continue to wipe out the vestiges of the old culture.

Ho Chi Minh City must develop its strength in terms of material facilities and the forces engaging in cultural work to better meet the needs for literary and artistic entertainment in order to bring culture and art into laboring hamlets, villages and the rural areas. It must create sports and health movements among the people in all remote places and in the city, and provide them with artistic performances, libraries, film shows and so forth. The supervisory task must be strengthened and the quality of mass cultural, literary and artistic movements relentlessly enhanced to create in them the nature of socialism and national characteristics which oppose the vestiges of the decadent and reactionary culture of neocolonialism.

Efforts must be concentrated on making the city bearing the name of President Ho Chi Minh and the capital city of Hanoi the worthy symbolic centers of the new culture of independent and Socialist Vietnam.

Through the implementation of the three revolutions, especially through the cultural revolution and by means of political and ideological activities in the party, in youth unions, teenagers' units and in socialist schools, we educate, invigorate and train new socialist men. The new man must, first of all, be Vietnamese--a man who has derived a clear understanding of our history of heroism and the national origin; who is imbued with patriotism and proud of being the son and nephew of the kings of the Hung Dynasty, the Trung sisters, Kings Tran Hung Dao, Le Loi, Nguyen Trai and Quang Trung; and who is combatant of the Ho Chi Minh era.

We must provide information to all the city's dwellers to enable them to clearly understand our national history, to be proud of the Vietnamese people and nation and to profoundly understand the flesh and blood relations between the life and death of themselves and their families and the existence and nonexistence of the Vietnamese fatherland and the Vietnamese community. It is also necessary for them to know how to combine their patriotism with the spirit of proletarian internationalism, love and respect the revolutionary cause of the fraternal countries, the international working classes and the oppressed people, and strengthen solidarity with the peoples of the world in the struggle for the lofty objectives of our era.

Society is the integration of three elements--man, family and the entire society. Society cannot exist without man; nor can it exist without the procreation of man by the family; and man and the family cannot live without the entire society. These three elements form an integrated whole, and the socialist economy and culture must be designed to support them. The new socialist man is one who leads a beautiful life with his right to collective mastery, who cherishes and feels close to the new regime, who correctly combines his own interest with that of the collective and the whole society, who loves labor and considers it as man's cause for existence and quality and the means with which to master nature, society and himself, and who is rich in compassion and respects the truth.

We must educate, train and foster the new socialist man right from his childhood. Therefore, it is necessary to develop the city's initial results in caring for and educating teenagers and children, organize more satisfactorily their upbringing and education in nurseries and kindergartens, and encourage all mass organizations, branches and echelons as well as the whole society to respond to and make practical contributions to the training of future revolutionary generations. Though we are still poor, utmost efforts must be made to do whatever is possible to ensure that the young ones are brought up, educated, cared for and protected more satisfactorily.

Socialist construction must necessarily be closely linked with the defense of the socialist fatherland and the maintenance of political security and social order against the schemes and acts of aggression and sabotage of the Beijing expansionists and hegemonists. In pursuing their hostile policy towards our people and undermining our socialist construction, the Chinese reactionaries as well as the U.S. imperialists and other imperialists and reactionaries consider Ho Chi Minh City a strategically important area. They have coordinated their activities in various fields to oppose us--dividing and inflaming us politically while sabotaging our economy by disrupting the market, and employing psychological and espionage warfare tactics. There is a connection between the activities of the reactionaries in the city and the intelligence and espionage command organizations from the outside. The city's party organization and the people must clearly recognize the perfidious schemes of the enemy, constantly hone their spirit of revolutionary vigilance and struggle in all fields--combining the security, armed and mass forces--to smash all acts of political and economic sabotage and all psychological and espionage warfare activities; and at the same time, they must struggle to repel and eliminate the negative phenomena in society, and severely punish and wipe out all the hooligans, remnant reactionaries, dishonest traders and other corrupt and traitorous elements.

Along with the southern provinces, Ho Chi Minh City must continue discharging its glorious obligation to serve as the great rear of the country in the struggle against the Chinese expansionists and hegemonists.

Dear comrades, the great tasks entrusted to the Ho Chi Minh City party organization and the city's important position in the undertaking to build socialism and defend the country require that vigorous changes be made in the building and consolidation of the party organization, especially in the enhancement of its organizational capability and fighting strength from the level of the city party committee down to the various party organizations at the grassroots level and from the leading cadres to all party members.

We must closely combine the effort to develop and consolidate our party with all the political tasks of our revolution in the new stage. It is necessary for the entire party organization as well as for each party organization, cadre and party member to struggle to make themselves strong in order to be able to fulfill their duties. Through this struggle, they must also improve themselves both in their knowledge and organizational skills and in their political quality and revolutionary ethics.

It is necessary to improve the ability and knowledge of the party organization in all aspects, especially in economic and social management and the organization of the people's livelihood. Regardless of position, every cadre and party member must study hard and must bear in mind that learning is a criterion of the party's character. They must devote part of their time to visiting various establishments to learn how to engage in production and trade as well as studying the methods applicable to large-scale industrial production. They must also study hard in order to be able to firmly grasp and correctly implement the party line and the state laws.

It is necessary to make every cadre and party member clearly understand their role in the struggle to switch from the national democratic revolution to the socialist revolution--a struggle not to defeat the imperialist enemy from outside but to transform an old society into a new society and to improve ourselves in line with the image of that new society. This struggle requires that party members play an exemplary role in implementing the policies on transformation of capitalist trade and industry, on agricultural cooperativization, on land reform and on tax payment and the sale of surplus agricultural and other products to the state in accordance with the party's stand to serve the interests of socialism. They must firmly refuse to be bought by the bourgeoisie.

To carry out the political tasks in the new stage, it is also necessary for cadres and party members to clearly identify the true nature of the new enemy of the Vietnamese revolution--Chinese expansionism and big-nation hegemonism. Confident of our people's ability to defeat the Chinese reactionaries, let us remain always vigilant in order to smash all their schemes and acts aimed at undermining our country.

Over the past 5 years, many members of the Ho Chi Minh City party organization have stood firm on the new revolutionary battlefield. They have proven themselves worthy of the title of communist fighters by their absolute loyalty to the revolutionary cause and their exemplary role in implementing the policy on socialist transformation. They have also won the love and confidence of our compatriots for their correct implementation of all policies to support socialist transformation and their dedication to serving the country and people.

However, it is unfortunate that a number of party members have poorly demonstrated their fighting will. They have relaxed and only concerned themselves with their private life without thinking about the living conditions of the masses. A small number of them have become degenerate and degraded, falling for the enemy's schemes or committing such serious shortcomings as stealing public property, corruption, oppression of the masses, depravity, and so forth. As a result, the party's reputation has been damaged.

In carrying out the present political and ideological tasks, it is necessary for the party organization to clearly distinguish right from wrong in matters of the principal nature of the revolution in the new stage. This is to help the aforementioned cadres and party members overcome their shortcomings and mistakes and firmly follow the path of the struggle for national independence and the success of socialism and communism.

Regardless of their positions, all cadres and party members must improve their ethical quality and always remain sober, strict and committed so as not to become degenerated and corrupt. Efforts must also be made to ensure that all regulations established recently by the party Central Committee concerning the system of self-criticism and criticism among cadres and party members are scrupulously implemented. It is necessary to promptly take action against corrupt elements who refused to improve themselves and resolutely remove them from the party.

Firmly maintaining the close relationship between the party organization and the masses of laboring people is a requirement of the task of building and consolidating the party. It is necessary to struggle against bureaucratism and authoritarianism, which cause inconvenience to the people and infringe upon the laboring people's right to mastery.

In this city, during a meeting with the comrade chairmen of the people's committees in the southern provinces and cities in 1977, I said: Any time a communist party member fails to think about realizing the laboring people's right to collective mastery, he betrays his own ideal and is no longer worthy of his party membership.

It is necessary to make our compatriots in the city clearly understand this concern of the party so they may contribute their ideas to the building of the party and help the party in checking the qualifications of its members. All cadres and party members must severely demand that they themselves rise up to meet the requirements of the revolution. They must serve the people better and must not cite their own difficulties as excuses for causing trouble to the people.

We must resolutely strive to act upon President Ho Chi Minh's teaching that our party must preserve its purity and serve as a worthy leader and absolutely loyal servant of the people.

The party is the staff which decides the success or failure of the revolution. The strength of this staff lies in its unity of views on its line, in the unity of its organizations, and in its unity of will and action. All party organizations, all levels of leadership and all cadres and party members of the Ho Chi Minh City party organizations must always preserve their unity and singlemindedness, the unity between old and new cadres, and the unity among cadres coming from different localities and training schools.

The unity and singlemindedness of the party organization will serve as the nucleus for the unity of the more than 3 million people in the city who, be they non-Catholics or Catholics, Vietnamese or Hoa, share the joy of success and the worry about the difficulties encountered in the process of development, and who are determined to overcome all hardships and trials so as to join with the people in the rest of the country in building and defending the beloved Vietnamese fatherland.

The party Central Committee is confident that the Ho Chi Minh City party organization, with its tradition of steadfast struggle against foreign aggression and of close unity with the masses, will certainly be able to make the best use of the latent potentials of the locality in order to promptly overcome the immediate difficulties and build our city in such a way as to make it worthy of the reputation of the great Vietnamese communist fighter, Comrade Ho Chi Minh, after whom it has the honor to be named.

I wish the second congress of the Ho Chi Minh City party organization fine success.

May the city's party organization and people enter the 6th year of the new era of the nation with confidence and the resolve to score many new successes!

THE LAO PEOPLE'S DEMOCRATIC REPUBLIC STEADILY ADVANCES

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 13-18

[Unattributed article]

[Text] On 2 December 1975, the Lao People's Democratic Republic was born. This was the great result of 30 years of arduous and tenacious revolutionary struggle by the peoples of the various Lao ethnic minorities under the leadership of the Lao People's Revolutionary Party.

Objectively and comprehensively analyzing the realities of Lao society and the general trend of our times, the 2nd National Congress of Delegates of the Lao People's Revolutionary Party held in early 1972 reaffirmed that advancing to socialism is the inevitable trend of the Lao revolution. The congress set forth the basic task of the Lao revolution as: "...preparing every condition needed to advance directly to socialism without following the course of capitalist development."

In late 1975, relying upon this basic task, the Lao People's Revolutionary Party, following the completion of the national democratic revolution throughout the country, set forth the line of "building a Laos of peace, independence, democracy, unity and socialism." The Lao National Congress of People's Delegates unanimously agreed with this line because it is consistent with the deep, fervent aspirations of the peoples of the Lao ethnic minorities.

Over the past 5 years, under the leadership of the Lao People's Revolutionary Party, the people of the Lao ethnic minorities have overcome tremendous difficulties and challenges, steadfastly followed the course of socialism and stood firm at their forward position, winning brilliant victories in the work of building and protecting the Lao People's Democratic Republic.

Together with Vietnam and Kampuchea, Laos is part of the bastion of the socialist community in Southeast Asia. Following the birth of the Lao People's Democratic Republic, the imperialists, led by the United States, the Beijing expansionists and reactionary powers in and outside Laos collaborated with one another and employed every possible measure to attack and undermine Laos in a vain attempt to weaken it, foment rebellion, topple the new regime, commit aggression against and annex Laos.

Realizing their responsibility and honor as a country manning a forward position and for the sake of the vital interests of protecting the socialist fatherland as well as the sake of their sacred obligation to the world revolution, most immediately the interests of peace and stability in Southeast Asia, the people of the Lao ethnic minorities have always been vigilant against every insidious scheme of their enemies, both old and new, constantly heightened their revolutionary vigilance, strengthened their unity, struggled to defeat every scheme of the imperialists and the lackeys to encircle and attack them and every very insidious scheme of the Beijing expansionists to infiltrate, divide and undermine them, including fomenting rebellion and toppling the regime, thereby maintaining the independence, sovereignty and security of the country. Through the challenges of the new fight, the armed forces and the people's security forces of Laos have constantly grown in both size and quality, always displayed revolutionary heroism and the fine nature of the people's armed forces and overcome every hardship and sacrifice in order to fulfill the mission of the key force of the dictatorship of the proletariat on the front of maintaining security and defending the nation.

Laos is a country that has rich natural resources; however, Laos is advancing to socialism from a small-scale production economy of a very natural, subsistent nature that has been ravaged by 30 consecutive years of war and by continuous natural disasters over the past several years. As a result, the Lao People's Democratic Republic encountered extremely large obstacles in restoring and building the economy and developing the culture. However, over the past 5 years, as a result of adopting a correct line for mobilizing the masses to enthusiastically participate in work and production and together with the assistance of the fraternal socialist countries and their friends throughout the world, the Lao People's Democratic Republic has gradually overcome its difficulties and won many important victories on the economic front, thereby stabilizing and gradually improving the standard of living of the people of the ethnic minorities.

In agriculture, the amount of area under cultivation has increased nearly 20 percent compared to liberation day (primarily as a result of restoring fields to production and clearing land), the amount of area under rice cultivation has increased 30 percent compared to 1976, the amount of area under the cultivation of industrial crops and subsidiary food crops has increased three-fold and total grain output has increased by more than 30 percent. Water conservancy work has received very much attention from the state and become a mass movement throughout the country. Many large and medium size water conservancy projects have been constructed. The amount of area irrigated has increased three-fold compared to the period of time preceding liberation day. The livestock herds that declined seriously during the war have been rapidly restored and developed. The buffalo and cattle herds have increased by more than 30 percent and the hog herd by 70 percent compared to 1976. The amount of area under cultivation and the output of industrial crops, especially coffee and tobacco, have increased by 25 to 30 percent. The socialist transformation of agriculture, which began in mid-1978, has recorded important achievements: at the start of 1980, Laos had more than 2,500 agricultural production cooperatives, which account for 50 percent of the total number of farm families; this does not include the tens of thousands of production solidarity teams that are now operating successfully, thereby creating the conditions for farmers to receive practical training in order to put the earning of a collective living on a regular basis. Dozens of state farms and agricultural experimental stations and farms have been and are being built.

Forestry is one of the two strengths of the Lao economy. During the past 5 years, more than 1 million hectares of forests have been investigated and surveyed in key areas. Timber output increased nearly 70 percent in 1980 compared to 1977. Timber leads the list of primary exports of Laos at this time.

Prior to liberation day, the industry of Laos was a small, crippled industry heavily characterized by contract production and frequent shutdowns caused by shortages of raw materials and supplies; now, the majority of this industry has been restored. The output of state-operated industry accounts for more than 75 percent of the country's industrial products. Many installations have been enlarged or constructed, such as the Nam Ngum Hydroelectric Power Plant, the capacity of which is four times greater than it was prior to liberation day, livestock feed processing plants, veterinary medicine production plants, machine repair enterprises, enterprises producing farm implements and building materials, enterprises processing grain, food products and so forth. The handicraft trades, which were practically eliminated under the old regime, have gradually been restored and incentive has been provided for their development. Generally speaking, industrial and handicraft production still faces many limitations, but has supported agriculture, forestry, everyday life and export activities.

The communications and transportation sector has also recorded important achievements. The highway system is now more than 30 percent longer than it was prior to liberation day and nearly 500 bridges have been repaired or constructed. The transportation capacity of the state is increasing with each passing day. Domestic and foreign air routes have been restored. The opening of routes to the sea through the east is being promoted.

Socialist commerce has constantly developed. The number and size of state-operated stores have doubled compared to 1975. Marketing cooperatives have been established and broadened their business network to 36 percent of the villages. The acceleration of the transformation of capitalist commerce made an important contribution to managing and stabilizing the market. The foreign trade sector has made numerous efforts. The goods sold by the state to the people in 1980 represented a 2.8-fold increase compared to 1977; exports increased nearly three-fold in 1979 compared to 1976.

Many positive measures are being taken to accelerate the establishment of an independent financial and monetary system. The unjust tax policies of the old regime have been replaced with new, fair and reasonable tax policies designed to provide incentive for production and increase budget revenues. The establishment of one monetary system throughout the country and the issuance of the bank "kip" were victories of important economic and political significance that helped to thwart the schemes of the enemy to monopolize the economy and undermine the political system, especially the schemes of the Beijing reactionaries regarding the Lao People's Democratic Republic.

In keeping with the line of advancing the cultural and ideological revolution and the guideline of building a national, democratic and socialist culture, the Lao People's Democratic Republic has made full use of every capability to accelerate the development of the education, public health and cultural sectors and, in this manner, clearly show the superior nature of the new system. General school education has developed at a rapid rate. In 1980, 26.5 percent of the citizenry attended school (including supplementary education and popular education); general school enrollment increased 157 percent during the 1979-1980 school year compared to the 1975-1976 school year and nearly doubled compared to the 1973-1974 school year; compared to the 1973-1974 school year, level II school enrollment has increased nearly six-fold, level III school enrollment has increased 11-fold and vocational school enrollment has increased 12.9 times; college enrollment increased 73 percent during the 1979-1980 school year compared to the 1977-1978 school year. Thousands of students, cadres and technical workers have been sent overseas to study. Particular attention has been given to wiping out illiteracy and providing supplementary education and many outstanding achievements have been recorded in this effort. As of January 1980, 80 percent of illiterates had been taught to read and write and illiteracy had been wiped out in 86 percent of the hamlets and 94 percent of the villages; by the end of the year, the number of provinces in which illiteracy has been wiped out rose to 10 (of the 13 provinces in the country). Hundreds of thousands of persons are attending supplementary education classes.

The public health sector has made many efforts. The public health network has constantly been expanded. Attention has been given to disease prevention sanitation. Many impressive results have been achieved in researching the coordination of eastern medicine with western medicine and the utilization of folk remedies. The number of hospitals amd medical aid stations has increased by 50 percent and the number of hospital beds has nearly doubled compared to 1975; the number of physicians, doctors and pharmacists has increased nearly 2.5 times and the number of public health stations has increased four times compared to the period preceding liberation day.

The party and state of the Lao People's Democratic Republic are very concerned with wiping out the social ills and the decadent, reactionary culture left behind by the old regime and building and developing a new culture of socialist content in order to competently support socialist transformation and socialist construction. In particular, the mass literature and art movement, the effort to restore the human dignity of the victims of the old society, restore good morals and customs, establish the civilized style of life and so forth have been warmly responded to by the masses in both the cities and the countryside and attracted the attention and won the admiration of foreign visitors to Laos. Over the past 3 years, the size of the wired radio system has increased three-fold. The number of movie theaters has increased by 30 percent and the number of mobile movie units has increased by 20 percent compared to 1977; many professional cultural entertainment units have been established.

In foreign affairs, following an independent, autonomous line and displaying the socialist international spirit, the party and state of Laos have always attached importance to strengthening their special relations with Vietnam and Kampuchea and establishing increasingly close relations with the Soviet Union and the other fraternal socialist countries while broadening their relations with the nationalist countries and international organizations and constantly developing their role within the movement of the non-aligned countries. The prestige of the Lao People's Democratic Republic has constantly grown in the world. As a result, over the past 5 years, Laos has received widespread, tremendous sympathy, support and assistance from many countries and organizations in the world, especially the Soviet Union and the other socialist countries, in its work of building and protecting the country in the new stage of the revolution.

The achievements presented above have made the position and power of the Lao revolution stronger than ever before. The Lao people's Democratic Republic, although still young, has met various challenges and is steadily advancing.

The important, fundamental and comprehensive victories of the Lao People's Democratic Republic over the past 5 years originate in the correct and creative leadership of the Lao People's Revolutionary Party, a genuine and experienced Marxist-Leninist party.

Immediately after seizing political power throughout the country, the Lao People's Revolutionary Party clearly established socialism as the immediate goal of the Lao revolution. The party maintains that advancing to socialism is the only correct course to follow; only socialism can insure that Laos is truly independent, that the Lao people are truly free and that the right of collective ownership of the working people is upheld.

As regards its strategy, the party has taken the position of closely coordinating the two tasks of building socialism and protecting socialism because Laos is advancing to socialism at the forward position of the socialist system and because, although it is at peace, it is also facing the threat of sabotage, aggression and annexation by the Beijing expansionists, who are collaborating with the imperialist powers and reactionaries in and outside Laos.

The general line adopted by the Lao People's Revolutionary Party is: firmly maintaining the dictatorship of the proletariat, upholding the right of collective ownership of the working people and simultaneously carrying out the three revolutions, with the production relations revolution opening the way for development, the scientific-technological revolution being the key revolution and the cultural and ideological revolution being accelerated; reorganizing production, developing industry on the basis of agriculture and forestry, gradually building a system of large-scale socialist production, eventually carrying out socialist industrialization and considering it to be the central task throughout the period of transition to socialism. In order to implement this line, the party has taken the position of closely linking the three areas of security, national defense and construction; strengthening the political base and building and developing the economy and culture; making every effort to develop and reorganize production, especially agricultural production and forestry; developing trade and coordinating the central economy with the local economy; and considering production to be the basic factor, commerce to be the main link and communications to be the spearhead in abolishing the natural economy. This line and position are very consistent with the characteristics of Laos, a country which, although it has rich natural resources, does not have a large population and is advancing to socialism from a small-scale production economy of a very natural, subsistent nature; material-technical bases are still small, practically all labor is manual labor and productivity is low; trade among the various areas and localities is still very limited; the cultural level of the people, cadres and soldiers is not high and the remnants of the thinking and culture of the old society are still rather widespread.

The tremendous victories won in the work of building and protecting socialism in the Lao People's Democratic Republic over the past 5 years show that the revolutionary heroism and traditions of unyielding struggle and diligent labor of the people of the Lao ethnic minorities have been and are being strongly developed upon in the united national front, the nucleus of which is the strong alliance of workers and farmers that was tempered and challenged in the 30 years of arduous and tenacious revolutionary struggle under the leadership of the Lao People's Revolutionary Party.

The party, government and people of Laos have also established the fact that the victory of the Lao People's Democratic Republic could not have been won without the support and assistance of the fraternal countries and their friends throughout the world, primarily the countries within the socialist community.

On the road to socialism, the Lao People's Democratic Republic will experience many difficulties and challenges. However, under the wise leadership of the Lao People's Revolutionary Party, an experienced Marxist-Leninist party, the people of the fraternal Lao ethnic minorities will surely successfully complete their glorious revolutionary task and successfully build a Laos of peace, independence, democracy, unity and socialism.

At present, the people of Laos are making every effort to carry out the immediate tasks set forth by the party and government of Laos:

--Strengthening their unity, heightening their vigilance, maintaining their readiness to prevent and combat aggression, prevent and combat rebellions and subversive activities, prevent and combat every scheme to bring about peaceful change and every psychological warfare scheme of the imperialists and the international reactionaries;

--Making every effort to restore and develop the economy, restore production, stabilize the lives of the ethnic minorities and, on this basis, stabilize the political situation and create the conditions for socialist transformation and socialist construction to be carried out smoothly;

--Making every effort to do everything necessary and possible to prepare for the first 5-year plan (1981-1985).

At the neighbors, as the comrades and brothers of the people of the Lao ethnic minorities, we are very excited and proud of the brilliant achievements recorded by the Lao People's Democratic Republic over the past 5 years. We consider these victories to be our own because the victories of the Lao Peole's Democratic Republic as well as the victories of the people of Kampuchea and the victories of the Vietnamese are tremendous and important contributions to increasing the strength of the militant solidarity of the peoples of the three countries of Indochina against the common enemy, the expansionist and imperialist powers, for the common goals of national independence and socialism. These victories are the factors insuring peace and stability in Southeast Asia and are a contribution to peace and the revolution throughout the world.

Over the past 5 years, together with the victories and growth of the Lao People's Democratic Republic, the especially pure, loyal and rare relationship between Laos and Vietnam has constantly been strengthened and developed in a comprehensive manner. The most vivid manifestation of the further strengthening of this relationship is the signing of the Treaty of Friendshhp and Cooperation, the Vietnam-Laos National Border Agreement and other important documents in Vientianne on 18 July 1977. The scrupulous implementation of these treaties by both sides over the past several years has yielded many concrete results, thereby helping to tighten the alliance between the two countries and help each country acquire additional strength with which to build and protect socialism in their country. This reality further confirms the inevitable nature of the special Vietnam-Laos relationship; in the history of the two nations of Vietnam and Laos, this relationship is a precious tradition, an invincible strength, a law of development of the Vietnamese revolution and the Lao revolution.

In the face of the divisive scheme and the insane opposition of the Beijing expansionists in collaboration with the imperialists and reactionary powers in and outside Laos, the purpose of which is to weaken the militant alliance between Vietnam and Laos, the parties, governments and peoples of Vietnam and Laos are determined to protect and further strengthen the special, loyal relationship which the two fraternal nations have shed much sweat and blood to establish and build. This determination has been confirmed by high ranking leaders of the two parties. Kayson Phomvihan, general secretary of the Lao People's Revolutionary Party Central Committee, stated: "Now, more than ever before, the two parties and the peoples of Laos and Vietnam must closely unite, protect one another and help one another in a close, comprehensive and long-range manner. This is an extremely important factor determining victory in the work of safeguarding the independence, sovereignty and national construction of each of our nations in the new stage of the revolution."(1) Le Duan, general secretary of the Vietnam Communist Party Central Committee, has also stated: "The people of Vietnam are determined to work with the people of fraternal Laos to strengthen our militant solidarity, mutual trust, long-range cooperation and mutual assistance in every area so that our two countries, which worked closely together in the cause of national liberation, will always have a close relationship in the work of building socialism and protecting the country for the sake of the prosperity and happiness of the people of each country."(2)

FOOTNOTES

LITERATURE AND ART, WEAPONS OF THE REVOLUTION

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 19-26

[Article by Tran Do]

[Text] Literature and art do not reflect life in a passive manner. In societies that have classes, literature and art are of a distinct class nature. The classical writers of Marxism-Leninism and the leaders of our party have discussed the party spirit of literature and art and of writers and artists in full detail.

"Culture and art are also a front.

You are soldiers on that front."(1)

Over the past several decades, our literature and art have become increasingly oriented toward the party and the people. They were a weapon of our people in the struggle for independence and socialism and are a weapon in socialist construction. Over the past several decades, our corps of artists and writers, creating and performing works of art on the basis of the ideological stand of the party, of the working class, has been forged in combat and in scrupulously implementing the lines and policies of the party and has gradually built the socialist literature and art of Vietnam. As a result, "in view of the achievements recorded primarily in reflecting the two great wars of resistance of the nation, our country's literature and art are worthy of standing in the front ranks of the anti-imperialist literature and art of our times."(2) The principle of the party spirit of our literature and art has long been a shining truth, has long been a matter not open to discussion.

Thus, why do we feel it necessary at this time to repeat that "literature and art are weapons of the revolution"?

Our fatherland has entered a new stage. Under the new conditions that exist, there are tremendous advantages and large difficulties that we do not correctly or deeply understand. Literature and art have encountered a new reality, a new public, new tastes, new conditions surrounding their creative work and performances, new and very much higher demands regarding quality, stature and so forth; in summary, they face the requirement of undergoing extraordinary development. Those engaged in literature and art must re-evaluate what they have done and what they have not achieved in order to know how they will continue to move forward and from which position they will continue to move forward. They must develop new themes, new standards in order to meet the new needs. More than a few artists and writers have given much thought to and eagerly looked for ways to contribute to the development of our socialist literature and art in the new situation. These are efforts filled with good will that are very welcome. However, in the process of their thinking, their search, a number of cases have arisen in which, due to limitations in one area or another, deviations in opinions have arisen, deviations which conflict with the basic principles in the literature and art line of the party, with the principle of party spirit in literature and art.

How have these deviations arisen?

They began with an incorrect, less than cautious evaluation on the part of some writers and artists of the achievements recorded in literature and art, primarily our literature and art in the recent stage. Some of these persons maintain that the achievements that have been recorded amount to nothing, that literature and art reflect reality and are extremely rich but say nothing of significance. Some only see the limitations of works of art. And others only concern themselves with the inexperience, the simplicity and the brevity, considering them to be the controlling factors, the essence of our literature and art. Thus, "making much ado about nothing," they reach the observation that our literature is an empty literature, a phony literature.

Even with regard to the "achievements recorded primarily in reflecting the two great wars of resistance of the nation" as a result of which "our country's literature and art are worthy of standing in the front ranks of the anti-imperialist literature and art of our times" are doubted by some. They maintain that these works of art leaned heavily toward describing "persons who were lucky in war," describing them in a manner half reflecting truth and half reflecting falsehood. Or, they say that these works of art "are similar in form to the heroic epic," describing "not reality as it exists, but reality as everyone hopes and dreams it could be"; then, they ask the question: "When will we truly have novels on war themes?"

And, some persons concisely state: "Generally speaking, in our present literary works, the description of that which must exist infringes upon the description of that which does exist." "This infringement, of course, is an obstacle on the road to realism." They maintain that our literature and art in the recent stage were "popular in nature," a lofty characteristic, that they were a kind of "proper realism," that "they were concerned more with that which is proper than that which is the truth," etc.

These incorrect observations and mistaken generalizations have led to a tendency to deny the achievements recorded by our people in the field of literature and art and reraise the question of truth and socialist realism in our literature and art. We are forced to think here that these incorrect observations and mistaken generalizations reflect a restatement of some of the arguments of Albert Camus, who called the socialist system a dictatorship and attacked socialist realism in art in an insidious manner. In his Address in Sweden, 1957, which was highly praised by bourgeois circles, Albert Camus said: "In the field of culture as well as in other fields, the dictatorial system is very arbitrary: realism is first a need, a need which can then become an achievement, provided that it is socialist in trend...

In actuality, the dictatorial system sincerely recognizes that it cannot restore reality and, without any selectivity, denies the realist theory proposed in the late 19th Century; it only needs a selective principle around which life will build itself. And, it discovers this principle not in the reality we see today but in the reality that will be, that is, in the future. In order to correctly record that which exists now, it must describe that which will exist. In other words, the true subject of socialist realism is something that has not yet become real...

In the end, this art is only socialist in nature but clearly not socialist in fact...

Art is dragged down until it is nothing. It serves and is a servant, it is enslaved and controlled...

Socialist realism is made to be the twin brother of political realism..."(*)

What is "proper realism"? Is it another name for the "political realism" of Camus? Are not "the real that exists" and the "real that must exist" the "that which exists now" and the "that which has not yet become real" of Camus? If this is so, it is a search for realism in the wrong direction and the discovery of realism in things not worth discovering.

What is truth? Truth is the accurate reflection of reality. Reality encompasses the natural world, social life and man with all his feelings, desires and problems. Correctly reflecting the truth is not something that involves convenient fabrications or forcing reality to conform with our subjective desires. Nor does it mean copying reality as done in the naturalism of Vu Trong Phung. When talking about realism, Engels pointed out: "In addition to the accuracy of details, it is also necessary to mention accurately reflecting model virtues in model circumstances."(3)

In writing about our two wars of resistance, for example, it is not necessary to describe in detail each battle in order to correctly reflect reality, provided that the persons and events described reflect the profound relationships that exist in reality, reflect the ardent patriotism, the close unity, the determination to fight and win and the revolutionary heroism of our people. Only by reflecting model virtues under model circumstances is it possible to reflect life with its genuine socialist content and in its trend of development. This is clearly related to the level of recognition of reality and the grasp of art of the artist.

It must be said that we have, over the past 30 years and more, recognized reality and have had a positive, reciprocal impact upon reality in the direction of the course of development of history. Under the light of the party's line, our corps of writers and artists has, generally speaking, learned how to correctly perceive the truth, grasped the essence and the trend of development of our society and described it in an intelligent, genuinely moving manner employing rather rich artistic language. The novels, poems, plays, paintings and songs praising and inspiring valiant deeds in combat and construction that are filled with the revolutionary heroism of our people, that have elevated the soul and intelligence of our people and helped to stimulate the advance by our country's revolution to the victories of today, are not they works of socialist realism that try to "describe reality in a true, detailed and historic manner in the process of development of the revolution"?

Why are they frivolously and unfairly called works of "proper realism," works that are not honest, works that "describe that which must exist not that which does exist" and works that are "one-half real, that are fraudulent"?

Our literature on the two wars of resistance of our people, which describes the brave fighting spirit and the sacrifices of our people in these two wars, correctly reflects objective reality, not only "one-half of reality" that must be balanced by another "half of reality" that is missing, is lost, balanced by means of the tragic echoes of individuals fate! In war, it is, of course, necessary to shed blood and make sacrifices in order to win victory. All progressive mankind has praised Vietnam for the way and the reasons why it fought and won victory. The enemy we faced then is still constantly threatening to commit aggression against our country. If necessary, our people will wage the same fight and win the same victory or an even larger victory. This is the reality of Vietnam, the circumstances of Vietnam, the people of Vietnam, the ethics of Vietnam. Therefore, with regard to elevating the realistic nature of our literature on the war, it is not necessary to retrieve the one-half that individualism considers to have been lost, but only necessary to reflect the entirety of that great fight "well, honestly and eloquently," a great fight in which the dominant theme was heroism.

Reality must be recognized, explained and reflected within the entity that it is, in exact accordance with its nature and in its trend of development. Here, the ideal and the real, that which must exist and that which does exist are closely linked to each other; the latter is the foundation of the former and the former is the inevitable trend of development of the latter. That which is real is constantly developing. Reflecting that which is real requires reflecting this development.

We cannot be satisfied with the achievements that have been recorded. Improving the genuine nature and the quality of works of literature and art is always a requirement of our party, our people and every artist. Besides successful works, our literature also includes works that have not been a success, works that are simplistic and shallow. Even among some works that have been a success there are still parts that are not good, parts that are not truly genuine and eloquent. However, this is no reason to conclude that our art is not genuine.

With regard to the weaknesses and shortcomings of our literature in the recent stage, we must fully understand each reason for them. Some reasons are objective. Some are due to shortcomings and weaknesses in our work.

Even in a number of cases in which writers and artists feel restricted or are compelled to revise their work to comply with the requirements of the committee in charge of a newspaper, a theater or a publishing house, for example, thorough analysis of the case is necessary in order to avoid offending the writer or artist; it is as if only a banned painting is a beautiful one, only literature in manuscript form belongs to the author, is realistic while printed literature is not realistic and no longer belongs to the author! Here, there might be unnecessary or rude intervention by a cadre in charge who does not understand or fully understand the special characteristics of literature, the subtle and long-range, broad impact of literature and simply wants every work to have an instant, specific impact in order to support an immediate political task. Occasionally, this cadre sets forth excessive requirements of an author on the basis of legitimate requirements of a publishing agency. However, it is also possible that the knowledge and cultivation of the author are not comprehensive and deep and that his sense of responsibility might not be as high as it could be. Authors who possess zeal and good motives want to contribute many good works, but zeal and good motives are not enough.

We must be aware of the requirements of the revolution in each stage and task of literature and art, of the writer-soldier and the artist-soldier; we must always heighten the party spirit in our thinking, feelings and creative works. We must "write from our hearts but our hearts must belong to the party"(So-lo-khop [Vietnamese phonetics]). We must carefully consider whether everything we write is beneficial or harmful to the revolution. We must also realize that the agencies of the party that lead literature and art only want and do everything they can to have many good works with which to meet the requirements of the revolution; every publishing house has its own policy and objectives and must have certain requirements of authors so that art is truly a weapon of the revolution, etc. With this in mind, it will be easy to achieve oneness of mind between authors and artists and the persons who manage literature and art. Antagonisms might still develop but when the reasons for them have been thoroughly analyzed in a spirit of comradeship, they can be easily resolved in a satisfactory manner.

In summary, it is necessary to correctly evaluate our socialist realism in literature and art in the recent stage: its strength as well as its shortcomings and weaknesses. We are proud to have works of art that mark a stage of development of our literature and art and are worthy of our nation, our people. Let us treasure the values we and our brothers have created through the shedding of much sweat and even blood. Let us be fair with ourselves and everyone else. Because, an unfair evaluation that reduces or denies the achievements that we struggled so hard and made so many sacrifices to record might easily cause discouragement and doubt and even lead to the re-examination of fundamentals, of matters of principle.

Another basic question that is also starting to be raised again against the background of the wavering opinions and confused attitude of some persons is the question of the function of our socialist literature and art.

Some persons maintain that our literature and art are art and literature for education and training based on the desires of the leadership. They say that, in our literature and art, "awareness of reason overpowers awareness of sentiment, intellect overpowers sentiment, essence overpowers phenomenon, content overpowers form." They want our literature to only give attention to ideology, not to art. They maintain that our literature is rudimentary and simplistic because of a "superficial concept of the function of literature," etc. They maintain that our literature has, for a long time, only attached importance to the function of teaching ideology. Here, ideology is understood as pre-established formulas and frameworks within which the artist must fit himself in order to be "proper."

Some persons say that the thinking in works of art is only the thinking of the party and that these works reflect virtually none of the thinking of the author. In the beginning, such words might only be designed to criticize dry works of art that lack creativity, that is, lack uniqueness on the part of the author in his method of viewing and generalizing the phenomena of life. However, on this basis, against the background mentioned above, odd arguments are formed that divide the writer in two: the writer as a person following the thinking of the party and the writer as a person following his own thinking; that divide literature in two: literature as an ideological weapon of the party and literature as a mirror reflecting reality through creative art.

Such divisions are clearly absurd. There are not two separate and distinct authors within the socialist author. There are not two such literatures within a socialist system of literature. The author is a person who propagandizes the thinking of the party in his own words. When it is a mirror reflecting reality through artistic creativity, literature must continue to be an ideological weapon of the party; literature can only play the role as an effective and sharp ideological weapon of the party when it is a mirror reflecting reality by means of artistic creativity.

We consider literature and art to be weapons of the revolution. However, to play this role, literature and art must simultaneously and fully perform each of their functions.

When we call a work a work of art, we do so from the point of view of the work as a whole. Only in theoretical thinking can we analyze content, form, ideological nature, artistic nature, dialectial relationships, reciprocal impacts and so forth. Artistic works have an impact upon us as a unified entity and have an impact upon all of our human "instincts." Only in theory can we analyze the different modes and forms of this impact.

When the performance of a play satisfies us by giving us aesthetic pleasure, it is because of the entire performance, because of the beautiful symbols of theatrical art created by the entire performance from the time the curtain first opens. These artistic smmbols move us, bring to us a new understanding of life, elevate our thinking, feelings and ethics and arouse in our consciousness and imagination many-sided associations that give these artistic symbols increasing richness and completeness and cause us to cry, to smile, to believe in the things that the performance wants to transmit to us. How can we separate the fabric of life reflected in the artistic form of this theatrical performance from the thinking and viewpoints it touches upon and calls to mind? How can we mechanically say that the faithful pictures of the life of man reflected on the stage fulfill the function of recognition; that concepts, ideas, ideals and so forth serve the function of teaching ideology; that the style, artistic method and creativity of the director and performers serve the aesthetic function?

No! A work of art serves all of these functions by means of its being a complete entity. When we analyze the content, form, ideological nature and artistic nature of a work of art, when we discuss the functions of recognition, education, aesthetics and so forth of a work of art with a view toward stimulating the development of our literature and art, we see that these things are not truly in harmony with one another in all cases, that one aspect might need to be improved; however, we do know that they are closely related to and founded upon one another. Therefore, we are not permitted to separate and isolate these things nor set them into opposition against one another. Our literature and art must simultaneously and fully fulfill its primary functions of recognition, education and aesthetics in order for them to be effective weapons of the revolution and they must be weapons of the revolution in every function. They cannot be the ideological weapon of the party by merely serving the function of education nor must they only serve the function of education in order to be the ideological weapon of the party and not serve the functions of recognition and aesthetics. Nor is it unnecessary for them to be the ideological weapon of the party when fulfilling their aesthetic function. If someone should say that they should also fulfill the function of entertainment, even when fulfilling this function, our literature and art must still be weapons of the revolution, must bring pure, wholesome aesthetic pleasures because we do not need empty or licentious, harmful entertainment.

Considering literature and art to only be a tool in the teaching of ideology like the other tools in the teaching of ideology and not giving attention to their special characteristics, artistic nature and special strengths is incorrect. Such would be childish. It is a simple and rudimentary concept--even a crude concept--of the functions of literature and art. Within a certain scope, among a number of comrades, even in creative work, not merely in critical theory and the guidance of literature and art, within some localities and at certain points in time, this concept has harmed the development of literature and art to some extent. This childishness must be corrected; political cadres who lead literature and art must deepen their knowledge of literature and art in order for this effective weapon in the hands of the party to have a greater impact. However, it would clearly be incorrect to maintain that this shallow concept has permeated, dragged down and controlled our literature throughout the recent stage to the point where it eroded the aesthetic capabilities of the public, caused artistic creativity to dry up and caused the proper sense of social responsibility of writers to wither, thereby creating an obstacle outside them, around them and within them, that is, it would be incorrect to consider this the only or principal cause of the so called "sluggishness in literature."

It would be an even greater mistake to maintain, on this basis, that we have long placed too much emphasis on the educational function of literature and art and that it is now no longer necessary to talk about it, but to emphasize the aesthetic function and even the entertainment function of literature and art.

It is regrettable that, in actuality, this trend has begun to emerge: there is little discussion of the educational function, of the ideological nature of works of art but much attention to interesting forms in literature and art, a bias toward the form of performances, artistic style, artistic method, sentences, words, composition and so forth; "any content will do as long as it is not incorrect" (the truth is that there have been mistakes in ideological content).

Our party never condones the maladies of rudimentary formulas and naturalism in literature and art. Our party always requires that works be of a highly artistic nature. A good work must be of a highly ideological and highly artistic nature, must create profound and strong feelings, must create intense aesthetic pleasure and bring the soul and sentiments of man to a new height. Of course, we do not demand that a work of art immediately have a concrete ideological impact in order to resolve a specific, immediate problem in life. Art has an impact upon man in a comprehensive and long-range manner. However, we also cannot tolerate a work of art that does not speak at all about the pressing problems of life, of the tasks of the revolution.

Works of art must be interesting, must bring to the public a pleasure, a delight. Therefore, full attention must be given to distinguishing legitimate, lofty tastes and needs from mundane, backward tastes and needs, even reactionary tastes and needs among the public. It is not that every work which is "accepted by the public" is a good or interesting work. Literature and art, as creative fields, also have the task of creating their own genuine audience. And, once this genuine audience has been established, the audience becomes a creator and works together with writers and artists to create a genuine and noble literature and art.

We need works of literature and art that are not only correct, but also good, diverse, interesting and moving, works that cause persons who have not seen or read them to want to see or read them and, once they have, to want to see or read them time and time again; we do not need works of literature and art that are dry and insipid. However, artistic attraction is primarily the result of the structural content of the work, of the matters raised within it having a profound philosophical significance upon the audience, of the beautiful concepts arising from deep within the dialogue which burst forth like flashes of lightning and affect the private thoughts and feelings of everyone...not merely the result of the form of the performance. Searching for factors that embody interesting forms, pursuing base tastes, trying to be interesting merely for the purpose or being interesting, being new solely for the sake of being new and creating "violent" and absurd personalities, none of these measures create genuine artistic interests. Clearly, only attaching importance to the form of a performance, to style and artistic method while giving light attention to the ideological content of the work of art is not enough to heighten the works artistic nature so that art can fulfill its aesthetic function well.

All of the points presented above prove: literature and art, in view of their inherent special characteristics, have many effects upon man on the basis of their own separate standards, simultaneously fulfill all of their primary functions, the functions of recognition, education and aesthetics, and, for this reason, are effective weapons of the revolution.

Life is always raising new problems. Literature and art are always raising new questions. We must think, conduct research and be creative if we want to continue to move forward. However, this not only demands zeal, but also correct recognition, correct methods.

Scattered opinion has caused us to observe that a trend is beginning to re-examine the fundamental principles of our literature and art. This phenomenon, which has its own historic background, is primarily the result of a limited and superficial understanding of the situation of our country and a metaphysical, unscientific method of thinking. These persons who, whether consciously or unconsciously, follow this trend do so on the basis of a desire that our literature and art fulfill their role as weapons of the revolution. No one doubts their good intentions; however, it might be because they have too much self-confidence in their good intentions that they have not carefully considered their attitude and, as a result, do not know that they have made a mistake.

We encourage thought, research and creativity for the sake of the fatherland and socialism, for the sake of the stronger development of our revolutionary literature and art. We cannot demand that this thinking, this research, this creativity always be absolutely free of deviations and mistakes. However, there is a line that cannot be crossed and we must keep our eye on that line in order to always inspect ourselves, in order to recognize: this is party spirit in literature and art, these are matters of principle in the literature and art line of our party. The mistaken opinions mentioned above, although only very few in number and widely scattered, are, in substance, serious mistakes because they truly conflict with matters of principle and must be promptly rectified.

THE MOBILIZATION OF YOUTHS IN THE NEW SITUATION

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 27-32 and 42

[Article by Nguyen Mai]

[Text] Under the leadership and guidance of the party, forged in the crucible of the revolutionary struggle of the working class and the nation and challenged in the vast emulation movements of the masses, the young generation of Vietnam has rapidly matured in many areas: youths are able to clearly distinguish between friends and enemies; possess the spirit of fighting in a selfless manner for the independence and freedom of the fatherland, for socialism; possess ardent patriotism and a deep love of the people; possess pure international feelings; are willing to endure hardships and overcome difficulties; their cultural level, their knowledge of science and technology, their economic management skills and their knowledge of military affairs are constantly being raised; they have a desire to contribute and are determined to improve themselves.

The important role and position of the young generation are clearly evident in the development of our country's revolution. At present, youths constitute a very high percentage of the persons working in the economic, technical and national defense sectors: 65 percent of the workforce of the industrial sectors, in general (80 percent of the modern industrial sectors), 52 percent of the workforce in agriculture, 60 percent of the corps of middle level technical cadres, 40 percent of the corps of high level scientific and technical cadres and more than 80 percent of the national defense forces.

On the basis of this reality, our party has asserted: our country's young generation possesses fine revolutionary qualities, tremendous potentials and a strong desire to make progress and is worthy of being the powerful revolutionary shock unit of the working class and the nation.

However, in the face of the large requirements of the revolutionary task of the new stage, the young generation has displayed shortcomings and weaknesses deserving of concern. They are:

Their spirit of socialist collective ownership is still low, a passive attitude is still rather prevalent among youths and their sense of responsibility to society is still weak. The psychology and habits of the small-scale producer are widespread. Their sense of organization and discipline, especially discipline in work, is poor.

Their ability to exercise collective ownership is still very limited. Their knowledge of Marxism-Leninism, of the lines and policies of the party, of the revolutionary situation and tasks in the new stage and so forth is, generally speaking, still low; their occupational qualifications and their ability to apply science and technology in production and in experiments are weak. In addition, some youths are backward, have foresaken their obligations, are living an unwholesome style of life and have become decadent and violated the law.

These shortcomings and weaknesses are due to the aftereffects of the long war, the influences of neo-colonialism and the influences of the small-scale production economy. On the other hand, the Chinese reactionaries in collaboration with the imperialists and other reactionary powers are frantically looking for every possible way to undermine our country's revolution and scheming to corrupt our youths. These are the objective causes. However, subjectively, these shortcomings and weaknesses are due to our loose economic and social management and to the failure on the part of the various echelons of the party, government and mass organizations (among which the Ho Chi Minh Communist Youth Union plays a very important role) to educate and mobilize youths well.

Building the system of collective ownership and carrying out socialist industrialization are the major, long-range revolutionary tasks of our entire party and all our people, tasks in which the young generation plays a vital role and occupies a vital position. For this reason, our party considers the mobilization of youths in the present stage of the revolution to be work of strategic significance and special importance.

The great success of the mobilization of youths during the past half century has been that our party has educated, organized and mobilized one generation of youths after another to wholeheartedly follow the party, fight tenaciously, bravely give their lives, make worthy contributions along with the rest of the nation to the resounding victories that have been won, to rewinning the independence and freedom of the country and reunifying the country and contributing the zeal and creative talents of the young to socialist construction. A new and powerful stratum of youths who are politically enlightened, are educated in culture, science and technology and possess abundant energies is playing the assault role on the fronts of building and protecting the fatherland; this is the direct result of the correct and creative line of the party regarding the mobilization of youths.

However, our party, possessing a full sense of responsibility, is not satisfied with these results and achievements. Our party has observed that there have been and still are a number of noteworthy shortcomings in the party's leadership of the mobilization of youths. At many places, the party committee echelon, government and mass organizations do not have a full understanding of the significance and strategic position of the mobilization of youths in the work of building and protecting the fatherland. When our country's revolution entered the new stage, we did not promptly research the situation and analyze the various laws in order to establish suitable guidelines, goals, requirements and measures regarding the mobilization of youths. Some party committee echelons have not led the government or mass organizations in establishing systems and regulations governing the mobilization of youths with a view toward insuring a division of labor and cooperation among the various sectors, state agencies, mass organizations and society as a whole in this work. The various organizations of the party have not kept abreast of the mobilization of youths, consequently, they do not understand the changes and new requirements in the mobilization of youths, in the utilization of youths or in the training of the young generation under the conditions of socialist construction. Many state agencies do not consider the mobilization of youths to be important work of their sector or agency. The state has not established an organization specializing in the mobilization of youths and the research of matters related to the young generation. The Ho Chi Minh Communist Youth Union, the organization that directly mibilizes youths, only mobilizes youths for the purpose of performing immediate tasks but has not adopted plans and measures for preparing the young generation for the future with a view toward achieving the objective of gradually molding the new, socialist collective master. The Youth Union has not fulfilled its function as the school of communism well nor its function of representing the interests and right of collective ownership of the young; it does not clearly see the tremendous requirements involved in reorganizing the entire young generation in order to adopt positive policies and measures for rallying all youths within suitable forms of organization. The education of backward youths also has not undergone significant change.

This situation demands that the mobilization of youths in the present stage of the revolution be considered work of a strategic nature; youth issues must be given the full concern of the party, the state, the mass organizations and all of society. In particular, the various organizations of the party must directly control the mobilization of youths because controlling youths is the same as controlling the "fuse"; only by controlling youths can the revolution have the power to attack, only by controlling youths can the revolution tightly control the future. Conversely, if the revolution does not control youths, the enemy will find ways to utilize this young force and turn it into an assault force opposing the revolution.

The mobilization of youths must still be considered an issue of importance to all of society. The concept has long been held that the mobilization of youths is the sole work of the Ho Chi Minh Communist Youth Union and that every issue related to youths is only resolved through the Youth Union. This concept is incorrect, is inconsistent with the viewpoint of the party and inconsistent with practice. The training of the young generation is the great undertaking of the entire party, of all the people and of all of society; the desired results could not be achieved if this work were only carried out by the Youth Union. Facts have shown that only by establishing a division of labor and cooperation on a society-wide scale is it possible to resolve matters related to youths well. The Youth Union can in no way take the place of the state, the other mass organizations, the family, the school or society. These organizations must work with the Youth Union in order to have a well coordinated impact upon the young generation in order to achieve high results. Under the leadership of the party, the entire dictatorship of the proletariat system, in which the state plays a particularly important role, and all of society are directly responsible for training as well as mobilizing and utilizing the young generation. Only in this way is it possible to achieve the strength of organization, incorporate the thinking of the working class in the education of youths and carry out the mobilization of youths well. This is a viewpoint of utmost importance in the mobilization of youths when the party is in political power and the dictatorship of the proletariat state is managing every activity of society.

The mobilization of youths is scientific work. Youths are persons who have special characteristics and requirements. Researching the characteristics of youths is not simple work; researching the requirements of the young is even more complicated.

Marx and Engels proved the need to understand and correctly calculate the characteristics of the young, the physiological and social characteristics of youths. While highly evaluating the abilities, desires and zeal of youths, Marx and Engels pointed out that these unparalleled qualities do not, of themselves, lead to the creation of a correct course to follow or firm confidence. Moreover, a lack of maturity, a lack of experience and mistakes can turn the fine qualities of youths into harmful habits that are the very antitheses of these qualities.

In the young, physiological maturity generally occurs earlier than social and political maturity; the instinctive man develops before the social man. Therefore, in the process of organizing and educating the young generation, it is absolutely necessary to give attention to the gap between these two aspects of maturity. At the age of maturity, youths develop needs of an instinctive nature. Persons who act on the basis of instincts easily find themselves committing crimes. According to calculations made by educators and psychologists, 75 percent of the crimes occurring in the capitalist countries are committed by youths 14 to 18 years of age. Capitalism has very thoroughly researched this shortcoming of youths. It uses every available form and measure to provoke base instinctive needs in order to paralyze the revolutionary capabilities of youths. We have long failed to research the characteristics that pertain to the age of youths well. We must conduct much more research, must firmly grasp the physiological and psychological characteristics and the needs of the young in order to adopt policies, guidelines and measures for educating and mobilizing youths that yield the highest possible results.

Another characteristic and, at the same time, another drawback of youths is their lack of experience in life. In the face of certain things and phenomena, youths usually only give their attention to their external appearance and spend little time delving into their essence. If not promptly and thoroughly guided, the observations and thinking of youths might very easily become onesided and mistaken, even to the point of considering something illogical to be the truth.

The needs of youths, such as their aesthetic needs, their need for friendship, their need for entertainment and so forth are also special in nature. It is necessary to research these needs of youths in a very detailed and truly scientific manner in order to guide their development along wholesome lines. The scientific-technological revolution that is developing rapidly and strongly throughout the world has had more than a small impact upon the tastes, preferences and lifestyle of man, especially youths. Youths everywhere quickly adopt the new and want to rapidly incorporate it in life. If attention is not given to the wholesome needs of the young and if everything is forbidden to youths, youths will be forced to live like their elders and will not tolerate such a situation.

Youths are not a separate class and do not have a particular consciousness of their own. Youths cannot be considered a totally independent stratum within society because they are an integral part of the various classes and strata of society. Therefore, the investigation and research of matters related to youths must give attention to social issues on a broad scope, both at home and abroad; at the same time, we must analyze the situation and role of youths in each specific stage of the revolution. It must be understood that youths have distinctly different traits, depending upon their living conditions, their class and society, the environment in which they live and even their sex.

In order to do a good job of mobilizing youths, we must establish objectives that must be achieved and specific tasks that must be performed. Our party has set forth the objectives of the mobilization of youths in the new stage of the revolution as: upholding the right of socialist collective ownership of the young generation and insuring that the young generation maintains its role as the revolutionary shock unit in order to successfully complete its glorious historic mission while educating and training the young generation to be new, well developed persons who carry on the heroic tradition of the nation and are the loyal, outstanding inheritors of the glorious cause of the party.

Of importance in the mobilization of youths is the need to implement and uphold the right of ownership and insure that youths play the role of revolutionary shock unit. At present, the right of ownership of youths is not being respected at many places and, at some places, it is even being seriously violated. Youths are still bound by old prejudices of society; in the newly liberated areas, youths are subject to prejudice because of their personal backgrounds and political affiliations. In labor, the role and position of youths have not been appropriately established, especially in management, even though youths are a large force engaged in positive activities in important jobs. Full attention has not been given to providing jobs for youths and some youths of work age still lack jobs. Light attention is being given to the training of youths; for the most part, emphasis is only placed upon utilizing youths, not on caring for and helping them make progress. The effort to insure fairness in education and the development of the talents of youths is not being carried out well. In everyday life, spiritual activities, such as culture, literature, art, physical education, sports, recreation and entertainment, designed to meet the requirements of the young and support the effort to provide them with a well balanced education in order to gradually mold the new socialist man have not been given attention or prompt guidance.

The requirements involved in guaranteeing and upholding the right of collective ownership of the young generation also include intensifying the education and training of the young generation so that it becomes a stratum of workers who exercise ownership, possess patriotism and the pure socialist international spirit, think correctly, feel beautiful feelings, have great dreams and ambitions, are willing to fight and die for their ideals, have the knowledge and ability to perform practical work, are in good physical condition, live lives based on the truth and love and have the ability to make the best possible contributions to the socialist revolution and socialist construction in our country and firmly protect the socialist Vietnamese fatherland.

In order to meet these objectives, it is first of all necessary to intensify the teaching of communism and forge youths to become the new, well developed stratum of persons exercising collective ownership. At the 3rd Congress of the All-Russian Communist Youth Union, Lenin stated that one of the extremely important tasks of the party is to teach communism to the young generation. To us at this time, this task involves cultivating within the young generation the scientific world view of Marxism-Leninism in order to help youths grasp the laws of development of society so that they can act in accordance with these laws and take initiative in struggling against every though and action that is hostile to socialism. We must arm the young generation with the correct understanding of the revolutionary line and the viewpoints of the party regarding all of the matters faced in life. We must mold within youths the ability to chart a correct course for themselves and handle every matter faced in life in accordance with the viewpoints of the party. We must help youths acquire necessary knowledge, beginning with knowledge of the history of our nation, working class, party, Youth Union and army so that youths can, through our history, confirm who they are and verify on their own the laws of development of society.

Together with teaching communism to the young generation, we must rapidly reorganize the entire young generation into a strong and solid force of collective ownership. Over the past half-century, our country's young generation has been organized in a manner consistent with the tasks of the revolutionary struggle in each stage of history. At present, the majority of our country's youths belong to no organization. The percentage of youths in the North who are Youth Union members is rather high compared to the percentage in the South, but they still only constitute slightly more than 30 percent of the total number of youths, thus, more than 60 percent of youths belong to no organization. Some youths are not participating in the various youth movements. At its height, the "three assaults of collective ownership" movement only attracted about three-fifths of our youths. Rapidly reorganizing the entire young generation, this is a pressing demand of the revolution in the present stage. In order to thoroughly develop the tremendous potentials of the young generation and constantly create new strength at the same time, it is absolutely necessary that we reorganize the entire young generation. Because, in the course of achieving their revolutionary ideals, youths not only rely upon the strength of the correct revolutionary line of the party, but also upon the strength of organization in practical activities. Only on the basis of firmly adhering to the revolutionary line of the party and by means of their organized practical activities can the young generation acquire tremendous strength. Only by being reorganized can our youths, teenagers and children acquire the conditions needed to accept the teaching of communism. Only by being tightly and widely organized can the young generation send its troops into battle in a large formation, take action in a large system and appear before society with the strength of millions of persons united as one. Rapidly, widely and strongly organizing the entire young generation will be the highest form of respect for the right of socialist collective ownership of the young masses; will create the conditions for every member of the young generation to make contributions and grow in accordance with the requirements of the party; and will gradually reduce and eventually eliminate negative phenomena and non-socialist factors that might have an impact upon and control the young generation. Under present conditions, rapidly reorganizing the entire young generation and placing it under the direct and constant leadership of the party are a positive way to create the conditions for the young generation to form its powerful revolutionary forces in order to participate in the process of building the forces of the modern Vietnamese working class and the stratum of socialist intellectuals in a manner consistent with the requirements of the industrialization of the country. Rapidly organizing the entire young generation will also have the practical effect of intensifying the building of the party, the building of the government and the building of the mass organizations on the various levels, thereby contributing to the struggle to overcome negative phenomena in economic management and social life.

To perform this important task well, we must rapidly organize the youths, teenagers and children of the entire country within a system of political organizations of the young generation consisting of the Ho Chi Minh Communist Youth Union, the Vietnam Federation of Youths, the Association of College Students, the Ho Chi Minh Vanguard Teenagers' Unit, the Ho Chi Minh Children's Unit and other forms of organization. We must gain the participation of youths in the national economic system, in the educational, cultural, scientific and technical systems; at the same time, we must insure that youths fulfill their obligation to protect the fatherland.

Another important task is that of launching a socialist emulation movement and a revolutionary action movement among the young generation. Our party requires that there be a socialist emulation movement and revolutionary action movement wherever there are youths. The education and organizing of the young generation can only be tested and yield returns in the realities of the revolutionary struggle, in the vast emulation movement of the masses. The party and state have the responsibility of leading and helping youths launch an intense, widespread emulation movement designed to gain the participation of a large social force in building and developing the economy, culture, science, technology, national defense system and so forth, thereby creating a strong moving force stimulating the advance of sociaty as a whole. The socialist emulation movement and revolutionary action movement must be oriented toward mobilizing the young generation to display a high spirit of overcoming difficulties and dare to think, act and be creative in order to contribute as much as possible to building and protecting the fatherland.

In order to establish a widespread emulation movement among youths, the organizations of the party and state must give youths specific tasks during each period of time, must trust and boldly assign tasks to youths and must, at the same time, create the conditions needed for youths to carry out their activities, be concerned with the legitimate interests of youths and so forth.

Together with caring for youths, every effort must be made to care for and teach teenagers and children. They are valuable assets of the nation, are the future youths who will hold the destiny and future of the country in their hands. It is with this in mind that our party places work among teenagers and children with the scope of the mobilization of youths.

CONCERNING THE QUALITY OF GENERAL SCHOOL EDUCATION

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 33-37

[Article by Hoang Ngoc Di]

[Text] Over the past 35 years, no country has waged the savage struggle, waged a continuous war of liberation, continuously fought to protect the country and had to contend with natural disasters and small-scale production as our country has. However, despite these circumstances, general school education has undergone a qualitative change from the tool of colonialism to the tool of the dicatatorship of the proletariat; our country, whose population was once 95 percent illiterate, now has a developed system of education.

In the North, these advances were most evident between 1955 and 1975. They could have only occurred under the socialist system. By 1958, the people in the lowlands and midlands had wiped out illiteracy; now, the populations of many villages now have a level I education. In the mountains, the effort to wipe out illiteracy was carried out on the basis of two languages, the universal language and the tribal language. In 1955, only 20 percent of the total number of children attended school; by 1975, this figure has risen to more than 90 percent. Each year, hundreds of thousands of level II and level III school graduates joined the workforce and the army. The educational program was reformed on the basis of scientific advances and was constantly supplemented. The methods of teaching were constantly improved along the lines of closely linking learning with practice, closely linking education with productive labor.

The schools in the North popularized level I general school education among the working people and level II general school education among youths, cadres and troops; these are the levels of education needed for the masses to work and fight under the conditions of a system of manual production that is gradually advancing to machine production. The schools taught to youths ardent patriotism and a deep hatred of the enemy aggressor, taught them love of socialism, the proletarian international spirit, the new viewpoint toward work and the concept of respecting the working people. They supplied cultural forces to meet the need to train scientific and technical cadres. Generally speaking, the cultural scene in the North was completely changed, primarily because of general school education.

Since the time the entire country was liberated, we have built a unified socialist educational system and continued the strong momentum of development of this system of education on a nationwide scale. Of course, we must still wage a difficult struggle in society as well as within the school against the influences of U.S. neo-colonialism, influences which are capable of causing a decline in the thinking and ethics of some students if they are not promptly blocked. However, we did rapidly occupy the educational front, abolishing the U.S.-puppet educational system, eliminating intervention by religions and immediately incorporating with the schools the new program of education and building a contingent of core cadres and revolutionary mass organizations.

One question that is frequently raised regarding general school education is: if we continue to develop education on a large-scale and at a rapid rate as we are doing now, will we not reduce the quality of education? This is called the "quantity-quality antagonism" by some in education. This question must be seriously examined rather than quickly reaching the conclusion that we should slow down the development of education in order to maintain its quality.

It is true that general school education in our country has developed at a rate rarely seen in the history of the development of education in any country of the world. North Vietnam wiped out illiteracy in only 3 years at a time when many developed capitalist countries still have tens of millions of illiterates. It took the North only 10 years, from 1955 to 1965, to increase the percentage of children attending general school from 20 to more than 80 percent. It took the developed capitalist countries more than 1 century to accomplish this; even the capitalist country that achieved this goal most quickly, Japan, took 70 years to do so. In the developing countries, even though they have recently made many efforts and invested much more in education than our country has, the percentage of children attending school was still relatively low in 1970. In 1970, according to data compiled by the Lagos Conference, the percentage of children between the ages of 6 and 11 attending schools in Africa was 41.1 percent and the percentage of children between the ages of 12 and 17 attending school was 23.9 percent (in a familiar country that has a rather well developed economy, Algeria, the corresponding percentages are 58.4 and 29.9 percent).

At the same time, as the resolution on educational reform of the Political Bureau observed, it is true that "our socialist education system has developed rapidly in size but is still weak in overall quality." Thus, how can we continue to develop education at a high rate in conjunction with steadily maintaining the quality of education? The need to accelerate the popularization of education among teenagers and children, the need to prepare educated persons for training cadres, wiping out illiteracy, disseminate general knowledge of science and so forth are legitimate, objective needs. If, in this initial stage of the revolution, our society does not meet these broad and pressing requirements, will it not experience immeasurable, severe consequences?

At present, the guideline for resolving this problem is: developing upon the experiences gained in stimulating the rapid development of the system of education while looking for ways to overcome the negative factors that cause the quality of education to decline.

We developed the system of education in a strong manner even though the economy was underdeveloped and we were at war because we knew how to turn the development of education into the work of the people. The people opened schools and supported teachers. It was also the people who moved tens of thousands of classrooms into tunnels during the summer of 1965 in order to contend with the war of destruction of the U.S. pirates. The need of the people for their children to have an education forced the educational sector to train many teachers, develop many forms of education and establish a suitable system of education on the basis of taking the circumstances of the majority of the children of the working people into consideration.

However, there are two major problems that we have not resolved well, problems that have caused the quality of education to decline, especially with regard to scientific knowledge:

--The first is that the plans for the training of teachers and the building of the corps of teachers have not been effective, have not anticipated the requirements of the development of each class. Depending upon the annual budget and supply of grain, the normal school system has at times become too large and at other times shrunk, even been disbanded at some places. The corps has been constantly changing; skilled persons on the lower level have been promoted to teach on the upper level; many localities do not have local persons as teachers; and, in some years, many teachers have joined the army.

--The second is that the quality of education has not truly been consistent with each stage of development of society. We are in the initial stage of industrialization but the educational program is patterned after countries that have a developed industry. Our country has many areas in which the economy and society have developed in very different ways, in ways very widely separated; however, we have implemented but one program of education. The needs of the division of labor demand the preparation of a reserve labor force encompassing many different levels of development, but we only have one training objective. Actually, we should skillfully coordinate the popularization of education and the improvement of the contents of the educational program, distinguish between the majority of students who are being trained as ordinary laborers and the few who have the talents needed to be trained for the various fields of science and the complex professions and establish a suitable quality of education based on the learning conditions of the young in each area. Generally speaking, because our level of economic development is low, it is necessary to popularize education rapidly by having the majority of students learn less but learn what they are taught better and make what they are taught part of their character before advancing. Clearly, this would be better than to have them study very hard but not have a firm grasp of any knowledge.

In addition, within the education sector as well as in society, the maladies of ostentatiousness and attaching more importance to form than substance are very serious. These maladies have given rise to cramming, to dry examinations and to a lack of faithfulness in evaluations and emulation, thereby creating many negative phenomena within the school.

Anooher problem that is frequently faced in universal education is: how can we improve the quality of education in accordance with the goals of training that have been established? Here, we shall not discuss specific measures, only discuss the methods of teaching the new man under the actual circumstances of our country as it shifts from small-scale production to large-scale socialist production. This question usually is raised under the form of looking for a new mode of education or applying the principles of education to the educational work of the school. Here, method is understood as: "awareness of the form of the internal movement of content itself"(Hegel)(1), not specific measures.

While looking for a new method of education, we have, on the one hand, discussed both concepts and theories; on the other hand, we have attached importance to summarizing progressive experiences. However, these two efforts have not been linked together; in other words, we do not have a theoretical viewpoint concerning the formation of the new, socialist man under the conditions of small-scale, handicraft production.

As regards theory, we have made efforts to determine the principal factors in the process of educating man; these factors are related to and supplement one another and, at the same time, can infringe upon one another; the problem is finding a way to correctly coordinate them. This coordination is the coordination between learning and practice, between education and productive labor, between politics and science, between the school and society and so forth. This is a correct way of thinking, is a way that permits us to avoid deviations, avoid giving light attention to one area while placing heavy emphasis upon another. However, why have we at times placed heavy emphasis upon productive labor and, at other times, heavily emphasized book learning? These two inclinations sometimes conflict with one another like two opposite trends. The specific reasons for this are:

--There is confusion between the principles of education as the laws controlling educational work, the laws controlling the coordination of the various factors of education (with factors being understood as a separate category) and the relationship among the various educational activities.

Therefore, some persons explain the principles of education as the coordination of the three basic educational activities without realizing that the principles of education themselves play a role in every educational activity. The resolution of the Political Bureau provided a correct explanation of the process of education, explaining it as a process of unifying man's comprehension and applying the cultural values of mankind and the nation.

--There is an over-evaluation of the role played by "externally manifested" activities, such as productive labor and social activities, in the formation of the socialist character of the student. This concept gives light attention to the role played by the comprehension of the cultural values that have been cultivated. Here, there is confusion between a practical activity of adults, the activity of creating new value, and the practical activity of students, which is inherently an educational measure and designed to gain a thorough comprehension of the knowledge that has been studied. This concept gives rise to pragmatism in education, a tendency which the resolution on educational reform criticized.

We have not delved into the matter of establishing a viewpoint to be followed in practical educational work, especially into the matter of resolving the contradiction between the contents of modern subjects of learning and the fact that the conditions for applying this knowledge are still backward and handicraft in nature. To resolve this contradiction, we once (1966-1967) proposed the slogan: "Combining advance science with the creative experience of the masses and the traditional knowledge of the nation." Because we did not establish a proper viewpoint, we developed a tendency to eliminate practical application for the reason that practical application does nothing to assist the learning of modern scientific knowledge. We must re-examine the contents of the educational program; we might find that certain scientific knowledge needed in the production of our country is lacking, such as knowledge of biology and chemistry needed in agriculture.

As regards practice, we have reviewed many valuable experiences. It is regrettable, however, that not many of these experiences have been promptly incorporated in regulations binding upon the schools. Moreover, some educational research cadres have shown little regard for these experiences, maintaining that it is only necessary to apply the modern methods of the world in order to provide a good education.

As regards achieving the educational goals of the general school, especially with regard to preparing within students the consciousness and ability to participate in productive labor or study a trade, these goals cannot be achieved through the general school alone. The educational system is an open system; the various types of schools are related to one another and there is a relationship between the school and society. We shall make an effort to provide an integrated education in labor and technology and provide occupational counselling within the general school; at the same time, however, society must be ready to utilize students and the various vocational schools must be ready to accept general school graduates. At present, this is not being done; each year, as many as 600,000 youths graduating from level II and level III schools do not go on to regular schools or even vocational training classes. Some youths become despondent over the fact that they must temporarily participate in labor.

In the recent past, we have given attention to the quality of education in order to achieve our two main objectives: first, preparing the young generation for actively participating in the war to liberate the country and, secondly, preparing them to learn scientific knowledge. We have not done a good job of preparing them for the system of large-scale socialist production or the new socialist life, as observed by the Political Bureau. Today, we clearly realize the adverse impact that these two shortcomings have had upon the development of the character of our youths. The first shortcoming can be quickly rectified once we establish a good system for training and utilizing youths; however, such is not the case with the second one. Youths who are not well trained in terms of their world view, politics, ethics, aesthetics and the new style of life are still victims of the influence of bourgeois culture. This influence did not end and withdraw along with the last colonialist aggressors; it is still capable of developing along with the development of cultural exchanges with countries that have different social systems through the various mass media.

The preparation of students in the field of the humanities is still weak. The programs and lessons in the social sciences, the extracurricular activities in literature and art, the relationships within the school and even the system of examinations are not enough to encourage students to delve deeply into the ideological and emotional relationships among persons, mold within themselves a feeling of trust in and love for others and, on this basis, become involved in the humanities and philosophy.

General school education in our country has travelled a course filled with difficulties and, amidst these difficulties, "the most beautiful flower of the new social system" has blossomed. One very important favorable condition for the development of general school education is that there is now a torch guiding its way, namely, the resolution of the Political Bureau on educational reform, which details the line on the socialist revolution on education set forth by the 4th Congress of the Party. This resolution summarizes the course that has been travelled and our thinking concerning the future. We must study the experiences of the world, especially of the Soviet Union and the other fraternal socialist countries, regarding the education of the new man. However, we must also engage in serious thought and research here in our own country, a country that has consciously given birth to heroic generations and will surely give birth to strata of new, beautiful persons.

RAW MATERIALS FOR INDUSTRY

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 38-42

[Article by Truong Son]

[Text] Raw materials are a very important factor in maintaining continuous industrial production. In particular, raw materials are of decisive significance in consumer goods production because they generally account for 70 to 80 percent of the product's production cost.

In the recent past, in order to create sources of raw materials for industry, we developed the cultivation of industrial crops, livestock production, the harvesting of forestry and marine products, the mining of minerals and have begun to develop industrial raw materials; at the same time, we have imported necessary raw materials, although the amount being imported does not meet requirements. The amount of area under the cultivation of industrial crops has increased slowly, crop yields are low and the yield of product from them is also low. Livestock herds and poultry flocks are small and the quantity of hides being purchased is very small (about 30 percent of buffalo and cattle hides and 3 percent of hog hides); forestry raw materials, such as timber, tre bamboo and nua bamboo, only meet 40 to 50 percent of needs; the output of marine product raw materials, primarily fish and shrimp, has been gradually declining each year. The supply of imported raw materials has been constantly declining. Discarded materials and defective products are not being fully collected and utilized.

The resolution of the 6th Party Plenum pointed out that raw materials are a matter of survival to industry, but our failure to provide a good supply of raw materials has been the main reason why industry has developed slowly. The resolution stressed that we must accelerate the domestic production of raw materials, increase our exports in order to earn foreign currency with which to import the raw materials we need but do not produce yet, make efficient and economical use of the various sources of raw materials and fully collect and utilize discarded materials and defective products.

In the 1 year that this resolution has been in effect, a number of initial results have been achieved. The government has promulgated several policies designed to provide incentive for the development of the production of agricultural raw materials. The food sector, together with Ha Son Binh and Vinh Phu Provinces, has replanned the sugarcane growing areas for the Van Diem and Viet Tri Sugarcane Processing Plants and constructed four sugarcane state farms in the southern provinces; it has taken over the state tea farms of the agricultural sector and organized industrial-agricultural federated tea enterprises. The building sector and light industry have concentrated on accelerating the construction of spinning mills. The amount of area under the cultivation of industrial crops increased 12 percent this year compared to last year. The output of coffee increased 70 percent and the output of dried laytex increased 4 percent. Many localities have made full use of their arable land and set aside an appropriate percentage of this land to create local sources of raw materials. Hanoi has planned the expansion of the agricultural raw material areas; the districts in the outskirts of the city have accelerated the excavation of peat and kaolin. Ho Chi Minh City has planned the expansion of the rush and coconut growing areas and accelerated the planting of mulberries for sericulture. Vinh Phu has accelerated the planting of new sugarcane, tea, lacquer and other crops. Ha Nam Ninh and Thanh Hoa Provinces have opened hundreds of thousands of hectares of rushes. Quang Ninh Province has planted additional rushes and mangoes. Tien Giang Province has constructed areas specializing in the cuttivation of pineppples, sugarcane, terminalia and cageput. Son La Province has repaired and developed the plantings of Mallotus philippinensis, tea and so forth.

A number of localities and installations have cooperated in harvesting and exchanging raw materials. Ho Chi Minh City is cooperating in the harvesting of reeds with Dong Thap Province, the harvesting of timber and rubber with Dong Nai Province, the harvesting of pine pitch with Lam Dong Province and the harvesting of buong leaves with Thuan Hai Province. Hanoi has cooperated with many provinces in the harvesting of raw materials, such as timber and the tops and branches of trees (Nghe Tinh Province), lacquer (Vinh Phu Province), rattan, tre bamboo and nua bamboo (Hoang Lien Son Province) and so forth. The cooperatives in Ha Nam Ninh Province have sent labor to cooperate with the Song Hieu State Farm in the felling of timber. The Sundries Corporation of the Ministry of Light Industry has cooperated with Thanh Hoa and Quang Ninh Provinces in the production of tannin.

Many enterprises have conducted research in technological improvements in order to make use of local raw materials and substitute raw materials. Textile shop number 13 of the Ho Chi Minh City Wool Rug and Jute Federated Enterprise has frequently improved its machinery and equipment in order to utilize nine different types of local raw materials, including a new type, wild jute, consequently, it was able to complete its plan for the first 6 months of the year ahead of schedule. The enterprise has been exchanging one new gunnysack for 2 kilograms of jute fiber; this enables it to acquire 700 to 800 tons of raw materials per year and has been welcomed by the people. The enterprises in Quang Nam-Da Nang have used Xuan Thieu sand in place of Non Nuoc pumice to produce floral bricks, used the skin of silkworm chrysalis as a raw material in the production of sauce, used paper mulberry as a raw material in paper production and used Diospyros kaki wood as weaving shuttles.

Some corporations and enterprises have applied flexible modes of supply and contract purchasing in order to create additional sources of raw materials for production. The Haiphong Enameled Iron Works lets work out under contract to agencies and enterprises and has received 250 tons of raw materials. The Thuy Khe Tannery, as a result of organizing many leather purchasing stations in the provinces, has so far purchased 20 percent more leather this year than during the same period of time last year. As a result of contracts and purchasing at negotiated prices, the various sugar refineries have acquired hundreds of thousands of additional tons of sugarcane. The soap factory, as a result of purchasing additional coconut oil at negotiated prices, has additional raw materials with which to produce soap cakes and toothpaste. The provinces of Cao Bang, Lang Son and Phu Khanh have intensified the purchasing of tobacco; as of September, Phu Khanh Province had exceeded its purchasing plan for the year and purchased 20 times more tobacco than in 1979. The Ha Bac Technical Supply Corporation, concerning itself with supplies for production just as much as producers do, has intensified its activities, directly provided supplies to 40 percent of its enterprises, improved its procedures and reduced shipping and receiving time from 7 days to 2 or 3 days; it routinely inspects its inventories, shifts supplies from places that have a surplus to places experiencing a shortage and has significantly helped enterprises within the province complete their plans. Some places have begun employing the mode of creating sources of raw materials through exports and imports; for example, the Haiphong Enameled Iron Works has borrowed foreign currency to import raw materials from the capitalist market and produce products for exportation to Cuba and imported raw Cuban sugar for refining and then exported it to the capitalist market in order to earn foreign currency with which to continue importing additional raw materials.

The utilization of supplies that are circulated slowly and the reclamation and full use of discarded materials and defective products in order to organize subsidiary production have been carried out in a widespread manner within many sectors, localities and installations. Hanoi has opened an exchange center at which it buys and sells supplies and commodities outside the plan and has achieved good results at this center, marketing millions of dong worth of stagnated supplies and signing many contracts to buy and sell goods.

In 1979, the state-operated enterprises in Hanoi produced 3 million dong worth of products from discarded materials; in 1980 this figure might be as high as 5 million dong. The handicraft sector has also produced tens of millions of dong worth of products outside the plan. The Buoi Association of Interbranch Paper Cooperatives, in addition to sending persons to purchase scrap paper and old magazines and books, has been exchanging finished paper products for discarded paper to use as a raw material in production. In 1979 and 1980, the cooperatives and state-operated enterprises in Haiphong used tens of thousands of tons of metal, rubber, plastic, wood, cotton fiber and so forth worth a total of 20 million to 30 million dong. Ho Chi Minh City is using discarded materials to puoduce hundreds of new products. In Ha Nam Ninh Province, the supply station of the handicraft sector has supplied 1,300 tons of old iron and steel, 2,000 cubic meters of lumber, 50 tons of cotton fiber and hundreds of tons of other supplies and raw materials, thereby helping to overcome the difficulties of production installations. The metallurgy, electric power, coal, chemical, light industry, building and other sectors have also made full use of discarded materials to produce subsidiary products worth tens of millions of dong. The mechanical engineering sector has produced more than 200 products from discarded materials, products worth more than 20 million dong. Hoang Lien Son, Ha Son Binh, Thanh Hoa, Ha Bac and other provinces have sent laborers to mine 30,000 tons of local coal in order to bake bricks and tiles, bake pottery and process agricultural products.

Besides the positive efforts mentioned above, there are some negative phemomena that must be criticized; for example, many localities retain their raw materials (tobacco, sugarcane, coconut oil and so forth) in order to use them in local production instead of delivering them to central enterprises in accordance with their plan. In some enterprises, primary raw materials are mixed among discarded materials, goods produced under the plan are mixed among goods produced outside the plan and primary raw materials are used to produce "subsidiary products outside the plan" for direct trade without going through the state-operated commerce sector.

Although we have recorded a number of initial results, the raw material problem of industry still has not been fundamentally resolved. Therefore, in order to continue to implement the resolution of the 6th Party Plenum and create stable sources of raw materials for industrial production, we should soon implement the following policies and measures:

1. We must make every effort to develop the production of agricultural raw materials by increasing the amount of area under cultivation, but very much importance must be attached to intensive cultivation. In view of the fact that difficulties are still being encountered with grain, there are two steps that can be taken in order to develop agricultural raw materials for factories. The most common practice is for the central level to "establish" a plan for the province, the province to "establish" a plan for the district and the district to "establish" a plan for cooperatives which requires that the amount of area under the cultivation of industrial crops, industrial crop yield and industrial crop output be increased by a certain percentage compared to the previous year; at the same time, the central level also assigns to the localities norms on the supply of grain for industrial crop areas and the purchasing of raw materials for central enterprises. Under this method, "non-intensive cultivation" does not yield the desired results.

We should select the other method of operating, specifically, in the next 4 to 5 years, we should increase the amount of area under the cultivation of a number of necessary crops for which the necessary conditions exist, such as rubber, coffee, tea, pineapples, tobacco, soybeans and so forth. It is necessary to zone production within centralized areas (increasing the number of centralized areas and decreasing decentralization) and practice intensive cultivation in order to raise crop yields and output; for example, with regard to sugarcane in the specialized growing areas, we will endeavor to produce 4 to 5 tons of sugarcane per hectare as we once did. With regard to tobacco, the average yield of which now stands at 5-6 quintals per hectare with a 50 percent commodity output, we will endeavor to raise yields to 1 ton per hectare and purchase 90 percent of output. The advantages of this method are that it will increase the supply of raw materials so that we can make full use of plant capacity and will take land away from grain cultivation.

As regards grain, in view of the fact that capabilities are limited, we should, instead of providing a small supply of grain to each place as we have long been doing, concentrate on supplying grain to a certain number of places so that we can purchase raw materials. For example, as regards soybeans, the state must supply grain to the people producing 10,000 to 20,000 hectares of soybeans in Dong Nai in order to purchase 10,000 to 20,000 tons. At other places, the state must purchase whatever is grown, considering these products to be supplementary products outside the plan.

Every possible form of organization must be used to mobilize many agricultural raw materials for industry, such as collecting agricultural taxes, making purchases under two-way economic contracts, making purchases at negotiated prices, having produced under contract and so forth.

2. At present, we do not have many discarded materials or defective products; however, on the momentum of development of production and everyday life, discarded materials and defective products will be a constant and important source of raw materials for industry. As a result, we must develop every possible way to fully collect and utilize discarded materials, especially those discarded by the people. We suggest that the enterprise directors be given the responsibility and authority to handle, in the manner that yields the highest possible economic returns, the various types of discarded materials and defective products arising in the process of production; however, there must be clear regulations and tight controls in order to avoid turning primary raw materials into "discarded materials" and primary products into "subsidiary products" (this does not include the case in which it is necessary to have some primary raw materials in order to make use of discarded materials and defective products). The provincial and municipal peoples committees must be given the responsibility and authority to organize the reclamation and good utilization of each source of discarded materials in the process of consumption, sources that are still scattered among families, agencies and schools. Many flexible forms of organization must be employed to accomplish this, for example, networks should be organized to purchase the discarded materials needed by the artisan and handicraft cooperatives; many stores should be organized to buy or trade discarded materials for products in the various wards; a Saturday of labor to collect discarded materials should be organized, etc.

3. In addition to developing and purchasing agricultural raw materials, which are of primary importance, it is necessary to adopt plans, policies and measures for gradually developing other sources of raw materials for industry, such as the following:

We must strongly develop afforestation and the reasonable harvesting of forestry resources in order to supply raw materials to the cellulous industry, the furniture industry, the pharmaceuticals industry and the industry processing special products for exportation. Of pressing, immediate importance is the need to protect and tightly manage all existing forests while endeavoring to cover barren hills with vegetation in the next 15 to 20 years. We must open additional forestry roads so that we can harvest trees in old forests at high, remote places and must limit the harvesting of highland forests and depleted forests. Attention must be given to coordinating harvesting with the preservation and regrowth forests and to coordinating the harvesting of forests with the transportation of forestry products with a view toward maintaining our natural resources. We must eventually organize a number of specialized forestry sites to support certain factories, such as nua bamboo forestry sites to support the paper plants, timber forestry sites to support the man-made fiber plants and so forth.

We must restore and properly operate the marine trades, which include the cultivation, preservation and harvesting of the various types of marine products in order to supply raw materials to the industries processing fish, salted fish, agar-agar, fish meal for livestock, marine products for exportation and so forth. The basic and long-range guideline is to organize marine product federated enterprises encompassing harvesting, processing and well-balanced rear services that are suitable in size and employ modern technology so that we can annually harvest millions of tons of fish at sea each year. In the immediate future, it is necessary to develop the potentials of the cooperatives in the North, carry out socialist transformation through various forms of organization of the fishing industry in the South and make full use of existing state-operated forces in the harvesting of fish. We must quickly carry out an investigation of resources and promulgate a marine products resources protection law in order to lay the basis for developing the ocean fishing industry.

We must intensify basic investigations and the exploration for and development of mineral resources in order to supply raw materials to industry, especially heavy industry. In the immediate future, we must continue the search for the various types of raw materials that support fertilizer production, the production of building materials, the ferrous and non-ferrous metallurgical industries and the glass, porcelain and pottery production industries. We must intensify the search for petroleum and natural gas and prepare to develop the petro-chemical industry in order to supply many types of raw materials to industry, such as plastics, chemical fibers, rubber, detergents, dyes, paint, etc.

At present, the majority of our raw materials for industry, especially light industry, must still be imported. For the foreseeable future, as long as we continue to make every effort to create domestic sources of raw materials but cannot fully meet needs, broadening our foreign trade is the most important way to supplement the raw materials of industry. We must adopt many policies that provide incentive for exportation in order to earn foreign currency with which to import raw materials, such as a policy that establishes an export obligation for each worker and farmer each year to produce export goods worth a certain amount; a policy on practicing economy in order to export goods, that is, of being determined to limit domestic consumption of goods that can be exported; a policy giving preferred status to exports which insures that units earn a greater profit for producing exports than producing domestically consumed goods; a foreign currency loan policy in order to import raw materials for the manufacture of export goods; and gradually implementing a policy of using exports to pay for imports, a policy under which every unit requiring imports must export goods in order to import the goods that it needs and can import many goods if it exports many but only import a few goods if it only exports a few goods (except in special cases in which imports are needed but exports cannot be arranged by the unit and, as a result, must be arranged by the state).

REVIEWING THE ARTISAN AND HANDICRAFT SECTOR OF HO CHI MINH CITY IN THE RECENT PAST

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 43-45

[Article by Le Chi Tiet]

[Text] Ho Chi Minh City has 182 artisan and handicraft cooperatives with 30,046 members, 2,234 production teams with 72,054 members, 398 small, private enterprises with 7,500 employees and 8,556 private producers with 35,934 laborers. The total number of artisans and handicraftsmen now under the management of the federation is 145,524, 70.1 percent of whom are cooperativized laborers and 29.9 percent of whom are workers of private enterprises and self-employed persons. The total output value of the sector in 1979 was 932 million dong, 20 percent of which was produced by cooperatives, 36 percent by collective production teams, more than 20 percent by private enterprises and over 23 percent by individuals. Thus, within the sector, private enterprises and self-employed individuals constitute less than 30 percent of the labor force but produce 43.1 percent of the total output value.

Recently, artisan and handicraft production developed strongly, thereby supplying goods to the market and meeting the needs of society. However, production has developed primarily at the private production installations and among self-employed persons. Some trade sectors have not been planned, organized or closely guided, consequently, they have developed rather strongly on their own, especially the sectors that use domestic raw materials and supplies or local discarded materials, such as the plastic, aluminum, soap, tobacco, wine and other sectors. Many private production installations and self-employed persons are competing with the state-operated and collective economy to control the sources of raw materials. The Federation of Cooperatives and the economic-financial management sectors have placed heavy emphasis upon managing collective installations that have stable production, plans and contracts but have been lax in the management of private production installations and the individuals that produce and market their own products. As a result, the supply of artisan and handicraft goods has increased but the quantity sold to the state has declined significantly. Meanwhile, the merchant and service trades of small merchants have "exploded" and cannot be restricted, thereby causing the "free" market to develop in a randon fashion, causing an increase in speculation, disrupting the market more, pushing prices upward and adversely affecting the daily lives of law abiding citizens and the other strata of laborers.

While the production of the private production installations and private individuals has "exploded" in s spontaneous manner, the majority of the cooperatives, which are producing products under contracts with the state, have been encountering difficulties. Due to the shortage of raw materials, contract production plans have been reduced, consequently, during the first 6 months of 1980, many cooperatives (producing farm implements, glassware, cloth, ready-made clothing, leather goods, processed wheat and so forth) have had to reduce the scope of their production, thereby losing a total of 21 million dong. In the face of this situation, the increase in the production of the private enterprises and individuals is only compensating for the decline in the production of cooperatives. Compared to the first 6 months of 1979, output value within the cooperative and production team sector declined 20 percent; however, the production of the private production installations and self-employed individuals has increased 67.5 percent, thereby raising their percentage of the total output value of the artisan and handicraft sector from 43 to 54 percent.

Of course, there is spontaneity, is a pilfering of raw materials provided under contracts with the state and artisan and handicraft cooperatives are marketing some of the products they produce; however, it is clear that our administrative, supply, bureaucratic style of management embodied in current policies and regulations is restricting collective production (in planning, the management of cash, the management of prices and so forth). Production has developed strongly but policies have not been promptly amended or revised; one area of management continues to be restrictive while another area is lax, consequently, collective production cannot develop strongly and the private sector has "exploded" together with the development of the "free market," thereby creating many negative phenomena.

The situation presented above shows:

In order for artisan and handicraft production to truly develop strongly and in the correct direction, it is necessary to clearly realize the role and position of the artisan and handicraft industry. In the process of advancing from small-scale production to large-scale socialist production, we must attach importance to building and managing state-operated industrial installations and attach importance to building and managing artisan and handicraft installations. It is necessary to establish reasonable relations among central state-operated industry, local state-operated industry and the artisan and handicraft industry in order to create the conditions for the artisan and handicraft industry to develop widely and in the correct direction and in order to make full use of its capabilities.

Under the conditions of small-scale production, the present decentralization within artisan and handicraft production is objective in nature. We cannot reorganize this production solely on the basis of our subjective desires but must know how to reorganize it in a manner consistent with the advance from small-scale production to large-scale socialist production. We must cause the artisan and handicraft industry to develop in two directions through many forms of development: serving as contracting satellites and cooperating in production with central and local state-operated enterprises under a suitable planning project and plan so that this sector achieves an independent position and grows alongside state-operated industry with the competent support of state-operated industry. This is a correct guideline for reorganizing and developing production.

However, the artisan and handicraft economy in our country at this time is both a collective and private economy. For this reason, if we do not have a unified management system consistent with this characteristic, it will be impossible to avoid the tendency of allowing basic units to develop spontaneously.

The following concept must be clearly understood: the cooperatives are socialist, collective economic units that belong to the socialist economy that exists along with the state-operated economy within socialism.

We cannot hastily abolish the private economy at will nor can we deny its impact. The state-operated economy and the collective economy are superior in nature but, at present, the private economy still serves the interests of the national economy. The problem we face is how to manage the private economy well.

The private individual economy has a dual nature: positive and negative. However, if they are reorganized so that these installations, their labor and their production tools serve as contracting satellites for the state and only receive the money legitimately due them for contracting work, with the goods they produce belonging to the state, these private installations will have been brought into the orb of the organization of production and the production planning of the state.

However, avoiding obligations to the state, wanting to charge high prices and pay little tax, wanting to buy at low prices and sell at high prices, pilfering supplies and raw materials of the state, engaging in speculation and hoarding, disrupting market prices, practicing tax fraud and tax evasion, operating in a deceitful manner, stealing supplies and raw materials belonging to the state and so forth, these are negative phenomena that must be eradicated and dealt with harshly. Therefore, the utilization of the positive aspects of these installations must go hand in hand with limiting their negative aspects.

We must set aside our prejudices and make every effort to teach the youths at private enterprises and the persons who are self-employed methods of management that are better, that are better suited to their method of operation; in this way, we will surely be able to develop upon their positive aspects.

In order for artisan and handicraft production to develop in the correct direction, it is necessary to perform the following jobs well in the immediate future:

--Continuing to carry out transformation, reorganizing production and better planning the artisan and handicraft sector so that it is closely and efficiently linked to state-operated industry; accelerating production from supplies and raw materials of the state while taking positive steps to mobilize every capability, including imports, the broadening of two-way contracts among localities, the expanded creation of local sources of raw materials and economizing on supplies and raw materials in order to produce goods of high quality in a manner that yields high economic returns; closely coordinating the acceleration of production with the strengthening of the management of circulation and distribution so that both production and the market develop well;

--Creatively applying and boldly revising policies and regulations so that they are suited to each different economic segment; more smoothly coordinating planning with the utilization of market relations and economic levers; applying a flexible planning method and adopting both legal plans and directed plans so that production develops in a non-restricted manner, develops without negative phenomena, with full attention to the requirements and characteristics of an economy advancing from small-scale production to large-scale production, an economy in which different economic segments still exist;

--Boldly strengthening the organizational structure and management apparatus of the artisan and handicraft sector on the various levels; strengthening the leadership provided by the various party committee echelons and the guidance provided by the various levels of government; attaching importance to the management provided by the ward and village levels of the private economy; accelerating cadre training and improving the economic, financial and technical management qualifications of cadres; and assigning additional competent management cadres to the federations of cooperatives on the various levels and related sectors.

RESEARCH: THOUGHTS ON THE IMPACT OF THE LAW OF VALUE IN THE ECONOMY AT THIS TIME

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 46-51

[Article by Tran Ho]

[Text] When talking about the law of value, everyone realizes that its existence within the socialist economy is an objective necessity; however, opinions must be exchanged concerning the impact of this law and how it should be applied in order to clarify these matters. Below are some thoughts offered in the hope of helping to clarify these matters.

Part I

The law of value is the economic law of commodity production. The law of value demands that the production and trade of goods be carried out on the basis of how much social labor need be expended. The existence of the law of value in every system of commodity production is always closely linked to a specific mode of production. As a result, we must research the law of value against the economic circumstances and conditions of our country.

To begin with, our country is in the initial stage of the transition to socialism and, at present, the law of value is having an impact within an economy consisting of many different segments. Attention must be given to the fact that, in the various stages of development of socialist society, the impact of the law of value differs in degree. In the initial stage of socialism, when socialist production relations are being established, the scope of impact of the law of value, although subject to certain limitations, is still broad. As socialist production relations are strengthened and developed, the law of value is increasingly limited. We are in the initial stage of transition to socialism in which there is a state-operated economy, a collective economy and, at the same time, a private economy. In the South, in addition to these three economic segments, there are also the joint public-private economy and the private capitalist economy. Due to the birth of the socialist economy and its dominant position within the state-operated economy and due to the impact of the economic laws of socialism, especially the basic economic law and the law of planned development, the impact of the law of value has been limited.

Under the capitalist system, the law of value rules man and has the impact of a spontaneous force. Conversely, under socialism, we recognize and apply it in the planned management of the national economy. One objective impact of the law of value under socialism to which we must give our attention to fully utilizing is the incentive it provides for higher labor productivity and the development of production if we know how to use commodity-money relations well in economic management. However, the impact of the law of value differs in degree within each specific field. Its impact is stronger in circulation than in production and stronger in consumer goods production than in the production of the instruments of production; its impact is stronger in the artisan and handicraft industry than in modern industry; and its impact is broader and stronger in the South than in the North at this time.

Within the state-operated economy, the law of value does not regulate production but it does have an important impact. There is product trade among the various sectors of the state-operated economy and this trade of products is based on calculating the expenditure of social labor. Within a sector of the state-operated economy, it is also necessary to calculate the expenditure of live labor and materialized labor in order to raise productivity and lower production costs so that enterprises can produce at a profit. Therefore, within the state-operated economy, in addition to applying the fundamental economic law of socialism and the law of planned development, we must know how to apply the law of value in production, distribution and circulation. Some enterprises that do not know how to apply the law of value produce products at any price, incur losses and harm the state. The law of value does, to a certain degree, regulate the production of products that are produced and circulated outside the plans of state-operated enterprises. If, in their production and business operations, state-operated enterprises do not take the law of value into consideration, it will pose an obstacle to the implementation of measures designed to develop production and will have more than a small influence upon the process of reproduction of the enterprise. If we only know how to bolster the morale and will of laborers but do not give attention to the production costs, value and prices of the goods that are produced or to whether the enterprise is earning a profit or incurring a loss, enterprises will ultimately encounter difficulties in production and in improving the lives of their workers. At present, the state must still compensate more than a few production and business installations that are incurring losses; we must improve our management and gradually put an end to this situation.

In the collective economy, which consists of agricultural cooperatives and handicraft cooperatives, the law of value still regulates production to some extent. Although they receive guidance from the state plan in the form of norms governing their various products, prices and profits are still very "attractive" to cooperatives. In the past, the purchasing of agricultural products has fallen short of projected plan quotas because of many reasons, including inappropriate prices. Farmers generally calculate their profit very closely when selling agricultural products to the state.

As regards the private economy, the law of value, although its impact is limited to some extent, still rapidly and strongly regulates production and circulation. Within this sector, prices rise and fall abnormally and are dependent upon supply and demand on the market.

Secondly, the law of value is having an impact in the process of advancing from small-scale production to large-scale socialist production, a process in which labor productivity is still very low but the value of goods is high. Commodity production in our country at this time is still based upon underdeveloped production forces and a low level of division of social labor.

Low labor productivity causes the amount of social work time required to be high and also results in the value of products being high because "the common law of commodity production is that labor productivity is directly proportionate to the percentage of the value it creates."(1) Due to low productivity, the surplus product is still small and commodity output is also small, especially in agriculture, where the commodity ratio is still low. This situation has led to a very sharp antagonism between production and consumption; the national economy is seriously unbalanced.

Part II

Recognizing and correctly applying the law of value is a very important matter in making good use of the various economic levers for the purpose of supporting socialist transformation and socialist construction in our country. In order to intensify socialist construction, we have attached importance to implementing the principle of providing incentives through material interests while giving our attention to teaching ideology, but not in the manner of idealists who only know how to mobilize the thinking of laborers while denying the objective laws that exist within the economy itself. Some persons engaged in economic work are very frustrated by the "stubbornness" of the law of value because it has "created" many very complex and hard problems that must be studied and resolved.

We must apply the law of value in a conscious manner; we must study Lenin, must "know how to use all of the existing forms of transitional economies...in order to immediately revive the national economy within a ravaged and weakened country."(2) In addition to teaching socialist patriotism to laborers so that they make every effort to build the socialist fatherland, we must know how to use the existing levers of commodity production and use intermediary links to stimulate the birth of large-scale socialist production in our country. One fact very deserving of attention is that when we apply it correctly, the law of value operates within the economy in a manner as quiet as a gentle autumn rain, as if no one even knows it is being applied; however, if an economic agency makes a mistake and violates the law of value, it will be beaten by it; then, it will arise like a roaring wave and clearly reveal itself to everyone; as Marx said, "It is as if it takes a house collapsing upon their heads to show everyone the law of gravity."(3)

When talking about value and the law of value, we must clearly realize that the basic quantity in the value of a commodity is the amount of social work time needed to produce it and it is this amount of time that is the basis for the impact of the law of value. If we do not clearly realize this fact, we cannot, in practice, establish the value and prices of commodities because the amount of social work time needed to produce a commodity is the essence of its value and the monetary form of expression of value is price. At present, we only research and determine production costs, a primary component of the value of a commodity, but do not truly compute the entire value of a commodity. We also do not calculate the value of the surplus product in order to, on this basis, establish a reasonable level of profit for production installations. The labor productivity of persons producing a commodity determines the amount of social work time to produce the commodity in question; this amount of time changes depending upon changes in labor productivity. When the amount of social work time needed to produce a commodity changes, the value of the commodity changes as does its price. Changes in value demand changes in prices because prices "revolve around value." It is an abnormal phenomenon and contrary to the law if a price does not change at a time when value has undergone significant change. Such a price policy would pose obstacles to production, distribution and circulation.

The law of value does not directly show itself on the market, but takes the form of prices. Actually, without prices, the law of value cannot be expressed.

We cannot give light attention to the relationship between supply and demand; even though it does not determine the formation of prices in socialism, it does have a very important effect upon prices. It is through the relationship between supply and demand that prices rise or fall on the basis of value; only in these increases and decreases in prices is the law of value implemented and are we able to set prices above or below value in order to support the development of the socialist economy. "Thus, there can be a separation, a gap between the price and value of a commodity and this possibility is realized through price structure itself. This vague concept, which appears to be a shortcoming, is actually one of the beauties of this structure."(4)

When applying the law of value, we must place it in a close relationship with the economic laws of socialism. These laws are organically linked to one another and combine with the law of value to form a system of objective laws in which the fundamental economic law of socialism and the law of planned development are the laws that occupy the dominant position while the law of value plays a secondary role subordinate to the system of economic laws of socialism. As a result, we cannot research or apply the law of value in an isolated, metaphysical manner, but must place it within its close relationship with the economic laws of socialism. Only as a result of the birth of socialist production relations and the laws that govern them can we apply the law of value for the sake of the interests of socialism. As the socialist production relations are strengthened and perfected, we will be better able to apply the law of value to serve the interests of socialism. As a result, we must give very much attention to building, strengthening and developing the state-operated and cooperative economies while creating the conditions for applying the law of value well.

To apply the law of value well, we must employ a correct methodology, must clearly recognize the inevitable existence of this law within our country's economy. However, recognizing and correctly applying objective laws involves an entire process. Some persons always say that they recognize the existence of the law of value but, in actuality, they give it no attention whatsoever, consequently, they commit serious shortcomings in economic management. They tend to make too much use of administrative measures instead of correctly employing the various economic relations; they think that this is the best and easiest course to follow but do not suspect that this objective law is having a reverse effect, forcing them to go around in circles and, as a result, waste much of society's wealth.

Correctly establishing the position of the law of value, the resolution of the 4th Party Congress pointed out: "In economic management, we must attach importance to use value and, at the same time, to the law of value; we must implement the system of cost accounting and make good use of the market and the various economic levers: prices, credit, wages, profits, etc."(5) We must overcome the idealist viewpoint of using subjective desires in place of researching and applying the various objective economic laws. On the other hand, we must also combat the tendency toward strengthening the role played by the law of value to the point that we worship it and do not see its negative aspects.

The law of value is not only applied to provide incentive for small-scale producers to work in accordance with the guidelines of the state plan, but also applied within the socialist economy. We apply the law of value in many areas of economic management, the principal ones being the following:

First, in planning, in addition to establishing material resources norms, we use value as a tool in the formulation of norms and the ratios among the various products within the national economy; at the same time, value is used to inspect and stimulate the implementation of the plans of the economic sectors, the localities and the production installations. After analyzing the basic position and impact of the use value of commodities in our system, Le Duan pointed out: "...During the period of transition to socialism and throughout the stage of socialism, value and the law of value exist in an objective manner and play an important role in building and managing the economy. They are measurements, are tools of inspection and are effective levers."(6)

We must coordinate planning with the utilization of market relations; this also means coordinating the application of the law of planned development with the application of the law of value, using the plan as the primary tool and the market as a supplementary tool. This is an activity in economic management which insures balance and provides a good deal of flexibility and diversity under the conditions of the economy in our country, which is advancing from small-scale production to large-scale socialist production. At present, our country is in the initial stage of the period of transition, its material bases are still underdeveloped and decentralized and the state cannot control each and every capability and need in production and everyday life, consequently, coordinating the application of the law of planned development with the law of value assumes very important significance in stimulating the development of production.

Applying value and the law of value in planning in coordination with utilizing market relations will cause production to "explode" in accordance with the line of the party and the guidelines of the state plan, first and primarily within the state-operated economy and the collective economy so that each installation and each worker displays initiative and creativity in order to contribute to implementing the state plan well.

In the relationship between planning and the use of market relations, it is necessary to combat the tendency at some places to give light attention to planning, wanting instead to develop the production of products outside the plan more than the production of products under the plan, even use supplies provided by the state to develop the production of products outside the plan. Our plans still have the shortcoming of being bureaucratic and restrictive; both the contents and methods of planning must be improved. However, this is no reason to narrow the scope of planning and place market relations above it.

Secondly, the law of value is applied in cost accounting by means of using value as the measurement of each production cost in order to, on this basis, determine production costs and enterprise wholesale prices for the purpose of insuring that enterprises earn a profit. At present, the implementation of cost accounting at enterprises in not good; one important reason for this situation is the failure to correctly determine production costs and enterprise wholesale prices by applying the law of value. Enterprise wholesale prices are not based on a reasonable system of standards and quotas, consequently, they have little effect in strengthening enterprise management.

The prolonged use of sweeping subsidies in economic management has caused production and business installations to rely totally upon the state and give no attention to using the law of value in order to produce and do business at a profit, instead, they merely rely upon the state to compensate the enterprise for its losses.

Thirdly, in pricing activities, we determine the value of a commodity on the basis of the amount of social work time needed to produce it together with applying the policies of the party and state and the economic laws of socialism; at the same time, supply and demand are taken into consideration in order to establish, in a planned manner, price systems designed to stimulate the development of production and help to improve the standard of living of the people, such as the system of agricultural product purchasing prices, the system of retail prices on consumer goods, the system of industrial product wholesale prices, etc. These price systems are closely related to and have an impact upon one another within a unified structure.

In recent years, we have begun to establish a number of price systems; at present, however, these systems are no longer suitable and do not meet the requirements of national economic development. These systems were adjusted in a piecemeal fashion and this served to make the relationship between agricultural products and industrial goods even more unreasonable; as a result, prices have not fulfilled their inherent function well and have not served as an effective tool in struggling against prices on the "free" market and speculators.

Fourthly, in the implementation of distribution in accordance with labor, the law of value is applied to improve the wage system. We must improve the various wage scales in a reasonable manner with a view toward fully implementing the principle of distribution in accordance with labor and helping to redistribute labor within the economic sectors in accordance with the guidelines of the state plan. It is necessary to widely apply in the various sectors and localities the system of piecework wages and contract wages. In addition, it is necessary to correctly implement the system of bonuses for increased labor productivity and production over and above the plan in order to provide incentive for workers and enterprises to accelerate production.

THE WORLD CAPITALIST ECONOMY AGAIN FACES MANY ACUTE PROBLEMS

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 56-60 and 70

[Article by Nguyen Van Tho]

[Text] At the start of this year, before the capitalist countries could overcome the serious consequences of the 1973-1975 economic crisis, they again had to contend with many new, acute problems.

In April 1980, the United States, the country with the greatest economic might in the capitalist world, faced another crisis of surplus production. In particular, this crisis has spread very rapidly and deeply. According to a statement by the U.S. Commerce Department on 19 August 1980, the GNP declined 9 percent during the 2nd quarter of 1980. This was an unprecedented quarterly decline. In July 1980, production declined 9.3 percent compared to the same period of time last year. All important production sectors have become entangled in this crisis. The automobile industry is only using 50 percent of its capacity; by June 1980, its output had declined by 23 percent, the lowest level in 20 years. In May 1980, the number of new houses constructed amounted to only 920,000 units, one-half the number built in May 1979. The metallurgy industry is also being severely affected by the crisis, using only 56 percent of its capacity. The United States has 16 large steel mills with 106 blast furnaces, but 43 of these furnaces are not in operation. During the first 6 months of 1980 steel output declined 15.8 percent compared to the first 6 months of last year, amounting to only 59 million tons.

Business activities have stagnated. The profits of U.S. corporations have strongly declined, declining 18.2 percent after taxes during the 2nd quarter of 1980 alone. The three largest automobile producers in the United States lost 1.5 billion dollars during this period of time. Many plants have had to close and there have been mass layoffs. In April and May of 1980, there were 1.7 million unemployed persons in the United States; the total number of unemployed workers has thus risen to more than 8 million, 7.8 percent of the workforce.

This serious crisis has inevitably led to a rapid drop in consumer demand on the U.S. market. The real wages of workers have declined continuously for 12 months and had dropped by 9 percent as of May 1980. An opinion poll conducted by the U.S. television network CBS recently showed: "The present economic crisis is causing Americans to be more concerned than ever before."

In western Europe, the economic crisis broke out first in Great Britain. During the first 6 months of this year, industrial production in Great Britain declined 3.5 percent compared to the same period of time last year. The Birmington industrial region in central Great Britain has experienced a serious decline, dropping 25 percent in the space of the last 3 months; of the total number of corporations doing business in this region, only 9 percent are operating normally. According to estimates by economic research organizations in Great Britain, the gross social product has declined 2.5 percent this year, thus equalling the level during the 1973-1975 crisis.

Industrial production in France began to stagnate in April 1980 and had declined 2.2 percent by May 1980, During the first 6 months of the year, industrial production declined 6 percent, automobile exports declined 2 percent and steel production declined 16.7 percent. The domestic purchasing power has seriously declined and inventories have soared. In May 1980, France had 6,800 bankrput corporations, a 7.5 percent increase over May 1979. Even West Germany, the country with the most highly developed economy in western Europe in 1979, encountered many difficulties as this year began: the rate of economic growth slowed markedly and, in some sectors, production had completely stagnated. During the first 8 months of the year, West Germany only produced 30.3 million tons of steel, a 1.2 percent decline compared to the same period of time last year. This year, GNP has only grown at one-half, sometimes only one-third the rate of last year.

In Japan, the 1979-1980 financial year ended with 16,535 cases of bankruptcy, an increase of 7.3 percent compared to the 1978-1979 financial year. Total unpaid debt stood at roughly 2.358 trillion yen (about 9.43 billion dollars), a 15.2 percent increase compared to the 1978-1979 financial year. According to estimates by Japanese banks, the rate of increase in investments in industry will not increae during the 1980-1981 financial year. For example, investments in machinery and equipment in 1980-1981 will increase 14.1 percent compared to a 16.5 percent increase in 1979-1980; the investment of private capital in the processing industries will only increase 8.7 percent in 1980-1981 compared to 21 percent in 1979-1980. During the first 8 months of this year, the Mitsubishi Economic Institute observed that the Japanese economy is showing signs of entering a decline. The rate of increase of GNP might decline from 6.1 percent during the 1979-1980 financial year to 4.5 percent in the 1980-1981 financial year. Consumer demand on the domestic market is declining.

In summary, economic activities are clearly stagnating throughout the capitalist world and a serious crisis exists in the United States and Great Britain. According to a report by the European Organization of Economic Cooperation and Development (OECD), the rate of economic growth of the 24 capitalist countries belonging to this organization in 1980 was about 1 percent (1979: 3 percent), inflation was 13.3 percent (1979: 10.1 percent) and unemployment stood at 20 million persons (1979: 16.5 million persons).

The economic crisis, although it only broke out recently, has revealed many of the acute problems with which the capitalist countries must deal.

First, this crisis has occurred at a time when the capitalist countries have not overcome the serious consequences of the economic crisis during the years from 1973 to 1975. Never before has the capitalist world experienced a stage of restoration as unstable and long as the stage following the 1973-1975 crisis. This stage lasted 14 months in the United States, 15 months in West Germany, 30 month in France, 35 months in Japan and 37 months in Great Britain. In 1978 and 1979, the capitalist countries entered a very brief and weak period of prosperity. During this stage, the industrial production of these countries only increased 4 percent each year, less than one-half the increase in 1973. Moreover, the production of many industrial sectors, such as shipbuilding, ocean transport, synthetic fiber production, textiles, ready-made clothing production, shoe production and so forth, continues to be in a state of crisis or stagnation.

The direct cause of this tragic situation is the serious difficulties encountered in many areas of the world capitalist economy, difficulties that have caused the various factors that stimulate the restoration and development of the economy to not have the impact they had in previous economic cycles. Following the 1973-1975 crisis, the capitalist countries did not see a surge in investments in fixed capital, a primary material base in economic restoration and development. It was not until 1978 that the capitalist countries, with the exception of the United States and France, returned to the investment levels of 1973, the year of highest investments. The main obstacles to this recovery were that economic prospects were not bright, consumer demand on the domestic and foreign markets had not increased and there was still a serious surplus of plant capacity. This situation had the unavoidable consequence of universally reducing labor productivity. During the period from 1975 to 1979, labor productivity in the United States only increased by 0.1 percent each year compared to 1.9 percent during the previous 10 years (1963-1973). Also during this period of time, labor productivity in Japan increased 3.4 percent compared to 8.7 percent, labor productivity in West Germany increased 3.2 percent compared to 4.6 percent, labor productivity in France increased 2.7 percent compared to 4.6 percent, labor productivity in Great Britain increased 0.3 percent compared to 3 percent and labor productivity in Italy increased 1.6 percent compared to 5.4 percent.

Economic recovery and development are also dependent, to a large degree, upon personal spending because personal spending accounts for 60 percent of national income in the capitalist countries. Serious inflation, the failure of wages to keep pace with rising prices and the constant increase in the number of unemployed, all of these factors have caused the annual rate of increase of personal spending to decline since 1973 to less than one-half the 4.8 percent average during the period from 1963 to 1973. This is not to mention the heavy tax burden and mounting consumer debt.

These difficulties on the domestic market have naturally affected demand on the world market, in general. Moreover, in recent years, international trade has encountered many new obstacles. Protective measures have become increasingly numerous and widespread. There have been continuous trade wars among North America, western Europe and Japan, such as the automobile war, the iron and steel war, the synthetic fiber war, the fertilizer war, etc. Tensions on the world market have also been increased by the embargo and economic retaliation of the U.S. imperialists and their allies against the Soviet Union, Vietnam and the other socialist countries as well as the developing countries in which the anti-imperialist movement is strong, such as Iran and so forth, thereby causing consumer demand on the world market to shrink correspondingly.

The situation presented above very clearly reflects the increasingly deep antagonism between production and the market and explains why the capitalist countries became entangled in the present crisis before they could overcome the serious consequences of the 1973-1975 crisis.

Secondly, a new symptom in the present stage of recovery and prosperity is that inflation and unemployment, instead of declining, have strongly increased in practically all of the capitalist countries. The prices of consumer goods increased 8.5 percent in 1978 and 10.5 percent in 1979 compared to 5.9 percent in 1972 and 9.5 percent in 1973. In 1980, the economic crisis broke out in the United States and Great Britain; inflation in these two countries has also increased strongly (13.2 percent in the United States and 18.5 percent in Great Britain). Of concern to the capitalist conntries is that both inflation and unemployment are rising; this malady, once acute, has now become chronic and is an unprecedented danger in the history of capitalism. The underlying cause of the present inflation is the policy of the capitalist state of regulating the economy by means of the budget. The budget deficit has been increasing strongly. In the United States, the annual average budget deficit has increased from 13.8 billion dollars during the years from 1970 to 1974 to 48.6 billion dollars during the years from 1975 to 1979. In western Europe, it has increased from 8.6 billion marks to 44.7 billion marks; in Great Britain, it has increased from 1.3 billion British sterling to 7.58 billion British sterling. During the years from 1975 to 1979, the annual average budget deficit in Japan was 17.16 billion dollars and, in France, 8.9 billion dollars.

This trend has been closely linked to increases in expenditures for non-production purposes, especially increases in military spending, spending on the arms race and spending to serve the interests of the monopolistic capitalist groups. According to calculations by UN specialists, the military expenditures of the capitalist countries increased from 209 billion dollars in 1970 to 450 billion dollars in 1980. Clearly, inflation has increased as the budget deficit has increased.

In addition to this underlying cause of inflation, the consequences of inflation under the present conditions of capitalism have created new factors that are having the reciprocal effect of causing inflation and unemployment to rise.

Thirdly, this economic crisis has broken out at a time when the various structural crises are becoming more serious. In late 1978, the energy crisis broke out. Compared to the 1974 energy crisis, in which petroleum prices increased by 9 dollars (from 2.59 dollars to 11.65 dollars per barrel), this crisis has increased prices by more than 200 percent, that is, an increase of 19.3 dollars (from 12.7 to 32 dollars per barrel).

The capitalist countries, on the one hand, have had to take stern measures to control energy consumption but without affecting the production of many sectors;

on the other hand, they have had to increase their spending in order to import petroleum. U.S. spending on oil imports increased from 8.1 billion dollars in 1973 to 45 billion dollars in 1977 and about 60 billion dollars in 1979. During this same period of time, Japanese spending on oil imports increased from 6.7 billion dollars to 25.5 billion dollars and nearly 40 billion dollars. Spending on oil imports has increased in a similar fashion within the European Common Market countries.

The immediate consequence of this situation is the serious trade deficit of the capitalist countries. In 1970, these countries only had a trade deficit of 6.24 billion dollars; the trade deficit increased to 28.4 billion dollars in 1975, soared to 64.7 billion dollars in 1979 and will increase even more strongly in 1980. During the 3rd quarter of 1980, the trade deficit stood at 40.4 billion dollars, for a projected annual deficit of more than 100 billion dollars. Clearly, the trade deficit of the capitalist countries is part of the serious crisis they are experiencing and has been and is creating many new difficulties and antagonisms in the other fields of the economy, especially the financial and monetary fields.

Rising oil prices have also created new factors that are causing inflation to worsen. On the one hand, the oil monopolies, seizing the opportunity for higher profits, raised the price of the petroleum they sell and of petroleum products by a rate higher than the rate of price increases of the countries in the Organization of Petroleum Exporting Countries (OPEC). On the other hand, the increases in oil prices have an effect upon the prices of all other goods, especially those who manufacture requires the use of much energy or much petroleum, natural gas and so forth as a raw material. As regards the causes of this situation, all bourgeois theorists blame the petroleum exporting countries. In fact, the increases in oil prices are the result of the economic crisis and the inflation in the capitalist world. At the start of 1979, the countries of OPEC revealed: inflation in the capitalist countries had caused their real earnings from the exportation of petroleum to decline by 17 billion dollars in 1977 and 20 billion dollars in 1978. Moreover, as of March 1979, the price of exported oil had only increased by 48 percent while the prices of industrial goods imported from the capitalist countries had risen by 56 percent. In the face of this situation, the OPEC countries had to increase the price of their oil to protect their interests; therefore, the present oil crisis has its origins within the capitalist system and it is the monopolistic capitalists themselves who have made this crisis worse with each passing day.

Due to the increasingly serious inflation, the capitalist currencies have rapidly lost value. In this general trend, the U.S. dollar has been weakened more rapidly than the other currencies and has dragged the entire monetary system of the capitalist world into a greater state of chaos. As of 21 January 1980, the price of gold has risen to 838 dollars per ounce, the highest price in history, a price 21 times higher than the price of gold at the start of the 1970's. This is eroding confidence in the western currencies and proves that every effort of the capitalist countries to achieve monetary stability is nothing more than an illusion.

The new difficulties and antagonisms in the capitalist economic cycle, the phenomenon of stagflation, which has become chronic and the deep structural crisis have caused the mechanical crisis to flare up. In recent years, facts have shown that the various measures taken by state monopolistic capitalism to intervene in economic life have not only failed to have an impact but have, in many sectors, also become the causes of new difficulties and antagonisms, the most obvious ones being inflation and its consequence, the malady of stagflation. Thus, state monopolistic capitalism truly finds itself in a state of crisis. The capitalist world economy is in an increasingly frustrated and inescapable situation.

On the basis of the serious difficulties mentioned above, all of the capitalist countries have made very pessimistic predictions concerning economic prospects in the 1980's. They consider the 1980's to be 10 gloomy years spent dealing with many extremely difficult problems.

Energy is the number one problem that all capitalist countries will face in the next 10 years. According to estimates by the International Energy Organization, the shortage of oil in the capitalist countries will constantly increase until the end of this decade. The U.S. Department of Energy has admitted that the price of oil in 1985 might be twice as high and that the oil consuming countries might have to spend an additional 140 billion dollars to import oil.

The second difficulty which no capitalist country can avoid is the parallel increases in inflation and unemployment, thereby creating two obstacles to capitalist reproduction.

The capitalist countries have placed many hopes on the achievements of the scientific and technological revolution in order to resolve the acute economic problems being faced now. However, the process of improving the economic structure and upgrading the old technological base to a new one suited to the new economic conditions in the capitalist countries are proceeding very slowly. Moreover, due to capitalist production relations, every step taken to rationalize production and make technological improvements is a step that increases the socialized nature of production forces and a step that results in mass layoffs. This will serve to exacerbate the political-social antagonism.

Against this background, the monopolistic capitalist state can only take halfhearted economic measures and policies, cannot thoroughly resolve the problems it faces.

Thus, in the 1980's, there is little chance in the capitalist countries for the emergence of true economic prosperity; rather, it is highly possible that these countries will experience economic crises that are at least as serious as the 1973-1975 crisis. The United States has been and is gradually entering the vortex of the economic crisis. Due to its economic and political position, the decline of this giant will surely drag down a host of other capitalist countries. In the "post-Vietnam" period, the capitalist world will surely experience more profound and larger changes.

A FEW ASPECTS OF THE COUNTRIES WITHIN THE SOUTHEAST ASIAN ORGANIZATION (ASEAN)

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 61-64

[Article by Nguyen Khac Vien]

[Text] Indonesia and Brunei annually produce nearly 100 million tons of petroleum.

Malaysia exports 60,000 tons of tin and 1.5 million tons of rubber each year.

The Philippines produce more than 12 million coconuts each year.

Thailand exports 6 million tons of cassava flour each year.

This is not to mention the other types of agricultural products: palm leaves, corn, tobacco, tea and so forth; not to mention the various types of ore besides tin; not to mention the deposits of petroleum and natural gas under the sea or lying elsewhere to be tapped; and not to mention the precious wood in the rich tropical forests.

However, the majority of this wealth is being exported to the United States, Japan and western Europe.

We were not surprised when U.S. President Eisenhower, in 1953, met with the French governor to explain why the United States was paying 80 percent of the costs of France's war in Indochina: Southeast Asia is a tremendous source of raw materials for the countries of the "free" world.

In 1970, as the fuel problem became an acute problem in the developed capitalist countries, exploration for petroleum and gas in Southeast Asia increased dramatically. The entire ocean region here was divided into grids for exploration and preparations for development. Between 1968 and 1980, the daily oil need of the world increased from 40 million barrels to 80 millions barrels. It has been estimated that, by 1985, the United States will be importing 13 million barrels per day and Japan will be consuming 12 million barrels per day.

Controlling the tremendous sources of raw materials in Southeast Asia is a matter of survival to the economies of the developed capitalist countries: the United States, Japan and western Europe.

The raw materials mentioned above, before being exported to the large capitalist countries, are processed to some extent; industries processing coconut oil, palm leaf oil, rubber and fruit have been constructed. Along with them, a number of automobile assembly plants and, in particular, electronic plants producing radios, televisions, recorders, telephones and so forth have been constructed. The components, which are produced in Japan and the United States, are sent to Southeast Asia to be assembled by workers in the countries of this region; the production of these components, which requires a high level of scientific and technological development, is carried out in the large capitalist countries; their assembly, which requires much painstaken labor, is done by workers in Southeast Asia. The goods, which are sold on the international market, still bear the labels of the United States, Japan or western Europe; the profit earned from their sale is primarily returned to the multinational corporations of the large capitalist countries in the United States, Japan and western Europe. The wages of the workers in Southeast Asia often only equal one-fifth the wage of a worker in Japan and one-tenth of a worker in the United States. When they are sick, they must leave their job without receiving the sick pay received by workers in the countries of Europe and the United States. In the competition among capitalists, finding the cheapest labor is a matter of survival.

Looking at the countries in the Southeast Asian Organization (ASEAN), we see another field that is apparently undergoing intense development: the tourism and service sector. In the cities of Bangkok, Manila and Singapore, one sees huge hotels and bustling recreational and entertainment areas; statistics show that the annual revenue from "tourism" is several hundred million dollars. The streets are bustling with tourists from the United States, Great Britain, Germany, France and Japan; each day, planes land in these cities bringing tens of thousands of tourists from the West and Japan. Throughout Japan, the United States and western Europe, one sees billboards inviting tourists to travel to Southeast Asia, billboards promising very exotic, very "eastern" pleasures.

Who are the guests that pour into the cities of Bangkok, Singapore, Manila and Hong Kong? They are the owners of large companies, specialists, engineers, experts in economics, banking and trade and, for the most part, "tourists." They come from Japan, the United States and western Europe, countries in which fun and enjoyment are very expensive, to Southeast Asia to live in spacious hotels or rent villas complete with kitchens at inexpensive rates; they travel extensively by airplane, taking only 12 to 13 hours to reach Southeast Asia. Once here, they are taken to see the sights of "Asia" and, in particular, enjoy its prostitutes at will. Thai girls from the poor lowlands, where farmers have gone bankrupt and been forced to sell their children to avoid starvation, have come to the cities to be prostitutes. To tourists, a few dollars is not much, but to an impoverished girl in Bangkok, it is a large sum of money. And, in such cities aa Bangkok, for example, prostitution for Japanese and western tourists has become an important industry. These girls earn twice as much as a college graduate. The French newspaper LE MONDE reports that the number of prostitutes in Thailand is estimated as 600,000.

Thus, the economies of these countries encompass three "developed" fields: the exportation of raw materials; the assembly and processing industries; and the tourist and service businesses. Recently, U.S. capitalists and business leaders in

Southeast Asia reached agreement concerning a host of measures that will enable the United States to invest much more heavily in this region. According to USIS, the direct investments by the United States in the five countries of Southeast Asia (Indonesia, Malaysia, the Philippines, Thailand and Singapore) in 1966 amounted to more than 5 percent of total U.S. investments in the developing countries; by 1978, this percentage had increased to 9 percent and, by the end of that year, stood at 3.640 trillion dollars. It has been estimated that this investment now stands at 5 trillion dollars. These countries of Southeast Asia are the fourth largest trading partners of the United States and U.S.-Southeast Asian trade relations have increased ten-fold compared to 1965; the total value of goods has reached 16.8 trillion dollars. During the first half of 1980, two-way trade increased by 46 percent. With such close economic ties, it is easy to understand their political closeness!

Another important characteristic of the economies of these countries is the primary role played by the bourgeoisie of Chinese extraction.

The workers at the assembly plants are citizens of the various countries within the Southeast Asian Organization (ASEAN), the companies that control the majority of the profit are from Japan, the United States and western Europe and the management intermediaries are overseas Chinese bourgeoisie.

The farmers of Thailand raise cassava and cassava flour is exported to the large capitalist countries, with the buyers being overseas Chinese bourgeoisie. In the tourist sector, the young girls are Thai, their clients are from Japan or West Germany and the hotel owners are overseas Chinese bourgeoisie.

Within agriculture, the production of some agricultural products and commodities has increased but all of these products are exported to the large capitalist countries; only landowners have enough capital to purchase machinery, chemical fertilizer and new seeds with which to produce these products; the profits are used to buy machinery and luxuries from the imperialist countries. Due to the introduction of machinery, the majority of farmers have lost their jobs; before the introduction of machinery, they had a few agricultural products or handicraft goods to sell in order to earn a small amount of money, which they must now do without. The population is constantly growing and the number of bankrupt persons in the countryside is increasing with each day.

As a result, crop yields have failed to increase over a large area. The average rice yield in Thailand is only about 2 tons per year; the majority of fields are only used to raise one crop per year. Thailand can export rice because it has a large amount of land under cultivation (17 million hectares, three times as much as Vietnam, but its population is nearly the same as Vietnam's). The divisions between the wealthy and the poor in the countryside of these countries are becoming increasingly sharp; tens of millions of bankrupt farmers have left their villages for the cities.

The populations of the cities, especially the capitals, such as Bangkok, have swollen to 5 million to 6 million; on the one side are huge palaces, skyscrapers, hotels and stores, an abundance of goods to serve foreign tourists, large businessmen, landowners and high ranking officers and officials; on the other side are the slums of the poor working people who hold unstable jobs. A small number of them have been employed at the assembly plants of the multinational corporations; their wages are not high but, compared to the wages of laborers who wander the streets and the income of bankrupt farmers, their income is much higher. Many persons who have had to use microscopes to assemble sophisticated electronic components for 5 to 7 years have had their vision impaired and been fired. The majority of the merchants, both large and small, and managers are Chinese.

Finally, besides a number of merchants and high ranking officials and officers who eat and dress very well and some manual workers and civil servants who temporarily have adequate food to eat, the vast majority of the people and laborers live unstable, easily bankrupted lives. The cinema, radio stations, television, books and newspapers overflow with things that stimulate violence and licentiousness, thereby dragging society into a decadent, pleasure-seeking lifestyle. National cultures have been crushed by waves of so called cultural products imported from the United States and the other large capitalist countries.

According to a report by the Economic and Social Commission of the United Nations on Asia and the Pacific (ESCAP), in Thailand, a country that seems prosperous from the outside and is famous for the smile on the faces of its people, 11 million of the more than 40 million people do not have enough money to maintain a minimum standard of living. This has also been recognized by the Bangkok government; another report states that more than 4 million of the 7 million children of kindergarten age regularly lack the necessary nutrition (in 1974, 54,000 children died of starvation). Millions of children in the impoverished northeast region of the country have been sold by their parents and must work at hard labor in factories with extremely wretched conditions; they work in the factories all week long and are prohibited from leaving it for any reason. (The approximately 8,000 factories of this type have contributed to the "prosperity" of Bangkok). In a report made public in 1976, the World Bank calculated that the number of children under 14 years of age in Thailand who must work is nearly 2 million (10 percent of the children of this age group). After being denounced by the Anti-Slavery Committee of the UN, the Thai government declared the launching of a campaign against "factories that use slaves" in the capital and the "flesh dealers" in the railroad stations of Bangkok; however, no concrete results have been achieved in this campaign.

In the countries within the Southeast Asian Organization (ASEAN), the majority of the working people are impoverished, the national culture faces the threat of being abolished and society has become decadent. This plight cannot help but generate strong reactions among the patriots, the manual workers, farmers, students and intellectuals of these countries.

In order to carry out their scheme of expansion, the Beijing reactionary authorities have pursued many plans in the countries within the Southeast Asian Organization (ASEAN). For example, they are using overseas Chinese to control key positions within the economy, assume positions within the government and bribe officials and high ranking officers; they are using the small Maoist parties to create disruptions and bring pressure to bear upon the local governments.

we are not surprised by the fact that, in the face of the pressure and enticements of the imperialists and the Beijing reactionary authorities, reactionary forces in some of the countries within the Southeast Asian Organization have sided with the United States, Japan and Beijing in a vain attempt to consolidate their positions. In addition to the way they make their living each day and to sharing the profits of the colonialist economies, a number of them also desire to make money through wars launched by the imperialists and international reactionary forces. In 1940, Thailand drove off Japan and took occupation of all of Battambang Province and a portion of Kompong Thom Province in Kampuchea; during the years of the U.S. attacks in Southeast Asia, Thailand supplied mercenaries and allowed the United States to use Thai soil for air and naval bases. The majority of the B-52's that committed countless crimes in the countries of Southeast Asia departed from Thai soil.

The people of the countries in the Southeast Asian Organization (ASEAN) share with the people of the three countries of Indochina a common environment and a past marked by struggle against old-style colonialism. Today, in order to safeguard their national independence, prevent their natural resources from being exploited to the point of depletion, prevent their national cultural from being destroyed and, in particular, maintain peace in the entire region and not be drawn into a savage war to die in place of forces commanded by reactionaries in Washington, Tokyo and Beijing, the people of all countries in Southeast Asia must resist the scheme of the imperialists and the Beijing expansionists. In this struggle for peace and independence, Vietnam, Laos and Kampuchea stand ready with the other countries in Southeast Asia to discuss and reach solutions, build permanent peace and, on this basis cooperate with one another to build and develop their economies and cultures. The destiny of Southeast Asia, of which Indochina is an integral part, must be decided by the people of Southeast Asia and cannot be delivered into the hands of the rulers in Washington, Tokyo and Beijing!

THE STRATEGIC AMBITION OF BEIJING REGARDING THE SOUTH CHINA SEA

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 65-68

[Article Nhuan Vu]

[Text] A Key Strategic Area

Measuring 2.14 million square kilometers, the South China Sea is one of the largest seas in the world. To the north, the South China Sea meets with the Hoa Dong Sea through the Strait of Taiwan and with the Pacific Ocean through the Basi Strait (between Taiwan and the northern Philippines). To the southeast, the South China sea adjoins the southern Pacific through the Sulu and Celebes Seas (between the Philippines and Indonesia). To the west, the South China Sea connects with the Indian Ocean through the Strait of Malacca. Therefore, the South China Sea is in a key position between Asia and Europe, in a key position vis-a-vis many regions in Asia and is an important maritime and naval communications hub. The South China Sea plays an important role in the economic life not only of the countries along its shores but also in Northeast Asia, especially Japan, a country that is heavily dependent upon the petroleum sources in the Middle East and raw material sources in Southeast Asia. The South China Sea is also an important strategic military region to all of the countries in Southeast Asia that are peninsula and island countries. It is also a strategic military area that links two oceans, the Pacific and Indian Oceans, and, as a result, it can serve the role as a springboard for deploying military forces from the Pacific into the Indian subcontinent, South Asia, the Middle East and East Africa.

The old imperialist, colonialist powers of the West quickly saw the importance of the South China Sea, consequently, as early as the 14th and 15th Centuries, Portuguese and Spanish merchants arrived in the Philippines and Indonesia and, in the 17th Century, warhsips of the French, Dutch and British colonialists appeared in the South China Sea, anxious to invade and occupy their colonies.

In a process of long struggle, the countries that were once colonies of the imperialists won their national independence. However, neo-colonialism took the place of old-style colonialism. The imperialist countries, primarily the United States and Japan, and the international reactionary powers are trying to control this region. This is a region of countries that have a warm climate, much manpower (approximately 300 million people), rich agricultural products and minerals and is a region considered to be a storehouse of many valuable, strategic raw materials in the world. For example, in 1970, the countries of Southeast Asia produced 2.4 million of the 2.9 million tons of natural rubber produced by the entire world and 115,000 tons of the roughly 200,000 tons of tin produced by the entire world.

Today, the position of the South China Sea has become even more important now that large petroleum reserves are being developed in many regions along its continental shelf.

Beijing's Ambitions Regarding Its "Home Waters"

Throughout history, the effort by imperialist and expansionist powers to conquer others has been in the hands of powerful armies but the operations of these armies have been limited to the mainland regions. For this reason, in order to become global powers, the imperialist powers had to have a powerful navy to complement their powerful army. To accomplish this, they first had to have favorable "home waters" to use as springboards for thrusts into the various oceans. The "home waters" of the imperialist Roman navy of ancient times were the Mediterranean; the "home waters" of the Japanese navy when it was first being built in the early 20th Century were the Sea of Japan; and the "home waters" of the German Nazi navy were the North Sea.

China has never had a modern, powerful navy or secure "home waters" in the several thousand years of its history. As the navies of the Song and Nguyen Dynasties were on the momentum of being built and developed and moved into the South China Sea in order to prepare for ventures far away, some of their ships were sunk in the mouth of the Bach Dang River and the river itself by the Dai Viet navy. Today, Beijing should not forget this fact. Since 1950, the Chinese navy has been expanded, its troop strength exceeds 300,000 and it is equipped with a large number of warships that are 20 to 30 years old. With the exception of 73 submarines and 23 destroyers of various types, the other warships in the Bac Hai, Dong Hai and Nam Hai fleets of the Chinese army consist primarily of escort vessels, anti-submarine vessels, battleships and fast torpedo boats.

The Hoa Dong Sea, which is the "home waters" of China and measures 1.24 million square kilometers, is now controlled by the U.S. and Japanese navies.

Looking from their "home waters" toward the ocean, Beijing sees through its binoculars warships of the U.S. Navy and the Japanese navy immediately before their eyes and the Strait of Taiwan, the Strait of Korea, the Ryukyu Islands and the Kyushu Island of Japan look like a screen preventing the winds from the Pacific from blowing into the Hoa Dong Sea and the several thousand kilometer coastline of China.

To the pragmatic eyes of Beijing expansionist and hegemonist circles, the South China Sea appears as a broad springboard which the Chinese navy, whose strength is limited, can use to have an impact, especially when operating within the framework of collaborating with the U.S. Navy. This is something that Washington desires because the United States wants to use the Chinese navy as a force temporarily helping it to achieve their sinister scheme in the South China Sea.

Within the framework of the mutual beneficial relationship between Washington and Beijing in the South China Sea, Beijing is dreaming of and making every effort to turn the South China Sea, which encompasses the offshore waters of many countries in Southeast Asia, into the "home waters" of the Chinese navy.

The New Long March to the South

Blocked toward the north, northwest and southwest and facing the open sea and the islands of Japan, a country called the "land of the rising sun" that has the ambition of becoming no less than the "country of the setting sun" as well, the Chinese expansionists have frequently directed their efforts toward the South, both from the mainland and the sea.

In World War II, as a result of controlling the South China Sea, the Japanese fascist army attacked and occupied practically all of Southeast Asia within a few months after the war broke out in the Pacific.

From 1955 to 1975, the U.S. imperialists tried to take control of South Vietnam, considering it to be their northern bridge to the Asian continent. The systems of U.S. military bases established in South Vietnam and the Philippines were considered by the Pentagon to be two pincers tightly controlling the South China Sea from its eastern and western shores for the purpose of turning this sea into the private lake of the U.S. Navy, into a springboard for U.S. military forces to control all of Southeast Asia and expand into the Indian Ocean.

Totally defeated in the war of aggression in Vietnam, U.S. warships and aircraft were forced to withdraw and began using the Subic and Clark military bases in the Philippines as their primary bases.

After 30 April 1975, the peoples of the countries along the shore of the South China sea applauded the glorious victory of the Vietnamese and hoped that the South China Sea would be "calm" from then on. However, before the shadows of the old pirate ships had disappeared, the new pirate ships of the Beijing expansionists appeared on the horizon and began their operations in a most brazen fashion with the event on 19 January 1974: openly collaborating with the U.S. imperialists in 1972. Nixon paid the first price to Beijing in his gamble of "playing the China card" by negotiating with and permitting Beijing to attack and occupy all of the Paracel Islands of Vietnam, which, at that time, were occupied by the Saigon puppet army.

This despicable trade was exposed when U.S. State Department spokesman John King declared: "The Chinese side does not appear to oppose the presence of Captain Colson on the island" and "the United States maintains its neutral stand in the Paracel Islands sovereignty dispute." Then, Colson, a "prisoner," a U.S. Army captain captured in the Paracel Islands, was sent with great fanfare by the Chinese authorities from the Beijing airport back to the United States.

That which the U.S. State Department spokesman called the "neutral stand of the United States in the dispute over sovereignty over the Paracel Islands" was, in substance, a manifestation of the strategic collaboration between Beijing and Washington.

Since conspiring with the U.S. imperialists, Beijing has made every effort to create trouble in the South China Sea. They have changed white into black concerning sovereignty over the archipelagos in the South China Sea. They have set one side against another in relations among the countries around the South China Sea. Their insidious scheme is to keep the waters turbid. We still remember when, in 1954, in a textbook, Beijing presented a map in which it showed as part of its territory millions of square kilometers of ocean waters and the islands of surrounding countries. This action was exposed. In 1978, Beijing fabricated another map, in which it claimed as its own territory practically all of the South China Sea to a distance of thousands of kilometers to the south of China's territorial waters. On this map, the "territorial waters" claimed by the Beijing expansionists were like a knife stuck into the stomach--the underbelly--of all Southeast Asia.

To the Beijing reactionary authorities, once they lost all of their influence in Vietnam and Laos, Kampuchea assumed a geographical position of special strategic importance in their South China Sea strategy. From Kampuchea, they could expand into surrounding countries, especially to the south, through the Gulf of Thailand to Singapore, whose population is 90 percent overseas Vietnamese, thereby blocking the strategic Strait of Malacca. Moreover, the Gulf of Thailand is linked to the strategic road running from Van Nam through Phong Sali and Luang Prabang to Pakse and through Phnom Penh all the way to the port of Kompong Som.

Thus, to the Beijing reactionaries, all of the Indochina peninsula, the mainland springboard, and the South China Sea, the springboard at sea, create the first rung in their ladder strategy for expanding into Southeast Asia and, from there, into the Indian Ocean and the countries lying along its shores. However, the countries of Indochina, having won their independence and uniting closely with one another, thwarted this strategic scheme of Beijing. This explains why Beijing has tried to cling to the corpse of Pol Pot, which was spat upon by millions of persons in the world! This reveals the inner meaning of what Beijing has said to its allies that the Kampuchean situation must be evaluated from the standpoint of global strategy. What is this global strategy if not the most reactionary global strategy of trampling upon independence won through the sacrifice of much blood by the peoples of the countries of Indochina and scheming to impose the rule of the Chinese expansionists and hegemonists upon the countries of Indochina and all the countries of Southeast Asia.

Under its "South China Sea strategy," Beijing is making every effort to turn the South China Sea into its "home waters" in the hope of biting the tails of the United States and Japan, extend their reach and create troubles in the Pacific and Indian Oceans. However, Chinese expansionism is coming up against the wall of the peoples of the countries of Southeast Asia, primarily the peoples of the countries of Indochina. Moreover, the U.S. and Japanese imperialists are making every effort to secure a foothold in Southeast Asia; they will not readily allow Beijing to expand in this region, thereby harming their interests. However, the peoples of the countries of Southeast Asia will not allow the expansionists and imperialists to have their will in this region.

CHINA: FACTS AND FIGURES

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 11, Nov 80 pp 69-70

[Article by Le Tinh]

[Text] According to official data for 1979, China has a population of 970 million, one-fifth the world's population. The territory of China measures 9,760,000 square kilometers. Its farmland measures 96 million hectares. There are nearly 1,000 square meters per capita. Industrial output value is 459 billion RMB, 3 percent of the industrial output value of the world. Its agricultural output value is 158.4 billion RMB; national income is 337 billion RMB; national income per capita is 347 RMB, 125th in the world.

The 1976-1985 ten year economic plan of China calls for the production by the end of 1985 of 60 million tons of steel, 500 million tons of crude oil, 1 billion tons of coal, 400 million tons of grain and so forth. And, when three more 5-year plans are added to this, China will become the leading superpower in the world! In September 1980, Hua Guofeng admitted that this plan had met with bankruptcy and said that the new plan will have to be extended to 1990. Generally speaking, the norms of this new plan are about 30 percent lower than the old plan. According to reliable sources of information, China's new plan calls for the production by 1990 of 40 to 50 million tons of steel, 200 million tons of crude oil, 600 million tons of coal, 400 million tons of grain and so forth. As regards the rate of development, the old plan called for industrial growth exceeding 10 percent per year; according to present projections, industry has only grown by 6 percent in 1980 and total industrial-agricultural output value has only increased by 6 percent. In agriculture, the old plan called for the completion of mechanization by 1980; this is no longer a goal due to a shortage of money. The rate of growth of agriculture has also been reduced.

Why were such serious revisions to the plan necessary? They were made necessary by the reactionary political line of the authorities, who want China to "leap" into the position of a leading superpower at a time when the Chinese economy barely escaped collapse following the cultural revolution and is a backward, weak and chaotic economy. In February 1978, Hua Guofeng admitted that the cultural revolution had caused serious harm to the Chinese economy; between 1974 and 1976, the damage to the economy amounted to 100 billion RMB. In August 1980, Deng Xiaoping said that 10 million persons were killed and 200 million persons were suppressed and terrorized in the cultural revolution. In May 1980, the Central Statistics Department of China published a document stating that "the economy is seriously unbalanced," "agriculture is the weakest sector," "light industry is not meeting the requirements of the people" and the heavy industrial sectors are experiencing "a very serious shortage of fuel and electricity"; meanwhile, "production costs are very high, product quality is low and there is very much waste but profits are small." In capital construction, the country "is carrying out 1,187 projects, but only 9.7 percent of them have been completed." According to the Chinese finance minister, the 1979 budget showed a deficit of 17.6 billion RMB; of this amount, military expenditures exceeded 2 billion RMB. This has been confirmed as being caused by the war of aggression against Vietnam. Inflation stands at 5.8 percent and foreign debt is 3.4 billion dollars. As a result, prices have risen quickly and the lives of the people, which were miserable in the cultural revolution, are now still submerged in difficulties. According to official figures, the average income of the farmer is less than 7 RMB per month, which is far below the average standard of living. Last year, Li Xiannian said that 100 million persons are starving; 20 million persons are unemployed, 26 percent of the total number of manual workers and civil servants. In June 1980, Xue Muqiao, a high ranking official in charge of the economy, said that 80 percent of the people now live in poverty and that one-third of the 600 million youths and teenagers are not attending school. In October 1980, the Chinese authorities officially made mention of an investigation conducted in the major cities: among one-fourth the total number of manual workers and civil servants, 8.2 percent are illiterate. In society, millions of youths and teenagers violate the law; within the agencies of the state, there were more than 10,000 violations of the law in the past year and one-half that were prosecuted in court or required disciplinary action.

In this situation, the Chinese reactionary authorities still maintain a huge military apparatus costing from 40 billion to 50 billion dollars per year (according to the journal POLITIQUE INTERNATIONALE, Paris, summer issue, 1980), which is four to five times the total spent on agriculture in 1979. This line will surely not help the Chinese economy.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentneses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

YOUTHS ENTHUSIASTICALLY RESPOND TO CALL FOR INDUCTION

Hanoi NHAN DAN in Vietnamese 6 Dec 80 p 1

[Article: "Ben Tre and Dong Thap Youths Enthusiastically Fulfill Military Obligation"]

[Text] Large numbers of draft-age youths in Ben Tre Province enthusiastically underwent physical examination for draft purposes. In Ba Tri District alone, which led the entire province, 1,252 youths had the honor of receiving the decision on their induction.

The selected youths have stated their determination to fulfill their task and to deserve the confidence of their families and country.

* All sectors, echelons and localities in Dong Thap Province have been seriously carrying out the recruiting task and mobilizing the people for properly doing the work in the rear for the army. As of 30 November, the province achieved 139 percent of its recruiting goal. Cao Lanh District alone had 1,116 youths being selected, or 189 percent of its goal.

Tam Nong, Lap Vo and Chau Thanh Districts and the city of Sadec also achieved 110-139 percent of their goal. Chau Thanh District has greatly surpassed its 1980 recruiting goal.

CONVICTED THIEVES RECEIVE LONG JAIL SENTENCES

Hanoi NHAN DAN in Vietnamese 6 Dec 80 p 4

[VNA News Release: "Ha Nam Ninh: Severe Punishment for Gang Having Stolen State Properties"]

[Text] The People's Court of Ha Nam Ninh Province has just tried Tran Duc Long, skipper of boat No 622-2A; Nguyen Van Han (alias Pho), skipper of boat No 612-2A; and 11 crew members, who in collusion with merchandise escorts Vu Thanh Son and Pham Hong Khai stole more than 21,800 kilograms of grain from the state.

The defendants told the court that on 27 March 1980 the two boats Nos 622-2A and 612-2A of the Xuan Thuy District transportation cooperative were given 78,023 kilograms of wheat to transport from the port of Hon Gai in Quang Ninh Province to Kim Thanh District in Ha Nam Ninh Province. About 10 kilometers from the port, they agreed with one another to exchange wheat for foods to eat. This act was to be repeated several times during the trip. In addition to what was used to exchange for foods, they also sold wheat to dishonest merchants and pocketed from 1,400 to 1,500 dong each. At the point of delivery, there was a shortage of 21,844 kilograms, excluding more than 1,800 kilograms which, because of their poor sense of responsibility, had been wet and thus lost its quality.

The court sentenced Tran Duc Long to 18 years of imprisonment, Nguyen Van Han 17 years, Vu Thanh Son 16 years and Pham Hong Khai 15 years; and 11 other defendants from 2 years of suspended sentence to 8 years of imprisonment. Long, Han and his gang had to pay to the state more than 87,300 dong for the grain that they had stolen.

INDIA-AIDED RESEARCH CENTER UNDER CONSTRUCTION

OW241047 Hanoi VNA in English 0705 GMT 24 Jan 81

[Text] Hanoi VNA January 24--An agricultural technical research centre is being built in the Mekong River delta province of Hau Giang, some 170 kilometres southwest of Ho Chi Minh City, with the cooperation and assistance of the Indian Government.

Its construction cost is estimated at 30 million dong (Vietnam currency) and 11 million rupees. Under the agreement between the two governments, Vietnam assumes the construction while India will provide equipment for the projects. When completed, the centre will have a staff of more than 600 to conduct researches on combined measures to increase crop yield and practice crop multiplication in the Mekong River delta, the key rice producer of the country. It will also produce rice varieties best suited to the region and serve as a centre to train university graduates and post graduates in agricultural sciences.

The centre covers 300 hectares. It has laboratories for more than 10 departments, a meteorological station, a green house and a library. The 20-hectare housing quarter includes a hospital, a school and a day-care centre. The 250-hectare experimental rice farm has 50 hectares for experimental planting, 200 hectares for rice seeds production, drying yards and storehouses. There will be also a pig farm and an engineering workshop.

The centre has conducted researches and experiments with rice species in the Mekong River delta including the N.N 8A and NN4B which give high yields and are pest-resistant.

The centre is now staffed by 200 cadres and workers, one fourth of which are university graduates and post graduates.

It is collaborating with various research institutes at home and abroad including the India Agricultural Research Institute in New Delhi and the International Rice Research Institute.

Dr. E. A. Siddiq, head of the Indian specialist team at the centre, said it is "a symbol of the solidarity and friendship between the Indian and Vietnamese peoples."

KAMPUCHEAN VICTORY DAY RECEPTION--Hanoi VNA Jan 8--Consul General Sok Son of the People's Republic oc Kampuchea to Ho Chi Minh City hosted a reception on January 7 in celebration of the second anniversary of the victory of Kampuchea. Present at the reception were Nguyen Ho, chairman of the city committee for solidarity and friendship with the peoples of other countries; Le Quang Chanh, vice chairman of the city people's committee; and many representatives of various public organs and mass organisations. Also present were the consuls general of the Soviet Union and the German Democratic Republic to Ho Chi Minh City. On this occasion, consul general Sok Son spoke highly of the devoted assistance given to the Kampuchean people by the fraternal socialist countries. [Text] [Hanoi VNA in English 1500 GMT 8 Jan 81 OW]

AID TO KAMPUCHEA--Hanoi VNA Jan 10--The central Vietnam highland province of Darlac has supplied the Kampuchean people in Mondolkiri Province with more than 200 tonnes of tree saplings and 4,000 farm tools. The Darlac irrigation service has sent technicians to help in the building of two irrigation projects and of dams, canals and water reservoirs to water hundreds of hectares of crop fields. The industrial, forestry and building services have provided Mondolkiri with equipment for a number of local industries. The transport service has collaborated with its Kampuchean counterpart in restoring and expanding almost 300 kilometres of road. [Text] [Hanoi VNA in English 1537 GMT 10 Jan 81 OW]

FRG FRIENDSHIP DELEGATION--Hanoi VNA January 16--A delegation of the FRG-Vietnam Friendship Association led by Frank Werkmeister, general secretary has concluded a visit to Vietnam. It was received by Professor Hoang Minh Giam, president, and Tran Hoai Nam, general secretary of the committee for solidarity and friendship with the peoples of other countries. The two sides informed each other of their past activities and their plans to strengthen friendship and mutual understanding between the two peoples. The delegation visited the northern provincial town of Lang Son and discussed with the local people's committee aid by the FRG association to build a creche there. The delegation presented Hanoi mayor Tran Vy with 14,200 deutsche marks for the construction of a creche in Hanoi. The money came from a voluntary work drive sponsored by the FRG association and other organisations with participants from 16 countries. It also presented Professor Ton That Tung with 80,000 vitamin A tablets and 20,000 antibiotic tablets donated from a movement to help Vietnamese victims of U.S. chemical warfare. PALESTINIAN WOMEN'S GROUP--Hanoi VNA January 17--Xuan Thuy, secretary of the Communist Party of Vietnam Central Committee, vice chairman of the National Assembly Standing Committee, and Presidium member of the Fatherland Front Central Committee, received here today a visiting delegation of the General Union of Palestine Women led by Jehan Nasri el-Helou, member of the union's Secretariat. Xuan Thuy spoke to the guests about the role of Vietnamese women in the front and the administration. He reaffirmed the strong support of the party, the government and the people of Vietnam for the just struggle of the people, especially women of Palestine. He condemned the U.S. imperialists for colluding with the Zionists and other international reactionaries in causing tension in Southeast Asia, the Middle East and elsewhere in the world. Ms Jehan Nasri el-Helou expressed her joy to visit Vietnam, and her confidence that the forces of peace with the Soviet Union as the core would spoil all schemes of the imperialists and other international reactionaries aimed at undermining detente and causing tension in the world. [Text] [OW171525 Hanoi VNA in English 1506 GMT 17 Jan 81]

SOVIET CINEMA DELEGATION--Hanoi VNA January 19--Xuan Thuy, secretary of the Communist Party of Vietnam Central Committee and vice chairman of the National Assembly Standing Committee met with a visiting delegation of the state committee of the USSR for cinematography led by the committee's vice president, O. I. Ioshin. Xuan Thuy warmly welcomed the Soviet guests and praised the Soviet Union for its valuable assistance to the Vietnamese film industry. Also present were Ha Xuan Truong, vice minister of culture and information and president of the Vietnam Association of Cinematography; and Soviet Ambassador N. N. Chaplin. A plan for cooperation between Vietnamese and Soviet film industries in 1981 was later signed by Ha Xuan Truong and O. I. Ioshin. Under the plan, the Soviet Union will continue its assistance to Vietnam in technology and the training of personnel. [Text] [OW190755 Hanoi VNA in English 0712 GMT 19 Jan 81]

INDIAN COOPERATIVES DELEGATION--Hanoi VNA Jan 21--Vice-Premier Do Muoi yesterday received a delegation of the All-India Union of Cooperatives (A.I.U.C.) led by Vitswoanatan, M.P. and president of the union. The vice premier expressed his satisfaction at the cooperation between the A.I.U.C. and the Vietnam consumers and marketing cooperatives, which, he said, has contributed to the friendship between the two countries. Earlier the delegation paid a floral tribute at the Ho Chi Minh mausoleum, and visited the late president's house. It also visited marketing cooperatives and historical relics in Hanoi, Haiphong and Quang Ninh. The delegation left here today. [Text] [OW210759 Hanoi VNA in English 0706 GMT 21 Jan 81]

GREETINGS TO LUXEMBOURG CP--Hanoi VNA January 24--The Central Committee of the Communist Party of Vietnam has sent a message of greetings to the Central Committee of the Communist Party of Luxembourg on its 60th anniversary. The message says: "We wish you further success in the struggle for progress, national independence, democracy and socialism, thus contributing to the common struggle of the world revolutionary forces. May the solidarity between our parties, between the working class and peoples of Vietnam and Luxembourg become increasingly stronger." The message thanks the communists, the working class and the people of Luxembourg for their warm support to the Vietnamese people in their past struggle against the French and U.S. imperialist aggressors, in their present struggle against Beijing hegemony and expansionism and in their effort [to] build socialism. BRIEFS

INSPECTION COMMISSION TASKS--The State Inspection Commission recently held a conference in Ho Chi Minh City to review nationwide inspection work in 1979 and 1980 and to discuss inspection tasks for 1981. In the past year, all echelons of the inspection sector organized many inspections to check on implementation of the state plan, especially in the economic field; the maintenance of political security and social order; the strengthening of national defense; and caring for the people's lives. They also assisted the party committee echelons and administration in controlling and supervising the movement against negativism, theft, corruption and bullying of the masses. Concerning the tasks of the inspection sector in 1981, the conference unanimously noted that the struggle to overcome negative phenomena and prevent and check theft, corruption and the bullying of the masses remains this year's central task and that the entire inspection sector must concentrate its efforts on carrying it out. All echelons must actively build the inspection forces, apply uniform measures to develop inspection work and, at the same time, develop the inspection forces of all other sectors and mass organizations, thereby creating a strong position and strong forces for the inspection sector to fulfill the tasks laid down. ECONOMIC PLANNING, TRADE AND FINANCE

COUNCIL OF MINISTERS DECREE ON MARITIME RELATED WAGES

BK210740 Hanoi Domestic Service in Vietnamese 1100 GMT 19 Jan 81

[SRV Council of Ministers 15 January decision on the extensive application of the payment of contract and product-based wages and bonuses in state-run and collective establishments exploiting and cultivating marine products]

[Text] In order to encourage those units and workers engaged in the exploitation and cultivation of marine products to actively develop innovations, rationalize production, improve techniques, satisfactorily use existing equipment, increase labor productivity, step up production, consolidate and perfect socialist production relations, improve the living conditions of the laboring people, and increase the accumulation of capital for the enterprises and collectives for expanding production and satisfactorily carrying out their obligation toward the state, the Council of Ministers hereby decides to expand the application of various forms of payment of wages based on established contracts and on products and payment of bonuses in state-run and collective establishments engaged in the exploitation and cultivation of marine products.

1. General Principle

The various forms of payment of contract and product-based wages must satisfactorily combine the three types of interests--those of the state, the collectives and the workers. Specifically, they must be designed to achieve better economic results, increase labor productivity, improve the quality of products, lower production costs, increase the accumulation of capital for the state or the cooperatives, increase the income of workers, improve the welfare of the collectives, consolidate socialist production relations, improve planning work, and maintain and strengthen labor discipline and socialist law.

2. Forms of Payment of Contract and Product Based Wages in State-run Maritime or Marine Products Establishments

A. Contracts for the production of finished products must be established with the collective of workers of each boat for every sea trip. Their purpose is to cover the production volume and production costs in the contract. After each sea trip, depreciation, expenses, managerial costs and production expenditures will be subtracted from the gross income, and various funds will be established as required. The balance will be divided as follows: 40 to 50 percent for the state, and 50 to 60 percent for the workers.

B. Contracts for the fulfillment of norms and for bonuses must be established with each boat for each sea trip. These norms are for production expenditures, gross payment, production volume and value of products. If the norms contracted for production volume and value of products are either fulfilled or overfulfilled and the norm for material expenditures is met, gross payment will be paid in full and bonuses will be given for overfulfillment of the production volume, savings in material expenditures and fulfillment of the plan based on the payment involved.

C. There must also be contracts on the payment for products based on accrued unit price. This is intended for the fulfillment by each boat for each fishing season and in each fishing ground of set norms for quantity and quality of products, for material expenditures and for the duration of each sea trip. The amount of products covered by the set norm will be paid for based on the established unit price and products that exceed the set norm will be paid for based on the accrued unit price.

3. Collective Economic Units, Cooperatives and Production Teams

Contract-based wages will be paid based on actual income. This is in order to contract for the fulfillment by each unit or boat on a monthly basis or for every sea trip of set norms for production volume and value of products on the basis of contractual norms for depreciation, production expenditures, managerial costs, payment of debts to the various funds and labor costs. The products exploited will be sold to the state in accordance with the set norm for volume. The remainder is left at the disposal of the unit concerned. If the norm contracted for is not met, the unit concerned must make up for the shortfall in subsequent trips.

The distribution of income on a monthly basis or for every sea trip is carried out in accordance with the following principle: expenditures and amounts reserved for the various funds will be deducted from the gross income; and the balance will be distributed among the workers based on their mandays. Of the income that exceeds the quota contracted, 30 percent will be put in a reserve fund to be liquidated at the end of the year.

In addition to this contractual method, the collective economic units may also use the forms of contracts for state-run enterprises mentioned under Item 2.

4. In order to ensure that the widespread application of the contract and product-based wages is carried out in accordance with established norms, the Ministry of Maritime Products, the people's committees at all levels, and all the ministries and general departments concerned must provide good guidance for the implementation of the following tasks:

A. State enterprises and collective economic units must closely manage their existing production materials, means, equipment and work force; correctly ascertain the value of their fixed assets; rationally establish economic and technical norms and contractual norms; lay down stipulations requiring those units failing to fulfill their contractual norms to make up for their production shortfalls; introduce scientific and technical advances in production; and rationally organize manpower in order to constantly promote increased production. It is necessary to exercise close management over products; ensure full delivery of products to the state as required; ensure the combination of the three interests in the distribution of income; take into account the benefits of the laboring people; appropriately commend and reward those individuals and units with high productivity and showing initiative to carry out technical innovations and practice thrift; and secure various necessary conditions for expanded reproduction at the grassroots level.

In carrying out the above tasks, state enterprises must uphold the collective mastery role of workers and trade unions while collective economic establishments must uphold the collective mastery role of cooperative members.

B. The Ministry of Maritime Products and the people's committees at all levels must formulate specific plans to guide and instruct various state enterprises and collective economic units to apply, depending upon their specific circumstances, one of the above contractual forms in such a way as to be most beneficial to increasing production and consolidating units. In other areas of production such as purchasing, collection, supplying, processing and capital construction, the Ministry of Maritime Products and the people's committees at all levels must base themselves on the government general decree on contractual work in order to provide implementation guidance for various units under their control.

C. In providing guidance for implementation of various contractual forms, it is necessary to regularly follow up and grasp the situation and regularly draw on and disseminate good experiences. We must concentrate on preventing erroneous trends which may develop to the disadvantage of the state and which may cause the collective economy and the relations of socialist production to deteriorate, such as establishing low or inappropriate expenditure norms in order to create a false image of great profits; excessively increasing wages and income at the expense of the state and the collective; taking materials or products which are placed under state control to sell on the free market at high prices or to distribute among members of a unit in order to earn profits privately; being preoccupied with private profits without paying attention to paying debts to or creating capital accumulations for the state and the collective; belittling collective well-being; and, while stepping up production, paying no attention to ensuring safety for sea fishermen as well as for boats, junks and equipment.

D. The State Planning Commission, the State Price Commission and all related ministries, especially the ministries of labor and finance, and the State Bank must, depending upon their functions, consider suggesting that the government revise those old and irrational rules and, at the same time, closely coordinate with the Ministry of Maritime Products and the people's committees of various provinces in organizing the implementation of this decree.

During the implementation, the Ministry of Maritime Products and the people's committees of various provinces must regularly report on the developments to the prime minister.

CSO: 4209

PREMIER'S DIRECTIVE ON SLAUGHTER TAX

BK250952 Hanoi Domestic Service in Vietnamese 0400 GMT 23 Jan 81

[Text] In pursuance of the 1 December 1980 resolution which revised Article 4 of the 23 June 1980 regulation on the slaughter tax, the premier of the government recently issued a directive amending and revising a number of points in Directive 202-TTG date 25 June 1980.

Base Price for Tax Computation

There is now too great a difference between the directed price applied by the state in the collection and purchase of slaughter hogs and the price commanded by this commodity in the free market. To bring into play the effect of the slaughtering tax, redistribute income, support collection and purchase work and strengthen market management, the 1 December 1980 regulation fixed the cattle and hog slaughtering tax rate at 10 percent of the market price of the slaughtered animals. Therefore, henceforth, the base price for the computation of taxes levied on the animals slaughtered by producers and consumers shall be fixed for 3-month or 6-month periods by the provincial or city people's committees on the basis of the median price of these animals in the free market. The state-run trade sector is exempt from the slaughtering tax.

To encourage the localities to actively collect, purchase and turn over slaughter cattle and hogs to the center, the local budget shall be entitled to a bonus equal to 10 percent of the value of the slaughter cattle and hogs turned over to the center according to the directed price set by the state for the collection and purchase of these animals.

Tax Reduction for Livestock Breeders Slaughtering Their Own Stock

Henceforth, the 25 percent slaughtering tax reduction granted to livestock breeders shall be computed on the total tax levied on the slaughtered animals and not just on the tax levied on the portion of meat retained for their consumption as stipulated in Directive 202-TTG dated 25 June 1980.

This directive will be uniformly implemented throughout the country as of 25 January 1981.

EDITORIAL STRESSES NEED TO STEP UP GRAIN-MOBILIZING WORK

Hanoi NHAN DAN in Vietnamese 6 Dec 80 p 1

[Editorial: "Mobilizing Tenth-Month Season Grain"]

[Text] The job of mobilizing the tenth-month season grain is being stepped up throughout the country. In the northern provinces, many localities which suffered damages from the last tropical storms and low pressures have been unable to fulfill their plan. But the cooperatives and districts which have had a good harvest are all trying to fulfill their obligation. The new efforts are seen quite clearly in the highland provinces where this year's crop has been better than that of the previous years.

A large volume of grain mobilized in this season is mainly concentrated in the southern provinces, mostly in the Mekong delta. The basic advantage there is the fact that six consecutive crop seasons were all good and that surplus grain still exists in pretty large quantities in the population. Although the 1980 grain-mobilizing task has not yet attained the goal set at the beginning of the year, there has been obvious progress. The volume of purchases was twice as much as that of 1979 and higher than 1976, which was the best year in the past. An Giang was still the leading province in terms of the total volume of grain mobilized. Cuu Long, Minh Hai, Hau Giang, Tien Giang, Dong Thap and Kien Giang Provinces obtained good results. Some provinces tripled the volume of 1979, with the volume of grain mobilized in the summer-autumn season being larger than in the previous winter-spring season. The mass movement to fulfill the grain obligation was quite active. The work of organizing its fulfillment gradually became orderly.

The results obtained from and experience in recently mobilizing grain affirm the correctness of the new policy. The collective production organizations have clearly realized that, through the effort to stabilize the grain obligation, all three interests -- those of the state, collectives and working people -- are served. A satisfactory combination of the three interests is first reflected in the principle of contributing fairly and rationally. Every productive unit and individual has the obligation of paying taxes, paying debts and selling grain, and at the same time is provided with materials and consumer goods at fixed prices. Beyond the obligation what is left can be freely used and circulated, and sold to the state at agreed prices. In their economic relations with the state organizations, cooperatives or production collectives have an advantage over individual farmers, and a much greater advantage than dealing with the unorganized market. As to the state, since it controls a larger volume of grain, it has the ability to respond better to consumption needs and to stabilize the standard of living, prices and the market.

The grain-mobilizing job brings about good results because it correctly combines three measures -- propaganda, economic and administrative. First of all, it is necessary to explain the policy in the party organizations, administration and mass organizations. Cadres and party members must take exemplary action and fulfill their own obligation. To closely link supplying materials and goods with purchasing by means of two-way economic contracts or direct exchanges at directed or high prices is the principal economic measure to control the sources of goods supplies. The mode of purchasing at agreed prices has the effects of supplementing and encourages producers to sell after they have fulfilled their obligation. The administrative measures, which are taken only in the cases of real necessity, are aimed at forcing the households that are capable of paying but evade the payment of taxes to fulfill their obligation and fighting against, preventing and dealing appropriately with those people who hoard paddy and rice; steal and illegally deal in the materials and goods which are under state management; and disturb prices and the market.

The grain-mobilizing job must be well prepared in terms of goods, cash, places of delivery and means of weighing, measuring, packing, transportation, etc. By popularizing the experiences that have been acquired in the recent crop seasons, all provinces can quickly and smoothly do the job of purchasing grain.

VCP ISSUES DIRECTIVE ON CONTRACT WORK

BK221520 Hanoi Domestic Service in Vietnamese 1100 GMT 20 Jan 81

["Full text" of VCP Central Committee Secretariat's 13 January 1981 Directive No 100-CTTU on contractual work]

[Text] The requirement of accelerating production to ensure livelihood and increase economic results has led many cooperatives, including the advanced and fairly good cooperatives, to adopt the form of giving groups of workers and individual workers contracts for product quotas concerning several types of crops, including rice, and animal raising and other professions and jobs.

This new contractual form has begun to develop its active role. However, due to a lack of unified leadership and guidance, several cooperatives have made some mistakes and committed shortcomings in its implementation. The Ninth Party Central Committee Plenum held in December 1980 decided to widely apply and improve various forms of quota contracts in agriculture.

In order to implement this policy, promptly develop the positive factors, overcome weaknesses and correct mistakes and shortcomings in contractual work, the party Secretariat requests all echelons and sectors to unify their knowledge and action and comply with the following regulations:

1. Firmly grasp the purposes, principles and guidelines for improving contractual work.

A. Contractual work, like other aspects of the managerial task of agricultural cooperatives, must serve the purposes of ensuring the development of production and increasing economic results on the basis of encouraging all people to work enthusiastically. We must increase labor productivity through stimulation, fully use land and existing material and technical bases, apply technical innovations, reduce production costs, consolidate and strengthen the relations of socialist production in the countryside, constantly improve the income and living conditions of cooperative members and the capital accumulation of cooperatives, fulfill obligations to the state and constantly increase the volume of production delivered to the state.

B. In this connection, we must ensure the implementation of the following principles:

Agricultural cooperatives must closely manage and effectively use all means of production, especially land, ricefields, draft force, fertilizer, tools and other material and technical bases of collectives. Cooperatives must properly organize labor management and control so as to develop the superiority of cooperation through the division of labor and, at the same time, to stimulate the work dynamism of all cooperative members as a collective and of each individual worker on the basis of making all people interested in and linked to the end results of production.

Cooperatives must formulate plans and programs which agree with zoned-off production area projects and district production plans, and must institute production regulations and ever more advanced technical and economic norms. Units awarded contracts must comply with these regulations and norms of cooperatives.

Cooperatives must be able to control the flow of products in order to ensure that the distribution of products correctly and harmoniously combines the three interests--state, collective and individual--and that distribution can be satisfactorily made according to labor to cooperative members.

We must promote the rights of cooperatives to self-govern and of cooperative members to collective mastery, and overcome authoritarianism and arbitrariness which are contrary to the principles of voluntarianism, mutual benefit and democratic management.

C. To implement the aforementioned purposes and principles in line with the present realistic situation, the main guideline for improving contractual works in agricultural cooperatives is to further promote workers' legitimate benefits and have all people participate in all tasks in the course of management and production of cooperatives so that they can be truly linked to the finished product. As a result, they will devote all their zeal and ability to work, production and construction in order to consolidate cooperatives.

2. Improve contractual forms and expand the use of products-based contracts.

Based on the aforementioned goals, principles and orientations, it is necessary to perfect further the system of three contracts for production expenditures, work credits and products applied by the cooperatives toward production teams through just rewards and penalties; and at the same time, to vigorously improve the various contractual forms employed by the production teams toward cooperative members.

The assignment of quotas for products by production teams to groups of workers or individual workers under contract--also referred to briefly as products-based contract--is a method for managing production and paying for labor which directly combines the responsibility and interests of workers with their finished products. It vigorously develops the enthusiasm and self-awareness of cooperative members and encourages everyone, including secondary workers, to make full use of land and fertilizer, apply new technical innovations, lower production expenditures and fully reap the crops--thus helping to increase productivity, production volume, economic results, the income of cooperative members and the cooperative's capital; and enabling the cooperative to better carry out its agricultural obligation to the state.

Correct application of products-based contracts will also have the positive effect of consolidating and perfecting the new production relations, consolidating the system of collective mastery, streamlining the cooperative managerial apparatus and at the same time, promoting the building of the material and technical bases for agricultural cooperatives. However, since this contractual form has just been developed and experience concerning its application still remains scanty and has yet to be fully reviewed, it still displays some imperfections. On the other hand, unless close guidance is given, it is easy to make shortcomings such as giving out contracts without specifying quotas, allocating lands to cooperative members in a fragmented manner, lax management of labor, draft power and fertilizer by the collective, loose control of products and so forth.

After reviewing the actual situation, we must boldly expand the contracting out of product quotas to groups of workers or individual workers in agricultural cooperatives, including progressive ones, regarding the various types of crops, including rice, livestock breeding and other trades in the cooperatives. At the same time, it is necessary to closely guide efforts to satisfactorily implement and constantly perfect this form of contractual work. We must put an end to such practices as doing things without the knowledge and permission of higher echelons and slackening leadership; prevent hasty work that is done without preparation; and resolutely eliminate and prevent the conclusion of contracts without the quotas specified.

For cooperatives in the mountainous regions and cooperatives and production collectives in the south, the Ministry of Agriculture will, along with the provinces, study and give specific guidance on the proper application of the various contractual forms. With regard to the contracting out of product quotas to groups of workers or individual workers, experiments must be made with this form before expanding its application.

To correctly contract out product quotas to groups of workers or individual workers, we must first of all satisfactorily organize cooperation and the division of labor in the cooperative and in each production team. On the basis of planning, programming, production plans and the set economic and technical norms, the cooperative and production teams are directly responsible for carefully organizing labor in specialized teams and cells to perform important operations that require technical expertise and the use of collective technical and material facilities, and that, if assigned to individual workers, will only yield poor results or further complicate managerial work--such as land tilling, farmland water conservancy, work related to seed and seedlings, management and distribution of fertilizer, prevention and control of diseases and harmful insects, and crop protection. In these operations, the cooperative and teams must contract out work to each worker in specialized teams or cells in order to enhance his responsibility, labor productivity and the quality of his work. For those operations requiring manual labor that can be satisfactorily performed by individual workers such as transplanting, planting, field tending and reaping, the teams must assign them to groups of workers or individual workers.

It is necessary to perfect various economic and technical norms in order to use them as a basis for improving cooperatives and production units in terms of production organization and management and for fixing a rational contractual standard.

In order to help cooperatives fix a rational contractual standard for their production units and then help production units fix a rational contractual standard for their groups of laborers or individual laborers, it is necessary to take into account the area, fertility and average productivity of each type of land as well as the working conditions and the requirements for production expenditure of each area. In addition, such a fixing of contractual standard must be discussed by cooperative members in a democratic spirit.

A rational contractual standard must simultaneously guarantee the benefits of cooperatives and production units and those of the laboring people. It must be able to increase the income of cooperative members mainly through efforts to promote increased productivity and increased value of man-days; and must, at the same time, promote supplementary income with rewards for overfulfillment of contractual norms.

Along with improving production organizationally, it is necessary to improve the system of distributing income in order to make everyone enthusiastically participate in the process of production as well as in the managerial task which is closely linked with the final results of production. To achieve this aim, in addition to establishing appropriate economic, technical and contractual norms, cooperatives and production units must discuss with cooperative members in a democratic spirit to come up with a fair system of rewards and fines applicable to everyone throughout all the production links.

It is necessary to closely manage and effectively use collective means of production and avoid dispersing the land and the material and technical bases of cooperatives, causing the collective economies to deteriorate.

It is necessary to resolutely prevent and eliminate the bad practice of giving out contracts for cooperative members without specifying quotas. We must not allocate land to cooperative members for use at their convenience and must not order any individual cooperative member to take charge of the whole process of production--from land plowing to crop harvesting. We must formulate plans to satisfactorily use the material and technical bases of cooperatives without causing any wastage and damage if the assignment of products quotas for cooperative members is to be satisfactorily carried out.

We must satisfactorily organize the assignment of land to production units as well as to groups of laborers or individual laborers for use in order to attain contracted yields, and must avoid cutting lands into small pieces because it will cause difficulties in the use of material and technical bases and the application of technical advances in production.

Once land intended for assigning to the laboring people has been rationally distributed, we must maintain this state for 2 or 3 years so that cooperative members can put their mind at peace while carrying out intensive cultivation in these lands.

As for the contracted and assigned quotas of products, it is necessary to examine them annually in order to make sure that they suit the real production situation. We must take steps to organize harvesting well so that the collective can ensure fulfillment of the requirements for distribution in accordance with established rules.

Cooperatives must establish a set of by-laws, according to which they will go ahead with assigning product quotas to groups of laborers or individual laborers and with delineating the responsibilities of the collective toward the laboring people and vice versa. In addition, cooperatives must take steps to satisfactorily enforce the implementation of the above set of by-laws in order to ensure the application of the form of giving contracts for product quotas in accordance with the set targets and principles.

The form used by production units to contract groups of laborers or individual laborers to do somethings can be called "contractual work" for short. This form helps bind the responsibilities and benefits of cooperative members with each contracted task and indirectly links them with the attainment of finished products. A number of cooperatives have successfully established a managerial pattern in keeping with this contractual form by constantly improving the managerial skills of cadres and a sense of collectiveness among cooperative members. They have scored numerous achievements in promoting production and consolidating socialist relationship.

Cooperatives whose cadres and members really favor the application of this contractual form in any production program will only need to improve their implementation organization and draw on experience to develop the positive aspect of this contractual form and overcome its weaknesses--such as cooperative members tending to go after work credits and paying less attention to the quality of their work performance as a result of their failure to fully understand that their responsibilities and benefits are directly linked with the attainment of finished products; failing to ensure the qualities required in verifying a task; management machinery still being cumbersome and so forth.

It is necessary to ensure the strictness of principles in providing guidance for contractual work and to permit cooperatives to flexibly apply various contractual forms. Depending upon the production characteristics of each type of crop and animal and of each branch and trade and also depending upon the conditions in each area, cooperatives can apply one contractual form or another or they can apply two contractual forms at the same time in order to have them supplement each other.

All party and administrative echelons must respect the right to self-control of cooperatives in selecting a contractual form on the basis of holding discussions in a democratic spirit among cooperative members and at the congresses of cooperative member delegate .

3. Intensify guidance and organization for implementation.

We must deeply and broadly popularize within the party and among the masses the party Central Committee's viewpoints regarding contractual work so that they will be fully understood and implemented by all cadres, party members and cooperative member peasants. Concerning the new form of contracting out product quotas to groups of workers or individual workers, the higher echelons must create conditions by guiding, supervising and helping grassroots units and the masses to carry it out satisfactorily.

Based on this directive, the Ministry of Agriculture must release at an early date a document giving specific guidance. Special attention must be given to carefully guiding the implementation of measure designed to protect and satisfactorily use land and the collective material and technical facilities of the cooperatives, in the allocation of land to cooperative members for use to fulfill the production volume contracted in such a way as to avoid cutting up ricefields into small pieces, and so forth. Through various stages of reviewing experience, it is necessary to promptly revise the various forms of contracting for product quotas so as to gradually bring them to perfection.

Attention must be given by the provincial and district levels to gradually developing the right to collective mastery of the cooperatives and cooperative members, broadening the right to take the initiative in production and business and the right to managerial autonomy of the cooperatives, and guiding the cooperatives to establish specific regulations for themselves and production teams concerning contractual work. At the same time, it is necessary to carry out close supervision in order to develop positive aspects, correct errors and resolutely prevent and eliminate all forms of blank contracts in grassroots units.

In particular, attention must be given to consolidating weak and lagging cooperatives and creating the necessary conditions for them to satisfactorily improve contractual work.

In order to consolidate agricultural cooperatives along with building the districts in general, and to make it possible for the districts to guide the cooperatives in satisfactorily carrying out contractual work in particular, the provincial and municipal party committees must pay special attention to strengthening the district level, especially the districts in key areas where grain or marketable agricultural produce is produced, and promptly consolidating the apparatus of weak or lagging districts. The central and provincial sectors concerned with the consolidation of agricultural cooperatives--such as the agricultural, water conservancy, food industry, power, supply, collection and purchase and other sectors--must improve their operations in order to satisfactorily serve the cooperatives.

The Ministry of Agriculture must study the reorganization of the managerial apparatus of cooperatives to be consistent with the improvement of contractual work and at the same time, issue additional regulations to define the responsibility, authority and interests of cooperative cadres. The provinces and districts must promptly train the contingent of grassroots-level cadres, especially production team leaders, in managerial methods and forms of contracts, especially the contracting of product quotas for groups of workers or individual workers.

We must constantly pay attention to political and ideological work in order to enhance the socialist awareness of party cadres and members and cooperative member peasants; and must launch an emulation movement with a vigorous revolutionary spirit in order to achieve realistic results. All publicity activities designed to promote contractual work, especially the form of contracting of product quotas for groups of workers or individual workers, must be carried out in an appropriate manner. Attention must be given to introducing practical experience in order to develop positive features and promptly overcome shortcomings and errors.

From now on, in written documents as well as in publicity work, we must standardize the names of various contractual forms as described in this directive.

This directive must be broadly discussed so that it will be thoroughly understood by the basic party organizations in the rural areas and by agricultural cooperatives.

All provincial and municipal party committees must formulate plans to popularize and guide the implementation of this directive in accordance with the local situation.

The party Central Committee's agriculture department and the Ministry of Agriculture are responsible for guiding, supervising and inspecting the implementation of this directive, and reporting their findings to the Secretariat.

LE THANH NGHI ON CONTRACTUAL WORK

BK250410 Hanoi Domestic Service in Vietnamese 1100 GMT 21 Jan 81

["Full text" of address by Le Thanh Nghi, member of the VCP Central Committee Political Bureau, at a "recent Haiphong conference on the consolidation of agricultural cooperatives and improvement of contractual work," entitled: "Improve Contractual Work and Expand Contracting for Products To Stimulate Production and Consolidate Agricultural Cooperatives"--read by announcer]

[Text] Dear comrades:

This conference was called for an exchange of experience so as to promote the implementation of the party secretariat's policy regarding a number of immediate tasks in the consolidation of agricultural cooperatives in coordination with district building in the northern lowlands and midlands.

All sectors and localities, showing a keen interest in the conference, have sent more delegates to it than required.

The problem on which the conference has focused its discussions and exchanges of experience is contractual work in agricultural cooperatives, especially the new form of contracting out the production of finished products to laborers. The views which I am going to express today are also centered on the problem of contract.

Part One

Contractual Work, an Important Task Which Helps Stimulate Production and Consolidate Agricultural Cooperatives

At present, the problem of contracting out the production of products to groups of laborers and individual laborers in agricultural cooperatives is capturing the wide attention of all sectors and levels from the center to the basic units. Many cadres, party members and the mass of cooperative members are eagerly awaiting a definitive and official answer to this question.

Contractual work in agricultural cooperatives has emerged as a hit issue for two reasons: first, this problem is directly related to the interests of laborers and, consequently, has an immediate and strong impact on the development of production and the consolidation of agricultural cooperatives;

second, concerning the problem of contracts, there has emerged the form of contracting out production to groups of laborers and individual laborers, and there have been conflicting opinions on this new form.

First of all, we must realize that the problem of contracts can be correctly understood and resolved only when it is considered as an important aspect of the task of consolidating and perfecting socialist production relations in agriculture so as to effect vigorous changes in production and life in the rural areas.

The basic and long-term guideline for consolidating agricultural cooperatives is to step up the three revolutions--of which the scientific and technical revolution is the keystone--on the basis of the system of collective mastery of cooperative members and for the ultimate purpose of vigorously developing agricultural production; improving the living conditions of the peasants; providing ever more grain, food, raw materials for industry and agricultural products for export; and satisfactorily serving the cause of socialist industrialization and socialist construction.

In this general guideline, improvement of the management apparatus in agriculture plays a very important role. At a time when we still have to face many difficulties and can neither rapidly increase the material and technical bases of the national economy nor satisfactorily meet the demands of agriculture for technical equipment and supplies, we must attach the utmost importance to improving the management apparatus along the lines of encouraging and creating favorable conditions for all basic units and laborers to exploit as best they can the existing capabilities and latent potentials of the economy, especially labor, land and the existing material and technical bases and facilities.

In keeping with this spirit, and basing itself on the resolution of the Sixth Party Central Committee Plenum, the Secretariat has advocated resolving a number of immediate problems in revamping agricultural cooperative management organizations in coordination with the building of districts, as stated in Notice No 22 issued by the Secretariat on 21 October 1980. These problems concern the scaling down of oversize agricultural cooperatives; the scaling down and strengthening of basic production units; the rational organization of units and groups in charge of specialized work; the improvement of contractual work in agricultural cooperatives by allowing the latter to apply the form of contracting out the production of finished products to groups of laborers and individual laborers and to study actual experiences so as to further improve this form; the strengthening of the body of management cadres of cooperatives and production units in coordination with the consolidation of party bases in the rural areas; the development of the autonomy of cooperatives in production and trade; and the building of the districts and the strengthening of the district level.

These tasks must be carried out simultaneously with the revision of a number of management policies and systems concerning the cooperatives, such as the stabilization of the obligatory collection-purchase of agricultural products, the revision of the collection-purchase prices of a number of agricultural products, the implementation of the distribution of cooperatives' income, especially the distribution of food according to the principle "to each according to his work," and so forth.

Thus, the improvement of contractual work must be combined with the revamping of organization, the comprehensive improvement of agricultural cooperative management, the building of the districts and the strengthening of the district level.

Practically speaking, if the cooperative and production networks are too big and beyond managerial capabilities and if party chapter and cooperative cadres are weak, then this leads easily to the condition of issuing contracts without specifying quotas.

In applying contractual work in whatever form, the contingent of cooperative and production unit cadres must be of good quality and acquire effective managerial skills. On the other hand, cooperative contractual work can be satisfactorily developed only when cooperatives rights to be self-governing in production and trade and cooperative members rights to collective mastery in managerial tasks are truly respected, especially in the planning and decision-making tasks on specific problems relating to management and the distribution of tasks within cooperatives.

Meanwhile, districts must be perfected so that they can effectively carry out supervisory work, promptly draw lessons from good experiences and correct shortcomings and deviations of cooperatives in the task of developing contractual work.

We cannot simply take it for granted that the development of contractual work can solve all complex problems in production organizations and cooperative management. This tendency will create obstacles to and limit results in the task of developing contractual work in particular and the consolidating of agricultural cooperatives in general. On the other hand, when we concentrate on consolidating and comprehensively perfecting socialist production relations in the rural areas, we must realize the very important position of contractual work in the present situation.

The Sixth Party Central Committee Plenum has concluded that one of the most important factors that leads to sluggishness in economic activities is the unenthusiastic effort of the laboring people in production. This is because the present managerial mechanism has not correctly coordinated the three interests, especially the working people's interest.

In agricultural cooperatives, contractual work is a keystone for comprehensively and directly solving the problems of the working people's interests. Therefore, it has a powerful effect on the enthusiastic laboring efforts of cooperative members and the masses, and is a lever to be used in stimulating production and accelerating the three revolutionary tasks in the rural areas. As a result, efforts must be concentrated on solving the problems of developing contractual work in order to create a vigorous change in the production and management of agricultural cooperatives. Wrong tendencies at the lower levels in these areas must also be corrected.

The VCP Central Committee's Ninth Plenum has decided to strengthen the implementation and perfection of contractual forms in agriculture. The Council of Ministers' Secretariat and Standing Committee recently held a conference to discuss and resolve basic problems concerning the granting of contracts for product quotas in agricultural cooperatives and issued an official directive aimed at creating unanimity in judgment and acts in order to organize and supervise the granting of contracts for product quotas actively and closely. In this conference, many reports and ideas were made on preliminary successful experiences, on weak sides and problems that must be solved in the developing of contractual work.

However, we cannot immediately perfect contractual work through only one conference or hope to obtain full solutions for all specific problems. It is imperative to thoroughly understand the guiding though and firmly grasp all basic problems specified by the Council of Ministers' Secretariat and Standing Committee in order to reach a correct decision in solving specific problems. We must also continue to study the creative practices of grassroots establishments and the masses profoundly and correctly use various economic laws relentlessly to perfect contractual forms.

Part Two

Objectives, Principles and Basic Guidelines for Developing Contractual Work in Agricultural Cooperatives

Contractual work is a form of production management and the paying of labor wages based on economic and technical norms and the principle of distribution according to labor.

The correct implementation of contractual work is a complex problem in the science of management and one which requires a correct use of economic laws suitable to the labor force's capabilities, the managerial capability of cooperatives and the production process of each type of crop, breed, sector and occupation.

Contractual work, as well as other aspects of the managerial system of agricultural cooperatives, is aimed at achieving the following goals:

1. To ensure the development of production and economic results on the basis of encouraging the full use of manpower and incentives to increase labor productivity so that everybody volunteers to exploit land and other material and technical bases well, apply technical innovations and reduce production costs;

2. To consolidate and perfect the relations of socialist production in the countryside, making cooperative members more attached to collectives; and

3. Raise the living standard of cooperative members, increase the capital accumulation of cooperatives and satisfactorily fulfill obligations to the state.

Among these goals, which are closely correlated with one another, the question of developing production and increasing labor productivity holds a decisively significant role in ensuring the implementation of the other goals. In order to implement this goal well, contractual work, as well as the entire management system of cooperatives, must ensure compliance with the following principles:

1. Agricultural cooperatives must closely manage and satisfactorily use all means of production--especially land, ricefields, draft force, fertilizer, material and technical bases, and the tools of collective--in order to increase their fixed assets and production capital constantly and to quickly apply scientific and technical innovations to production.

2. Cooperatives must organize labor management and control well and make full use of their manpower in order to enhance the superiority of cooperation with the division of labor and to stimulate work dynamism in every individual and collective by making all people interested in and linked to the final results of production.

3. Cooperatives must engage in planned production which corresponds with zoned-off production areas and district production plans. They must institute production regulations and increasingly advanced economic and technical norms. Units and workers receiving contracts must correctly implement the stipulations by cooperatives.

4. Cooperatives must control the flow of products to implement their task of distribution well, ensuring that the three interests--state, collective and individual--can be correctly combined and that the principle of distribution to cooperative members according to their labor can be implemented well.

5. Cooperatives must develop their right to self-government and their members' right to collective mastery in production and business operations and must resolutely overcome at all levels all forms of authoritarianism and arbitrariness which contravene the principles of voluntariness, mutual benefit and democratic management.

These principles serve as guidelines for contractual work, leading it in the right direction and paving the way for creatively and flexibly applying various contractual forms while preventing the awarding of contracts without specified quotas, a situation that corrodes the socialist economy.

The aforementioned goals and principles constitute a standard for evaluating contractual work to see whether or not the work correctly follows the socialist procedures for economic management and whether or not it is implemented under good leadership. By firmly grasping this standard, we can accurately control and evaluate contractual work and avoid a debilitating debate that precludes any intensive study of realities and the true nature of problems.

Proceeding from the aforementioned goals and principles and based on the present realistic situation, we can establish the following main guidelines for improving contractual work in order to develop all of its aspects vigorously:

1. Further promote the laboring people's interests on the basis of correctly combining the three interests--state, collective and individual--as outlined in the party Central Committee's 9th Plenum resolution. This is not only an orientation for improving contractual work in agricultural cooperatives but also a core problem in the improvement of such economic leverage policies as prices, wages, labor payment, collection, purchase, taxes and credits, and so forth, because this is a fulcrum on which to stimulate work zeal and step up production, changing the economic situation.

2. Link the responsibilities and benefits of all people engaged in various tasks in the production and management process with the finished products. This is a guideline for advanced and scientific production management and labor payment which is being studied for application to several economic sectors such as industry, agriculture, construction, transportation and so forth. It stimulates an increase in labor productivity and uniformly ensures the quality of all tasks in the production process, bringing about the highest economic results.

Agricultural cooperatives must, on the basis of assigning quotas of products to production teams, consider the form of contracting out the production of products to groups of laborers or individual laborers as a method of improving contractual work along that line. The reason for this is because this form of contractual work can directly link the benefits and specific responsibilities of the laborers with the final results of production. This form is not only in line with socialist economic management methods but is also an advanced method which we should not consider as a setback.

Correctly combining the three interests and linking the responsibilities and benefits of the laborers with the finished products are closely related. Thus, in improving the contractual work, good results can be obtained only when attention is paid to these two aspects.

Part Three

Contractual Work in Agricultural Cooperatives

The objectives, principles and guidelines for improvement of contractual work as stated above are basic and universal issues which we must firmly grasp and resolutely implement. It is necessary to apply specific contractual forms in a skillful manner so as to be in line with the characteristics and present situation of various agricultural cooperatives, in which the level of standardization, centralization and cooperativization is still low; the production orientation still includes many species of crops and animals and professions and occupations; the material and technical bases are still small; most of the agricultural production activities still have to be carried out with manual labor; agricultural production still depends heavily on nature; and the knowledge of managerial cadres is nonexistent.

Reality has proved the creative ability of various grassroots units and the masses in solving specific problems concerning managerial work, in general, and contractual work in particular. The diversified experiences presented by various agricultural cooperatives at this conference have affirmed this fact even more clearly. The most correct attitude of leadership is to help all grassroots units and the masses firmly grasp the matters of principle so that they can actively seek the necessary measures to solve their specific problems. We should not always follow one fixed form or method.

We must, on the basis of the creative experiences acquired by the masses and grassroots units, promptly analyze and review our experiences and develop all successful lessons in order to overcome shortcomings and deviation which are contrary to the common objectives and principles. In this regard, we must study the actual situation and experiences of all agricultural cooperatives.

The party Central Committee Secretariat and the Standing Committee of the Council of Ministers have drawn upon a number of points of universal significance to improve various contractual forms as follows:

1. We must further improve the three-contracts system between agricultural cooperatives and production teams with discriminate reward and punishment for the results produced by the latter in contracts for production expenditures, contracts for work credits, and contracts for production volume.

It is necessary to always rely on the basis of consolidating and improving the three-contracts system between cooperatives and production teams to improve the contractual work between production teams and cooperative members, no matter what the form is. To achieve this, cooperatives must constantly improve their production plans and programs and establish economic and technical norms to use as the basis for scrupulously assigning the three-contracts plan to production teams.

Cooperatives should establish a reasonable system of reward and punishment for production teams. However, to reward a production team with 80 percent of the quantity in excess of the quota of products, while merely imposing on it a monetary fine equal to 50 percent of the quantity below the quota of products calculated according to directed prices is not an effective method and must be corrected. It is necessary to overcome such practices as casualness, toleration and exaggeration, particularly in matters that are not part of the three-contracts plan.

It is also necessary to enhance the responsibility of production team chiefs and reasonably settle the system of compensation for their success in implementing the three-contracts plan and so forth.

2. We must improve all forms of contracts made by production teams with cooperative members and expand and continuously improve the awarding of quota contracts to groups of workers and individual workers. Based on quota contracts awarded to them by cooperatives, production teams have thus far applied a general contractual form to cooperative members by assigning work to groups of workers and individual workers with technical standards and pay rates computed in mandays which are determined for each product. Some advanced cooperatives have further determined in advance the value of mandays paid to their members. In brief, this contractual form is called work contracts.

In recent years, a new contractual form has appeared through which cooperatives and production teams directly organize and perform some tasks in production and use work contracts for these tasks. As regards the remaining tasks in the process until the final products are achieved, production teams will give contracts for work credits and for production volume and costs to groups of workers and individual workers along with a system of incentive rewards or punishments depending on whether the norms for production volume are overfulfilled or underfulfilled. This, in brief, is called contracts for product quota.

The contractual form adopted by production teams to assign work to laborers according to the prescribed economic and technical norms and with a just and clear system of rewards and punishments, is compatible to the three-contract system applied by cooperatives to production teams. This system binds together the responsibilities and benefits of cooperative members with respect to assigned work and is indirectly linked to the finished products.

Compared to the time when cooperatives still used the daily rated pay system or the system of evaluating works by recording marks, this form of work contract is a major stride forward. It has, therefore, had a positive effect on the development of production and the consolidation of production relations. However, this contractual form has some weaknesses which must be overcome if its positive effect is to be developed. Its major weaknesses are:

--The benefits and responsibilities of each cooperative member cannot be closely and directly binded with the finished product. This easily generates a situation in which cooperative members tend to go after work credits and to work carelessly without paying attention to the quality of their work.

—The qualitative test control of contracted works is very complicated and it is difficult to complete it adequately because of the characteristics of agricultural production, especially when manual labor still prevails and cooperative members still try to save face. As a result, the cultivation tasks can hardly meet the qualitative requirement; waste and loss of materials and products occur frequently; the personnel of the managerial apparatus must be relatively large; and the number of people indirectly engaged in production quickly increases.

In the course of applying this contractual form, some of the advanced cooperatives have succeeded in establishing a system of close management, raising the cadres' standard of managerial knowledge and the cooperative members' sense of collectivity, thereby minimizing the aforementioned weaknesses and achieving much progress in production, livelihood and the fulfillment of obligations to the state. However, in a large number of cooperatives, these weaknesses have directly affected the results of production, lowering the value of mandays, especially when the habits of idleness and exaggerating credits have not been overcome. This has made cooperative members' income from the collective economy too low to remain a stimulus for cooperative members to care for collective production.

Nevertheless, we cannot attribute production sluggishness in many cooperatives to weaknesses in the method of awarding work contracts. We must see the effects of several other shortcomings in the entire economic management system.

The form of finished product contracts awarded to groups of workers and individual workers has emerged from and developed through the course of creative research by cooperatives and localities which is aimed at overcoming the aforementioned weaknesses in awarding work contracts.

Many cooperatives, including the advanced ones, have used product quota contracts for their subsidiary food and industrial crops, animal raising and other professions and jobs, and have recently applied the same to rice crops. Product quota contracts constitute a developmental step supplemental and not contrary to work contracts.

The assignment of work quota is maintained in product quota contracts in addition to a new requirement that the assigned work quota is linked to the finished products. Cooperative members receiving product quota contracts will benefit from both the income computed in mandays and part of the production volume exceeding the quota norm. If this contractual form is correctly implemented, cooperative members' benefits are more closely linked to and not separated from those of collectives because cooperative members' income is mainly based on distribution by cooperatives according to the number of mandays whose value is quickly increasing while the part of production volume exceeding the quota norm is merely a supplementary income.

The scientific and progressive characters of product quota contracts awarded to groups of workers and individual workers lie in the fact that the contracts directly bind the benefits and responsibilities of workers with the finished products. They, therefore, become a strong motive force pushing all people to enthusiastically engage in labor and production according to the labor organization and division by collectives, realizing what Lenin has taught us: One of the most important and difficult problems of socialism is to attract all people into labor.

Under this new contract, cooperative members actively make full use of labor time, land, fertilizer and other existing material conditions; willingly ensure the fulfillment of all cultivation techniques; apply technical innovations to production; reduce production costs; fully reap crops and increase economic results without need for close and complicated supervision and control and test acceptance by production team chiefs. As a result, productivity, production volume and economic results can be increased definitely and the income and livelihood of cooperative members can be raised, creating realistic conditions for increasing cooperatives' capital accumulation and providing even more agricultural products for the state.

The realistic experiences of those cooperatives which have satisfactorily implemented product quota contracts, clearly prove that these contracts not only have promoted production but also have contributed to consolidating the relations of socialist production, attaching members more closely to their cooperatives, strengthening the system of collective ownership and streamlining the cooperatives' management. At the same time, they have helped strengthen the material and technical bases of cooperatives and turned them into good use.

Facts show that product quota contracts awarded to groups of workers and individual workers have clearly played many active roles since they correspond to the present standard of production and management in cooperatives. In the future when agricultural production is mainly carried out mechanically and the cadres' level of managerial knowledge is higher, contractual forms can be changed specifically. However, the principle of binding the benefits and responsibilities of workers with the end products will remain in effect for a long time.

Product quota contracts awarded to workers have developed only on the basis of the creativeness of localities and primary installations. The experiences in using these contracts have not been completely and promptly reviewed and recapitulated. Therefore, there still are some discrepancies. For example, in a large number of those cooperatives adopting product quota contracts, the binding of workers' benefits and responsibilities with the finished products has been materialized only through a few tasks assigned to cooperative members and not through all the remaining tasks. Cooperative members usually like small quotas so that they can easily overfulfill the quota norms for production volume and pay little attention to increasing the value of cooperatives' mandays. In allocating land to cooperative members so that they can fulfill their assigned quota of production volume, tricky situations and other irregularities have not been overcome in several localities.

On the other hand, in organizing the implementation, there have been many cases of a lack of careful preparation and failure to provide close guidance, and even instances of a relaxation of leadership, thus leading to erroneous phenomena. Some localities have even awarded contracts without specifying quotas. This is especially true of a number of weak cooperatives which need improvement.

The awarding of contracts without specifying quotas has also occurred at a number of cooperatives that have not yet applied the mode of contracting product quotas. It should, however, be noted that if we contract cooperative members to cultivate a given area without specifying what they will have to do until the attainment of finished products or without providing close guidance, we will easily fall into the trap of awarding contracts without specifying quotas.

From the above analysis, it can be seen that in order to implement the resolution of the party Central Committee's Ninth Plenum satisfactorily, we must unreservedly broaden the form of contracting of product quotas for groups of laborers and individual laborers with regard to various crops--including rice--animal husbandry and branches and trades of agricultural cooperatives, including advanced cooperatives. Simultaneously, we must provide positive and close guidance; put an end to the phenomena of relaxed leadership; refrain from imposing restrictions which may lead to a state of trying to finish work without paying any attention to the outcome; prevent the state of working hastily without making preparations; and resolutely do away with and prevent the awarding of contracts without specifying quotas.

As for those cooperatives in the mountainous areas and those cooperatives and production collectives in the south, the Ministry of Agriculture must join with various provinces in studying and providing guidance for the application of various contractual forms in a suitable manner.

With regard to the form of contracting, and for product quotas in particular, it is necessary to experiment with this form prior to broadening it.

With regard to the form under which a production unit gives out work contracts for groups of workers or individual workers, if this contractual form has been applied skillfully and effectively by cooperatives and has continued to be favored by cooperative members when dealing with a number or crops, animals and products, we must draw experience from, seek improvement for, foster the positive aspects of and reduce the weaknesses of this contractual form.

Depending upon the production characteristics of each crop, animal, branch and trade, and also depending upon the conditions of each area, cooperatives may use one form or another or they may use two forms at the same time so that these forms can supplement each other in an effort to attain the best results in boosting production and consolidating cooperatives.

The selection of a contractual form must be undertaken by cooperatives themselves on the basis of widespread discussions among cooperative members and by congresses of cooperative member representatives. Selection should not be imposed by any party or administrative echelon. Leading cadres must adopt a clear-cut attitude on actively supporting renovation efforts and create conditions for those renovation and modernization efforts to develop.

If cooperatives and cooperative members wish to apply the form of contracting of product quotas for groups of laborers and individual laborers, higher echelons concerned must not stop them from doing so. Instead, they must, through their guidance and control, create conditions for grassroots-level units and the masses to do it effectively.

3. In order to ensure a correct application of the form of contracting of product quotas, through initial experience obtained from various cooperatives, we must strive to carry out the following tasks satisfactorily:

A. Cooperatives and production units must organize and guide special work teams in satisfactorily carrying out those important tasks which are connected with the use of collective material and technical bases and for which the laboring people, if working separately, will encounter low labor productivity or will cause further complications to the managerial task. In cultivation, these tasks will include plowing the land with the use of machinery or draft animals, germinating rice seeds, carrying out farmland irrigation, managing and distributing fertilizer, and preventing and eradicating insects and blights for the protection of crops.

As for those manual tasks which can develop dynamism and the flexibility of individual laborers and which can help exploit to the fullest the working capabilities of cooperative member families in order to attain high productivity and results, production units must contract groups of laborers or individual laborers to do these tasks involving sowing, caring for and harvesting efforts.

The allocation of land to cooperative members who have to assume these tasks must depend on the division of labor in cooperatives and production teams. It cannot be uniformly the same for every member and will not be based on the number of people in each household. As a result, this cannot be considered a contract awarded to a family, even though this contractual form encourages the full use of manpower in cooperative members' families for production.

In some cases, people in a family can form a group of workers to receive product quota contracts from production teams. Nevertheless, this does not alter the nature of quota contracts for cultivated products and means that contracts are awarded to groups of workers and individual workers and not to families. The question of determining what is to be done by collectives and what will be assigned to workers should be realistic and should be resolved under good guidance. Casualness will limit the organization of cooperatives through division of labor and will lead to giving unspecified quota contracts.

B. Production volume norms for the areas assigned to workers are a key problem that must be satisfactorily resolved in order to stimulate cooperative members' activity, benefit cooperatives and satisfactorily fulfill the obligations to the state. It is necessary to stress the unity of interests between cooperatives and their members in determining the production volume norms since these norms play a significant and decisive role in determining the value of mandays worked by cooperative members.

If the assigned norms are low, cooperative members can easily overfulfill production volume but will lose when accepting distribution in mandays. Therefore, the basic spirit of determining quota norms is to ensure that cooperative members' income--computed in mandays--from the collective economy is larger or increases more quickly than the profits from production volume in excess of quota norms.

In order to determine correct norms, we can learn from the experiences of cooperatives in Haiphong, Vinh Phu and Nghe Tinh, and so forth. It is necessary to determine once again the area and soil quality of each plot and ricefield, even if this means surveying land and ricefields. We must also refer to old farmers' experience and knowledge of the land must promote democratic debate among cooperative members in order to accurately determine production volume quotas.

The production volume per area unit in quotas assigned by production teams to groups of workers and individual workers cannot be lower than the average production volume achieved in previous years. And all the quotas added together cannot be lower than the production volume which cooperatives' management committees have rationally prescribed in contracts awarded to production teams.

The determination of quota norms for outlying and less productive ricefields should encourage cooperative members to willingly accept work on those ricefields. Rational norms must be established for close and distant ricefields of good and bad soil quality in order to avoid ill intentions in allocating land to cooperative members and so that they can fulfill their production volume quotas.

When the area quotas assigned to workers assuming the final tasks in the production process have been rationally distributed, they can be stabilized for a few years so that cooperative members can freely take care of intensive cultivation on their assigned areas. As for product quota norms, they should be verified and determined annually, depending on the conditions concerning materials, the application of technical innovations and weather.

While ensuring that just and clear contracts are awarded under several appropriate forms to workers, many cooperatives in Haiphong, Vinh Phu and Ha Nam Ninh, and so forth, have taken sufficient care of wounded soldiers, fallen heroes' families and needy members by giving them priority in selecting good, close and easily worked ricefields and by assigning them product quota norms which are lower than those of other workers.

C. Rewards and penalties are an important factor in stimulating productive labor. This question is debated quite animatedly. The method in solving this question lies with knowing how to offer rewards and mete out penalties in order to make those taking part in the process of production truly link themselves with the final results and to convince them that they will be worthily rewarded when production is finished and properly punished if production is below quota without justifiable reasons. Therefore, it is necessary to promptly reexamine the regulations concerning rewards and penalties among cooperatives in order to correct all irrationalities.

It is necessary to set up a bonus fund for cooperatives and production teams in order to reward those participating in various activities of the process of production, including persons engaged in managerial work. Some localities can take about 10 to 20 percent of the output made in excess of quotas by the contracted laborers to set up such a fund while giving the remaining 80 or 90 percent to these laborers. Other localities can allow production teams to assign the laborers with product quotas which are a little higher than those actually assigned by cooperatives, or reserve part of the fulfilled plan output to establish the bonus fund. In this case, the laborers should be given 100 percent of the products made in excess of the contracted output quotas.

In the immediate future, we should allow the cooperatives to apply these guidelines in accordance with their own specific conditions; and in 1981 experience will be reviewed so as to determine the optimal methods.

The distribution of income and the application of rewards and penalties are crucial to the control of products by the cooperatives and production teams. In order to control products and satisfactorily ensure distribution in service of the three types of interests and in accordance with the "to each according to his work" principle, the best measure, as has been proven by the experience of Tho Tang cooperative, Vinh Phu, is that the cooperatives and production teams must prepare enough drying yards and threshing equipment in one place for cooperatives to work on the harvested crops.

D. To prevent and overcome the practice of giving out contracts without specifying quotas it is important that, along with establishing plans, programs, production procedures and economic and technical norms, the cooperative must draft internal management regulations on product-based contracts based on the five principles mentioned above, introduce them to cooperatives for discussion in a democratic manner, and adopt measures to ensure strict implementation of these regulations. We must absolutely not allow the cooperatives to give out contracts without specifying quotas. If a cooperative continues to do so, the village and district party committees will be held responsible; and guidance must be promptly given to that cooperative so that it can immediately correct its error.

A number of cooperatives, such as Minh Tan cooperative, Haiphong; Nghia Thuan cooperative, Nghe Tinh; Tho Tang cooperative, Vinh Phu; Son Cong cooperative, Ha Son Binh, and so forth, have adopted internal regulations clearly defining the responsibility of the collective toward the workers and the responsibility of cooperative members toward the collective, establishing the forms of contracts to be given to workers so as to avoid cutting up cropland into small pieces, regulating the application of rewards and penalties in such a way as to make all those participating in the production process closely associate themselves with the finished products, specifying measures for standardizing the management of products, and so forth.

We must review and promptly popularize the initial experiences of the cooperatives that have reported to this conference, and help these cooperatives further improve their operations.

Concerning the organization, guidance and implementation of contractual work, the following tasks must be carried out satisfactorily:

1. First, the resolution of the party Central Committee and the policies of the party Secretariat and the Council of Ministers' Standing Committee on improving contractual work and expanding the contracting for products must be deeply and broadly disseminated to all party organizations in the countryside and all agricultural cooperatives so that all party cadres and members at the grassroots level and the masses of cooperative members can thoroughly understand and correctly implement them.

Leading and agricultural management agencies at the central level must provide specific guidance. Through this conference, the Ministry of Agriculture must recapitulate the experiences and lessons of those agricultural cooperatives which have satisfactorily implemented product quota contracts so that specific guidance can be promptly issued, clearly pointing out what must be done and what must be avoided. As a rule, initial guidance is insufficient. Followup preliminary and recapitulative reviews of acquired experiences must be conducted regularly in order to supplement and perfect contractual forms.

2. Provincial and district level authorities must exercise close leadership, supervision and control to cope with the realistic situation in order to promptly develop the positive factors and correct deviations. Attention should be paid to developing the right to collective mastery of cooperatives and their members, expanding the cooperatives' activity in production and business operations, and promoting the genuinely democratic work method.

All of the cooperatives' managerial tasks, especially their contractual work, should be debated among their members and decided upon by collective votes. All manifestations of coercion, authoritarianism and loose leadership should be overcome immediately.

Special attention should be paid to consolidating weak cooperatives, creating necessary conditions for them to satisfactorily improve contractual work. We must closely control, promptly detect and resolutely overcome and prevent all attempts to give unspecified quota contracts, fraudulently distributing land and ricefields.

In order to ensure good guidance for cooperatives to perform their contractual work, we must vigorously accelerate the development of districts and the improvement of the district level, paying attention to districts in the targeted areas producing grain and other agricultural products and goods while quickly consolidating the machinery of weak districts.

3. Sectors at the central and provincial levels which are related to the consolidation of agricultural cooperatives--such as agriculture, water conservancy, food industry, distribution, electricity, material supply, collection and purchase--should promptly improve their operations in order to support cooperatives well.

4. Study should be made to modify the organization of cooperatives' managerial apparatus in line with the improvement of contractual work. At the same time, we must amend regulations concerning the responsibility, authority and benefits of cooperatives' managerial cadres and production team cadres. Provincial and district authorities must advance their knowledge of cooperative administration and contractual work, especially the procedures of giving product quota contracts to the contingents of cadres in primary production units, namely production team chiefs who directly control manpower and production in cooperatives.

5. The political and ideological tasks should be performed regularly to enhance socialist awareness for cadres, party members, peasants and cooperative members to overcome the bad habits of small producers. At the same time, we must organize a seething revolutionary emulation movement to attain practical results.

Dear comrades: Uncle Ho said: If leaders are unable to learn from the actual experiences, people and components at lower levels in order to draw out necessary lessons, they certainly do not know how to provide general guidance for all components.

Our leadership over the contractual work--especially the new contractual form--in agricultural cooperatives, mainly stems from our recapitulative study and improvement of the actual lessons experienced by localities, primary installations and the masses, just like Uncle Ho has taught us.

The experiences recapitulated and exchanged during this conference have more firmly confirmed the conclusions adopted by the party Central Committee's Ninth Plenum and Secretariat as well as by the Council of Ministers' Standing Committee, concerning the contractual forms used in agricultural cooperatives.

We must take action to actively and scrupulously implement the party policies without any hesitation. At the same time, we must continue to make an indepth study to discover and recapitulate the good initiatives and experiences of the masses in order to improve our contractual work every day.

May you better improve the contractual work and expand the implementation of product quota contracts in order to vigorously boost production and consolidate agricultural cooperatives in 1981.

Certainly, by the next conference we will have many more fruitful lessons.

PHA LAI EXPANSION--On 16 January 1981, the Council of Ministers issued a decision on expanding Pha Lai town in Chi Linh District, Hai Hung Province by incorporating into it Sao Son, Thach Thuy and Binh Giang hamlets of Co Thanh village in Chi Linh District. Thus the boundaries of Pha Lai town are now adjacent to Luc Dau River in the west, to Van An village in the east, to Co Thanh village in the south and to Hung Dao village in the north. The Council of Ministers also decided to incorporate four hamlets and three subdivisions of Nhan Hue village into Co Thanh village. FINANCIAL SECTOR CONFERENCE--Recently, the armed forces financial sector held a conference to review and evaluate the implementation of its financial work in 1980 and discuss the guidelines and tasks for 1981. In 1980 the armed forces financial sector overcame many difficulties that had affected its work and satisfactorily completed its central tasks, thus insuring the implementation of various tasks of the armed forces and meeting the important needs of every branch and unit. The sector applied many measures to properly carry out various systems and fulfill the standards, constantly and closely supervised the performance of tasks by each unit and promptly carried out coordination and adjustment plans. Many branches and units in the armed forces successfully reduced their expenses by exploiting and securing raw materials by themselves to build barracks and produce various implements while striving to increase receipts in order to swell their budgets. After reviewing, evaluating and severely criticizing the shortcomings committed in managerial work, the armed forces financial sector carefully discussed the guidelines and tasks for 1981 and the satisfactory fulfillment of all duties early in the year in order to insure the successful implementation of all tasks entrusted to the armed forces by the party and state. AGRICULTURE

GROWING OF WINTER-SPRING VEGETABLES, CROPS SPEEDED UP

Hanoi NHAN DAN in Vietnamese 6 Dec 80 p 1

[VNA News Release: "Growing Winter Vegetables, Subsidiary Food Crops and Spring Rice"]

[Excerpt] In this winter-spring crop season, Phu Khanh Province tries to grow crops in 36,000 hectares, nearly 1,500 hectares more than this season last year. It has acquired such leafhopper-resistant and high-yield rice varieties as IR36, Long Dinh 2, etc. The province as a whole has sown seeds to obtain nearly 1,200 tons of seedlings. Its cooperatives took appropriate measures to treat seeds by soaking and covering them and to fight leafhoppers for rice seedlings. Many districts have sown rice seeds again after the rains and storms destroyed their seedlings.

As draft power had been made ready for dry-land plowing wherever the harvesting had been completed, the cooperatives and production collectives were able to plow for the first time almost all of their cultivated areas. Thousands of hectares were plowed 2-3 times. Farmers were getting rid of weed, building embankments to retain water and preparing for transplanting.

Tuy Hoa District, whose area put aside for winter-spring crops is equal to nearly one-half of that of the entire province, has drawn up plans to have nearly 10,000 hectares of land in the so-called intensive rice cultivation zone.

Farmers have also made ready nearly 65,000 tons of stable manure.

* As of 25 November, Nghe Tinh Province has planted over 20,300 hectares of winter plants and subsidiary food crops although prolonged continuous rains affected soil preparation and winter crop growing and, in addition, many localities harvested the tenth-month rice crop late, just because almost all cooperatives had signed contracts with members to assign winter crop production and had acquired enough seeds and actively overcome all materials and draft power difficulties. Many districts were faster than this same time last year in growing corn.

Anh Son District planted 1,550 hectares of winter corn more than last year and within the best schedule. Huong Son District also planted corn more quickly than in the previous crop season.

Nghe Tinh Province has also planted 13,860 hectares of winter sweet potato. Taking advantage of warm sunny days, all districts are continuing to grow vegetable sweet potato and manioc. The cooperatives that have almost completed the tenth-month rice crop harvest are now switching their attention to growing the fifth-month and spring rice crop. The province as a whole has completed the first plowing in more than 44,000 hectares of ricefields, or nearly twice as fast as this same time last year, and has sown over 4,620 tons of seeds of the fifth-month rice varieties 314 and 184.

* The Dalat Nursery (Lam Dong Province) has seeded and produced more than a million small cabbage plants for distribution to cooperatives and production collectives for their growing winter-spring vegetables.

This year excessive rains caused damages to the small plants of the vegetables-growing installations.

LOCALITIES SPEED UP GROWING OF WINTER-SPRING CROPS

Hanoi NHAN DAN in Vietnamese 23 Dec 80 pp 1, 4

[Article: "Growing of Winter-Spring Crops Speeded up; Tenth-Month Rice Crop in the South Better Than Last Year"]

[Text] According to the Statistics General Department, by mid-December the northern provinces and cities have sown rice seeds in 83,000 hectares, including 33,000 hectares with the fifth-month rice variety 314 and 424,310 hectares with the Nong Nghiep 8 variety, to produce enough seedlings for 60 percent of the area planned for the entire crop season. The localities are providing leadership for sowing in the full area planned to get seedlings grown in seedbeds and on hard ground in time and for sowing the spring rice seeds directly without transplanting as their plan calls for. The fifth-month rice seedlings are now in great demand and the cooperatives are concentrating manpower on transplanting quickly the mature seedlings.

The cooperatives have completed the first plowing in 641,000 hectares, or 100,000 hectares less than this same time last year, with plowing machines being used in 172,000 hectares.

They have made ready for the winter-spring crop season 5.124 million tons of organic fertilizer, about the same as this time last year, or in average 4.7 tons per hectare. If the amount of stable manure that has been applied to the winter crops is subtracted from the latter, only 2.3 tons remain for each hectare of the fifth-month and spring rice crop, thus only about 30 percent of the need level for intensive cultivation being satisfied. The chemical fertilizers made ready for the entire crop season are 5,000 tons more than last year's figure, but there is less nitrate fertilizer -- 3,000 tons less than last year. The cooperatives made rational manpower arrangements to fully retrieve and process stable manure, to make green manure and to quickly propagate azolla, thus trying to ensure enough supply of fertilizers for intensive cultivation.

The southern provinces and cities have grown 201,000 hectares of winter-spring rice, or over 28 percent of their goal but less than this same time last year.

The provinces south of Thuan Hai have sown rice seeds in 155,000 hectares, or over 29 percent of their goal. The provinces that have completed a relatively high percentage of sowing of the winter-spring rice are: Long An 72.4 percent, Hau Giang 40.5 percent, Ben Tre 56.2 percent, Tien Giang 55.1 percent and Phu Khanh over 40 percent. Cuu Long, Dong Thap and Tay Ninh Provinces and Ho Chi Minh City have just begun to sow the winter-spring rice.

The southern provinces and cities have also harvested 310,000 hectares of the tenth-month rice, or 16 percent of the cultivated area, with the provinces south of Thuan Hai having harvested 166,000 hectares, or 9.8 percent. The provinces that have completed much of the harvest are Nghia Binh 62 percent, Gia Lai-Kon Tum 69.4 percent and Lam Dong 68 percent.

This year the tenth-month rice in the provinces south of Thuan Hai is good and has not been affected much by harmful insects. The yield obtained in the harvested area is higher than that of last year. Along with the rice crop, they have harvested over 4,000 hectares of corn, potato and manioc; nearly 1,300 hectares of vegetables; and over 2,000 hectares of industrial crops.

* Since the beginning of November, the Nam Bo provinces have been mobilizing tens of thousands of people for building small water conservancy works and repairing the watering tools and pumps to get water for the winter-spring crop production.

They inspected and repaired the watering and drainage canal systems to ensure their effective operations. Tien Giang Province used nearly 40,000 man-days to dig and build 55,000 cubic meters of earth, repaired and built anew many canals and brought dozens of high-output pumps to Cai Lay District to serve 10,000 hectares of high-yield rice. Tien Giang, Long An and Ben Tre Provinces in the river basin area, where water receded quickly, organized the people in time for doing small water conservancy work to ensure earlier planting of the winter-spring rice than this same time last year. In the provinces located in the head of the Mekong River, since the beginning of December, as water receded more quickly than elsewhere, all localities have been doing small water conservancy work, preparing the soil and increasing the speed of sowing rice seeds. Ho Chi Minh City mobilized its people for doing small water conservancy work; Binh Chanh District built levees to contain water, dredged canals and ditches and created additional sources of water to extend the area of planting the winter-spring rice crop.

HANOI REPORTS 10-DAY AGRICULTURAL REVIEW

BK210719 Hanoi Domestic Service in Vietnamese 2300 GMT 20 Jan 81

[Review of agricultural news for the past 10 days]

[Summary] Last week, the weather was warm, favorable for the transplanting of winter-spring rice.

"According to the General Statistics Department, over the past 10 days the northern provinces and cities have transplanted nearly 230,000 hectares, averaging 22,000 hectares a day, almost double the pace in the same period last year.

"To date, more than 400,000 hectares of 5th-month spring rice--or over 40 percent of the plan norm--have been transplanted. In some areas, however, the transplanted rice has been slow in taking root, and some other areas have been hit by a shortage of water. In the early days of January, a prolonged cold spell gave rise to leaf yellows in and slowed the growth of some rice seedlings planted after 15 December. Last week, with the arrival of warm weather, these rice plants began to recover. The localities are actively taking good care of rice seedlings to prepare for transplanting in the coming days.

"In the southern provinces, as of mid-January, only 450,000 hectares--or over 60 percent of the plan norm--had been transplanted. Specifically, the provinces from Thuan Hai southward have transplanted more than 300,000 hectares, with Nghia Binh, An Giang, Phu Khanh, Thuan Hai and Long An [as heard] fulfilling more than 80 percent of the transplanting plan. A number of provinces in the Mekong River delta, however, have been slow in this task, with Long An [as heard] and Ho Chi Minh City having transplanted only 10 percent of the planned area, and Tay Ninh, only 2 percent.

"The cause of this slow pace is the failure of the localities concerned to effectively organize their work forces to simultaneously harvest the 10th-month rice and transplant the winter-spring rice. The slow recession of floodwater in some areas has also affected the transplanting pace. To ensure the fulfillment of this year's winter-spring rice area plan, these provinces should concentrate their manpower and means on quickly transplanting the remaining area and strive to complete this task before the lunar new year.

"Last week, along with transplanting the winter-spring rice, the southern provinces and cities harvested more than 220,000 hectares of 10th-month rice, bringing the total area of this crop harvested thus far to more than 1 million hectares, or over 57 percent of the cultivated area."

In this year's 5th-month spring crop, the northern provinces should pay attention to producing more fertilizers. Over the past 10 days, despite favorable weather conditions, only 5,000 hectares of duckweed have been planted, bringing the total duckweed area to more than 30,000 hectares, a decrease of 50 percent from the same period last year. The main cause of this shortfall is the water shortage.

"Because of the difficulties regarding electricity and diesel supplies, wet plowing is still slow. To date, the northern provinces have actively irrigated about 30 percent of the area which needs water. To provide water for wet plowing, the localities are concentrating all means on irrigating the fields."

Last week, along with transplanting the winter-spring rice, all the provinces and cities planted 61,000 hectares of vegetables and subsidiary food crops and industrial plants, bringing the total area of these winter-spring crops to more than 500,000 hectares.

Hai Hung, Thai Binh and Thanh Hoa provinces and Hanoi and Haiphong city have harvested more than 5,000 hectares of winter crops, with sweet potatoes giving a fairly high yield while the yield of potatoes was lower than last year.

According to the General Meteorological and Hydrological Department, it will continue to remain warm in the last 10 days of January. This weather is favorable for the planting of spring rice, vegetables and subsidiary food crops. In the immediate future, all localities should satisfactorily carry out the following tasks:

The northern provinces should effectively implement the directive of the party Central Committee Secretariat on improving contractual work in production so as to develop a strong movement for productive labor among the masses;

Plans should be formulated to transplant rice seedlings before they become overgrown, and efforts must be made to complete the transplanting of 5th-month rice before the lunar new year;

Those localities which have completed the transplanting of 5th-month rice should take advantage of the warm weather to transplant the spring rice immediately; and

The southern provinces should continue to quickly harvest the 10th-month rice and transplant the winter-spring rice.

Aside from these tasks, the localities should motivate the peasants to promptly fulfill their grain obligation to the state and concentrate on planting winter-spring subsidiary food crops. The northern provinces should quickly harvest the winter crops and take good care of herds of cattle and hogs during the cold season.

CSO: 4209

BRIEFS

AGRICULTURAL STATISTICS--According to the General Statistics Department, as of 15 January the entire country had transplanted 796,000 hectares of winter-spring rice, fulfilling 45.2 percent of the planned norm and producing an increase of 76,000 hectares over the same period last year. Taking advantage of sunny and warm weather, over the past 10 days the northern provinces and cities have transplanted another 227,000 hectares, thus bringing to 339,850 hectares the area transplanted with this rice since the beginning of the crop season and fulfilling 31.6 percent of the planned norm. This figure also includes 121,000 hectares of 5th-month rice sown with 314 and 424 rice varieties, which represent 35.8 percent of the cultivated area. Meanwhile, the southern provinces and cities have transplanted winter-spring rice on 456,000 hectares or 66.5 percent of the planned acreage, with the provinces from Thuan Hai southward accounting for 312,000 hectares or 63.1 percent of the planned norm. In addition to rice, the entire country has planted 500,000 hectares of subsidiary and industrial crops. This figure includes 384,000 hectares of subsidiary crops, 88,000 hectares of vegetables and beans, and 27,000 hectares of industrial crops. [Text] [BK220814 Hanoi Domestic Service in Vietnamese 1100 GMT 21 Jan 81]

MEKONG RICE PROCUREMENT--In the first 20 days of 1981 nine provinces of the Mekong delta turned over to state granaries eight times as much 10th-month rice paddy as in the same period last year. Hau Giang has taken the lead by procuring 100,000 tons of paddy or over 43 percent of the quota assigned by the central government. Minh Hai comes next with almost 70,000 tons or over 30 percent of its quota, and is followed by Cuu Long which has fulfilled almost 40 percent of its procurement quota. Concerning the collection of agricultural tax, as of now the nine provinces of the Nam Bo delta have rounded up almost 65,000 tons of paddy, fulfilling almost 20 percent of the tax collection plan for the 10th-month crop season. Hau Giang and Cuu Long provinces have made vigorous efforts in this regard and fulfilled 31 to 36 percent of their plans. In this drive to procure grain, many provinces have undertaken the political task and assigned procurement quotas to every district and village; and the financial, grain, banking and communications and transport sectors have achieved better results than last year thanks to their close mutual coordination. Cuu Long Province has satisfactorily prepared and developed its procurement plan at the grassroots level. It has set up specialized collection and purchase teams and closely supervised their work. Thanks to this, the peasants have fulfilled their obligations under two-way contracts, paid their tax and debts, and sold surplus rice to the state in a prompt and satisfactory manner. Many provinces have paid attention to protecting the procured paddy from moisture and mildew. Cadres in charge of grain procurement in Soc Trang city promptly discovered more than 4,000 tons of paddy affected by moisture and put it out to dry before packing it into sacks for transportation to Ho Chi Minh City. TRANSPORTATION AND COMMUNICATIONS

GOVERNMENT PROMULGATES RAIL TRAFFIC SAFETY REGULATIONS

BK251124 Hanoi Domestic Service in Vietnamese 0400 GMT 23 Jan 81

["Full text" of the SRV Interior Ministry's 22 January communique]

[Text] Railway travel safety regulations are being regularly violated by train passengers who sit on the roof of rolling stock, cling to railroad cars or jump on and off of moving trains. Such acts have resulted in many accidents, including the recent deaths of a number of riders who were thrown off the roof of railroad cars in motion.

To ensure the safety of communters and strengthen the maintenance of traffic order, the interior minister announces the following:

1. All train passengers must seriously and correctly observe railway travel safety regulations. They shall not sit on the roof of railroad cars, cling to rolling stock or jump on and off of a train in motion.

2. Station masters, train masters, railway security officials and army-public security joint railway patrol teams have the authority to arrest and send to the nearest public security post for legal action anyone who intentionally violates these regulations and refuses to comply with warnings.

3. The head of the General Railway Department, station masters and train masters should widely disseminate the department's railway travel safety regulations among train passengers. They also have the responsibility to enforce these regulations and strictly supervise their implementation.

4. Heads of the railway public security services, directors and heads of the public security services of the cities and provinces serviced by trains, especially in those localities with a major station such as Hanoi, Haiphong, Vinh, Hue, Nhatrang and Ho Chi Minh City, have the responsibility to organize the checking of all trains prior to departure. They must absolutely prohibit people to sit on the roof of railroad cars or cling to rolling stock.

5. Station masters and train masters have the responsibility to check trains and seriously observe state regulations on railway traffic. Only ticket

bearers are allowed on trains. Anyone engaged in train ticket black-marketing must be severely punished according to law. Anyone who exposes train ticket black marketeers or catches them red-handed will be entitled to commendations and rewards.

6. Anyone who violates railway traffic regulations will be punished according to the law in effect. Anyone who scores achievements in maintaining railway traffic order and safety will be commended and rewarded.

*Head of the Grains Service, Vinh Phu Province; his article "Vinh Phu Processes and Utilizes Manioc" appeared in the cited source. (NHAN DAN 25 Dec 80 p 2)

Lê Văn Cơ [LEE VAWN COW], Doctor, Deceased

Born on 15 January 1897; Member of the VCP; Delegate to the 1st National Assembly; Member of the Executive Committee of the Vietnam General Confederation of Trade Unions, 2nd Session; Secretary of the Vietnam Public Health Trade Union; Deputy Head of the Disease Prevention and Cure Department of the Ministry of Public Health; he died at his home on 20 December 1980 at age 83. (NHAN DAN 26 Dec 80 p 4)

Nguyễn Đình Doãn [NGUYEENX DINHF ZOANX]

Vice Minister of Communications and Transportation; in December 1980 he attended a reception for a delegation from the Finnish Organization for Development and Aid. (NHAN DAN 19 Dec 80 p 4)

Trần Hữu Dực [TRAANF HUWUX ZUWCJ]

Head of the People's Supreme Procuratorate; on 20 December 1980 he presented a report to the National Assembly. (NHAN DAN 21 Dec 80 p 1)

Phan Văn Đáng [PHAN VAWN DANGS]

Member of the Central Committee of the VCP; Vice Chairman of the Standing Committee of the National Assembly; his article on the new Constitution appeared in the cited source. (NHAN DAN 24 Dec 80 p 3)

Nguyễn Đăng [NGUYEENX DAWNG]

Vice Chairman of the Plans and Budget Committee of the National Assembly; on 23 December 1980 he presented a report to the National Assembly. (NHAN DAN 24 Dec 80 p 1)

Nguyễn Thị Được [NGUYEENX THIJ DUWOWCJ]

Vice President of the Vietnam Women's Confederation; Delegate to the National Assembly from Minh Hai Province; recently she addressed the National Assembly concerning the new Constitution. (NHAN DAN 18 Dec 80 p 3)

Bùi Nguyễn Hai [BUIF NGUYEEN HAI]

Member of the Central Committee of the Ho Chi Minh Communist Youth Union; *Secretary of the Ho Chi Minh Communist Youth Union, Nghe Tinh Province; his remarks on physical fitness and the Youth Union appeared in the cited source. (TIEN PHONG 30 Nov 80 p 3)

Thanh Hải [THANH HAIR] aka Phạm Bá Ngoãn [PHAMJ BAS NGOANX], Deceased

Born in 1930 at Phong Binh Village, Huong Dien District, Binh Tri Thien Province; Member of the VCP since 1948; former Standing Member of the Vietnam Arts and Letters Confederation; Member of the Executive Committee of the Vietnam Writers

Association; Member of the Fatherland Front Committee, Binh Tri Thien Province; Member of the VCP Fraction and Vice President of the Binh Tri Thien Arts and Letters Association; he died following a serious illness on 15 December 1980. (NHAN DAN 17 Dec 80 p 4)

Song Hào

Secretary of the Central Committee of the VCP; Head of the Central Control Committee; in December 1980 he met with a Bulgarian provincial delegation. (NHAN DAN 14 Dec 80 p 4)

Đặng Vũ Hiệp [DAWNGJ VUX HIEEPJ], Major General

Alternate Member of the VCP Central Committee; Deputy Head of the Political General Department of the VPA; in December 1980 he received a Soviet military delegation. (NHAN DAN 19 Dec 80 p 4)

Huỳnh Công Hòa [HUYNHF COONG HOAF]

*Vice Minister of Maritime Products; on 17-26 December 1980 he represented the SRV on the USSR-SRV Joint Fisheries Committee which met in Hanoi. (NHAN DAN 26 Dec 80 p 4)

Trần Quang Huy [TRAANF QUANG HUY]

Member of the Central Committee of the VCP; Minister in Charge of the Government Legislation Committee; on 15 December 1980 he attended a reception for a visiting delegation from the GDR Ministry of Justice. (NHAN DAN 16 Dec 80 p 1)

Phạm Hưng [PHAMJ HUWNG]

Associate Justice of the People's Supreme Court; on 20 December 1980 he presented a report to the National Assembly. (NHAN DAN 21 Dec 80 p 1)

Nguyễn Văn Lập [NGUYEENX VAWN LAAPJ], Deceased

Member of the VCP since 1930; former Chief of Cabinet of the 4th Inter Region; Specialist at the Su That Publishing House; he was in retirement at the time of his death on 15 December 1980 at age 71. (NHAN DAN 17 Dec 80 p 4)

Nguyễn Đình Nhiên [NGUYEENX DINHF NHIEEN]

*Secretary of the VCP Committee, Do Son District, Haiphong; his article "Initial Results of In-kind Payments at Do Son" appeared in the cited source. (NHAN DAN 26 Dec 80 p 2)

Lê Đình Nhơn [LEE DINHF NHOWN]

Vice Chairman of the People's Committee, Ho Chi Minh City; on 20 December 1980 he attended ceremonies marking the anniversary of the VPA. (NHAN DAN 23 Dec 80 p 1)

Trần Hải Phùng [TRAANF HAIR PHUNGF], Major General

Commander of the People's Armed Forces of Ho Chi Minh City; on 20 December 1980 he attended ceremonies in Ho Chi Minh City marking the anniversary of the VPA. (NHAN DAN 23 Dec 80 p 1)

Vũ Sơn [VUX SOWN]

*SRV Ambassador to the Congo People's Republic; on 8 December 1980 he attended the arrival in the Congo People's Republic of an SRV delegation headed by Political Bureau Member Vo Nguyen Giap. (NHAN DAN 18 Dec 80 p 1)

Phan Minh Tánh [PHAN MINH TANHS]

*Deputy Secretary of the VCP Committee, Ho Chi Minh City; on 4 December 1980 he attended a meeting marking Lao National Day. (NHAN DAN 6 Dec 80 p 1)

Nguyễn Trung Thành [NGUYEENX TRUNG THANHF]

Delegate to the National Assembly from Cuu Long Province; Deputy Head of the Preparatory Committee for the All Vietnam Farmers Congress; recently he addressed the National Assembly concerning the new Constitution. (NHAN DAN 17 Dec 80 p 3)

Lê Phước Thọ [LEE PHUWOWCS THOJ]

Deputy Secretary of the VCP Committee, Hau Giang Province; his article "Lieu Tu Village Goes From Weak to Satisfactory" appeared in the cited source. (NHAN DAN 24 Dec 80 p 2)
[NOTE: This individual was previously reported as Secretary of the Province's VCP Committee]

Ka Ba Tơ [KA BA TOW]

Member of the Central Committee of the Ho Chi Minh Communist Youth Union; *Secretary of the Ho Chi Minh Communist Youth Union, Gia Lai-Cong Tum Province; his article on physical fitness and the Youth Union appeared in the cited source. (TIEN PHONG 30 Nov 80 p 3)

Lưu Minh Trị [LUWU MINH TRIJ]

Secretary of the Ho Chi Minh Communist Youth Union; *Secretary of the Ho Chi Minh Communist Youth Union, Hanoi; his remarks on physical fitness and the Youth Union appeared in the cited source. (THE DUC THE THAO 30 Nov 80 p 3)

Phạm Chánh Trực [PHAMJ CHANHS TRUWCJ]

*Secretary of the Ho Chi Minh Communist Youth Union; Secretary of the Ho Chi Minh Communist Youth Union, Ho Chi Minh City; his remarks on physical fitness and the Youth Union appeared in the cited source. (THE DUC THE THAO 30 Nov 80 p 3)

Nghiêm Xuân Yêm [NGHIEEM XUAAN YEEM]

Secretary General of the Vietnam Democratic Party; Delegate to the National Assembly from Hanoi; recently he addressed the National Assembly concerning the new Constitution. (NHAN DAN 18 Dec 80 p 3)

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

VPA IMPLEMENTS NEW COMMAND SYSTEM

Hanoi TAP CHI QUAN DOI NHAN DAN [PEOPLE'S ARMY REVIEW] in Vietnamese No 10, Oct 80 pp 38-45

[Article by Le Tat Thang: "Several Experiences in Implementing the One Person in Command System*"]

[Text] The implementation of the one person in command system is a matter of major importance, one which represents a change in the command system within our army and marks an important stage of development in the organizational work of our people's armed forces.

The realities of the units that implemented this system previously confirm that the position of the party with regard to implementing the one person in command system within the army is correct and timely, is consistent with the development and growth of our country's revolution, of our army, meets the requirements of the political task and the military task of our party in the new stage and satisfies the pressing demands of the large combat task of our army in the cause of protecting the fatherland. The implementation of the one person in command system has had a marked and positive impact in many areas: the collective leadership by the party committee is strictly maintained; the responsibility of the commander and the effectiveness of command have been strengthened; the coordination among the various areas of work is tighter; tasks are completed with higher quality and so forth. Problems regarding the relationship between the commander and the party committee, the commander and the agency on the upper level, the commander and the party committee on his level, the commander and his deputy commanders, the commander and the staff, the political agency, the rear service agency and the technical agency, the commander and the mass organizations and the mass of cadres and soldiers within the unit and so forth have gradually been correctly resolved in accordance with the guideline of constantly increasing the effectiveness of the leadership organization, the command organization and the mass organization.

The results of the implementation of the one person in command system within the units that implemented this system first have provided us with useful experiences and made a practical contribution to the widespread and successful implementation of this system throughout the army.

1. The party committee, party members and cadres must have a thorough understanding of the objectives, requirements and contents of the one person in command system, there must be total unanimity among them and they must be determined to thoroughly implement this system.

To begin with, it must be realized that the implementation of the one person in command system within the army is designed to constantly strengthen the leadership role of the party committee collective and fully develop the responsibility of the commander to insure the development of leadership strength in conjunction with increasing the effectiveness of command, determinedly and promptly implementing the resolutions, directives and orders of the upper echelon and the resolutions of the party committee on one's level and so forth in order to successfully complete every task.

This is clearly a new stage of development and improvement in organization, one consistent with the political line and task, the military line and task and the military science and art of the party in the people's war to protect the fatherland, consistent with the guidelines and tasks of making our army a powerful, revolutionary people's army, an army that is increasingly regular-force and modern. These are the objective requirements of protecting our fatherland in the new stage. They are also a manifestation of the revolutionary and scientific nature of the organizational work of our armed forces today.

In the past, after the party committee issued a resolution, the group commander and unit commanders primarily served the function of commanding and managing troops in the areas of military affairs, rear services and technology while party work and political work were undertaken by the field-grade political officers and the political officers at battalion level or below. Today, all of these activities are concentrated in one person in order to insure centralized, unified, rapid and timely command; the organization of implementation is carried out in an urgent and efficient manner without decentralization or waiting, consequently, resolutions, directives and orders are implemented more rapidly and with greater effectiveness. It is necessary to correct misunderstandings resulting from a lack of understanding of the viewpoint of development and the failure to boldly change things what were suitable in the present stage but are no longer suitable. These phenomena are primarily the result of an incorrect outlook or method of evaluation but, in some cases, they are also the result of the influences of individualism, localism and so forth. The realities of the units that implemented the system first have shown that at those places where there is tight leadership and thorough education, where everyone has a firm grasp of objectives and requirements, is highly determined and fully complies with official duties and regulations and promptly corrects deviations, this system is implemented smoothly, internal unity exists and the effectiveness of the commander is heightened. Conversely, at places where good preparations are not made, where attitudes and thinking are incorrect and where individualism has not been completely eliminated, problems routinely occur that influence internal unity and influence the work efficiency of every cadre, including the commander, with the result that everyone finds its difficult to fulfill his task and duties.

2. The implementation of the one person in command system must be based on strict adherence to the principle of leadership by the party committee (party chapter) while fully developing the responsibility of the commander.

Everyone knows that the leadership of the party is the origin of every victory of our army. The leadership of the party is primarily manifested in the centralized, unified leadership and guidance provided by the Party Central Committee, the Political Bureau, the Secretariat and the Central Military Party Committee; at the same time, it is also manifested in the leadership and guidance provided by the various party committee echelons within each unit. The collective leadership of the party committee echelon has the purposes of tapping the intelligence of each cadre and party member and insuring unanimity of thought and action throughout the party organization and unit in the implementation of the lines, positions and policies of the party; it is also designed to create firm conditions for the commander to heighten his command effectiveness, develop the strength of the unit as much as possible and insure that the unit can complete each task as well as possible. The matters mentioned above are principles as well as experiences in the nature of traditions of our party, our army.

Recently, the units that have implemented the one person in command system have been units that have still regularly maintained and improved the quality of party committee activities. Good preparations are made for the conferences of the party committee. Before conferences are held, the secretary and the commander conduct research together or the commander, if he is also the secretary, carefully prepares a proposal, solicits the opinions of the various party committee members and correctly proposes the matters that must be discussed at the conference, especially matters of key importance to the unit concerning which there are still differing opinions. At the party committee conference, the central task of each period, the emergency tasks and the major positions and measures as well as the objectives and requirements that must be met are thoroughly discussed, thereby highly tapping the intelligence of the collective. The conference conclusion is also thoroughly prepared and accurately reflects the opinions of the majority; personal opinions do not prevail over the opinions of the collective. At the units that operate in this manner, conferences are held in a short amount of time, the quality of activities has been improved, internal unity is maintained and the unit commander is better able to complete his task well. Conversely, at units that do not firmly adhere to the principles and system of leadership, matters that must be presented to the party committee (or its standing committee) for discussion and decision are not discussed to the point of unanimous agreement, consequently, this has adversely affected the results of work, internal relationships and the effectiveness of leadership and command. There have also been cases in which, due to the failure to thoroughly prepare for a conference of the party committee (or standing committee), the conclusions that became the resolution of the conference failed to reflect the opinions of the majority; in one case, the secretary reached the conclusions almost entirely on his own and based them on his own opinions, with the result that the resolution did not reflect the will and intellect of the party committee, consequently, it lacked force and unanimity and affected the work and progress of the unit.

On the basis of these actual experiences, we must once again state: in order to implement the one person in command system well, one of the primary requirements is to fully comply with the principle of collective leadership by the party committee and to improve the quality of party committee activities.

We must always remember that the relationship, which is in the nature of a principle, between the party committee and the commander is the relationship between the leader and the person being led. The commander must comply with the resolutions of the party committee and must never act in a manner that is contrary to resolutions of the party committee; he and the secretary must take the initiative and present to the party committee matters that must be discussed and decided by it but he must not merely rely upon the collective of the party committee. The party committee must provide close leadership but never take over the task of the commander, rather, it must create favorable conditions for the commander to fulfill his task. The issue of main importance is that the commander must fulfill his responsibility and always respect the collective; in the face of difficult, complex and urgent changes in the situation, he must dare to be decisive, dare to assume responsibility and not miss opportunities, stand with his hands folded and wait.

The collective leadership of the party committee and the command activities of the commander always require the highest possible unanimity. If, when the situation is developing in a rapid and urgent manner, matters arise that lie beyond his scope of responsibility, the commander must still look for every opportunity to ask the opinions of the collective of the party committee's standing committee. If time does not permit, the commander must make a prompt decision in order to rapidly win victory; at the same time, he must immediately notify each party committee member of his decision and later report to the entire party committee and assume responsibility to it for his decision. If there is a difference of opinion between the party committee and commander concerning a decision or position, it must be immediately reported to the party committee and commander on the upper echelon in order to be resolved. If the situation is urgent and does not allow time to report to or wait for a decision from the upper echelon, the commander has the authority to make a decision in order to rapidly meet the demands of the situation; at the same time, he must report to and request a directive from the upper echelon and be responsible to it for his decision. These procedures are designed to promptly deal with the situation and have the winning of victory as their highest objective.

However, experience has shown that with commanders who are competent and skilled, who firmly adhere to the principle of collective leadership, who are fully responsible to the leadership of the party committee and who make thorough preparations so that the party committee can discuss and decide the matters they raise, unexpected developments that lie beyond the scope of responsibility and authority of the commander are generally few in number. The skilled, competent commander never considers this special method of handling situations to be a universal principle that reduces the role of the collective leadership of the party committee. As for the party committee, it must always gather correct opinions and utilize every creative capability of each member. The party committee must use persuasion to show the difference between right and wrong, show everyone the truth and reach a high level of agreement; it must resolutely comply with the principle of majority rule but never use the majority to infringe upon the individual and must create every possible condition for heightening the effectiveness of command and implementing the one person in command system as best possible. Matters pertaining to lines and principles must be thoroughly discussed and resolved in a clear, unequivocal manner. Matters related to specific positions and measures should not be imposed in a compulsory manner, thereby depriving the person who organizes their implementation of the use of creativity.

3. In the process of implementing the one person in command system, we must always display a high sense of organization and discipline, especially discipline in complying with the lines and policies of the party, the laws of the state, the principles, systems, orders and regulations of the army and the resolutions, directives and orders of the upper echelon; on this basis, we must correctly establish the various relationships.

Both the leadership of the party committee and the command activities of the commander have the purpose of successfully carrying out the tasks of the unit in exact accordance with the lines and policies of the party, the laws of the state and the resolutions, directives and orders of the upper echelon with the highest possible results.

The results of the completion of a task are the measurement of the leadership effectiveness of the party committee and of the competency and skill of the commander. The highest ranking commander within the unit is also the person that has the greatest responsibility to the upper echelon, to the party committee on his echelon and to all cadres and soldiers for the completion of each task of the unit. The display of talents, creativity and decisiveness by the commander must be fully encouraged. This is a matter of extreme importance in complying with the one person in command system.

The commander who fulfills his responsibility and has the trust of the upper and lower echelons must be a person who acts in accordance with lines, positions and policies and fully complies with principles, systems and regulations; who scrupulously implements the resolutions, directives and orders of the upper echelon and the resolutions of the party committee on his echelon in a thorough and creative spirit. As a person who possesses political skills and a proper style, the good commander never abuses his authority, never likes to be ostentatious and never handles matters in a haphazard fashion or in a manner that goes beyond his authority. In conjunction with fully complying with the directives and orders of the commander on the upper echelon, including the orders and directives of the deputy commanders on the upper echelon, the commander must also respect the deputy commanders and staffs that assist him and create every possible condition for them to fulfill their duties and tap the strength of the entire unit and must work with them to complete each task. At places where the commander operates in this manner, internal unity and positive factors develop more with each passing day. Conversely, there are also some comrades who take over or infringe upon the work of the deputy commanders, who rarely hold discussions with their specialized deputy commanders or who only discuss matters with them in a form for form's sake manner and rarely consider their opinions. They sometimes even use their authority as a commander to reject solutions proposed by cadres on the deputy commander level merely because they did not seek their opinion. Such commanders cause many negative phenomena to develop; their deputy commanders are hesitant and reluctant; the results of work are limited and the unit makes progress slowly.

Deputy commanders must display a high level of discipline and fully obey their commander. They must fulfill their duty as persons who assist the commander, be thoroughly familiar with the work assigned to them, take the initiative and report the situation and prepare plans and propose opinions in a full and accurate manner so that the commander can make an accurate decision. After their plans and proposals have been approved by the commander, they must guide their thorough implementation and make a full report on the results achieved. When engaged in discussion and debate, they must boldly present their opinions and endeavor to distinguish between right and wrong; however, once a directive or order has been issued, they must obey it unconditionally and implement it thoroughly. It is necessary to guard against and overcome the irresponsible practice of not expressing one's opinions during conferences but talking at great length outside conferences and the phenomenon of being negative in the implementation of a decision, of doing as one sees fit, not fully complying with the intentions of the commander and providing full reports when one's opinions are not accepted, thereby affecting unity, unanimity and the completion of tasks.

In order for the one person in command system to be implemented well, it is very important to establish the correct relationships between the upper echelon and the lower echelon and between the commander and the persons who assist him on the basis of fully complying with lines, policies and regulations and correctly implementing the principle that the lower echelon must obey the upper echelon and deputy commanders must obey the commander; at the same time, we must establish and cultivate comradeship and cooperation among unit members so that they create the conditions for one another to complete their tasks.

4. Every effort must be made to provide cadres with basic, systematic and comprehensive training while assigning cadres to jobs in exact accordance with their capabilities and in a manner in which they establish complete staffs and can support one another.

One of the major strongpoints of the corps of cadres of the party within our army is that it was forged for many years in the revolution and the revolutionary war, is loyal, possesses political consciousness and is experienced. However, compared to the requirements of tasks in the new stage, some shortcomings still exist, especially the lack of basic, systematic and comprehensive training. The majority of military cadres have not received basic political training and have not delved deeply into party work or political work. The majority of political cadres have not received military training and have not delved deeply into military affairs. This weakness was also evident in the past when the commander and the political officer were each in charge of a different area; now that one person is in charge of both areas, it is, of course, even more difficult to avoid certain shortcomings and difficulties at first. Therefore, we must concern ourselves with comprehensively cultivating the capabilities and qualities of cadres to insure that the one person in command system is implemented well.

Over the long range, we must provide cadres with basic, systematic and comprehensive training. However, in the immediate future, we must concentrate our efforts on providing training in areas in which cadres are still weak. Comrades who are assigned the task of serving as a commander must not only have a firm grasp of the military line, viewpoints and thinking of the party and the military science and art of a people's war to protect the fatherland and constantly improve their command and management skills and be the masters of existing weapons and equipment, but must also have a firm grasp of the principles, regulations and requirements of party work, political work and so forth. In order to meet this requirement, we must give immediate attention to training those commanders who are military cadres in party work and political work. With regard to those comrades who are political cadres and have now become commanders, we must give our attention to immediately providing them with military training. Training must delve deeply into the duties of each echelon and person; the organization must adopt a thorough plan for training cadres; each cadre must take the initiative and actively study and raise his qualifications in every area in conjunction with cultivating good qualities and rapidly correcting his weaknesses in order to rapidly achieve the ability needed to complete the duties and tasks of the commander.

In conjunction with training, it is necessary to assign cadres to jobs in a manner consistent with their capabilities and in a manner that establishes complete staffs so that they can support one another in their work. The assignment of cadres must insure that the commander is a person who can develop rapidly, can take over each aspect of the unit's work, can unite everyone and insure that everyone fulfills his responsibility. The organization must be efficiently rearranged so that cadres have the conditions needed to support one another, needed to unite with and help one another. However, with regard to cadres, once the structure of the organization has been decided, they must fulfill their tasks and duties well and not affect either unity or the work being performed for any reason. Units whose commander is a military cadre must have a skilled deputy commander in charge of politics, one who is fully capable of helping the commander. In units in which a political cadre becomes commander, it is necessary for the deputy commander in charge of military affairs to be rather well qualified so that he can competently assist the commander.

In the deployment of cadres, an effort must be made to establish an adequate staff, one that is neither too large nor too small and is based on a regular-force organizational system; if the staff is too large, it is difficult to assign tasks and the habit of depending upon others to have work performed easily develops; if the staff is inadequate and staff members must perform two jobs at once, it is impossible to achieve specialization. Both of these phenomena create difficulties for the commander and influence work.

It is necessary to take the initiative and provide close ideological and organizational leadership and guidance in order to insure results from the very outset.

The implementation of the one person in command system within our army represents a change compared to the previous command system. For this reason, everything from outlook and thinking to work procedures and methods must change accordingly.

When implementing a new system well, it is usually difficult to avoid shortcomings and sometimes even deviations; however, instead of seeking perfecting and waiting until all the necessary regulations have been established, we must rapidly implement this system, must gain experience while working and will, in this way, gradually correct deviations and supplement and perfect the regulations regarding this system. Of course, we must endeavor to establish every condition needed to make thorough preparations and resolve problems pertaining to thinking and organization well so that everyone has absolute confidence and the system is implemented well at the very outset, thereby reducing the negative phenomena that might occur to the lowest possible level.

The process of implementation in the units that implemented this system previously has shown: the successful units are units that have provided close leadership and guidance of thinking and organization from the very outset; in the various stages of the implementation of the system, they have clearly established the objectives and requirements that must be met, taken the initiative in preventing possible deviations and assigned cadres in an efficient manner while providing them with necessary training. At the same time, they have adopted specific regulations governing the various activity systems and procedures, constantly gained experience and, in this manner, continued to supplement these systems and procedures, making them increasingly complete, while always attaching importance to heightening the sense of organization and discipline of everyone, improving everyone's work methods and promptly resolving personal problems. In these units, not only is the one person in command system implemented well, but good results are achieved in their work, their internal unity is even stronger and the unit make progress in every area.

Today, the conditions needed to implement the one person in command system throughout the army are becoming increasingly complete. The problem faced at this time throughout the army as well as within each unit is that we must urgently make good preparations, the most important of which are gaining a thorough understanding of the party's position with regard to implementing the one person in command system within the army, correctly deploying and properly training cadres, deeply researching and creatively applying the experiences of the units that implemented this system first and so forth.

This is a major task in the organizational work of our army. The party committees and cadres on all echelons have the responsibility of completing the implementation of the one person in command system throughout the army in order to make an important contribution to raising the regular-force level of our army to a new stage of development, further developing the strength of our organization and the effectiveness of command and raising the fighting strength and the level of combat readiness of our armed forces in the new stage.

NEED FOR COORDINATION IN COMBAT STRESSED

Hanoi TAP CHI QUAN DOI NHAN DAN [PEOPLE'S ARMY REVIEW] in Vietnamese No 10, Oct 80 pp 46-52 and 62

[Article by Pham Le: "The Combat Coordination Among the Various Branches and Services of Our Army"]

[Text] Today's scientific-technological revolution and its achievements, which are being applied ever more quickly and widely in the military field, have been and are leading to major changes in the military art of modern warfare. The emergence of many new, highly accurate, long-range means of war with great destructive power together with the development and establishment of modern technical branches and services is one of the primary causes of these changes. One of the characteristics of the development of military art in modern warfare is the development of combat coordination among the various branches and services.

Today, according to a viewpoint shared by many foreign military theorists, combat coordination among the various services and branches in the world has undergone many developments in modern warfare. They include the centralized use of a large force of troops together with very many modern means of war, such as various types of missiles armed with nuclear warheads, strategic bombers, tactical aircraft of all types, warships and submarines, tanks, combat vehicles, artillery and so forth. They include coordinated actions and an extremely complex unity of efforts among the various types of means of combat and among the various branches and services over an area of unprecedented magnitude, on land, at sea, in the air and even in space. They include the activities of the army as well as the very quickly unfolding and rapidly changing battlefield situation. They include the emergence of many new and very diverse methods and forms of warfare, which cause combat to be intense, continuous, difficult and fierce. They include greatly increased losses in manpower and technical materials. Since the start of World War II, the equipment of an infantry division (mechanized infantry) of those countries that have a modern army has increased as follows: a 16-fold increase in tanks, a 37-fold increase in trucks and armored vehicles, a 10-fold increase in the horsepower of engines per person, a 5-fold increase in wireless means of communcation, a 30-fold increase in the amount of ammunition for the various types of single round artillery and mortars... The facts presented above have led to changes of a revolutionary nature in the fields of command, management, training, education and so forth within the army in order to fully develop its new fighting strength in the methods of modern warfare and in combat coordination among the branches and services.

Our army has also acquired certain knowledge and experience concerning combat coordination among the various branches and services in the wars of liberation and the recent wars to defend the country.

In the war of resistance against the French colonialists, our army's combat coordination developed from simple to complex forms, from small scale to large scale, from a low level to a high level. This reflected the gradual development of combat tasks, the level of organization and the weapons and technology of our army in the process of the war. In this war, the combat coordination of our army, primarily of the main force infantry units, began as coordination among the infantry, artillery and engineers in each battle. By the final years of the war of resistance, combat coordination had reached the scale of campaigns and was taking place among many infantry units, artillery, engineer, signal, transport and other units. The high development of combat coordination in the war against the French colonialists was evident in the historic Dien Bien Phu campaign. In this campaign, our army established coordination among many well trained, combat experienced infantry divisions and ground artillery regiments, anti-aircraft artillery regiments, engineer regiments, signal units, transport units and so forth over a broad area and for a rather long period of time and excellently completed the mission of the campaign. Thus, by the final years of the war of resistance against the French colonialists, our army had achieved a certain level of combat coordination, primarily coordination among a number of branches within the army and between the various branches of the infantry and a small number of ground artillery, engineer, air defense artillery, transport and other units using weapons and technical equipment that were not modern and were few in number. In **terms** of the organization of command operations, this coordination was still simple in nature and restricted to a few types of campaigns by ground forces in only one type of terrain (either in the mountainous jungles, in the midlands or in the lowlands). This was an inevitable development in view of the fact that our army was, at that time, both fighting and building itself up, was advancing from guerrilla warfare to regular-force operations, from purely infantry units to military corps consisting of several combined branches. The technical services had not been established yet and the various branches of the ground forces had not developed completely. The level of development of our cadres and soldiers regarding large-scale, concerted warfare was not high. The rear-service support facilities and material-technical bases of the country were still poor, etc. Nevertheless, our army made a very high effort to fully develop its fighting strength in this method of warfare and made decisive contributions to the victory of the campaign.

At the start of the war of resistance against the U.S. imperialist aggressors, our army in both the South and the North fought under new historic conditions. Our army and people had to defeat a very modern aggressor army in order to "liberate the South, protect the North and reunify the country." One-half of our country had been liberated; the restoration of the economy, socialist transformation and socialist construction were being carried out in the North. With the tremendous help of the Soviet Union and the other fraternal socialist countries, our army continued to be built and developed in every area along the lines of strongly advancing to the level of a regular-force, modern army. The various branches of the ground forces were becoming increasingly complete; the air defense-air force and the navy began to be built and later developed at an increasingly rapid rate and on an increasingly large scale. Weapons and technical equipment were being increased and improved along increasingly modern lines. The organization of the army, of the various branches and services was being strengthened and developed along the lines of uniformity and coordination. Cadres and soldiers were being educated and trained in regular-force procedures in order to learn more and more about modern warfare on the basis of thoroughly comprehending the military line of the party. All of these factors laid the foundation for our army to constantly raise the level of combat coordination among the various branches and services in this war.

In the North, from the very first days of the fight against the war of destruction waged by the U.S. imperialists, our army fought battles coordinated among the various forces, the various modern technical branches of the air defense-air force and the navy in order to retaliate against the U.S. Air Force and Navy. In the battles against attacking U.S. aircraft, there was combat coordination between the many different types of anti-aircraft artillery units and the low altitude network of the militia and self-defense forces and between the mobile forces fighting the enemy and the stationary forces. In the course of development of the war, large-scale, campaign coordination emerged among the anti-aircraft artillery units, the ground-to-air guided missile units, the attack aircraft units and the air defense forces of the various military elements in order to protect political, economic and communication centers or attack enemy aircraft in important directions of the strategic communication lines. The high point of the development of a coordinated, modern air defense campaign was the campaign to retaliate against the strategic air offensive carried out by B-52's of the U.S. imperialists against Hanoi and Haiphong in December 1972. In this campaign, our army achieved smooth coordination in the organization and command of a large number of missile units, anti-aircraft artillery units, attack aircraft units and air defense units of the various localities, used a relatively large quantity of modern means of war in complex situations and excellently completed the mission of the campaign.

The navy, although it was being built up while engaging in combat, also constantly raised its level of combat coordination in the process of retaliating against the acts of destruction by the U.S. Navy.

In order to carry out the task of supporting the great frontlines so that they could win victory over the U.S. pirate aggressors, our army also created and successfully applied a unique method of combat coordination, strategic transport support combat coordination, in both tactics and campaigns. It involved combat coordination among the motor transport military corps, infantry units, air defense units, engineer units and so forth for the purpose of defeating the air and ground operations being conducted by the enemy in a vain attempt to disrupt our strategic transport lines from the North to the South.

On the southern battlefield, the development of the combat coordination of our army was marked by different characteristics. There, combat coordination also developed from small scale to large scale, from a low level to a high level, from the simple to the complex. In contrast to the war of resistance against the French, this process, due to the existence of the great rear area, was shorter in length and involved stronger stages of development. Beginning with small-scale battles and campaigns coordinated between infantry and artillery units, such as the battles at Ba Gia, Play Me and Dong Soai, our army went on to establish relatively large-scale coordination right within the municipalities, cities and towns of the South in the general offensive and uprising of the Spring of 1968. This was coordination among the infantry, artillery and sapper units which, in turn, closely coordinated with uprisings by the masses. In the strategic offensive in the spring of 1972, we saw large-scale, offensive campaigns coordinated among the infantry divisions, artillery units, tank and armored vehicle units, air defense artillery units, air defense missile units, sapper units and so forth. In addition, there also was coordination among the local artillery, sappers and armed forces in attacks on airports, port piers, rear service facilities, technical facilities and so forth of the enemy, attacks which took many different forms and varied in size. The high development of combat coordination was evident in the general offensive and uprising in the spring of 1975, especially in the historic Ho Chi Minh campaign. The most noticeable manifestations of this development were the use of a large number of infantry units and large quantities of weapons and technical equipment; the large-scale coordination between the combined military corps of the ground forces and the military corps composed of tanks and armored vehicles, heavy artillery anti-aircraft artillery, missiles, attack aircraft and bombers and sappers; the large-scale coordination among ground forces, the air force and navy in many different areas and on many different types of terrain, both the mainland and at sea; and the close and large-scale coordination with the uprising forces of the masses.

Thus, by the final years of the war of resistance against the United States for national salvation, our army had achieved a level of combat coordination in modern air defense campaigns, achieved combat coordination among the various branches of the ground forces and began to establish coordination among ground forces, the air defense-air force and the navy with a relatively larger amount of modern weapons and technical equipment in complex, urgent situations and over a large area. This coordination made a decisive contribution to the victorious conclusion of our nation's unprecedented war for national salvation. Recently, the level of coordination reached a new stage in the two wars to protect the fatherland against the Chinese aggressor army and their lackeys on the southwestern border and the northern border of our country.

In the protection of the socialist fatherland, our army's combat coordination among the various branches and services has incorporated and developed upon existing experiences while encompassing new factors that did not exist in previous wars. This reflects the new requirements, requirements that are in the nature of laws, in the work of protecting the independent, sovereign socialist state; the new elements in the military line and strategy of our party in the new stage; the latest developments in the fighting strength of our army; the new capabilities of the national defense system, of the people's war to protect the fatherland when our people are the total masters of the country and are carrying out the socialist revolution throughout the country.

1. Combat coordination among the modern technical branches and services on a medium scale and a large scale can take place during the very first days of a war

to protect the fatherland, can take place in border regions, on the islands and along the seacoast. This is an objective requirement in implementing the strategic thinking and determination of our party and people in the cause of protecting the fatherland. As everyone knows, the Chinese expansionists are scheming to commit aggression against and annex our country. They are engaging in acts of provocation and sabotage along the border, in the offshore waters and on our islands and threatening to unleash another war of aggression against our people. In order to firmly protect the socialist Vietnamese fatherland and thwart their scheme to attack and rapidly win victory over us, our army and people must strongly retaliate against them as soon as they launch a war of aggression against our country and at the very first spot they commit aggression against us. Medium-scale and large-scale combat coordination among the various branches and services is one of the measures for delivering decisive blows by means of a combined strength to the enemy for the purpose of annihilating very many enemy troops, protecting our land, protecting our people and protecting their socialist construction.

Today, our army is continuing to be built into a powerful, revolutionary people's army on an increasingly high regular-force, modern level in exact accordance with the guidelines and task of building up the people's armed forces and in exact accordance with the military line and strategy set forth by the party with regard to the cause of protecting the fatherland. Cadres and soldiers are constantly improving their grasp of the military art of the people's war and their grasp of the modern methods of warfare and combat coordination among the various branches and services. The organization of our army is constantly being strengthened and developed. The various services, such as the ground forces, the air force and the navy are being built and developed in accordance with the requirements of a war to protect the fatherland; the branches within each service are developing more with each passing day in a manner consistent with the role and task of each service. Weapons and technical equipment are constantly being increased and improved along the lines of achieving a high level of medernization. Our army is ready to fight at battle positions prepared in advance. All of these factors give our army a firm foundation for effectively applying the method of medium-scale and large-scale combat coordination among the various branches and services during the very first days of a war to protect the fatherland, regardless of where the enemy first commits aggression against us.

2. Combat coordination among the various branches and services can be achieved over a broad area, on many different types of terrain and at the same time for the purpose of thwarting the scheme of the enemy to launch a mass attack on our country from many different directions, from the mainland, the sea and the air. This point differs from previous wars in which combat coordination generally occurred on a selected battlefield and on a specific type of terrain in order to attack weaknesses of an enemy that was already on the territory of our fatherland.

The development mentioned above demands that our army, both main force units and local units, be skilled in combat coordination among the various branches and services on every scale, especially medium scale and large scale, on all types of terrain, on the mainland, at sea and in the air. There are even times when, in the same battle or campaign, military corps must fight on many different types of terrain, such as the mountainous jungles, the foothills, the lowlands and the seacoast. In order to achieve high effectiveness in combat coordination, the command cadres of the various branches, services and military corps must improve their ability to organize and command coordinated operations in order to insure close coordination among units, among the different services and branches. One very important requirement is to make use of the various types of modern weapons in a manner consistent with each type of terrain and achieve the full power of these types of weapons on the terrain on which the military corps have been assigned their tasks. In combat on every type of terrain, the military corps must achieve a high level of combat coordination, must closely coordinate with one another and must create strong firepower, tremendous assault power and high mobility in order to rapidly smash the aggression by the enemy troops on that type of terrain.

In order to fully achieve the combined strength of the various branches, services and military corps in combat coordination on the various types of terrain of our country, our army must effectively prepare the battlefields on the various fronts on which tasks have been assigned. On the basis of the types of terrain on these fronts, the various branches, services and military corps must truly prepare themselves to take correct, flexible actions on these types of terrain, actions consistent with the tasks assigned to them. These preparations must be made in accordance with a plan and must be closely coordinated with the preparation of battle positions and the preparation of the battlefield by the army and people of each locality.

3. Our army's combat coordination among the various branches and services must be applied in the many different methods of fighting of the war to protect the fatherland. Today, the continuous growth of our army has led to new developments in military art and in combat coordination. The enemy will commit aggression against the territory of our country from the outside, have a large number of troops and resort to many very insidious methods of warfare. For this reason, in order to annihilate very many military forces of the enemy in conjunction with protecting the land and life of the people and the property and natural resources of the country and protecting and building socialism, our army must achieve the high level of effectiveness in fighting the enemy of combat coordination in many different types of fighting, in defensive, counter-offensive and offensive operations, so that they can win victory over the aggressors regardless of the route they choose to take and the methods they choose to employ. This differs from previous wars in which we fought an enemy who was already in our country by means of specific methods of fighting.

The military corps, branches and services must achieve a high level of combat coordination and work together to create a tremendous combined strength in order to defeat attacks by land, air attacks, airborne attacks, amphibious landings and so forth by the aggressor army. There are times when, in a campaign or on a battlefield, our army must achieve combat coordination in defensive fighting, counter-offensive fighting and offensive fighting in order to smash every warfare measure of the enemy.

The military corps, branches and services must be skilled in fighting independently in each method of fighting and must employ their full strength when on the defensive, in counter-offensives and when on the offensive. They must make highly effective use of the modern weapons and technical equipment in each form of warfare, each form of tactics and each form of campaign waged by the military corps, branches and services in accordance with the new requirements of a war to protect the fatherland.

4. The combat coordination of our army today is the coordinated action, the close coordination of an increasingly large number of military corps, branches and services, of an increasingly large volume of various types of modern weapons and technical equipment that are routinely and closely coordinated with the local armed forces.

This development demands a truly scientific, precise, detailed and firm ability to organize and command coordinated combat operations on the part of the commanders and the command agencies of the combined troop units of the various military corps, branches and services. In order to achieve this level of ability, the commanders and command agencies on the various echelons must have a firm grasp of the new requirements of combat coordination in a way to protect the fatherland and must be thoroughly familiar with the combat order governing combined branches, the combat orders of the various branches and services and even the methods of fighting of the local armed forces. They must skillfully apply the various methods of organizing coordination and the techniques of coordination. The commanders and command agencies on the various echelons must possess modern military scientific-technical knowledge so that they can make good use of the various types of modern weapons, such as the tanks and combat vehicles of the infantry, the various types of artillery, missiles, attack aircraft, bombers, transport aircraft, reconnaissance aircraft, warships, modern signal equipment, the modern means of mobility, etc. Our cadres must have the ability to collect, analyze and process a volume of information of unprecedented magnitude, have the ability to make a decision and organize its precise, rapid implementation, have the ability to re-establish coordination in every situation, etc.

As regards troops, combat coordination with a large number of military corps and modern weapons and technical equipment demands a basic and firm grasp of combat techniques, especially those of the modern technical branches and services. This insures that they can take precise, flexible and creative action in combat coordination in complex situation. One very basic requirement is that troops must possess a high sense of organization and discipline, must scrupulously obey each order of their commander and must reject acts of liberalism and convenience that disrupt coordination in the course of warfare.

Combat coordination involving many technical branches and services with a large quantity of modern weapons and technical equipment demands the good organization of rear service-technical support work. This is the work of supplying, supplementing and replacing in a prompt and well coordinated manner a large volume of weapons, means, grain, ammunition and so forth so that troops can constantly increase their assault power, their firepower and the mobility in combat and campaigns and excellently complete their task.

MILITARY AFFAIRS AND PUBLIC SECURITY

VAN TIEN DUNG SPEECH AT YOUTH UNION CONGRESS

Hanoi TAP CHI QUAN DOI NHAN DAN [PEOPLE'S ARMY REVIEW] in Vietnamese No 10, Oct 80 pp 23-25

[Speech by Senior General Van Tien Dung opening the 2nd All-Army Congress of Delegates of the Ho Chi Minh Communist Youth Union: "Truly Making the People's Army a Great School of the Young Generation*"]

[Text] Dear Presidium,

Dear Hoang Quoc Viet, chairman of the Presidium of the Vietnam Fatherland Front,

Dear Dang Quoc Bao, 1st secretary of the Central Committee of the Ho Chi Minh Communist Youth Union,

Dear delegates,

Today, the Second All-Army Congress of Delegates of the Ho Chi Minh Communist Youth Union opens in the capital Hanoi, the heart of the country, in preparation for the 4th National Congress of Delegates of the Ho Chi Minh Communist Youth Union. On behalf of the Central Military Party Committee and the Ministry of National Defense, we convey warm greetings and heartfelt congratulations to all delegates and, through you, to all Youth Union members and youths in the army who are performing tasks on the frontlines and in the rear area, at home and in friendly countries.

In view of the present revolutionary situation and tasks, our congress is of important significance and has a major responsibility.

The great mission of the nation of Vietnam in the new stage is to successfully build socialism, bring back prosperity and happiness to the people, firmly protect the socialist fatherland and defeat each scheme and act of sabotage and aggression of the Chinese expansionists and hegemonists, who are collaborating with the U.S. imperialists.

In the long history of the nation, our strength has never been as great as it is today. As the revolution advances, we still face many difficulties and challenges; however, we have many very basic advantages in our favor and we shall surely overcome all of these difficulties and challenges. We can and must rapidly increase the country's strength in every area and must regularly heighten the combat readiness of our army and people in order to thwart every sinister and insidious scheme of the enemy. We are determined to work with the fraternal peoples of Laos and Kampuchea to maintain and develop upon the accomplishments of the peoples of the three countries of Indochina, thereby contributing to the cause of peace in Southeast Asia and the entire world.

Today, our army has been assigned many large tasks: maintaining combat readiness and fighting to protect the fatherland; helping to maintain political security and social order and safety; working, producing and building the economy; and fulfilling our international obligation in Laos and Kampuchea. Our army must continue to be built into a modern, regular force, increasingly powerful, revolutionary people's army. The army must be a reliable army in the cause of protecting the fatherland and must, at the same time, be an army that molds talents well, be a great school forging the new man among the young generations.

Youths constitute the majority of the personnel of the army, are a powerful force possessing robust health, intense zeal and the ability to learn rapidly and must play the dominant role in the effort to complete the glorious tasks assigned to the army by the party and state. Our congress must discuss and set forth a practical program of action and the best possible measures for mobilizing and organizing the youths of the entire army in the effort to successfully complete these tasks. The youths within our armed forces must be ready to contribute their intelligence, talents and energies for the sake of the revolutionary goals of the party, for the sake of the ideals of communism.

May the leadership and command cadres on the various levels relate to youths with deep love, confidence and respect and relate to them by means of detailed educational work, the ability to organize practical work and the setting of good examples. We surely can develop the potentials and tap the strong vitality of the young, thereby helping to increase the invincible strength of the army, completing every task and working with all the people to win victory over every enemy.

One great achievement of our party over the past half-century has been the training of several generations of youths who have enthusiastically taken the lead and made tremendous contributions in the long and extremely arduous fight and in the extremely glorious victories for the independence, freedom and socialism of our fatherland, for the sake of our international obligations.

The youths within the army today are one of the outstanding segments of the country's young generation. They possess many very basic strongpoints; at the same time, it is difficult for them to avoid the easily understood shortcomings of the young. Our common enemies, the Chinese reactionaries and the imperialists, are scheming to discolor the tradition of the revolution and disorient our youths in a vain attempt to achieve their sinister intentions.

Our congress must have the effect of further intensifying the mobilization of youths and the effort to build a strong and solid Youth Union organization within the army. We must teach and forge youths to be new socialists who fight and produce well; who possess the spirit of collective ownership and the ability to exercise collective ownership; who are the masters of science and technology; and who possess a high sense of organization and discipline and scrupulously comply with the laws of the state and the codes, laws, regulations and rules of the army. We must establish a wholesome, cultured lifestyle. We must insure that all young men and women make marked progress in every area during their years and months in the army, thereby bringing peace of mind and enthusiasm to their parents. We must insure that the people's army is truly the great school of the young generation.

By doing this we shall implement the sacred testament of the revered President Ho Chi Minh: "Train the revolutionary generations of the future."

Our congress has the task of participating in and preparing for the national congress of Youth Union delegates, which is the great festival of the youths of our entire country and is an important political activity of youths. Let us display the spirit of collective ownership and use our collective intelligence to insure that the All-Army Congress of Youth Union Delegates is a fine success. This would be a practical way to prepare for the national congress of Youth Union delegates. In one respect, it would also help to prepare for the new changes that will occur in youth work, in general, and insure that shock youths are the "shock unit that is always present in the spearheads of the effort to build and protect the country," as directed by Le Duan, general secretary of the party.

Dear comrades,

The All-Army Congress of the Ho Chi Minh Communist Youth Union is a center of the attention of the youths of the entire country, of everyone concerned with the growth of the army, with the future generations.

The congress meets amongst the "boundless love" left behind by Uncle Ho for youths and amidst the fervent aspirations of the older generations concerning the generations succeeding them.

With confidence that you delegates will be worthy of the trust placed in you by the corps of youths within the army and fulfill the wishes of the entire party, all the people and the entire army, I hereby declare our congress open.

INTERNATIONAL RELATIONS, TRADE AND AID

INCREASED SCIENTIFIC-TECHNICAL COOPERATION WITH SOVIET UNION SEEN

Hanoi TAP CHI HOAT DONG KHOA HOC in Vietnamese No 8, Aug 80 pp 1-2

[Article by Nguyen Van Cang, deputy chief of the International Cooperation Department, the State Science and Technology Commission, and Nguyen Tram: "The Fine Development of Scientific and Technical Cooperation Between the SRV and the USSR"]

[Text] In conjunction with the fine development of the diplomatic relations between our country and the Soviet Union (which were established in 1950), the economic cooperation (started in 1955) and the scientific-technical cooperation between the two countries have also resulted in significant achievements.

Over the past 20 years and more (since the official signing on 7 March 1959 of the Treaty on Scientific-Technical Cooperation), the scientific-technical cooperation between the two countries has been based on the principles of equality, mutual benefit and mutual help in the proletarian international spirit and has constantly developed. Together with the tremendous, valuable and effective assistance in many areas that has been given to our country by the Soviet Union, in the field of scientific-technical cooperation, the party, government and people of the Soviet Union have, for many years, given us non-repayable financial aid with which to pay the costs related to scientific-technical cooperation and create the conditions for implementing cooperation programs. As a result, the scientific-technical cooperation between the two countries has constantly developed over the past 20 years and more, from low forms of cooperation to high forms, from several projects in several sectors to many projects in practically all fields of the national economy and from requests by us that our friends help us to the start of an agreement on a long-term program of cooperation coordinated with research involving matters that are of interest to both sides but primarily involve the Soviet Union helping Vietnam.

The results of the scientific-technical cooperation between the two countries in the past can be seen in the following areas:

Each year, we have sent hundreds of cadres to engage in research and practical training and receive higher education in the research institutes, colleges and production installations of the Soviet Union. All of the subjects of scientific-technical research and practical application have been based on the requirements of production, research and instruction at home.

The Soviet Union has sent to Vietnam hundreds of specialists and scientists to provide scientific and technical assistance, guide and coordinate research work and experiments, provide specialized instruction, etc.

Our scientific-technical organizations and installations have annually received hundreds of technical documents consisting of various types of blueprints, industrial manuscripts, standards, codes and scientific-technical information and received various types of models, such as equipment and implements used in scientific and technical research, crop varieties, breeds of livestock, species of microorganisms, varieties of medicinal plants and so forth. Some specific fields are as follows:

In the fields of agriculture, water conservancy and meteorology: the mechanization of the planting of rice, the technologies involved in the planting of cotton, the processing of tea, the classification and management of land, the production of livestock feed, the production of fertilizer from microorganisms, the production of mineral fertilizers and the production of parasitic bees to control insects, manuscripts for the design and manufacture of various types of agricultural machines, such as transplanting machines, planting machines, livestock feed grinding machines, water pumps and so forth; the design and construction of water conservancy projects, the use and protection of water sources and the development of underground water sources; matters related to typhoon and weather forecasts, hydrological forecasts, flood control, the design of a telecommunications meteorological station, the construction of a meteorological radar station, etc.

In the field of mechanical engineering: the design and manufacture of tractors, metal cutting machines, welding machines, forges, spare parts for internal combustion engines, boiler equipment and pressure equipment for the food products sector; the operation of a high frequency induction furnace, the design of a 1,000 ton fishing ship, a 10,000 cubic meters per hour water pump and so forth.

In the field of electric power and coal: the design of hydroelectric power plants, the repair and adjustment of hydroelectric turbines, the repair and operation of power shovels and diesel engines, first aid in mines, the management of electricity in mines, the design of coal mines and metal mines, both underground and strip mines, manuscripts on the design and manufacture of mining machinery, such as deep shaft pumps, electric tram cars for mines, coal shovels, digging and sorting machines, fans and so forth as well as various types of electrical machinery, such as generators, electric motors, hydroelectric turbines, power line equipment, electrical gauges, solar power equipment and so forth.

The majority of the products of the mechanical engineering sector and the electricity sector that we have produced have been based on technical manuscripts received through scientific-technical cooperation with the Soviet Union.

In the fields of communication, transportation and building, the Soviet Union has provided us with experience in researching the organization and operation of the communications-transportation sector, the registration of ships, the reconditioning of automobile parts, the technology of bridge construction, the prevention of railroad and highway cave-ins, the complete design of a new railroad line and so forth;

manuscripts on the design and manufacture of various types of machinery for the communications and transportation sector, such as cargo ships, tugboats, dredges, barges, automobile spare parts and so forth and various types of building machines, such as concrete mixers, bulldozers, cranes, earth pounding machines and so forth; designs for housing and public projects, the technology involved in ornamental and finishing work in housing construction, etc.

In the field of public health, the Soviet Union has helped us with the methods of researching malaria in the laboratory and the field, the methods of experimental and clinical research of cancer, the methods of analyzing and isolating the active ingredients of medicinal plants, the techniques of raising and processing medicinal plants, medical information activities, the research and treatment of a number of viruses, diseases of the circulatory system, etc.

In the fields of light industry, the food products industry, posts-telegraph, metal refining, chemicals, geological projects, forestry, pisciculture,and technology within the cultural sector, many scientific-technical problems and production problems have been resolved through scientific-technical cooperation with the Soviet Union and good results have been achieved.

Our country and the Soviet Union signed a long-term scientific-technical cooperation program for the years 1976-1980. The matters of long-term scientific-technical cooperation with which our two countries have been concerned and which they have developed have not only been of scientific-technical value, but have also laid the foundation for economic cooperation between the two countries. At present, the two countries are initiating cooperation in several other areas, such as protecting power lines against lightning, researching the physical properties and industrial properties of wood, researching the most efficient techniques for harvesting timber under the conditions of Vietnam, researching ways to protect wood against the effects of pests and the environment, researching ways to combat malaria, treat diseases of the eye, raise medicinal plants, treat polio with live polio vaccine and the prevention of plague, researching the mechanization of the planting of rice, the protection of crops, the raising of bees, the development of silkworm production, etc.

In addition, there is a relationship of close cooperation between the Science and Technology Commission of our state and the Science and Technology Commission and the Commission of State Standards of the Soviet Union, the purpose of which is to exchange professional experiences; the Soviet Union has systematically provided us with knowledge of economic management, scientific-technical management, work involving standards, weights and measures and quality control. The Science and Technology Commission of our state and Vietnam Institutes of Science have signed an agreement to cooperate with the State Science and Techology Commission of the Soviet Union and the member countries of the "Interkosmos" organization in the field of earth exploration from space and space research. The cooperation between the two sides in these fields have yielded fine results; in particular, it led to the brilliant success of the coordinated space flight by V.V. Go-ro-bat-co /Vietnamese phonetics/ and Pham Tuan on 24 July 1980.

In the coming years, the number of matters concerning which our country and the Soviet Union will engage in scientific-technical cooperation will increase even more and these matters will become more diverse and detailed. We will rely upon the Soviet Union for much more scientific and technical help, primarily help formulating the long-term scientific-technical development plan in the Socialist Republic of Vietnam.

We are confident that, in the years to come, the scientific and technical cooperation between the two countries will be strengthened and broadened. In order to insure the good implementation of cooperation projects and insure that high results are achieved, the concerned ministries, sectors and agencies of our country must adopt plans for summarizing and evaluating the results that have been achieved and gaining experience in the following areas: the formulation of plans for cooperation, the organizing of negotiations, the implementation of agreements that are signed, the selection and preparation of cadres to be sent to the Soviet Union for practical training and observation, the organizing of work with specialists, the processing and use of manuscripts and models, the application of the results of scientific-technical cooperation in production, research, instruction, etc. At the same time, they must reorganize the management of scientific-technical cooperation.

HUNGARY-VIETNAM FRIENDSHIP TECHNICAL SCHOOL DESCRIBED

Hanoi VIETNAM [Pictorial] in English No 256, Apr 80 p 27

[Text]

More than one hundred workers will soon graduate from the Vietnam-Hungary Friendship Technical School. They will work at the plants of the Metal and Engineering Ministry. There are a thousand others now being trained at the school. They are the pride of their school, of the Ho Chi Minh Communist Youth Union and of the Hungarian Communist Youth Union. The skills they are gaining are the result of the wholehearted help of Hungarian young people to Vietnam

Through four years of voluntary work, Hungarian young people set aside nearly 100,000,000 florins for the Ho Chi Minh Communist Youth Union to build this school. Eleven different trades are taught : electrician, mechanic, motor fitter, etc.

« The school is equipped with modern machines and teaching aids from Hungary and uses our friends' advanced curriculum, » head teacher Nguyen Khac Chan told us. « Besides it is helped a by the Hungarian specialists so the workers learn of relatively quickly. Ninety five per cent of the trainees in the first batch have passed the theoretical and practical tests, over 50 % having passed with distintion or credit though there are many difficulties in organization and using of new methods and also the inadequacy of translated materials. »

The students can learn their trades in a school which is at the same time a real industrial plant. Modern machines such as galvanometers, checking machine, lathes and grinders... enable the students to get experience of any technique they are liable [illegible] counter after graduation. The school has also produced spare parts, instruments, etc. for nearly plants in order to increase its income. In 1979, the school brought 86,800 *dong*.

The Hungarian specialists headed by Heks Ernô are present in almost all activities of the school : organization, training, machine operation and repair Their devotion and responsibility are of great help to the teachers and workers. The friendship between the two technical schools of Vietnam and Hungary, reflects the friendship and close co-operation between the young people of the two countries. As Heks Ernô said, « Young Hungarians have the slogan' we helped Vietnam, we are helping Vietnam and we will help Vietnam'. And we at this school, make the same pledge to help you morally and materially so that the school will further develop and advance. »

ECONOMIC PLANNING, TRADE AND FINANCE

NEW COMMERCIAL POLICIES EXPLAINED

Hanoi TAP CHI GIANG VIEN in Vietnamese No 6, Nov-Dec 80 pp 1-8

[Unsigned article: "Some Basic Matters in the Recently Promulgated Policies Regarding Distribution and Circulation"]

[Text] Recently the Political Bureau issued a resolution regarding the improvement of distribution and circulation. It is a document with very great significance with regard to theory as well as practical guidance. In order to concretize the basic viewpoints of the Political Bureau resolution, the Council of Ministers has promulgated a number of specific policies. It is essential that cadres and party members fully understand those policies so that they can have deep understanding of the party's viewpoints and strictly implement the Political Bureau resolution.

The recently promulgated government policies are only intended to resolve a number of the most urgent problems at present regarding distribution and circulation. They include policies regarding the state purchasing of agricultural products in general, especially grain; policies regarding the state purchasing of pork, the management of tobacco, and market management; procedures for private individuals to engage in industry, commerce, and service; the opening of bank accounts; a decision regarding assuring the living standards of workers and civil servants; and over-all directives regarding the implementation of the Political Bureau resolution regarding distribution and circulation. The basic and relatively comprehensive objectives of those policies are intended to stimulate the development of production, strengthen state control of the sources of supply, stabilize the market, assure the living conditions of the workers and civil servants, strive to balance the budget, and tightly manage money. In more general terms among those objectives the most outstanding are serving the development of production, controlling the sources of supply, managing money, etc. The matters of production, state purchasing, distribution, etc., are closely interrelated. Therefore, the above objectives are also closely related and must be fully understood during the implementation process.

In gaining understanding of the policies, it is necessary to pay attention to the most outstanding matter at present: closely combining strengthening state purchasing to control goods with promoting the development of production. In actuality, as stated in the Political Bureau resolution, production has developed slowly, the state cannot control products, and distribution and circulation cannot manifest their positive role in promoting production and are separate from production. Therefore, the newly promulgated policies clearly confirm and manifest the combination of those two aspects.

The newly promulgated policies stipulate that it is necessary to combine state purchasing with the supplying of means of production to serve production and the stimulation of production development. On that basis, supplying means of production will be in accord with the requirements of production, will facilitate the development of production, and will increase the effectiveness of the use of materials and equipment. Furthermore, state purchasing to control the supply of goods will be facilitated and assured. Supplying by the state of such technical materials as fertilizer, POL, insecticides, electricity to operate pumps, and such production season services as the use of tractors in soil preparation, water pumps, etc., has in itself affirmed the responsibility and duty of the peasants to sell agricultural products to the state in the guiding spirit of the new policies. The state can also supply those production means and services in advance (during the production phase) in order to receive agricultural products later (after the harvest).

At present, the supplying of production means is separate from the state purchasing of agricultural products. Materials are supplied by the agricultural organs, while the state purchasing of agricultural products is the responsibility of the Ministry of Food or the Ministry of Commerce. Therefore, the above-mentioned policy is a major improvement. According to that formula, with the same amount of materials we can purchase a quantity of foodstuffs many times greater than in the past.

In the implementation of that two-way relationship, the new policies clearly manifest the state's guidance thoughts, which are as follows:

-- Concentrated, specialized production areas based on the requirements of the state plan are more beneficial than miscellaneous production areas not based on a plan.

-- Peasants in cooperatives and production collectives are more beneficial than individual peasants.

-- Exchanges according to contracts are more beneficial than exchanges based on negotiated prices, i.e. planned exchanges are more beneficial than unplanned exchanges.

Those guidance thoughts are manifested specifically in the exchange ratio between state industrial products and the peasant's agricultural products. That ratio with regard to the instances mentioned above is relatively lower than in other instances.

With those principles, the exchange of goods between the state and the peasants has the effect of furthering the concentration and specialization of production, furthering planned exchanges, and promoting agricultural cooperativization. By means of their specific, actual benefits, the peasants will clearly realize those guidance thoughts and voluntarily enter onto the path of large-scale socialist production. F. Engles said, "Distribution is not merely a negative result of production and exchange; in turn, it exerts a reciprocal effect on production and exchange." * At the beginning of the process of applying that policy, although it have been implemented only a short time, in some places the peasants have quickly reached those actual conclusions and have proved the correctness of those view points.

Implementing the policy of stabilizing the obligation to sell agricultural products, and combining the implementation of two-way contracts with state purchasing at negotiated prices.

Previously, producers were not sufficiently encouraged for two reasons: the obligation to sell agricultural products was not stabilized from year to year and the state purchasing prices, even for products produced in excess of the plan, were still low. With the old state purchasing policy, distribution and circulation exerted a negative influence on production. The negative influence was so serious that many new scientific-technical factors were introduced into agriculture but did not have much effect, to the degree that in some places even simple reproduction could not be assured. During the past 5 years the state has invested in agriculture a considerable amount of money, but crop productivity has failed to increase and has even declined. That situation may also be due to other reasons, but it is certain that one reason is that distribution and state purchasing policies that were created under wartime conditions are no longer appropriate to the actual situation.

The new policy also stipulates that the obligation to sell agricultural products be stabilized over a relatively long period -- 5 years -- so that the peasants can be at ease, raise the level of intensive cultivation, and increase the yields of crops and livestock. The new policy, which is tied in with that system, also stipulated the right of workers to use and circulate products produced in excess of the plan (or in excess of contracts with the state), and that if they need to sell such products the state will purchase them at negotiated prices. Furthermore, with regard to some types of agricultural products of which the state needs to purchase large quantities but the guidance prices of which are not very appropriate (for example, the price of meat, etc.), the ratio of products purchased in accordance with the stipulated obligations is relatively low and therefore the part purchased at negotiated prices is greater, which has a greater stimulating effect. With regard to collective livestock raising by cooperatives, that change is even greater, in order to stimulate collective livestock raising and support the collective economy.

However, it is necessary to guard against the viewpoint of only stressing the benefit of the peasants but disregarding the benefit of the state, which is manifested in raising the negotiated prices and thus resulting in an excessive budget deficit.

The exchange of agricultural products between the peasants and the state can be carried out in many flexible forms. First, the form of the two-way contract. According to that form, the peasants and the state exchange agricultural products

---

* F. Engles, "Anti-Duhring," Su That Publishing House, Hanoi, p. 252.

and industrial products according to a definite, rational ratio. For example, the state supplies a unit of fertilizer, fuel, or materials while the peasants sell to the state a certain quantity of agricultural products. That ratio is determined by the state purchasing organ and the peasants according to the conditions in each area. Second, if that form is not used it is possible to exchange agricultural products and industrial products at negotiated prices. Individual peasants may sell agricultural products for cash. Many people refer to that formula in frief as "buying high and selling high." In fact, with that formula the peasants may not benefit as much as by the two-way contract formula because the prices of industrial goods increase unexpectedly and because the source of supply is unstable, and the state cannot plan the management of products. Therefore, the two-way contract formula is beneficial to both the peasants and the state. In guiding implementation it is necessary to enable the peasants to clearly realize that and guide the peasants in voluntarily exchanging products according to contracts with the state. At present, there are few industrial goods to exchange with the peasants. That is an objective reality that influences the wide popularization of the formula of state purchasing according to contract. The state is studying ways to create new means of production and consumer goods, in addition to those that are being used to exchange with the peasants, such as materials with which to build houses and drying patios, and even to build kitchens and other living facilities for peasants' houses, for which there is a great demand, especially in the Mekong Delta area.

However, it is necessary to realize another problem related to the formula of state purchasing at negotiated prices, i.e. at high prices. As stated above, circulation is related to distribution, finance, and money, and vice versa. State purchasing at negotiated prices has created conditions for the state to control many more goods than previously, but that has caused great expenses for the budget, to the extent that it is necessary to make up for a considerable deficit, and our capability to distribute consumer goods at supply prices has been limited.

The new policies clearly manifest the responsibilities of both the buyer and the seller -- the state and the peasants. That is another new point in policy of state purchasing according to two-way contracts. The new policies clearly determine the responsibilities of the peasants and the state to supply production means, consumer goods, or grain (with regard to the areas producing industrial crops, vegetables and fruits, etc.). It clearly determines the exemptions and reduced obligations of the peasants, and appropriately compensates the state for damages caused by failure to supply goods in accordance with the negotiated contracts. The relationships between the two parties are equal. That serves to strengthen the relationship between the peasants and the state and stimulate the peasants' enthusiasm for developing production, while also heightening the responsibility of the state organs responsible for serving production.

The newly promulgated policies not only clearly determine the relationships between the state and the peasants but also clearly determine the responsibility of the state economic enterprises. First, the state enterprises must turn over all products to the state, specifically to the commercial organ. That system will also be applied to the products and goods of the research and experimental stations. Second, with regard to products produced beyond the plan, the state pays state purchasing prices corresponding to the negotiated prices of the peasants' agricultural products. The increased income resulting from sales at those high prices will essentially be used to increase the income and welfare of the cadres and workers. Because the state farms are, in general, still experiencing certain difficulties with regard to their production conditions,and because production management is still weak and deficient, the new stipulations will serve to encourage the state farms to strongly develop production, stimulate a strong transformation of management along commercial lines, and oppose the supply-administrative type of management.

With regard to the processing industry enterprises, in addition to implementing plans utilizing raw materials assigned by the state, the new policies also authorize and encourage the enterprises to further develop production by means of raw materials bought from the producers at negotiated prices. The commercial organs will purchase such products on the basis of rational production costs, i.e. at production costs which take into consideration the ewuipment, machinery, fuel, labor, factories, etc., of the state. With that formula the enterprise can fully utilize the capacity of the equipment and the productivity of labor, and therefore increase the rational income of cadres and workers and increase the amount of products supplied to society.

The new policies, in general, represent a major improvement in the distribution system by assuring the good implementation of what we usually call the combination of the "three benefits," an outstanding feature of which is emphasis on the direct benefit of the workers. That improvement will have a great significance with regard to stimulating production. The "three benefits" are a unified whole, but each "benefit" has a certain significance. Therefore, only by correctly determining each benefit can we assure the unity of the "three benefits." The effectiveness and talent of the manager lies in uncovering the contradictions in the present distribution structure and adjusting them to create unity among the "three benefits".

At present, agricultural production plays a key role in the national economy, so the relationship with the peasants is an objective most worthy of the state's concern. Among the newly promulgated policies, the matter of improving the relationship with the peasants is manifested most clearly.

In addition to promoting production, the newly promulgated policies are intended to improve market management. The objectives of that improvement are to confirm the state's right to master the market, lead the exchange process onto an organized path, and expand the socialist market.

In order to attain those objectives, it is necessary first of all to expand the activities of state and collective commerce. That is the basis on which to assure the concentration of goods in the hands of the state and the basis on which to assure the implementation of a rational distribution system. At the same time, only by intensifying the activities of the socialist commercial system can we struggle to restrict the "free market" and eliminate speculation, hoarding, and blackmarketing.

The operational formula of socialist commerce is to endeavor strongly to control retail selling, services, and the selling of goods at both supply and negotiated prices. For a long time now we have only concentrated on retail buying and selling at supply prices, so the function of the commercial sector has in actually been so restricted that it now amounts to not more than a goods-supplying organs. That has enabled the "free" market to develop strongly and to spread over into the organized market. In addition to controlling the supply of goods by combining buying and selling, socialist commerce must take the initiative in also dealing in products produced in excess of the plan by the state enterprises and collectives, and products produced in the sphere of the secondary family economy and bought and sold in accordance with the formula of buying at negotiated prices to sell at guarantteed commercial prices. Commercial activities must be aimed at the objective of concentrating to the highest degree the goods produced by all economic components of society. Only thereby can the market be managed and stabilized. The new policies also clearly determine the tasks and formulas for expanding commercial activities, including commerce in goods at both supply prices and guaranteed commercial prices. The state has created the necessary conditions to implement that commercial formula.

The commercial system according to the newly promulgated policies, include socialist commerce, collective commerce, and retail agents for the sale of certain consumer goods. Collective commerce includes the trading cooperatives in the localities and districts and the collective services. In order to manage the retail selling of consumer goods, in addition to the state and collective bases, arrangements are made for private individuals to serve as agents and private merchants are used to assist socialist commerce by purchasing certain products in miscellaneous production areas in which socialist commerce cannot yet organize purchasing.

At the same time, commerce is responsible for expanding such services as tailoring, catering, etc. In that regard, we have many conditions for good operation, but in actuality state commercial activities are still too weak so private individuals monopolize prices to an excessive degree and therefore harm the living conditions of the workers.

In order to create conditions for commercial activities to attain high economic effectiveness, the state readjusts some irrational goods and services prices and clearly confirms the system of commerce in accordance with the two price systems: supply prices and guaranteed commercial prices, as stated above. Those adjustments are intended to overcome the situation of excessive deficits and lessen damage to the state budget, while also serving to encourage the economic organizations to improve the commercial activity formula and do a good job of serving consumers.

With regard to private individuals, the state stipulates a system of goods prices management in order to prevent speculators from disturbing the market. In addition to registering to engage in commerce, private individuals must post price lists.

In order to tightly manage the market, the new policies stipulate that speculation in and hoarding of goods will be opposed; private individuals are not authorized to deal in products managed by the state; it is forbidden to raise prices in order to compete with the state in purchasing goods or to sell goods at prices higher than the listed prices; it is forbidden to deal in or counterfeit ration stamps and coupons or to produce ersatz goods; and that it is forbidden to violate customs statutes, statutes unifying commercial management, and statutes regarding industrial and commercial taxes and commercial registration.

The new policies also clearly stipulate material incentive measures regarding people who have merit in market management and in opposing speculation and blackmarketeering.

In addition to the economic measures, the new policies also stipulate such urgent administrative measures as tax collections, commercial registration, and the organization of market control and management.

Assuring, and gradually improving, the living conditions of the workers, civil servants, and laboring people is one of the most important problems of the economy in general and is an important objective which is clearly manifested in all the above-mentioned policies.

Of all the present economic measures, the most basic and decisive are the development of production and the stabilization of living conditions. Since there are few conditions for developing production, the improvement of living conditions can only be accomplished to a certain degree. That objective reality must be realized if we are to have a correct attitude. The recently promulgated policies clearly determine the consumer goods which the state will make all-out efforts to provide. Such products will be supplied in fexed quantities and at supply prices.

Such products are the most essential for life and include grain, vegetables, salt, dipping sauce, cooking fuel, meat and fish, eggs, sugar, MSG, cloth, and soap. Furthermore, it is also possible to supply certain other essential goods, such as tea, plastic cloth, electric fans, bicycles and parts, mats, writing paper, mild for young children and ill people, and household goods in accordance with appropriate formulas, to assure that they reach the people who need them.

Also because of limited production conditions we must not only limit the supplied goods but also supply them step-by step, i.e. priority must be given to the armed forces and the areas experiencing the most difficulties. Improving the living conditions of the people, especially those operating in the state economic apparata and organizations or who have economic relations with the state, is always the ultimate objective of state economic activities. But that is dependent on the actual objective conditions and not on subjective desires. For that reason there must be appropriate, step-by-step distribution formulas.

The system of supply according to fixed quantities and supply prices is compulsory because production conditions are still limited and that mode is also the most appropriate, for it has been tried out in real life.

In order to assure the implementation of the new policies, the state stipulates the specific responsibility of each management sector, such as grain, foodstuffs, home trade, marine products, communications and transportation, etc., and clearly stated the necessity of sparating the consumer goods for cadres, workers, and officials, people who have direct economic relations with the state from the fund of goods to exchange with the peasants.

In addition to assuring the supply system the new policies determine the responsibilities of a number of sectors relevant to assuring and improving living conditions, which must expand their commercial dealings in products produced beyond the plan or products of the secondary economic sphere, in order to further improve living conditions.

In addition to the above measures, the state has stipulated a system of temporary salary allowances for cadres, workers, and civil servants, and an increase in hardship allowances for people who experience unexpected difficulties. That is also a necessary measure for contributing to overcoming the influence of the regulation of commodity prices. At the stipulated level, the state treasury must make a rather large expenditure, and it cannot be any larger.

Furthermore, in order to effectively contribute to improving living conditions, the state has adopted the policy of extensively applying the systems of paying salaries by the job and according to output, encouraging the enterprises to fully utilize the capabilities of their labor and equipment to develop production in excess of the materials plan assigned by the state, encouraging the cadres, workers, and civil servants to work overtime, and encouraging the scientific research organizations to cooperate with the production bases and economic organizations in order to attain the objective of combining science with production while increasing the incomes of the cadres and personnel. As stated above, the basic way to improve living standards is to develop production. It would truly be a mistake to only think about raising salaries, replace the present system of supplying fixed quantities at guidance prices by the formula of distribution according to value, or want to increase monetary incomes without increasing production,which is formalistic and sensless. The above-mentioned specific stipulations regarding the improvement of living conditions have a very real significance because they are tied in with the promotion of production. There are still many latent capabilities for developing production, so the results of the application of those measures will be very great. In actuality, in many enterprises, due to the application of the system of paying salaries according to output and paying salaries the incomes of cadres and personnel have risen considerably. In some places they have risen 50 to 70 percent or have doubled, and in the Con Dao and Quang Nam-Da Nang fishing enterprises, the Pho Yen ball bearing enterprise in Bac Thai, etc., incomes have risen even more.

With regard to balancing the state budget and managing money, the fulfillment of the tasks of building the material-technical bases of socialism and continuing to strengthen national defense capabilities require outstanding efforts with regard to national finance. But the stabilization and development of national finance must be based on developing production and increasing the economic effectiveness of investment capital. At present, we are experiencing many financial difficulties. Therefore, the state has clearly confirmed the necessity of endeavoring to balance the budget and economize on expenditures. It is necessary to fully exploit all existing sources of revenue. At present, that is not being done, which results in a considerable loss of revenue. We must strictly implement the system of collecting agricultural, industrial, and commercial taxes, and resolutely collect credit debts which are due or past due. In the sphere of private industry and commerce, the implementation of the commercial registration and taxcollection policies has doubled revenue for the budget. If agricultural taxes were collected in full, the state would receive more than 1 million tons of rice and would not have to spend money to buy it.

With regard to increasing revenue, the state has also paid much attention to economizing. Those two tasks are closely related. In order to economize, first of all, in correct accordance with the term it is necessary to reduce expenditures, the central thrust of which is reducing administrative expenditures. Such expenditures do not directly create wealth, so we must resolutely reduce them. Our administrative apparatus is larger than it needs to be, which both results in large budgetary expenditures and exerts a negative influence on production.

Furthermore, it is necessary to increase the effectiveness of investment capital. That is a measure with the most positive significance. If it is to be attained it is necessary to concentrate capital so that the new construction projects can rapidly be brought into production. At the same time, priority in the use of capital must go to the objects of production and the production areas capable of most rapidly developing effectiveness. Under our country's actual conditions -- we are still poor in investment capital and we must import most of the principal technical materials -- that matter should be fully understood but, on the contrary, little attention has been paid to it, so economic effectiveness has steadily declined. That is also an important reason for the increase in budgetary expenditures.

In the financial sphere, the state also has the policy of strengthening money management. In order to carry out that task, the most basic direction is that the state bank must improve and expand its sphere of activities in order to improve the quality of its work, do a better job of managing money, mobilize idle money among the people, and do better job of serving the requirements of production and commerce. The newly promulgated policies also clearly state the responsibilities of the bank in commercial activities. For example, if it harms the economic activities of a depositor, the bask is materially responsible. The most important requirement is that the bank must improve its work so that it corresponds to the function of an economic-commercial organization.

In addition to improving and expanding the activities of the bank, the new policies also stipulate the responsibilities of private businessmen engaged in industry or commerce on a rather large scale (according to the commercial income levels stipulated by the General Director of state bank), who must open an account with the bank and deposit in it unspent funds, property depletion funds, accumulated funds, etc., in addition to the funds deposited to cover the ordinary commercial activities. The policies clearly confirm the depositor's right of ownership of deposited money and such rights as the right to earn profits and borrow business capital. The newly promulgated policies clearly state the responsibilities and rights of the two sides: depositors and the bank. With the new stipulations, it is certain that money management will be tighter.

Although the state's new policies regarding distribution and circulation have only just been promulgated and have only just begun to be implemented, they have clearly manifested their positive effect. The clearest results have been that the quantity of agricultural products purchased by the state has doubled in comparison to the past, budget management has progressed along more positive lines, etc. The results that have been attained regarding distribution and circulation are certain to exert a positive influence and stimulate the development of production. That will lead to many positive effects on the national economy as a whole. However, those policies are interrelated and form a unified body, so their implementation must be uniform and harmonious.

PREMIER ISSUES DECREE ON SALT PRODUCTION

BK151200 Hanoi Domestic Service in Vietnamese 0400 GMT 15 Feb 81

[Text] Demands for salt for use in consumption, industry and for export have increased, while our salt production has decreased in recent years.

To accelerate salt production in order to meet mounting demands and in order to satisfactorily manage the collection, purchase and distribution of salt to avoid ill effects in the economic, political and social domains, the SRV premier on 7 February issued Directive No 31/TTG on salt production, trade and management.

The directive says:

The ministries of food industry, home trade, communications and transportation, and the people's committees of salt producing provinces are requested to reorganize the following specific tasks:

1. Accelerate salt production. They are to ensure the quantitative aspects of production while improving the qualitative requirements for salt, taking special care to make certain that the salt is crystal clean.

Coastal provinces and districts with conditions favorable for the production of salt must develop and organize their production capacities so as to become self-sufficient in salt. Provinces which produce large quantities of salt must ensure that their plan norms for the delivery salt to the state are fulfilled. To ensure the purity of salt, the State Science and Technology Commission and the ministries of public health and food industry must undertake studies to establish national standards for salt purity and then submit the results to the government for promulgation.

2. Carry out intensive measures to expand salt-producing areas.

The Ministry of Food Industry must control all salt-producing areas and supervise localities in planning areas for salt production. This involves the application of intensive production methods, improving production techniques and expanding productive areas. The State Planning Commission and the Ministry of Food Industry must accurately determine the amount of capital to be invested in the salt sector. In doing so they must pay special attention to indepth investments and must clearly fix production plan norms for each locality.

In areas where production is in progress, intensive measures must be applied in order to upgrade the effectiveness of various tasks related to increased production. These include such areas as water conservation, supplying salt water and draining fresh water, improving cushions on salt fields and increasing the availability of the essential equipment and tools used in production. This is especially important for the coming producing season.

In order to exploit available production areas intensively and satisfactorily, arrangements must be made for the 1981 investment and expansion plan and during preparations for the 1982 plan and subsequent years to ensure the fulfillment of the 5-year plan norms. Plans to expand salt-producing areas in southern Vietnam must be balanced with consumption limits and the avialability of transportation to prevent unnecessary accumuiations of salt.

3. Satisfactorily solve problems relating to the living conditions of salt producers and strengthen managerial organizations in order to implement the state monopoly of the salt trade.

In order to resolve the problems involved in ameliorating the living condition of salt producers, it is necessary first of all to arrange employment for workers and help the salt producers increase labor productivity and, consequently, their income. At the same time it is necessary to organize secondary jobs so as to make full use of the workforce. Possibilities here include combining salt production with fishery or agricultural production and not spearating them in a formalistic manner. Depending on availability, localities must allocate some percentage of their land to salt producers for vegetable cultivation or livestock breeding.

To stabilize the life of salt producers so that they can concentrate on their line of production, all localities must ensure satisfactory implementation of the policies already promulgated for the salt producers. This includes supplying them with adequate grain, food and fabrics in accordance with set quotas and supplying them with coal or fuel wherever necessary--although in the long term plans must be devised to encourage them to plant trees for firewood.

Concerning organization and management, it is urgently necessary to consolidate and develop state-run salt production enterprises to ensure that they will operate in a profitable manner and to guide them in the satisfactory implementation of Decrres No 25-CP and No 26-CP dated 26 January 1981 issued by the Council of Ministers.

Units engaged in the production or distribution and circulation of salt must actually carry out profit-and-loss accounting, expand the practice of contracting for product quotas and the payment of bonuses based on accrued output. They must also closely combine the three types of interests so as to increase labor productivity and output and lower production costs.

At present, the production of salt is being carried out primarily by cooperatives and production collectives and secondarily by individual producers. Therefore, we must pay attention to carrying out the socialist transformation and consolidating socialist production relations in the salt-producing sector.

Concerning the collection, purchase and distribution of salt, the state must secure a monopoly of the salt trade and stamp out speculative and smuggling activities. To step up collection and purchase work it is necessary to satisfactorily resolve problems arising from irrational policies concerning prices, credits and taxation.

The directive also points out the tasks to be carried out by the various ministries and localities in order to accelerate the production and management of salt.

Concerning the division of labor in managing the salt sector, for the time being, the Ministry of Food Industry is still responsible for production while the Ministry of Home Trade and the trade sectors are responsible for collection and purchase activities. The Ministry of Home Trade is also responsible for the domestic distribution and circulation of salt, including both wholesale and retail activities. The Ministry of Foreign Trade is responsible for exporting salt. The people's committees of the various provinces are responsible for guiding production and managing the distribution of salt locally.

AGRICULTURE

BRIEFS

NORTHERN AGRICULTURAL PRODUCTION—According to the General Statistics Department, after the Tet holidays, peasants of the agricultural cooperatives in the north have enthusiastically resumed production work in the fields; and in 5 days--from 5 to 10 February--they planted 51,000 hectares of spring rice, bringing the total area planted with 5th-month spring rice since the beginning of the season to 608,000 hectares or 56.6 percent of the plan. This is 20,000 hectares more than the area planted in the same period last year. Provinces and cities making good progress in planting the 5th-month spring rice are Binh Tri Thien, 90.6 percent; Haiphong, 92 percent; Nghe Tinh, 80 percent; and Ha Nam Ninh, 67.2 percent. Provinces with large spring rice areas such as Hai Hung, Thai Binh and Ha Son Binh, though having just begun transplanting work, have fulfilled from 27 to 37 percent of their respective plans. These provinces are guiding the cooperatives to accelerate sowing and transplanting work in an effort to basically finish planting the spring rice within the best seasonal period. HEAVY INDUSTRY AND CONSTRUCTION

STEEL CORPORATION BEGINS PRODUCTION OF ROLLERS

Hanoi TAP CHI HOAT DONG KHOA HOC in Vietnamese No 8 Aug 80 pp 25 and 26

[Article by Thai Doan De, deputy chief of the Technical Department, the Thai Nguyen Iron and Steel Corporation: "Researching the Production of Rollers at the Thai Nguyen Iron and Steel Corporation"]

[Text] 1. The need for rollers for the corporation's rolled steel production.

The Thai Nguyen Iron and Steel Corporation has two steel rolling mills: the Gia Sang Steel Rolling Mill and Steel Rolling Mill 650. The Gia Sang Steel Rolling Mill uses various types of iron rollers that have a diameter of 280 to 402 millimeters and steel rollers made of Ni, Cr and Mo alloys that have a diameter of 530 millimeters to roll bar steel. The annual quantity supplied for the production of rolled steel of roller quality by the GDR is 200 tons. Steel Rolling Mill 650 uses various types of iron rollers and steel rollers that have a diameter of 680 to 840 millimeters. The quantity needed each year at this mill for the production of rolled steel of high roller quality, including bar rollers manufactured from Ni, Cr and Mo steel alloys, is 650 tons. If we had the conditions needed to fully utilize the capacity of existing rolled steel production equipment, we would need 850 tons of rollers per year. However, in order to produce this quantity of rollers, a minimum of 1,200 tons of pig iron rollers would be needed each year.

2. The situation and position of the corporation concerning steel rollers.

The Gia Sang Steel Rolling Mill was constructed with the help of the GDR and originally equipped with enough rollers for production over a certain period of time; therefore, we must provide enough rollers to maintain production on a permanent basis. Steel Rolling Mill 650 was completely equipped by China, which also supplied the raw materials and important parts needed for production, including various types of rollers. When China withdrew its specialists and cut its aid to us, the rolling mill 650 project was incomplete and the equipment and spare parts at it at that time, including the various types of rollers, were insufficient to produce any type of rolled steel product (with the exception of rollers to produce blanks).

The position of the corporation has been that we must look for every possible way to achieve self-sufficiency in the production of rollers because this self-sufficiency will result in the saving of a large amount of foreign currency; in view of the corporation's situation, in particular, and our country's situation, in general, this self-sufficiency will allow us to take the initiative in production and provide the conditions for increasing the various of steel rollers with a view toward meeting the production needs of the various economic sectors in the most positive manner possible. The party committee, board of directors and Trade Union of the corporation have been concentrating their efforts on guiding and organizing forces and creating every possible condition for researching and producing rollers. The corporation has set forth specific principles to be followed in this research and production in order to achieve self-sufficiency; they are:

--The raw materials needed for production must primarily be domestic raw materials as this is the only way we can take the initiative in research and future large-scale production and, at the same time, not be dependent upon the importation of scarce raw materials.

--On the basis of improving and rationalizing their organization, every effort must be made to fully utilize the equipment and production installations that the corporation has now or can acquire. During the initial period, requirements should not be too high so that the problem can be resolved in a rapid and timely fashion.

--Research and testing must be simultaneously carried out under the present production conditions of the corporation; on this basis, we must verify and evaluate results and the quality of rollers and lay the basis for continuous improvements, for the improvement of the quality of the various stages of roller production.

Due to these characteristics of the subject in light of the corporation's circumstances, research has had to be carried out in an urgent manner, that is, has had to bypass the stage of small-scale experiments and, at the same time, achieve very high results, results that could immediately be introduced in production. Therefore, in order to meet the requirements presented above, the corporation has taken the following measures.

--The target to be achieved must be reasonable in view of our technical conditions, equipment, raw materials and so forth;

--Formulate an efficient technical plan and state which results will be acceptable;

--Use and retool a number of pieces of equipment in order to provide satisfactory service during the initial stage of research and production;

--Resolve the problem of fire resistant materials in order to support refining and casting operations;

--The various types of rollers are of large dimensions and heavy (in crude form, the largest weighs 16 tons), consequently, the corporation must resolve the problem of machining equipment and techniques for assembling these various types of rollers.

--The corporation must organize, guide, carry out and coordinate the research into the production of steel rollers while continuing its management work and production in accordance with its state plan. This is complicated even more by the fact that many units are participating in this effort.

3. The results that have been achieved so far.

a. Quantity.

At the Gia Sang Steel Rolling Mill, the corporation has achieved complete self-sufficiency in the various types of iron rollers and steel rollers measuring from 280 to 530 millimeters in diameter. At Rolling Mill 650, we have achieved self-sufficiency in the various types of steel horizontal rollers that have a diameter from 680 to 840 millimeters. The test production of bar steel rollers has not been carried out yet but we are capable of carrying it out.

b. Quality.

--The iron rollers that have a diameter of 680 millimeters have a roller surface hardness of 385-420 HB.

--The steel rollers that have a diameter of 840 millimeters have a hardness at the tuyeres ranging from 215 HB to 297 HB;

--The steel rollers that have a diameter of 530 millimeters have a hardness at the tuyeres of 237 HB to 299 HB after the first lathe operation.

c. Use in production.

--The small, iron rollers for the Gia Sang Steel Rolling Mill have an average life-span that approximates that of the rollers from the GDR.

--The large rollers manufactured from steel, a typical example of which is roller number 12, which has a diameter of 840 millimeters, have been used to produce more than 10,000 tons of rolled steel.

--The large rollers manufactured from iron that have a diameter of 680 millimeters of more and have been in use at rolling shops number 2 and number 3 of Steel Rolling Mill 650 have met the basic requirements regarding the quality of steel products but the quality of the rollers themselves has not been stable.

d. Economic returns.

The production of steel rollers has:

--Helped the corporation to maintain the production of rolled steel at its two mills and resolved the basic, long-range problem of production;

--Reduced the amount of foreign currency spent by the state;

--Enabled us to take the initiative in production and increase the variety of rolled steel products;

--Enabled the use of primarily domestic raw materials, consequently, we have been able to take the initiative in the production of rollers.

4. Lessons and experiences.

The reasons for the results that have been achieved are also lessons and experiences in the successful research and production of rollers by the corporation and partially in the various scientific-technical activities and the movement to make innovations, make technological improvements and rationalize production in the past several years; they are:

a. The correct leadership provided by the party committee, the corporation's board of directors and the leadership committee, which were highly determined and, at the same time, turned their determination into determination on the part of the technical cadres and manual workers of the corporation; in the most difficult jobs, managers personally provided guidance while highly tapping the creativity of the masses.

b. In view of the fact that the corporation is encountering difficulties in production and its production is imbalanced in many areas, the board of directors and the managers on the various levels selected the technical areas of key, decisive importance in immediate and long-range production, concentrated their efforts on research and experimentation in these areas and assembled specialized technical cadres and manual workers to design and manufacture rollers.

c. The concern of the corporation for the material and spiritual lives of the cadres and manual workers who participated in research and production; the corporation has promptly praised achievements, put the consideration of initiatives for awards on a regular basis and promptly promoted personnel, thereby motivating everyone as positively as possible to participate with a high degree of zeal. As a result, the entire corps displayed a high spirit of socialist cooperation, a high spirit of responsibility and high creativity under all circumstances.

5. The direction of future research.

In the immediate future, we must:

--Perfect the equipment, material bases and other conditions needed for the stable production of rollers;

--Improve technology, designs and machining in order to improve and achieve stable roller quality;

--Stabilize the sources of raw materials, especially raw materials for fire resistant bricks and catalysts.

SPECIALISTS' VILLAGE AT HOA BINH POWER PROJECT DESCRIBED

Hanoi XAY DUNG in Vietnamese No 12, Dec 80 p 13

[Article by Engineer Nguyen Ngoc Tu, the Institute of Housing and Public Project Design: "The Planning and Construction of the Specialists' Village at the Hoa Binh Hydroelectric Power Plant on the Da River"]

[Excerpt] The specialists' village at the Hoa Binh Hydroelectric Power Plant on the Da River was researched and designed by Soviet specialists in coordination with cadres of the Institute of Housing and Public Project Design of the Ministry of Building on the basis of an agreement signed by the Socialist Republic of Vietnam and the Union of Soviet Socialist Republics. The specialists' village was designed to support the approximately 2,000 specialists participating in the construction of the Hoa Binh Hydroelectric Power Plant on the Da River. The construction site is located in the town of Hoa Binh on a hill, measures roughly 50 hectares and is about 3 kilometers from the power generating center. The planning of the specialists' village has been closely linked to the natural terrain and enables easy travel between living quarters and the work place by means of a network of internal roads linked to the main road that leads to the hydroelectric power plant.

The specialists' village makes rather systematic and efficient use of land and has required little leveling of construction sites, consequently, the system of technical projects, such as electricity, water, culverts, sewers, roads and so forth has been less costly and this has enabled us to invest less capital in construction. The various projects, which are arranged to receive much of the cool summer breezes and face the main road, have a diverse layout consisting of many different types of projects with different shapes and heights, thereby creating harmony between architectural projects and the terrain and natural environment and increasing the beauty of the natural surroundings.

The specialists' village consists of a housing area and a public service area. The housing area has five main housing complexes (which include one reserve complex) and a complex of cottages for leadership cadres. The housing complexes, which surround the public complex, lie within the system of parks and internal roads and provide for quiet living, convenient travel and a sanitary environment.

The public complex consists of three clusters of buildings arranged on the basis of their function:

--The cluster of public buildings, which adjoins the housing complexes, consists of the commerce center, the joint building (the school, club, restaurant and child care center), the medical aid station...

--The cluster of recreational buildings, which is located near the lake and has beautiful scenery, consists of a summer movie theater, a dancehall, a swimming pool...

--The cluster of service buildings, which cannot be seen from within the village, consists of cold storage facilities, a laundry, a boiler plant, water reservoir, parking lot for vehicles...

HEAVY INDUSTRY AND CONSTRUCTION

CONSTRUCTION UNITS PRESS TO COMPLETE PLAN

Hanoi XAY DUNG in Vietnamese No 12, Dec 80 pp 2-3 and 10

/Article by Bui Van Cac, Vice Minister of Building: "Endeavoring To Complete the 1980 Construction and Assembly Task and Making Good Preparations for Construction and Assembly Work in the 1st Quarter of 1981"/

/Text/ Our entire sector has entered the final days and months of the 1980 plan. The construction and assembly units of the ministry and the various localities are making every effort to complete as much as possible of the plan tasks assigned by the upper level.

Reviewing the past 10 months and more, we see that very many difficulties have been encountered in every area; in particular, there has been a shortage of electricity for construction and the supply of materials to projects has not been well coordinated; however, the construction and assembly units, on both the central and the local levels, took positive steps to implement their 1980 plans in accordance with the guidelines of the ministry: concentrating on completing one project at a time and putting one project after another into production or use. In the process of carrying out their construction and assembly tasks, many units have taken the initiative and overcome their difficulties and strengthened the various areas of management, consequently, they have maintained their construction rate and are able to implement the plan assigned them well.

To date, excluding medium-scale and small-scale projects, the entire sector has completed, consigned and put into production or use a number of projects ahead of schedule, among which the important projects deserving of mention are: the Hoa Sen Earth Satellite Signal Station, XZ-72, the wireless equipment major repair facility, the exports cold storage facility, the Dong Anh Paving Brick Factory, the Huong Canh Livestock Feed Enterprise and so forth. The key projects which our sector has the responsibility of building have also been accelerated. Some projects were completed on schedule, such as the Hoa Sen Satellite Signal Ground Station. Several other projects, such as the Pha Lai Power Plant, the Hoang Thach Cement Plant, the Bim Son Cement Plant, the Vinh Phu Paper Mill, the Hoa Binh Hydroelectric Power Plant, the Thang Loi Textile Mill, the Nha Trang Fiber Mill and so forth, are receiving centralized guidance in an effort to achieve the rate of construction planned for 1980. Improvements have been made in the quality of construction and assembly work at many projects. The Vinh Phu Paper Mill project, the Hanoi Children's Hospital project, the Hoang Thach Cement Plant project, the Gia Lam Locomotive Factory project, the diplomatic delegations project, the Noi Bai Airport project, project 66A and so forth are projects at which the quality of both technical work and artistic work is high. Labor productivity and the income of manual workers have increased in some units. Two units, Building Corporation Number 1 and the Viet Tri Building Corporation, have made substantial improvement with regard to guiding the construction of one project at a time and completing and putting into use one project after another. Many new factors and new models have emerged within the productive labor movement, such as the expansion of the payment of piecework wages; organizing production lines to work two or three shifts per day; the coordination, cooperation and mutual support among units at key projects; the development of potentials both in and outside the sector and potentials of both the central and local levels; the intensification of the effort to raise additional food in order to improve the standard of living; the many intense emulation campaigns between our cadres and workers and the specialists, especially the Soviet specialists.

All of these facts, which reflect the very praiseworthy efforts made by virtually all construction and assembly units within the sector, especially the units constructing and assembling key projects, have one point in common: the very high determination on the part of the ministry to assemble manpower, supplies and equipment and provide guidance for the key projects of the national economy. However, there are still some units that have not maintained their rate of construction; they have not maintained continuous construction after starting projects; their forces are decentralized, they lack centralized guidance and there is no comprehensive plan for finishing work; they have not made good preparations for production and product contracts, have not made good use of the various economic levers; the quality of their projects is not good and these projects must be repaired time and time again. These are a number of weaknesses that must be rapidly corrected. The realities of construction and assembly work since the start of 1980 show us:

--At places where good preparations are made for production and product contracts, labor productivity is high, the income of manual workers has increased, they produce with enthusiasm and the rate of construction is accelerated. The experiences of the Federation of Machine Installation Enterprises, the Federation of Mechanized Construction Enterprises and Building Corporation Number 1, which are units that perform this work well, clearly show this.

--In view of the shortage of electricity, units that have promptly shifted their production to manual production have been able to maintain continuous production.

--The development of the potential for transportation by water routes in the various localities and at installations is of special importance. As a result of the redeployment of transport forces by some corporations, the means of water transport mobilized to support the Pha Lai power project increased to 5,000-6,000 tons. This is one of the lessons in developing the potentials of the localities and units within the sector to support key projects.

The portion of the construction and assembly task to be completed by the end of 1980 is still very large, especially the implementation of the norm on projects completed and consigned and the norm on the construction rate of key projects. On the other hand, we must also make good preparations for construction and assembly work in the 1st quarter of 1981, especially with regard to the key projects of the national economy because what we achieve in future years is dependent upon the work we perform in 1981.

In order to successfully carry out the task mentioned above, the construction and assembly units must immediately make extraordinary efforts to successfully complete the projects and project items recorded in the 1980 consignment plan; achieve the construction rate targets for such key projects as the Bim Son Cement Plant, the Hoang Thach Cement Plant, the Vinh Phu Paper Mill, the Pha Lai Power Plant and the Hoa Binh Hydroelectric Power Plant; assemble the forces and equipment needed to accelerate the Nha Trang Fiber Mill project, the Hanoi Fiber Mill project, the Dac Lac Lumber Mill project and the Lam Thao Superphosphate Plant project; continue to prepare for the start of construction on several new projects; formulate and assign 1st quarter 1981 plans; and prepare all of the materials needed for construction and assembly work in January 1981.

Several important measures that must be taken during this period of time are:

--Formulating a detailed schedule and measures for finishing work and, on this basis, computing the needs for manpower, supplies, vehicles, machines and wages while taking determined steps to provide ample materials and equipment for and assigning complete contracts for the finishing work at each project or each project item to units. As regards the rate of construction of projects, especially key projects, these measures must also be taken in a manner consistent with the characteristics of each project.

--Deploying production forces and giving priority in the supply of materials and equipment to achieving the targets for the completion of consigned projects and project items and achieving the planned rate of construction of key projects. The remaining forces must be deployed in a manner consistent with capabilities at other projects, with every effort being made to avoid decentralizing forces.

--Organizing two or three regular work shifts per day and organizing production lines at completed and consigned projects and key projects; providing the production factors, command factors and life support factors needed to put the working of two or three shifts per day on a regular basis.

--Trying to provide additional competent cadres for supply and transport work; providing close guidance of everything from purchasing contracts to the transportation, storage and distribution of supplies; taking specific steps to prevent all theft and waste of supplies; and teaching in conjunction with training and caring for the corps of persons who perform supply and transport work.

--Intensifying the educational effort and the inspection of the implementation of quality control regulations in each stage of production in order to combat sloppy, careless work; attaching importance to labor safety.

--Accelerating the application of technical advances and making good preparations for the 1981 technical advances plan.

--Improving the making of payments and the settlement of accounts and inspecting the formulation of projected unit prices in order to insure ample capital for operations.

--Caring for the standard of living of cadres and workers; the bases for raising the standard of living of manual workers and cadres are expanding the payment of piecework wages and raising the income of workers. On the basis of increased income, the eating standard of cadres and manual workers must be raised. Inspections must be conducted to insure that meal ration standards are being met and between shift meals must be organized well.

--Taking positive steps to increase food production, strongly developing crop and livestock production and organizing studies, relaxation and entertainment with a view toward improving the material and cultural lives of manual workers and cadres.

--Summarizing the productive labor emulation movement and the emulation movement to achieve high productivity; selecting progressive, outstanding persons and collectives and completing the procedures for suggesting that the ministry praise and commend them at the sector-wide review conference at the end of the year.

Successfully carrying out the construction and assembly task for 1980, the final year of the second 5-year plan, and making good preparations for the 1981 construction and assembly plan, beginning with the 1st quarter of 1981, in order to take the initiative in carrying out the building task of the third 5-year plan are of very important significance. With the valuable experiences that have been gained in the recent past, especially the experiences of the first months of this year, the construction and assembly units will surely undergo many new changes, make new progress and make outstanding contributions to the successful completion of the state plan assigned to our sector by the party and government.

HEAVY INDUSTRY AND CONSTRUCTION

BRIEFS

PHA LAI POWER PLANT--Five months after the start of construction, the Pha Lai Power Plant construction site has poured 3,000 cubic meters of concrete foundation, finished pouring the foundations of the **auxiliary** boiler, the smokestack, the outdoor electric power distribution station and the auxiliary complex and constructed the frame of the main plant. At the construction site, the worksite has completed the construction of the acetylene production plant, the 110 kilovolt transformer station and machine shop 15 and is urgently building the various warehouses, industrial yards and pipelines. The corporation has taken various steps to provide incentive for production and the efficient organization of construction, such as contracts for complete jobs, increased productivity bonuses and more money for between shift meals. In October 1980, the worksite completed the construction required by its plan for the year. The Federation of Machine Installation Enterprises undertook the design and has completed the construction of the network of construction electricity for the Pha Lai thermoelectric power project and is assembling several large cranes to support the placement and installation of boiler equipment. [Excerpt] [Hanoi XAY DUNG in Vietnamese No 12, Dec 80 p 33] 7809

DA RIVER POWER PLANT--The Da River Hydroelectric Power Plant Construction General Corporation has put into use 113,600 square meters of housing, 21 kilometers of steel reinforced concrete highway paved with asphalt, 31.4 kilometers of power lines, 6 transformer stations, 2 diesel powered generating stations, 24 kilometers of water drainage pipe and a number of support projects, such as work places, a hospital, a general merchandise store, a food store, a bookstore and a posts-telegraph station. Vietnam Report

No. 2298

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

SENIOR GENERAL CHU HUY MAN ON PARTY LEADERSHIP IN NATIONAL DEFENSE

Hanoi TAP CHI QUAN DOI NHAN DAN [PEOPLE'S ARMY REVIEW] in Vietnamese No 2, Feb 81 pp 1-14

[Article by Senior General Chu Huy Man: "The Leadership of the Party--the Primary Factor Determining Victory in the Protection of the Fatherland"]

[Text] In the undertaking filled with hardships and sacrifice to save the country from powerful and wealthy country-robbers, as a result of the leadership of the party, our people arose, united in struggle to throw off the ruling yoke of colonialism and feudalism and carried out the successful August Revolution; they also won victory over extremely cruel wars of aggression waged by the French colonialists and the U.S. imperialists, thereby achieving the total independence and unification of the fatherland and advancing the entire country to socialism. In the new stage of the revolution, the same holds true, that is, the leadership of the party is always the primary factor determining victory in our people's work of building the country and protecting the socialist fatherland.

Ours is a genuine Marxist-Leninist party that is absolutely loyal to the interests of the working class, of the Vietnamese people and which has made positive contributions to the revolutionary cause of the people of the world. Our party has always firmly grasped the revolutionary and scientific essence of Marxism-Leninism and applied this only correct science of revolution in our times to the specific conditions of our country better with each passing day. The party has adopted a correct and creative line, one which includes a political line, a line on economic development, a military line, a domestic affairs line and a foreign affairs line, in order to complete the tasks of the nation and fulfill our international obligations. Our party has been forged for many years in the flames of the revolutionary struggle, a struggle filled with hardships, in the war of liberation and in the very fierce wars to defend the country against many cruel enemies; it has experienced many very arduous challenges, including seemingly insurmountable challenges. However, our party has always led our army and people in overcoming every difficulty and our nation of Vietnam has always won extremely glorious victories. In the process, our party has gained many valuable experiences, experiences in armed uprisings and revolutionary war, experiences in guiding production and building and managing the economy under war time circumstances and so forth. Our party has also gained experience while performing international tasks. Our party is truly the strategic staff of the working class and nation of Vietnam, is a strong and determined corps within the international communist and worker movement.

We maintain that, in the face of the new and no less arduous, decisive and complex challenges of the period of building and protecting the fatherland, our party will surely complete its glorious historic tasks. The organizations, cadres and members of our party will surely make greater progress, both in terms of their ability to help formulate lines and organize their implementation and in terms of their revolutionary will and sentiments, thereby proving themselves worthy of the trust of the people and our international friends.

I. A Correct Line, the Ability To Provide Guidance and the Ability To Perform Practical Organizational Work

After the fatherland was completely liberated and the country was reunified, the 4th Congress of the Party set forth the revolutionary line for the entire period of transition to socialism. It is the platform of building socialism and protecting the socialist fatherland in the new era of our nation of Vietnam. It is the banner of inevitable victory of our people as they march forward to make our country a country that has a modern industrial-agricultural structure, a strong national defense system, a progressive culture, science and technology and a civilized and happy life. It is also the banner of inevitable victory of our army and people in the work of protecting the fatherland and in the effort to strengthen the national defense system and build up the people's armed forces as well as in the process of waging a people's war to protect the fatherland against every enemy aggressor, both the Beijing reactionaries and the imperialists.

The military line of our party in the period of building and protecting the fatherland reflects the revolutionary line and the revolutionary method of the party and, at the same time, reflects the laws of armed struggle, of a patriotic war under the new historic conditions of our nation and our times. It is an integral part of the party's line on the socialist revolution. It is the result of correctly and creatively applying the Marxist-Leninist theory on war and the army to the realities of Vietnam in order to resolve problems related to national defense and the war to protect the fatherland and, at the same time, help to enrich the storehouse of experience and theory regarding Marxist-Leninist military science. It has inherited and developed upon the military line of the party in the war of liberation and the war to defend the country and raised our forefathers' tradition of unyielding resistance against foreign aggression and outstanding strategic genius, a tradition displayed in thousands of years of struggling to defend the country, to a new level.

During the periods of the resistance against the French and the resistance against the United States, the military line of the party was gradually formed through the realities of fighting and winning victory over the enemy. Our party led the war while researching and summarizing experiences and formulating and gradually perfecting its military line. As a result, today, as we begin the fight against the new enemy aggressor, our party has been able from the very outset to resolve the most important problems regarding how to protect the fatherland. The military line of the party was formed on the basis of the major viewpoints and thoughts expressed in the resolution of the 4th Party Congress and has been concretized and developed upon in subsequent resolutions of the Party Central Committee, the Political Bureau and the Central Military Party Committee. This development was proven to be very correct by the realities of the building of the national defense system, the buildup of the people's armed forces and the conduct of the people's war to protect the fatherland in the southwestern and northern regions of our country. It is the all the people defend the nation line and the line on the people's war to protect the socialist Vietnamese fatherland.

Both theory and the realities of history have pointed out that, today, thoroughly understanding the political line and the military line of the party is the most basic, the most decisive factor in winning victory in the work of protecting the fatherland and building socialism.

Of direct, decisive significance in turning the line of the party into a combined strength, into specific results, into real victory is practical organizational work. This work encompasses many areas and is closely linked to the various periods of development of the revolution; it is the work of all organizations of the party, from the central level to the local level and the basic level and within the units of the army, with the most important areas being the close strategic guidance provided by the Party Central Committee and the Political Bureau.

In the new stage, while the party is leading every aspect of the activities of all of society throughout the country in socialist construction and the protection of the fatherland, practical organizational work involves many new specifics and requirements in peace time as well as when war breaks out.

When war breaks out, the party must lead the people in making every effort to build the economy, develop the culture and stabilize and gradually improve the living conditions of the people in conjunction with strengthening our national defense potentials and building the material-technical bases of socialism. It is necessary to build up the people's armed forces, build defense lines and strategic bases, build the great rear area of the entire country and the immediate rear area of each battlefield and so forth, thereby creating a strong, firm battle position for the national defense system and the people's war to protect the fatherland. The coordination of the central task of building the economy with strengthening our national defense potentials throughout the country as well as within each locality must be based on the general strategic guidelines for the entire country and must, at the same time, be consistent with the special characteristics of each locality, with the economic, political and military positions of each battlefield, each province, municipality and district. On this basis, we must establish specific targets and develop the various localities so that they possess relatively comprehensive and reliable strength, thereby insuring that they complete their local task and the task of supporting the frontlines in case of war. At this time, practical organizational work, although not as difficult and decisive as practical organizational work conducted under war time circumstances, when it is necessary to directly deal with the enemy, is still very complex in many areas. We must constantly improve the organization and the building of the structure to be consistent with newly developing conditions, adopt specific programs, policies and plans and establish close coordination among the various sectors within the dictatorship of the proletariat system, among the various localities and so forth with a view toward achieving specific national defense objectives during each period of time and insure that each locality and the entire country are always in a high state of combat readiness while still focusing their efforts on their construction tasks, instead of separating the economy from the national defense system or cause one to pose obstacles to the other.

The present shortcomings and weaknesses of our state in organizational work and in the management of every aspect of the activities of society, which include national defense activities and the coordination of the national defense system with the economy within each locality and throughout the country, are also the shortcomings and weaknesses of our party. They reflect the fact that the ability of the various party organizations to perform practical organizational work in the protection of the fatherland under peace time circumstances is still limited. We must clearly recognize that organization is a science and must make every effort to learn and gain experience in order to carry out these practical tasks well and put the effort to strengthen the national defense system within a mechanism, put it on a regular and stable basis so that we are ready to win victory should war occur.

In the case in which the enemy recklessly unleashes a war of aggression against our country, the guidance of the war effort primarily involves mobilizing the people to fight, to actively fight, to engage in productive labor and continue to increase their strength in order to attack the enemy and bring the war to a victorious conclusion.

The most important problem in the case of war is that the strategic guidance provided by the Party Central Committee and the Political Bureau must quickly reach the various party committee echelons, localities, sectors and levels and must be complied with unconditionally. Under the circumstances of modern warfare, it is still possible for us to correctly predict changes in the basic situation; however, it cannot be said that these changes always occur in exact accordance with our understanding and aspirations. A war to protect the fatherland can break out and reach a turning point very quickly. Winning a major victory over the enemy army at the start of a war is of very important, decisive significance to the entire war. As a result, in guiding a war effort, the strict requirements that must be met are: seizing strategic initiative and developing upon this initiative from the very outset and making a great effort to annihilate many enemy forces from the very outset, thereby changing the comparison of forces, changing the situation so that it is favorable to us and unfavorable to the enemy and so that we win victory in every situation.

The art of guiding a war effort in such a way as to meet the requirements mentioned above demands that our party firmly grasp the laws of a people's war to protect the fatherland, take the initiative and skillfully employ these laws by means of its intelligence and spirit of boldness in conjunction with its ability to perform urgent organizational work. We must achieve a highly developed combined strength within a combined strategy that is based primarily on military struggle while coordinating with the other forces and phases of struggle in order to concentrate our force on a specific strategic objective during key periods of time and at key places in order to win decisive victory. As a result, our party and the organizations of the party must possess tremendous energy and must have the ability to organize implementation in a skillful, scientific, tight and strict manner from the very outset.

Leading a war effort is the task of both the Party Central Committee and the local party committee echelons. The basic party committees and the party chapters also fulfill the function of leading the war effort within their locality and unit. One effort of foremost, decisive importance--an effort that must be steadfastly maintained--is to organize and mobilize all the people to fight the enemy, maintain control, fight the enemy and engage in productive labor at the same time in order to complete local tasks and provide battlefield support.

Under the direct leadership of the Party Central Committee and the Political Bureau, the army party organization is the nucleus in the effort to organize the implementation of the party's military line and apply Vietnamese military science and art in a war to protect the fatherland when war breaks out. On the basis of the functions and tasks assigned by the party, the Central Military Party Committee researches strategic matters in order to make proposals to the Political Bureau and the Party Central Committee and leads and guides the entire army in implementation. The various military regions, military corps, branches and agencies must organize implementation in a creative manner under the direct guidance of the Central Military Party Committee in order to win a decisive victory on each battlefield.

In war, the creative application of the military art of a people's war to protect the fatherland is very important. Our cadres, who have been trained in principles and theory at academies and schools and forged on the training field, will be directly challenged on the battlefield, primarily on the first defense line. This challenge, which comes in the form of iron, steel and flames, very rapidly shows us the solutions to military problems, even during the very first hours and days of the decisive test of strength with the enemy. The collectives of the party committees and the command cadres on the various levels and at the various agencies must have a firm grasp of the basic principles they have learned; however, they must display a high degree of intelligence, talent and energy in organizing implementation. They must have a firm grasp of military art and take the initiative and be creative in the application of this art; however, they must scrupulously obey and implement strategic guidance, thereby making a positive contribution to seizing strategic initiative, as mentioned above, even when the enemy still has many forces, many weapons and many means of war.

To fulfill their task in the protection of the fatherland, the organizations of the party on the various levels, cadres and party members must rapidly improve their ability to perform practical organizational work and closely coordinate ideological and organizational work in order to overcome the phenomenon of doing things in a simple, lax manner and the phenomenon of "form for form's sake." They must struggle to meet the highest possible requirements and the greatest challenges.

In order to strengthen its leadership at a time when it is in political power throughout the country, the party must constantly perfect the organizational structure of the party, the state and the mass organizations and perfect the mechanism "the party leads, the people exercise ownership and the state manages" in socialist construction, economic management and the protection of the fatherland.

The 4th Congress of the Party pointed out that building a national defense system of all the people is the task of all the people, the entire army and the entire dictatorship of the proletariat system under the leadership of the party. The problem we face is correctly establishing, by means of the organization of systems, the relationship among the party, the state and the people and developing the effectiveness of the mechanism proposed by the congress not only within the task of building the country, but in the task of protecting the fatherland as well.

The apparatus that leads and manages economic construction, cultural development, the living conditions of the people and the building of the national defense system must be a competent and sensitive apparatus, both in peace time and when war breaks out. When war breaks out, this apparatus must organize the conduct of a people's war in order to win victory over aggressors and protect the fatherland and must manage the construction of the material and technical bases of socialism under war time circumstances. Of course, this apparatus must be supplemented or adjusted when necessary so that it is suited to the situation and tasks in time of war.

The political report delivered at the 4th Congress of the Party pointed out: "As the tool for building socialism and protecting socialism, our state must always attach importance to strengthening national security, political security and social order to insure that the country is always ready and always has the strength to crush every attack of those who would start a war and of aggressors as well as crush acts of opposition by counter-revolutionaries."

As a result, the party must concern itself with building the state apparatus, strengthening the system of law, formulate laws, build the organization, establish regulations and so forth. The party must build and forge the state apparatus so that it is fully capable of managing the economy, managing society and strengthening the national defense system in peace time; when war breaks out, this apparatus must respond very quickly to the guidance of the war effort provided by the Party Central Committee and Political Bureau by means of its abundant vitality, discipline in coordination and strict practical application.

If the building of the party is separated from the building of the state apparatus and light attention is given to the government, it is clear that the effectiveness of the party's leadership will also decline. Because, ours is a party in political power and "the leadership of the party and the right of collective ownership of the people are most vividly manifested in the state and primarily implemented through the activities of the state."(1)

In view of the fact that it is a party in political power, the lines, positions and policies of the party in the building of the country as well as in the protection of the fatherland are concretized and codified and become binding upon every citizen, every agency of the party and state and every mass organization. Only in this way is it possible to develop the effectiveness of the party's leadership. The resolution of the 8th Party Plenum concerning the draft of the Constitution pointed out: "The Constitution and laws are the basic positions and policies of the party that have been codified, have been 'institutionalized in the form of the state' so that they are obeyed by everyone." This is a new requirement in practical organizational work to a party in political power. We should not consider the laws of the state to contain nothing that belongs to the party. We must coordinate education and motivation with compulsion under the law in order to develop the spirit of collective ownership and uphold the right of collective ownership of the masses so that every position and policy of the party is implemented in a scrupulous manner. "The party compels its organizations, cadres and members to respect the power of state agencies and scrupulously comply with the law and with the decisions and directives of state agencies, considering this to be the discipline of the party."(2)

The right of socialist collective ownership of the people as regards the national defense system as well as in a people's war is expressed not only through the state, but also through the mass organizations. When building the state apparatus and developing the role played by the state, the party must attach full importance to the role played by the mass organizations, such as the Trade Union, the Youth Union, the Women's Union, etc. It is necessary to motivate, organize and rally the people to implement their right of collective ownership in the protection of the fatherland through these organizations.

The mass organizations have the tasks of teaching the people and fulfilling their role in strengthening the national defense system and insuring that everyone fights the enemy. Each stratum of the people, each citizen must do their very best to participate in the work of strengthening the national defense system, building up the people's armed forces, participating in combat and combat support and so forth in case of war. The mass organizations must be schools of patriotism, socialism and communism. In particular, they must teach the youths of the entire country to scrupulously fulfill their military obligation and labor obligation.

In the various periods of development of the country, in general, as well as the revolution over the past half-century, our generations of youths have always been worthy of being the shock forces of the fatherland, of the party. Today, in the work of building and protecting the country, the force of youths is becoming increasingly large and increasingly talented. They are an army that has all the ability and intelligence needed to attack the fields of science, to become the masters of science and technology within enterprises and worksites, in fields, at research institutes and so forth, thereby making a positive contribution to the creation of the material wealth and spiritual and cultural values of the country. They are a force filled with heroism and also have the knowledge needed to become the masters of weapons, thereby helping to create invincible strength in the effort to protect the fatherland. They are the generations succeeding their fathers and older brothers in developing upon the achievements of the revolution, a generation that has a firm grasp of the truth and is always in the vanguard of the revolutionary undertaking of the fatherland. The mass organizations must make the force of youths understand that every expectation of the young can only be achieved and every talent of the young can only be developed in their beloved country by means of coordinating academic education with working and fighting. Our youths must consider this to be their source of happiness. For this reason, President Ho taught: "Training the revolutionary generations for the future is very important and necessary work."

The mass organizations must also mobilize the people to perform good rear service work so that, when war breaks out, the rear service is truly the firm base, the tremendous source of mobilization of manpower and materiel for the frontlines as well as a strong source of inspiration to the soldiers on the frontline.

Adopting the correct line is a matter of very basic, very decisive importance but it is not enough. We must also have the ability to provide guidance and organize implementation in order to turn this line into real victory. In other words, the correct line must be accompanied by creative organizational ability; these two closely linked factors cause the leadership of the party to truly become the primary factor determining victory in the cause of protecting the fatherland and building the country. "We must bring about a profound change of a revolutionary nature in our viewpoint concerning the building of the organization, must improve management and must make every effort to close the gap between the requirements of the political task and our organizational skills, thereby bringing organizational work to the level of the political task and supporting the requirements of the political task well."(3)

Building a Party That Is Strong Politically, Ideologically and Organizationally

In the revolution, in general, as well as in the protection of the fatherland, in particular, the party must be built so that it is strong throughout its organization, strong from its nerve center to its basic cells. This strength must not only exist from the very outset, when a war is not in progress, and exist throughout the course of building and strengthening the national defense system, but must be increased even more when war breaks out, increased throughout the entire process of the war and expressed in the form of successfully completing the political task and military task of the party in the various periods.

In the leadership of the revolutionary struggle, especially at turning points and in the face of important developments, the entire party must be united with regard to its line, must thoroughly understand and unswervingly adhere to this line in every situation, must organize the implementation of this line in a creative manner and, in this way, must help to formulate, concretize and develop the line of the party. It is necessary to protect the line, protect the leadership, protect the unity and discipline of the party.

The same holds true in the military field. The entire party must be in agreement concerning the political line and the military line, concerning the evaluation of enemy forces and our forces and concerning the strategy of the party. There must be agreement from the very outset and this agreement must become stronger with each passing day. It is necessary to unswervingly adhere to the line, organize its implementation and protect the line in every situation, not only in peace time, but also when war breaks out and throughout the course of development of a war, especially in difficult, decisive situations that will determine whether or not the war ends in victory.

One matter of basic importance in the line is that of correctly establishing the strategic objective of our country's revolution and the combat objective of our army and people. Today, the reactionaries within Beijing ruling circles are collaborating with the U.S. imperialists and various lackeys to weaken and annex our country, annex the countries of Indochina, sweep into Southeast Asia and eventually become rulers of the planet. We must continuously consolidate and strengthen the unanimity within the party concerning the analysis and evaulation of the reactionary nature and the capabilities of the enemy; we must steadfastly maintain this unanimity throughout the course of a war, especially at turning points in the war, and through the decisive tests of strength between ourselves and the enemy on the battlefield, both on the frontlines and in the rear area as well.

As we know, the political objectives of the revolutionary struggle and revolutionary war are the same; however, a war is governed by laws of its own. An unjust war of aggression and a just war of self-defense develop in accordance with opposite laws. Aggressors concentrate their forces and means of war not only at the very outset in a vain attempt to win decisive victory in a short time, but also throughout the development of the war, especially at highpoints in the war. Even after suffering defeats, sometimes heavy defeats of strategic significance, the enemy might try to escalate the war to its highest level ever in a vain attempt to win back lost positions and reverse the situation. However, when we steadfastly adhere to the line, unswervingly adhere to our determination and overcome the highest war effort of the enemy, we will crush the forces of the enemy and the total defeat of the enemy thus becomes unavoidable. Experience has shown that, in certain situations, at certain times and on certain battlefields it appears as though the enemy is still increasing its strength; in actuality, however, we find that they have become weak and have weakened very rapidly; this is seen in their insane writhing, writhing that easily causes persons to mistakenly think that they are strong. In such complex situations and at such difficult and decisive turning points, achieving agreement within the party concerning the evaluation of enemy capabilities can provide an opportunity to challenge cadres and party members as regards their spirit of steadfastness and their viewpoint concerning the enemy, in terms of strategy, the campaign and combat. If the unanimity achieved through this challenge is consolidated and strengthened slowly, it will adversely affect the unity and oneness of mind within the party, adversely affect the fighting capabilities of troops and our ability to win victory.

The same applies with regard to us; there is generally agreement from the very outset, very rapid agreement concerning the evaluation of our strength, of our strongpoints as well as our weaknesses and of our possiblities for development. However, this is not sufficient. We must steadfastly maintain this unanimity throughout the course of development of a war, especially at turning points and after decisive tests of strength with the enemy on the battlefield. Each time we win victory, we usually suffer certain losses; with these victories, the difficulties and shortages that existed before them can be reduced; however, new difficulties and shortages arise as a result of the new requirements of development. In this situation, there are times at which and units in which it appears, on the outside, that our strength is declining; actually, however, such is not the case. The comparison between ourselves and the enemy in terms of position and power, quality and the primary trend of development is advantageous to us. If our cadres and party members are not fully forged, if they are not familiar with or do not dare to squarely face the difficulties involved in our growth following victory, they might suffer a decline in their energy to overcome difficulties and might not be determined to boldly develop upon victories. This is another challenge to cadres and party members in terms of their steadfastness, their confidence in the capabilities and potentials of revolutionary forces.

Therefore, when we say that the leadership of the party is the primary factor determining victory in war, one very important matter is to achieve a correct evaluation and unanimity within the party concerning the general situation of the revolution and our advantages and difficulties in the course of development as well as the enemy's situation and our situation from the very outset and during each period of the war. At turning points and in the face of decisive tests of strength between ourselves and the enemy, unanimity within the party concerning the evaluation of the situation reaffirms the fundamentals set forth by the party and inevitable trend of development of the war and achieving this unanimity is a process of challenging cadres and party members and forging our party so that it is strong politically, ideologically and organizationally.

It is necessary to build party organizations that are truly strong and pure, that are fully capable of leading all the people and the entire army in successfully completing the task of building the country and protecting the fatherland. The revolutionary undertaking constantly develops on an increasingly large scale; however, it does not follow a straight or simple path, but experiences difficulties and travels a winding path to the ultimate objective. The same is true with regard to protecting the fatherland. A war of aggression, if unleashed by the enemy, is a major, comprehensive challenge to our country. War tests the line, thinking, viewpoints, will and organizational ability of our party and state. In order to firmly insure victory in the work of building and strengthening the national defense system as well as in a war to protect the fatherland when one occurs, it is necessary to have a party that is truly strong and pure. The party and its organizations must be the nucleus uniting, mobilizing and organizing millions of persons to fight, work and produce filled with confidence. The party and its organizations must be the competent command staff that is capable of engaging in profound thought, capable of performing truly scientific organizational work and capable of coordinating every force on every battle line in accordance with a strict combat discipline, thereby insuring victory over the enemy in every circumstance.

The party organization and the organizations of the party within the armed forces must be the strong nucleus in the most difficult situations and in the face of the most stern challenges. The basic organization of the party and the party chapters must be the shock forces leading the collectives of units forward, leading them in combat and victory over the enemy in the worst of situations. To accomplish this, the basic organizations and party chapters must constantly maintain close relations with the masses, must blend with the masses in order to build units, build them politically, ideologically and organizationally, build them into a steel bloc. The party committees on the various echelons must be strengthened in terms of their organization and personnel in both peace time and time of war. We must emphasize the collective leadership role of the party committee echelon in conjunction with heightening the responsibility of the commander, thereby insuring that troops are led, commanded and managed in such a way that they complete every task and win victory over the enemy.

The building of the organizations of the party must be closely linked to the completion of the political task and the military task of the unit during each period. The organizations of the party and each party member must be forged through the completion of the tasks of the unit during each period. The building of a good organization is designed to develop good personnel; party members who have been forged well are a prerequisite to building a party organization that is strong and pure.

A strong party with a strong organizational structure must go hand in hand with a corps of party members that is routinely supplemented in terms of its size and constantly improves in terms of its quality. The matters of foremost importance that determine the comprehensive quality of the party member are awareness of the ideals of communism and boundless loyalty to the fatherland, the people and the international obligation. The party member must endeavor throughout his life to achieve the lofty goals of the revolution and must do so with precise motives in mind. The enlightenment of each party member must be expressed in positive, creative actions, in every task assigned by the party. In his daily work as well as in combat, the communist party member must always be in the vanguard; communist party members must be in the vanguard in terms of their outlook, their thinking and their ability to take action, thereby achieving practical results in their combat, work and productive labor. The role of the party member must not only be manifested in normal times, in advantageous times, but must especially be manifested in a natural way in times of combat, under the most difficult and serious circumstances and in the face of the greatest challenges.

A corps of party members who possess well developed political qualities and organizational skills consistent with the level of development of the revolution is a very important requirement in order for the party to constantly maintain and strengthen its leadership role. Every party member must bring himself abreast of the continuous development of the revolution; this is an expression of his loyalty and his desire to make progress. The party member must never divorce himself from the basic goals of the revolution; he must always maintain a correct point of view and establish clear relationships in combat, work and his daily activities. As regards the enemies of the revolution, of the people, he must be definite and unshakeable, both in the face of their military power and their temptations. As regards the party, party members must be determined to implement the lines and policies of the party, determined to protect the lines and organization and maintain the discipline of the party. As regards the people, they must love them and respect the right of collective ownership of each person. They must be loyal and devoted to their comrades. They must be humble and simple in dealings with their friends. Party members must fight with no thought for themselves, must live faithful and simple lives and must not only express these qualities under normal circumstances, but under complex and difficult circumstances as well. Party members who are elderly, who have served for many years in the party and who occupy positions of leadership must display these virtues even more clearly and purely. The corps of party members must constantly study and train in order to acquire comprehensive, basic and highly specialized knowledge. They must study and train constantly so that they can learn the latest achievements in the social sciences, the natural sciences and the technical sciences of the country and our times and turn them into assets of the people, of the fatherland. Learning and constantly making progress is a challenge to the communist, primarily to those comrades who have fought for many years and have made certain contributions to the revolution.

Building a strong party that has a strong, pure organizational structure and a corps of party members who possess the necessary skills and political qualities mentioned above is a difficult job and requires continuous effort.

Once the correct line has been adopted, the matter that directly determines the success of this line is the organization of its implementation, and, in practical organizational work, the corps of cadres plays the decisive role, especially with regard to our army when implementing the "one person in command" system. In the new stage, the tasks of building socialism and protecting the socialist fatherland demand that the corps of cadres possess higher organizational and managerial skills in every area. Our party and state must build and forge a corps of cadres who possess good political qualities and are skilled in taking action. The corps of cadres must be large enough for the various organizations within the dictatorship of the proletariat system and must meet both the immediate and long-range requirements of building and protecting the fatherland. This corps of cadres must consist of cadres who provide guidance and management in economics, the culture, society, highly specialized fields, productive labor, scientific research, etc. This corps of cadres must be built in exact accordance with the working class line of the party and in exact accordance with strict selection of guidelines and standards consistent with the development of our society. In order to make a positive contribution to the protection of the fatherland and fulfill the task of building the country, our cadres, regardless of their field of activity outside the army, must possess certain military knowledge. Only in this way can we smoothly coordinate the economy and the defense of the nation, coordinate building and combat.

The corps of cadres of the party within the army must be trained and forged so that it is strong enough to serve as the nucleus of the effort to build the national defense system, the nucleus of the building of powerful people's armed forces and the nucleus of a victorious people's war to protect the fatherland. We must formulate cadre planning and build a corps of cadres whose structure is well coordinated and consists of increasingly developed command cadres, political cadres, scientific-technical cadres and specialized cadres as well as skilled scientific research cadres, theoretical research cadres and instructors. Cadres must receive basic, comprehensive and highly specialized training so that they can excellently complete every task assigned to them by the party and state. When a party member becomes a cadre, the basic standards regarding his political qualities and ability to take action must be higher. Fortunately, the vast majority of the cadres of the party within the army today have been directly forged for many years in the patriotic war and in the revolutionary movement of the masses, thus accumulating much valuable experience. However, we cannot be satisfied or stop at this point, rather, cadres must make every effort to study and make continuous progress. Cadres must see the new requirements that exist in the new stage of the revolution, that lie along the path of building socialism and protecting the socialist fatherland. The abilities and qualities of cadres can only be developed when cadres always keep abreast of the requirements of the revolution, of the continuous development of the revolutionary struggle and actively endeavor to make progress. Scientific and technical cadres must develop their talents, reach the pinnacles of world science and technology and learn the very best knowledge of the nation with a view toward achieving the goal of making the fatherland prosperous and strong and bringing happiness to the people.

Only by raising the matter in this manner is it possible for there to be steadfast efforts on the part of each individual cadre as well as the agencies that organize and manage cadres.

On the basis of a large corps of cadres who are deployed and engaged in activities in all fields of the country, the party must select a corps of high level cadres who are competent, firm and pure in every set of circumstances and in the face of every development of the revolution. High level cadres are the persons who bear major responsibility for organizing the successful implementation of the party's line and turn it into the strength of millions of persons in productive labor and combat. High level cadres are also persons who are highly capable of contributing to the formulation of the lines and policies of the party through their practical activities. High level cadres also play a very important role and have a very important task in training the corps of successors and preparing the persons to replace them for the sake of the interests of the revolution. When a cadre is assigned a more difficult task, the scope of his activities and his relationships, consequently, become broader and, as a result, this cadre assumes heavier responsibilities with regard to protect the prestige and reputation of the party by means of the examples he sets and his practical activities. The same applies within the armed forces; high ranking cadres are persons who control and utilize large forces of personnel, equipment and weapons and who occupy important positions in both combat and work. The ability, spirit and style of a high ranking cadre in both combat and work are most clearly evident in annihilating the enemy and winning the largest possible victory in combat with the lowest possible loss of our forces, thereby influencing the strength of the unit and the confidence of lower ranking cadres and soldiers in a positive manner. In guidance, command activities and management, high ranking cadres must establish the correct relationship between the collective and the individual and must respect and listen to the correct opinions of the lower level; instead of relying upon the collective, upon the upper level, they must make decisions in a full spirit of responsibility while not being authoritarian or arbitrary. They must maintain a simple, wholesome style of life. The party must have a long-term plan for selecting high ranking cadres; at the same time, the party must give this corps of cadres a clear understanding of their position and role in the common undertaking of the country and the people.

For more than one-half century, under the leadership of the party, our nation of Vietnam has continuously waged extremely difficult fights filled with sacrifices against cruel aggression by many large enemies. In the historic tests of strength, which were matters of survival to our nation and of tremendous international significance, our people won total victory over imperialism and have also won victory over the Chinese expansionists and hegemonists.

However, the ambition of the enemy remains. The reactionary rulers in Beijing are continuing to pursue their insidious scheme to weaken and annex our country in order to sweep into Southeast Asia in a vain attempt to become rulers of the world. They are frantically looking for every way to collaborate with the imperialists, primarily the U.S. imperialists, in order to carry out their long-range, sinister scheme.

However, our people and armed forces have the correct, wise and experienced leadership of the party. Our ability to defend the country is greater than ever before. We have our militant solidarity with the fraternal peoples of Laos and Kampuchea. We have comprehensive cooperation with and tremendous, effective assistance in many areas from the Soviet Union and the other fraternal socialist countries and the sympathy and support of friends throughout the world. In our just undertaking and amidst the great strength of our nation and our times, our generation of today and the generations of tomorrow possess and shall possess the determination and skills, the will and ability, the intelligence and confidence to build a prosperous and strong Vietnam, forever protect the beloved Vietnamese socialist fatherland and make worthy contributions to the cause of revolution and peace in the Far East, in Southeast Asia and the world.

MILITARY AFFAIRS AND PUBLIC SECURITY

FUNCTION, AUTHORITY OF MILITARY CONTROL FORCES CLARIFIED

Hanoi QUAN DOI NHAN DAN in Vietnamese 12 Jun 81 p 3

[Article by "Chien Si Dieu Lenh" [Ordinance Combatant] in "Understanding Orders and Regulations" Column: "Function and Authority of Military Control Forces"]

[Text] Question: What are the function and authority of the military control forces? How can one distinguish a genuine military control armyman from an impostor with bad intentions? Who has the right to control military men and to exercise military control?

Answer: The functions of the military control forces are:

--To maintain military discipline, state law and social order and security with regard to all armymen and military transportation means outside barracks.

--To cooperate with and assist the public security force and others in maintaining political security and social order and security within the assigned area.

The above-mentioned two functions are related, sometimes closely; however, the military control forces must consider the first function as the permanent and most important one.

In carrying out their duty, armymen in charge of military control have the following power:

--Remind and correct military men who violate orders and discipline.

--Control and inspect documents, luggage and goods of military men and military transportation means whenever they show any sign of infringement of law or discipline at places determined by the commander of the troops' stationing areas.

--Arrest and detain military men committing a serious infraction of law or discipline and bring them to the troops' stationing area for judgment by the high echelons.

--Search, arrest and detain military men caught red-handed violating the law as well as the persons involved in such cases and seize the evidence--if any--according to law.

--Use weapons if the lawbreaker resists and endangers the lives of the armymen in charge of military control and the lives of other people or if the person guilty of serious lawbreaking refuses to obey the "stop" or "hands up" order, runs away or offers resistance.

Except for the above-mentioned provisions, armymen in charge of military control are not allowed to confiscate anything from military men such as military equipment, jewelry and so forth.

At present, armymen in charge of military control wear on their left arms a red band with the letters "Military Control" and are provided with credentials made after a uniform pattern used by the entire army (there are three types of military control credentials which are all made of printed forms).

--Whenever a military control armyman who wants to exercise control over another military man is requested by the latter to show his credentials, he must show his credentials together with his identity card.

--Armymen in charge of military control are subjected to control by the commander of the troops' station area and his assistant cadres and also by the cadres bearing credentials empowering them to exercise control over the military control forces. (Whenever a cadre wants to exercise control over armymen who are carrying out their military control duty, he must show his credentials and identity card.)

All military control credentials must be made of the printed forms available and will be considered valid only if they bear the signature and seal of a division commander or his equivalent or superior.

BEIJING CALLED CENTER OF SUBVERSIVE ACTIVITIES IN ASIA

Hanoi TAP CHI QUAN DOI NHAN DAN [PEOPLE'S ARMY REVIEW] in Vietnamese No 2, Feb 81 pp 50-55

[Article by Tran Trong: "Fomenting Rebellions--a Dangerous Method of the Beijing Expansionists"]

[Text] For a long time, fomenting rebellions has been one of the dangerous methods employed by Beijing to achieve expansion and power and annex neighboring countries in Southeast Asia and South Asia.

Beijing's method of fomenting rebellions is basically the same as the methods of fomenting rebellions employed by the imperialists and reactionaries since antiquity. However, due to the specific characteristics of Chinese expansionism and hegemony, the rebellions fomented by them are different in many ways from the rebellions engineered by the imperialists, in terms of viewpoint and thinking, the organization of forces and the measures employed. Thus, what are the characteristics of the scheme of the Beijing expansionists of fomenting rebellions and what activities do they employ to foment rebellions?

Reviewing the various rebellions fomented by Beijing, one sees certain characteristics in the nature of laws in their scheme of fomenting rebellions.

1. The Organizations and Activities Employed by Beijing To Foment Rebellions Are Generally Called "Revolutionary" but Are Based on the Viewpoints and Strategic Objectives of Expansionism and Annexation

It is not surprising that the rulers in Beijing have long liked to talk about the so called "great world rebellion." Facts have shown that this viewpoint is not only designed to create a tense situation in the world and provoke the psychology of war, but also designed to camouflage a very insidious and malicious strategy. It is the strategy of fomenting rebellions, causing neighboring countries to constantly be unstable and causing them to fall into a state of chaos so that they can control these countries or topple their governments and replace them with lackey governments.

In its scheme of creating a prolonged and pervasive state of "rebellion" in a number of countries, Beijing generally sets forth such fraudulent revolutionary viewpoints as "lying in ambush for a long time" and "waging a protracted armed struggle," which, in essence, are designed to "harrass on a long-term basis" other countries by means of counter-revolutionary rebellions. The rebellions and the insurgent forces that have been guided and supported by Beijing in a number of countries, such as India, Burma, Thailand and so forth, for many years prove this.

As is the case with the rebellions fomented by the imperialists, the rebellions organized by Beijing are generally closely associated with massacres and barbarous terror. According to foreign press reports, at a number of places, such as northeast India, Burma and so forth, local reactionary lackeys of Beijing have massacred thousands of persons in rebellions. Their organizations that foment rebellions in various countries are called by very "revolutionary" names, such as "the Marxist-Leninist Communist Party"(Thailand), the "Social Party"(Laos), the "National Front for National Salvation"(Laos), the "Fraternal Islamic Organization"(Afghanistan), etc. The rebellions fomented by them in other countries are described as "revolutionary struggles" and they proclaim that "supporting revolutionary struggles(!) is the international obligation that China must fulfill." For decades, Beijing has been and is using more than a small amount of money, weapons and cadres to support and employ reactionary forces in Southeast Asia and South Asia.

As an important measure in the long-range strategy of expansionism of Chinese hegemonism, Beijing's scheme of fomenting rebellions has actually become a primary and constant danger threatening the independence and security of other countries and the stability of all Southeast Asia and South Asia.

2. Organizing, Supporting and Making Coordinated Use of All Reactionary Forces as Tools for Fomenting Rebellion

In the rebellions masterminded by Beijing, we generally see the participation of many different reactionary forces. These primary forces consist of:

--Local reactionary elements, who include landowners, reactionary bourgeoisie, dissatisfied and opposition elements and the leaders of reactionary political parties. In ethnic minority areas, Beijing usually tries to win over the leaders of tribes and the leaders of smuggling organizations. A typical example of this is the fact that Beijing has, for decades, been making every effort to "build a base" among the Meo Tribes living in the northern border areas of Vietnam, Laos, Thailand and Burma and among the ethnic minorities in northeast India, Nepal and Pakistan. Another clear example is that the ringleaders of the opium smugglers in the "golden triangle"(which lies along the borders of Burma, Thailand, Laos and China) have long had close ties to Beijing.

--The ringleaders of bandits and traitors who live in exile, having fled to foreign countries: these include such persons as Vang Pao and Cong Le (from Laos), Pol Pot, Ieng Sary, Khieu Samphan, Son Sen and Sihanouk (Kampuchea), Hoang Van Hoan (Vietnam), etc. The western press reported that, in 1978, when Vang Pao was invited to Beijing, the Chinese authorities "rolled out the red carpet as though he were a head of state." Each time Cong Ly, Pol Pot and Ieng Sary have gone to Beijing, they have been "received at Dieu Ngu Dai--a place reserved for receiving heads of state." They were received so "formally" because they (with the exception of Hoang Van Hoan) still control a number of bandits hiding in Thailand who are forces that are "highly rated" by Beijing for use in fomenting rebellions. The reactionaries within the ethnic minorities along the northern border of Vietnam that fled to live in China, proclaiming themselves to be the Meo king, the Thai king, the Nhung king and so forth, and the reactionary tribal chiefs of the Islamic minorities in Afghanistan who are supported by Beijing in Pakistan are also of this type.

--The "emigre" reactionaries, the majority of whom are puppet officers and enlisted men and puppet government personnel in South Vietnam, Laos and Kampuchea who committed many crimes, refused to undergo transformation and fled the country. In 1979, Beijing sent one group of "security cadres" after another to the "refugee camps" in Thailand and declared that they would select from 16,000 to 20,000 persons to be sent to Hai Nam Island in China for training. In early 1980, according to western news reports, they recruited 6,000 persons and organized them into two divisions in preparation for sending them to commit acts of sabotage and foment rebellions in the countries of Indochina. Beijing has been trying for many years to organize and train forces of this type. According to western news reports, Beijing has so far established 40 training camps for this type of reactionaries in Tay Tang and 20 special training camps controlled by Chinese advisors in Pakistan for the purpose of supporting their scheme to foment armed rebellion in India and Afghanistan.

--The "underground army of ethnic Chinese" is a dangerous force already used by Beijing in plans to foment rebellions in Indonesia, Malaysia, Thailand, Vietnam, etc. Large (more than 20 million ethnic Chinese are in Southeast Asia) and occupying important positions within the economies and administrative apparata of some countries, this "underground army" is capable of committing economic sabotage in coordination with political disruption in order to incite rebellions.

The Maoist forces disguised as "revolutionary organizations" or "communist parties," that are organized, supported and commanded by Beijing are also a dangerous tool in the scheme of fomenting rebellions. The activities of the Maoist organizations in Thailand, Malaysia, Indonesia and so forth and of the organization called the "People's Army" in the Philippines have caused these countries to experience a nearly constant lack of security and stability for many years. During the past several years, the Beijing authorities have, on the one hand, been making every effort to court the governments of the ASEAN countries and, on the other hand, have publicly pledged to "absolutely support" these forces within the scope of "party to party relationships" for the purpose of exerting pressure and maintaining the ability to foment rebellions and topple governments when possible.

Beijing's network of spies and secret service agents, which extends throughout almost all of the countries of Southeast Asia and South Asia, has the task of organizing insurgent forces and the task of guiding rebellions. According to the western press, this network is divided by type of activity and region. It is under the command of such agencies as the Central Intelligence Department of the Chinese

People's Liberation Army, the Hoa Nam Intelligence Department, Southeast Asian Liberation Headquarters and so forth. In the activities of Beijing designed to foment rebellions, we generally see that the diplomatic agencies of China overseas, such as the embassies, consulates, commercial representatives, offices of the New China News Agency and so forth are local centers guiding and commanding rebellions.

The above mentioned forces are usually utilized by Beijing in a coordinated fashion depending upon the objectives, the situation and the course of development of rebellions in each country. Compared to the imperialists, Beijing has forces that the imperialists do not have for fomenting rebellions (such as the "underground army of ethnic Chinese," the Maoist organizations masquerading as revolutionary organizations and so forth).

3. The Coordination of Many Methods and Measures.

In order to foment rebellions, Beijing usually attaches importance to coordinating many political, economic and military methods and measures. This coordination involves the use of psychological warfare to provoke the masses into staging rebellions through acts of economic sabotage and the use of military pressure or a war of aggression in a vain attempt to rapidly create a state of confusion and instability in countries. Beijing's use of the "army of ethnic Chinese" to commit economic sabotage, create political confusion, foment rebellion and topple the government in Indonesia, its coordination of a war of aggression on the border with the fomenting of rebellions within the ethnic minority areas in northeast India, its use of pressure and threats of aggression along the border combined with acts of psychological warfare to provoke insurrections and a coup d'etat in Laos and so forth prove this fact.

Even within each type measure, Beijing generally coordinates many different methods. For example, economically, they generally use ethnic Chinese merchants to disrupt the market in coordination with economic embargoes from the outside. Militarily, they generally coordinate the intensification of armed activities by local insurgent forces with the intensification of provocation, military pressure and threats of a war of aggression. In the war of aggression against Vietnam in early 1979, Beijing planned to foment rebellions in the northern border provinces and even provoked ethnic Chinese and decadent elements in a vain attempt to foment rebellions in both Hanoi and Ho Chi Minh City; however, they were tragically defeated.

Deserving of attention is the fact that Beijing attaches very much importance to provoking bigoted nationalism and sowing national hatred, especially in ethnic minority areas. Here, they usually employ lackeys and secret service agents in a psychological war waged by taking advantage of superstitions and using counter-propaganda to distort the policies of the local government. Recently, they have also employed at a number of places methods employed by the U.S. imperialists, such as sending in goods from China to bribe the people in ethnic minority areas and distributing psychological warfare "gifts" containing leaflets appealing to the people to overthrow the government.

In recent years, Beijing has also made efforts to use religions for subversive purposes. Many diplomatic agencies of China in the countries of Southeast Asia have made secret contacts with Buddhist, Catholic and Islamic organizations. Beijing's recent proclamation of support for the insurgent forces in the so called "Fraternal Islamic Organization" in a vain attempt to gain control over this forces in order to oppose the Afghanistan revolution is a typical example of this sinister scheme.

Exporting counter-revolution in order to foment rebellions is a malicious and very brazen measure that has been employed by Beijing. In the 1960's and the early 1970's, when the so called "great cultural revolution" was being accelerated throughout China, we noticed the emergence in many countries of Southeast Asia and South Asia of numerous organizations of overseas Chinese called "Red Guard" that engaged in activities against the laws, the system and the policies of the host countries, disrupted order and security and appealed for a coup d'etat. Today, although the rulers in Beijing have declared that the "cultural revolution" has ended, they have not abandoned their scheme of expanding and annexing other countries. For this reason, exporting counter-revolution is still a measure that Beijing will continue to employ.

4. Close Collaboration with the U.S. Imperialists in the Effort To Foment Counter-Revolutionary Rebellions

In recent years, years during which the leaders in Beijing have openly collaborated with the imperialists, especially the U.S. imperialists, with a view toward opposing the Soviet Union, Vietnam and the other socialist countries together with all revolutionary and progressive forces in the world, this collaboration has been clearly evident in the fomenting of rebellions overseas. Issue number 5 of the INFORMATION BULLETIN (July-August 1979) forthrightly stated that "according to reliable CIA sources, in his visit to Beijing in 1971, Kissinger laid the groundwork for an agreement to exchange strategic intelligence information with China." In subsequent years, "the Sino-American exchange agreements closely linked the clandestine intelligence activities of the United States...with the intelligence activities of China in Indochina." In the near future, "there will be more closely coordinated clandestine activities between China and the United States in Southeast Asia" and "the objective of these Sino-American activities will be to oppose the three revolutionary countries of Indochina." On 5 March 1978, the French newspaper THE NEW OBSERVER reported that China is planning to "revive the FULRO organization, a product of the U.S. spy network" to "foment rebellion against Vietnam." During the years that Beijing used the Pol Pot-Ieng Sary lackeys to wage a war of aggression against Vietnam on the southwestern border, there was much evidence of coordinated activities between Chinese secret service agents and lackey reactionary forces left behind by the United States in a vain attempt to foment rebellion in the provinces of South Vietnam. According to the western press, for nearly 1 year, Beijing and Washington have been closely collaborating in an effort to undermine the Afghanistan revolution by means of rebellions. Behind the so called "bilateral coordinated actions in the Afghanistan issue," we see that both Beijing and Washington have sent dollars, weapons and military "advisors" to strengthen the forces of the Afghanistan insurgents.

In this collaboration, they are in agreement with each other with regard to undermining and weakening revolutionary forces; at the same time, there are also antagonisms between them. As a result, it must be stated that this collaboration is very dangerous to the peace, security and stability of countries, especially in Southeast Asia.

As regards Beijing, in addition to the prime objective of opposing the revolution in the three countries of Indochina, they also want to use this collaboration to infiltrate the countries of Southeast Asia in a vain attempt to establish a foothold and strengthen the position of the pro-Beijing forces within the ASEAN countries, as they have done in Thailand.

All of the characteristics mentioned above show that, today, Beijing has truly become a center organizing and guiding all forces engaged in the fomenting of counter-revolutionary rebellions in Southeast Asia and South Asia. Clearly, Beijing's policy of expansion and hegemony and collaboration with the U.S. imperialists is the origin and the primary cause of the confusing situation and the threat to the peace and stability of this entire region.

However, the realities of several decades of defeat for Beijing in the scheme of fomenting rebellions in this region show that these strategic measures are not as effective as Beijing would like them to be. Despite this, the Beijing authorities are still frantically preparing for a war of aggression in coordination with intensifying the fomenting of rebellions.

Clearly aware of the enemy's scheme, our people and our armed forces are always alert and vigilant, are in a high state of combat readiness and are determined to defeat every malicious, insidious scheme of the enemy and successfully build and firmly protect the socialist Vietnamese fatherland. Beijing's scheme of fomenting counter-revolutionary rebellions and instigating wars of aggression shall surely be defeated.

MILITARY AFFAIRS AND PUBLIC SECURITY

FUNCTIONS OF BATTLEFIELD AIR FORCE OUTLINED

Hanoi TAP CHI QUAN DOI NHAN DAN [PEOPLE'S ARMY REVIEW] in Vietnamese No 2, Feb 81 pp 39-49

[Article by Colonel Le Vien: "The Battlefield Air Force"]

[Text] Today, when a war to protect the fatherland breaks out, a campaign in which there is coordination among the modern branches and services will be a type of widely used campaign in warfare waged by main force military corps. The battlefield air force military corps is a form of organization and utilization of forces of the air force in order to participate in such campaigns.

The battlefield air force is a combat air force consisting of many different branches, such as the fighter branch, the fighter-bomber branch, the helicopter branch, the reconnaissance aircraft branch, the transport aircraft branch and so forth. The correct determination of the role, task and mode of utilization of the battlefield air force in campaigns in which there is coordination among the various branches and services makes a large contribution to achieving the combined strength of the main force military corps in a war to protect the fatherland.

In combat against the war of aggression waged by the Beijing reactionaries and their lackeys Pol Pot and Ieng Sary in the southwestern region of our country, the Southern Air Force, the function of which is to serve as a battlefield air force, began to achieve the offensive strength and mobility of the air force and basically completed the mission of controlling the air space, attacking ground and water targets, supporting command and transportation operations, supporting the mobility of forces and so forth, thereby helping to achieve the basic objectives of the various campaigns, especially the spring campaign in 1979. This article presents a number of experiences gained in the use of the battlefield air force in campaigns.

1. Making thorough, comprehensive and well coordinated preparations for campaigns and adopting a plan and norms that concentrate on the primary mission.

In the formulation of a campaign plan, it is of utmost importance to correctly establish the primary mission of the air force:

Generally speaking, each military corps of the air force has two basic missions when participating in a campaign: air defense combat operations and combat operations coordinated with the various branches and services. On the basis of the experience gained in fighting to protect the southwestern border, the southern air force realized that it was necessary to attach importance to the mission of providing direct combat support to the various combat branches and services. Correctly determining the primary mission of the air force on each front in each campaign is the basis for guiding the preparation of campaign forces and campaign training activities, organizing coordinated command operations and providing rear service and technical support consistent with the mission of the military corps. However, it must be realized that the air defense mission and the combined branches and services combat mission are closely related. Both of these missions have the purpose of competently supporting the various branches and services in the completion of their campaign mission. As a result, the Southern Air Force prepared the campaign for the correct direction, carefully prepared the various targets to be attacked on land and water and fulfilled the mission of the battlefield air force well.

Campaign preparations for the battlefield air force must be very well coordinated.

The success of the Southern Air Force in the formulation of its plan was that it gradually established norms that had to be met in the campaign: the basic mission that had to be completed; the primary targets that had to be destroyed; the mode of combat operations and the number of the various types of aircraft needed; the ratio among the various types of aircraft; the number of stationary and mobile troops that had to be supported during the campaign; the permanent and field air strips that had to be used or developed; the quantities of food, petroleum products and ammunition that had to be stockpiled; campaign attrition levels, etc. Although these norms were only projections, they did have the effect of giving the leaders of the various sectors, agencies and units a basis for making detailed calculations in each of their specialized areas.

The operations of the battlefield air force are operations that involve many elements of the service, many different objectives and combat coordination. For this reason, importance must be attached to making well coordinated preparations, both in the air and on the ground, in flight units and the agencies of flight units, at air force bases and command facilities and at the command posts coordinating with the various combined military corps. The commander of the battlefield air force must not only concern himself with a specific type of aircraft, but must also provide detailed guidance of preparations, methods of fighting, methods of combat operations, support operations and so forth for all of the types of aircraft within the formation. This is a factor that makes it possible to make optimum and highly efficient use of campaign air forces.

Campaign training must also be well coordinated. If fighter and bomber forces are well trained and well prepared for the campaign but the observer, reconnaissance and transport forces within the table of organization of the battlefield air force are not properly prepared, are not well coordinated in terms of their level of combat readiness and their ability to coordinate tactically with the bomber and fighter forces, they will pose obstacles to the completion of missions by the other elements.

If importance is only attached to training in the air but attention is not given to training command staffs and support facilities, it is difficult to complete missions well. At air bases, the lack of thorough preparation in any aspect of the handling and loading of bombs and ammunition will more than slightly affect the efficiency of fighters and fighter-bombers in the performance of their mission.

Importance must also be attached to providing training in combat coordination among the various elements of the service, among the various types of aircraft within the air force and between the staffs and combined branches and services in order to achieve higher efficiency in the performance of campaign missions.

The training of the staffs that prepare the campaign must be coordinated with the task of formulating plans for and preparing command posts and ground facilities. The training of staffs must also be well coordinated so that the command posts on the upper level and the lower level are united in their actions and in agreement with one another.

There must be good training in air communications so that air forces can be commanded in a precise, rapid and firm manner; there must be good training in organizing coordinated communications in order to provide timely support of the various combined services; the command posts of the combined services must also give attention to selecting positions and creating the conditions for the establishment of air force command facilities in offensive campaigns. The air force itself must prepare a number of tables of organization of air force representation sections in advance in order to promptly perform the task of observing the offensive thrusts of the combined services.

In the comprehensive, well coordinated preparation of the command posts on the ground and in the air, the front command posts and the air force representation sections must receive uniform training in how to prepare basic command posts and the central command posts of the military ccrps. The basic command posts must be staffed with adequate personnel and have sufficient means to keep abreast of the situation on the various fronts and maintain close contact with the air force representation sections. Experience has shown that it is necessary to organize a command staff component in the air field duty area in order to rapidly assess every aspect of the situation of returning combat border units and flights and promptly disseminate information and intelligence to forces leaving for combat.

2. Knowing the basic objective of the campaign, the mission of each front, of each stage, of each key battle and the role of each target in battle.

Knowing the basic objective of the campaign is the basis for correctly determining combat strategy and correctly and creatively applying the tactics of the battlefield air force.

Experience has shown that wherever the basic objective of the campaign is not thoroughly understood, certain difficulties arise in leadership, in the organization of command operations and in the specific combat operations of the border units and flights. Each campaign front, each stage of development and each battle in the campaign has different specific requirements; sometimes, these specific requirements are dependent upon how the commander of the combined military corps employs the air force. Therefore, in the process of gaining a thorough understanding of the basic objective of a campaign, it is necessary to gain a detailed understanding of the intentions of the commander on each front as well as during each stage and at each opportunity of decisive significance in the campaign. This is the basis for correctly determining how to use air forces, how to use each type aircraft in the various missions and the basis for selecting modes of combat operation designed to achieve high combat efficiency.

Correctly and rapidly determining the primary front in need of air support, determining air support priorities and resolutely concentrating air support on key battles are the valuable experiences that were gained by the Southern Battlefield Air Force.

In the fight against the Beijing reactionaries and their lackeys on the southwestern border, the battlefield air force had an advantage in its favor, namely, it was directly commanded and assigned its missions by the Ministry of National Defense. In order to carry out the missions and directives of the ministry, the forces of the battlefield air force were utilized in a rather concerted manner; at one time, more than one-third of these forces were used to carry out the primary mission. In view of the facts that the number of the various types of aircraft available was limited, there were very many specific missions and all of these missions had to be performed during the same time and over a very large area, this represented a major effort to implement the principle of centralizing forces for the purpose of carrying out the primary mission of the battlefield air force. Facts have shown that in combat operations that are coordinated among the various services and branches, both the army and the navy simultaneously have legitimate needs for air support in many different directions which require that the commander of the air force consult with the upper echelon in order to make truly efficient and economical use of air power. Sometimes, there is a true need to support both the army and the navy at the same time, to provide direct support to the combined military corps and conduct necessary independent air force operations at the same time as well as a need to make the secondary direction of attack the primary direction of attack. For this reason, rapidly determining air support priorities and resolutely centralizing the forces of the air force in order to support key battles demand that the battlefield air force commander be clearsighted, flexible and determined in his decisions.

From its experience, the Southern Air Force learned to seize the opportunity, resolutely utilize its forces to deeply penetrate enemy territory and stage long-range attacks, quickly shift from one stage of combat to another and maintain continuous combat operations.

In a campaign, opportunities such as the following might arise: the enemy might be routed and flee, the enemy might draw back or shift to the defensive, the enemy might launch a counter-attack or counter-offensive and so forth. It is necessary to promptly recognize these opportunities and be determined to employ the air force and take bold tactical measures.

After a period of combat, after examining the actual situation and after evaluating the air and air defense forces of the enemy, the commander of the battlefield air force raised the operational altitude of the attack aircraft flights in order to facilitate radar intelligence, facilitate air communications and broaden the scope of operation of aircraft, carry out the decision to deeply penetrate enemy territory and stage long-range attacks and support the combined military corps. The making of calculations to determine the best time for bomber forces to operate in view of the development of the campaign and determine the order of takeoffs and the rotation of aircraft as well as the targets to be attacked and assaulted under the condition of us controlling the air space increased the accuracy of the surprise attacks by the air force. These were examples of seizing opportunities in the campaign to increase the combat efficiency of the air force. In every campaign, depending upon the specific situation, the operations of the various services and branches shift from one stage to another, from offensive operations to temporarily maintaining positions, from heavy attacks to mop up operations, from temporary defensive operations to offensive operations, etc. In order for the air force to be independent in both its thinking and actions, it is necessary to predict the development of the situation and the missions and mode of operation of its border units, flight units and other forces. As regards combat operations in the process of shifting from one stage to another, the air force commander must first give thought to promptly providing guidance with regard to the methods of fighting to be employed, the scale of the utilization of forces and the methods to be employed in combat operations, must set forth a suitable plan for the use of weapons and so forth. These are the factors of decisive importance in insuring that the battlefield air force can always take the initiative in combat and constantly increase the combat efficiency with which it completes its missions in the course of development of the campaign.

In view of the conditions under which we operate, it is not enough for us to merely make concerted use of our forces in key battles, rather, we must also concentrate the use of our forces on primary targets and must hit the primary target within each group of targets.

Depending upon the specific objective of a battle, including key battles, different air support requirements might arise, such as attacking a seaport without hitting its warehouses, attacking an air field in order to paralyze its operations without damaging its runways or bridges in the course of the attack, attacking ferry landings without destroying ferryboats, etc. These are very high requirements throughout the entire course of a battle which air force combat border units must firmly grasp and which demand that these units overcome their difficulties in order to carry out the maneuvers involved in attacking targets and meet the requirements of the combined military corps. This is also an expression of the spirit of using the combat mission of the combined branches and services in battle, in a campaign, as the combat support objective of the battlefield air force, in particular, and the air force, in general.

The commander of the combined military corps must make known to the air force what the primary target within each group of targets is so that the various border units and flight units can attack them in a way that precisely meets the requirements of the combined military corps. The realities of combat have shown that the fighter-bomber forces of the air force were utilized rather well and that their use was rather highly concentrated on primary targets. In the spring campaign of 1979, 46 percent of the total number of the sorties flown by the border units and flight units of the air force were used to attack and destroy primary targets, such as enemy artillery positions, command posts, etc. However, what must be learned from this experience is that both the commander of the combined military corps and the air force commander are responsible for meeting this requirement.

As for themselves, the combat flight units and border units of the air force also must understand that launching concerted attacks means concentrating their attack on one target so that they do not disperse their firepower. They must be truly flexible and creative so that they hit the predetermined primary target with the highest possible offensive capability and the highest possible number of bombs. The effort to provide a thorough understanding of the basic objective of the campaign, the mission of each front and the mission in each stage and key battle and each target in battle must be carried out well within the basic units and among all troops participating in the campaign, especially with regard to the various party committee echelons and the commanders from the detachment to the military corps levels. In a campaign, it is necessary to quickly detect and correct anything that shows the lack of a thorough understanding of the basic objective of the campaign.

3. Making efficient, concerted use of one force after another in the primary mission, on the primary front and at primary opportunities; organizing large-scale annihilating attacks, direct hits on the target and continuous attacks better; and achieving the combined strength of the various forces in the tables of organization of the military corps.

Making efficient, concerted use of one force after another is a guideline and a method in the effective use of the air force. In a campaign, the air force generally operates over a large area, must coordinate its combat operations with many combined military corps, must support many fronts, carry out many missions and attack many targets. In view of the fact that the forces of the air force are limited, it is even more necessary for the commander of the battlefield air force to firmly adhere to the guideline of making concerted, efficient use of one force after another to attack primary targets.

To accomplish this, it is important to correctly establish the order of priority of the mission that the air force must perform and the targets to be attacked. It is necessary to comprehensively analyze the relationships among the various missions, targets and fronts. On this basis, the air force commander must determine on which mission and target he should concentrate his forces first and on which mission and target he should concentrate his forces later. In the course of a campaign, the air force commander's attention can still be distracted by requirements of the combined military corps, the requirements of the air force representation sections onthe various fronts and so forth, consequently, it is easy for the use of combat border units and flight units to become decentralized. To correct this situation, the battlefield air force commander must be both determined and patient in his evaluation and analysis of the situation and be able to skillfully organize and utilize his forces as calculated.

Raising the percentage of annihilating attacks and direct hits, achieving high efficiency in each battle and achieving high results from the entire campaign: the battles fought by the air force in areas B. and C., on S. Mountain, at K. River, at Wharf N. and in Ports X. and Z. were evaluated as highly efficient battles. These battles not only destroyed enemy forces and their weapons and storehouses, but also directly supported the combat activities of the combined military corps. However, there was also a small number of attacks on some targets in which many bombs were used but not with high efficiency. The requirement of a campaign is that the battlefield air force hit targets on the ground or water, hit the vital portions of targets, hit the positions requested by units.

Hitting the target is related to the economical use of forces, to making concerted use of one force after another against targets and to shifting support forces to other fronts. Because of inaccurate bombing that fails to destroy the target, a number of sorties must be flown to attack the target the next time or the next day; this makes it impossible to economize on forces or concentrate the use of forces on other missions. In actuality, there are some targets that the air force must attack several days in a row; in addition to the need to support the combined military corps, such attacks are also necessitated by inaccurate attacks on requested positions. Even the reports by combat pilots on the results of attacks on targets will, if inaccurate, affect the decision of the commander regarding the use of forces. For this reason, attention must be given to conducting reconnaissance operations before, during and after an attack in order to precisely determine the results of combat and decide how to use subsequent forces.

Another experience is that of fully utilizing the combined strength of the forces in the table of organization of the air force.

Each military corps within the air force has a certain number of personnel, aircraft and means and consists of many different branches. The problem faced is how to fully utilize the strength that lies within the table of organization of the military corps in the campaign. The Southern Air Force boldly assigned new pilots to fly together in combat and promptly reassigned pilots in order to utilize the various types of aircraft required by the campaign. The Southern Air Force also made it possible for all types of aircraft to employ many different methods in combat; they not only had to be proficient in attacking prepared targets, but also had to attack targets by voice command or search for and destroy targets on their own. Some aircraft were assigned additional missions and their method of operation was improved, thus further developing the offensive strength of the air force. The level of coordination was constantly raised and the support operations at bases, which quickly prepared for the next sortie, increased the intensity of combat of the border units and flight units and multiplied the combined strength of the air force. As regards a mixed military corps within the air force, the full utilization of air and ground forces, command facilities and so forth for the purpose of achieving the combined strength of the unit represents the thorough implementation of combat guidelines and the art of utilizing forces.

4. Establishing a unified, centralized, well coordinated command, establishing an efficient relationship between centralized and decentralized commands, attaching importance to coordinating combat operations by target and time and closely coordinating combat support and the campaign.

In organizing coordinated combat operations, it is necessary to understand the fighting methods of coordinating units, give friendly units an understanding of the capabilities of the air force, the capabilities of each type of aircraft and correctly employ forces in a manner consistent with missions. In the realities of a campaign, the fighting methods of each corps in the army and navy are very flexible and diverse and are constantly changing and developing, sometimes involving attacks to breach enemy lines, sometimes involving mobile attacks, sometimes involving landings on beaches, etc. If the air force does not truly understand the formation, the fighting methods and the methods of operation of the military corps and the combined units, does not understand the difficulties of friendly units and does not understand the key opportunities for air support, it will be difficult for the air force to competently support the combined military corps. On the other hand, if the air force does not give friendly branches and services an understanding of its capabilities, the capabilities of each type of aircraft against each target and under various weather conditions, the method of assaulting targets of each type of aircraft and so forth, it could easily lead to demands for air support that are too high and to the use of air support in a manner that is not consistent with its missions or capabilities, thereby reducing its combat effectiveness and sometimes causing a lack of agreement regarding coordinating efforts.

Only by establishing a unified, centralized and well coordinated command with a clear division of responsibilities is it possible to increase the efficiency with which command operations are organized. Battlefield operations require a high level of combat readiness, close coordination in combat in terms of targets and timing, the simultaneous use of many elements of the service and continuous, intense combat operations. This demands that the air force command be unified, centralized and well coordinated and have a clear division of responsibilities. The deployment of many command centers (the basic command post, the foward command post, the front command posts, the air force representation sections, the air field command posts for command aircraft, transport aircraft and so forth) and the simultaneous deployment of hundreds of radios of all types are objective requirements of the battlefield air force. Therefore, it is necessary to unify and centralize every campaign command decision within the central command post so that it has the ability to firmly command all air and ground command centers and has the highest authority. The command on the air force corps level is, in actuality, the campaign command and determines the missions, the campaign fighting method, the utilization of forces, the selection of targets and so forth of the air force. The commands on the air force detachment level lie within the scope of organization of takeoff and landing operations and the organization of the formation, the fighting methods and the specific flight routes for each target and objective.

In order for command operations to be stable and smoothly coordinated, importance must be attached to establishing coordination between the detachment command echelon and the military corps command echelon, especially with regard to organization, communications equipment and work procedures among the various command posts. An air force representation section that is observing operations on a front must also attach importance to coordination. However, if personnel are poorly qualified, if the quality of vehicles is poor, if there is an inadequate supply of air communications equipment and coordinated communications equipment or if there is a lack of maps or codes, it will be difficult to complete missions regardless of how operations are organized.

When many command echelons and command agencies are deployed, it is important to determine the role, mission and division of responsibilities of each echelon and clearly define the authority of each in order to create a unified, centralized command and insure that it fulfills the role intended for it. At the basic command post, the organization and division of labor should be such that it is possible to observe air to air combat missions, observe air attacks against ground or water targets, observe transport missions, make detailed situation reports and so forth as this is the only way to help the commander to keep abreast of the overall situation and keep abreast of a specific situation without overlooking any force, help the commander to closely observe the combat operations of each unit and closely manage the air space in which missions are being performed.

Importance must truly be attached to coordinating combat operations by target and time and establishing close coordination between combat support and the campaign.

Facts have shown that there is a need for very close coordination in terms of the time when aircraft appear in the area of operation in combat and the time when targets are attacked in support of the combined military corps. Attacks cannot be allowed to take place too early or too late. When aircraft arrive late and are slow to attack a stipulated target in coordinated operations, in addition to adversely affecting the performance of the mission, there is also a threat to the safety of both sides, especially the unit being supported. If aircraft arrive early and attack a stipulated target in coordinated operations early, the unit being supported cannot take advantage of the results of the attack and the enemy gains time to recover and mount a resistance. Therefore, close coordination in terms of timing is the responsibility of both the air force commander and the commander of a combined military corps.

When done properly, signals that distinguish us from the enemy in coordinated attacks on land or water targets help us to not miss an opportunity in combat and to provide good support, especially when the air force is operating on the basis of voice commands or destroying targets in search and destroy activities in mop up operations against the enemy.

The most notable progress made by the Southern Air Force was in organizing the direct support of the combined military corps in combat. The air force also learned to seize the opportunity to launch attacks on enemy forces when they were routed and fleeing in large groups. Thus, the battlefield air force competently fulfilled its mission of directly supporting the combined military corps in each battle and carried out attacks that affected the development of the entire campaign.

5. Comprehensively guiding combat support, rear services and technical support in a manner that truly meets campaign and tactical requirements and is consistent with the characteristics of the combat operations of the battlefield air force.

The various types of combat support, such as reconnoitering and guiding aircraft past air defense firepower, defending air fields, providing maps, guides and weather information, command signal operations, rescue operations, engineer work, rear service support and technical support, in the campaign conducted by the Southern Air Force provided many good experiences, the most significant one being the need for comprehensive, well coordinated guidance that meets requirements and is consistent with the characteristics of missions.

Above everything else, more importance must be attached to reconnaissance to assess the enemy situation and determine combat results in combat support operations. The battlefield air force must comprehensively assess the enemy's situation in the air as well as on the ground and water. In other words, it must assess the situation of the enemy air force, the deployment of air defense forces, the radar situation, the deployment of fighter and bomber forces, the deployment of air fields, fortifications and firepower,the location of command posts, artillery positions, seaport piers, ferry landings, areas of troop concentrations, campaign storehouses and so forth. This information is needed to prepare targets for our air force to attack.

It is necessary to utilize and collate available information well in order to assess the enemy's situation. Facts have shown that there is no shortage of sources of information in a campaign, rather, the problem lies in developing, analyzing and using information well: information from electronic reconnaissance, radar reconnaissance, photographic reconnaissance, observations by pilots and so forth to information provided by the air force military intelligence sections with the combined military corps.

The air force corps echelon must attach particular importance to organizing photographic reconnaissance and the observation of the ground from the air. When they return from each sortie, combat pilots bring back many observations made in combat and during their flight, such as the terrain in the combat zone and the fighting taking place at the target. Therefore, it is necessary to collect and collate this information well so that it can be rapidly disseminated to the border units performing subsequent missions as well as to the combined military corps. The reconnaissance of combat results by means of observer aircraft, photographic reconnaissance aircraft and fighter aircraft performing observation missions is essential in increasing the effectiveness of attacks.

Assessing the enemy's situation and gathering, analyzing and using information are not only the mission of the intelligence agency, but are also an important task of the air force commander. The commander must personally organize the reconnaissance of the enemy and collate and analyze information on the situation in order to lay the basis for making decisions and commanding combat operations.

An important experience is that of keeping abreast of campaign and tactical requirements and the characteristics of battlefield air force operations in order to increase the effectiveness of rear service support and technical support. A good guideline for campaign rear service support operations is to use an air field as the support center and to make combat forces the primary forces to be supported. The base air field is the place that embodies the various aspects of rear service operations, is the center in which guidance must be centralized and is the second battlefield of the entire air force. At an air field that has many different types of aircraft taking off and landing, it is necessary to properly organize deployment lines and combat support lines, from deploying the surface area of the support formation to organizing the lines that prepare bombs and ammunition. The base air field is also the forward command post of the air field rear service commander.

Preparing bombs and ammunition, organizing refueling operations for helicopters, organizing cargo handling areas, organizing the transportation of the wounded, resupplying air force units deep within newly liberated areas with food and so forth, which require an operation-size organization, support and escort operations and even air transport plans, are specific, necessary jobs. On a few fronts in the campaign, the tank trucks that refuel aircraft must be part of the organized formation of operation vehicles of the combined military corps in order to reach their destination safely.

The campaign rear service operations of the battlefield air force demand newer and more comprehensive guidance compared to air defense combat missions. There is a need for closer coordination between the rear service line of the branch and the rear service line of the air force. Rear service operations do not stop at the concept of support, but must also have a command impact in the area of rear services. The rear service agency must be the rear service command of the air force commander.

Providing technical support to the majority of the types of aircraft in a campaign, which involves a very large effort on the part of the air force technical sector, and insuring that the number of aircraft in continuous operation does not fall below the stipulated level are good experiences that have been gained in technical work. This work consists of a number of measures involving periodic maintenance, the classification of equipment, the creation of sources of equipment, the production and improvement of components, warehouse inventories, the research of inventions and so forth before and during the campaign.

Packaging commonly used equipment and components so that they can be easily transported to the front in mobile combat operations in order to promptly repair aircraft is another good experience gained by the technical sector. Guiding technical improvements so that they meet the tactical requirements of each type aircraft also yielded many results. The close coordination of the technical support line of the branch and that of the air force in the South created tremendous technical support capabilities.

Although there are still some problems in need of additional, deeper research, the above mentioned experiences of the battleifeld air force on the southwestern border are highly valuable experiences not only for combat operations, but also for the buildup and training of the battlefield air force in a war to protect the fatherland.

COMBATANTS RECEIVE PROPER TREATMENT AT END OF DRAFT

Hanoi NHAN DAN in Vietnamese 6 Jun 81 p 1

[Article: "Properly Implementing Policy Toward Combatants Having Fulfilled Military Obligation"]

[Text] Phu Khanh Province satisfactorily welcomed more than 400 cadres and combatants who had fulfilled their military obligation and now returned to help build the locality. The military commander let them know thoroughly the present situation and immediate and long-term tasks of the province. The professional organs took good care of their interests in full compliance with the policy of the party and state. The sectors and local areas made arrangements to give them jobs suitable for the occupation they had been trained in in the army. Nearly 40 cadres and combatants who had made good achievements in combat and productive labor received training to become reserve officers and to serve as the hard core for building the militia and self-defense force.

Carrying out the directive on organizing military recruitment in 1981, the Special Operations Service Command had a plan for providing leadership to make the units and organs in charge of policies, war supplies and financial affairs get prepared in every way and do this work properly. The organ in charge of organization and mobilization completed its statistical work by dividing each batch of new recruits on the basis of both quantity and quality, selecting people for training to become reserve officers or for taking college examination or vocational training and sending cadres to local military organs to discuss welcoming the combatants who were returning after having fulfilled their obligation. All units considered the cases of commendation and awards and positively made public the policies regarding these combatants. Many commanders came to actually meet and exchange ideas with each of these combatants about the strengths and weaknesses they had known while being in the army.

After having fulfilled their obligation in the army, many troops of the armored force volunteered to go to help build new economic zones. Vehicle operators and mechanics signed up for work in motorized units to suit their capabilities. The command of the service gave orders to units in charge of registration to find the combatants who had acquired good professional and specialized capabilities and to let them return to local areas to help manage the reserve force.

Gia Dinh Regiment of Ho Chi Minh City took good care of the interests of 469 military draftees who had fulfilled their obligation. Seventeen wards and districts had full lists of them, registered them as new households and made arrangements to give them jobs. The military supplies and equipment organ delivered enough grain for 6 months' consumption to the ward and district grain supply offices. The combatants who did not receive military uniforms in 1981 were permitted to buy at supply prices cotton materials to make new clothes for themselves.

TIEN GIANG MILITIA, SELF-DEFENSE FORCES UNDERGO MILITARY TRAINING

Hanoi QUAN DOI NHAN DAN in Vietnamese 12 Jun 81 p 1

[Article by Quang Khanh: "Tien Giang Provincial Military Organ Raises Combat Standard of Militia and Self-Defense Forces"]

[Text] In view of the topographic characteristics and production seasons of the province, the Tien Giang provincial military command has studied and organized a more rational military training within a reasonable concentration period in order to achieve good results from training without impeding the local production schedule.

Village and subward cadres have attended the training courses, firmly grasped two forms of tactics and practiced shooting with live ammunition in taking lesson 1 in the use of AR-15 rifles.

Over the past year, 100 percent of the total number of militia and self-defense men in 8 subwards and 5 villages subordinate to My Tho City have undergone training. Their units have adequately organized patrols and guards and maintained order and security in their respective localities.

In a number of coastal villages, militiamen have closely cooperated with the border defense troops in patrolling and keeping watch to prevent bad elements from fleeing abroad or infiltrating illegally.

Recently, the provincial military organ organized joint maneuvers by the coastal village militia and the border defense troops with the objective of defeating the enemy on the spot in case he violates the coastal areas of our country. Following these maneuvers, the militia units in coastal villages have further heightened their standard of combat readiness and cooperation with the border defense troops.

SECURITY MEASURES TIGHTENED IN VINH CITY

Hanoi QUAN DOI NHAN DAN in Vietnamese 12 Jun 81 p 2

[Article by Duong Thanh Tung: "Vinh City Steps Up Maintenance of Security"]

[Text] Since mid-1980, the military and public security forces, neighborhood protection sections, village public security sections and militia and self-defense forces in Vinh City have simultaneously deployed their units to clear the area, to hunt out the criminals' dens, to arrest many gangs of ruffians, to promptly punish snatch-and-run hoodlums and to fight and eliminate many groups of persons intent on causing local political disturbances.

Army and public security units have assigned cadres and combatants to villages, subwards, organs, enterprises and schools to motivate the masses to build and strengthen a security and national defense network. Vinh City has satisfactorily strengthened village public security sections and neighborhood, organ and enterprise protection sections and has consolidated and developed thousands of cells in charge of maintaining security for the people and ensuring safety in various organs. "Red Banner" youth units and "Blue Birds" teenagers units have acted in conjunction with hundreds of fire-fighting and people's protection units and proven effective in carrying out regular patrols and inspections to defend the socialist property and the people's wealth. The entire city has begun to strictly implement regulations to build a civilized life style.

FOOD PRODUCTION BY HAU GIANG TROOPS DESCRIBED

Hanoi TAP CHI QUAN DOI NHAN DAN [PEOPLE'S ARMY REVIEW] in Vietnamese No 2, Feb 81 pp 63-69

[Article by Senior Colonel Ngo Duc Nhuong: "The Troops of Hau Giang Develop Upon the Strengths of the Locality and Actively Produce Grain and Food Products"]

[Text] Hau Giang is a province in the Mekong River Delta that consists of the former areas of Can Tho and Soc Trang. With its arable land, its rivers and streams and the conditions with which it has been blessed by nature, Hau Giang has long been a province with much potential in agriculture. This strength of the locality has been an important factor helping the troops of Hau Giang to produce grain and food products over the past several years, which they have been doing with marked results and increasing progress.

In 1979 alone, the local army units of Hau Giang harvested 1,536 tons of rice. After deducting 130 tons to pay agricultural taxes, 167 tons for seed and 210 tons to pay for production costs, they still had 1,029 tons to serve as a grain source for the units of the province, which were incorporated in the upper level to lower level supply standard. Also in 1979, the livestock herds and poultry flocks of the units of the province numbered 115 buffalo and head of cattle, 557 hogs of various types and 2,796 chickens and ducks. Some 71,000 fish were released.

The above were the results that were achieved during a period of time in which the majority of the province's units had been sent to the front to maintain combat readiness and engage in combat. Of course, these results originated, to an important degree, in the projects prepared in previous years by units performing economic work and by the armed forces of the province. However, these results also indicate the thorough understanding that the troops of Hau Giang have of the resolutions and policies of the Party Central Committee concerning agriculture, in general, and the production of grain and food products, in particular; they reflect tremendous efforts on the part of cadres and soldiers. Developing upon the inherent strengths of the locality in order to produce grain and food products has become a living lesson to the troop units of Hau Giang. Facts have shown that this practice not only makes it possible to create significant sources of grain and food products in order to reduce the contributions made by the people, reduce the transportation of these products from the central level and improve the meals of cadres and soldiers, but also makes it possible to eventually establish stockpiles and create local sources of materials for local and national defense military rear services within the locality.

1. The troops of Hau Giang have engaged in analysis and gained a thorough understanding of the strength of their locality in order to utilize it well.

A workforce of 800,000 laborers is a significant workforce and more than 400,000 hectares of farmland in the Mekong River Delta are a precious asset to a province. Abundant sunlight, much rainfall and a moderate atmosphere together with the systems of canals and ditches that were established long ago and have been strengthened and developed for many years are important conditions that provide additional advantages for crops and cause the crops of Hau Giang to mature rapidly. All of these characteristics and conditions combine to form the strength of the province. The locality's strength in agriculture also lies in the machine network and the local machine capabilities that support crop production; the strength of the locality also lies in the tradition, habits and experiences of its farmers. Thus, it can be said that the strength of Military Region 9 in agriculture is primarily the strength of each province and within each province.

However, facts show that not all of the areas or places within the provinces of the military region or within Hau Giang share this strength equally. The geo-economic position, military position, soil structure and water sources vary from area to area. Although they do not constitute the majority of the total farmland of the province, areas of saline soil and alkaline water, areas that are waterlogged or dry due to inadequate water conservancy projects and areas that have lain fallow since the resistance against the United States are not few in number. Field work in these areas obviously poses many unavoidable difficulties. Therefore, if, in the face of the strength of the province, each unit only prepared itself to deal with advantages and only viewed these advantages in a general fashion, they could very easily encounter difficulties and suffer setbacks.

On the basis of thoroughly analyzing the strength of the locality, one matter was decided upon by the troops of Hau Giang: to be ready to go to the places of greatest difficulty and successfully raise rice, even in areas of saline soil, waterlogged areas, arid areas and fallow areas; and to develop the production of subsidiary food crops and expand livestock production on the basis of solving the grain problem through rice production. Although they faced difficulties, these difficulties were difficulties of and within the strength of the province. In the resistance against the United States, the army and people of the entire military region as well as those within each province united as one, overcame countless sacrifices and hardships, displayed self-reliance and clung to their land and fields in order to struggle with the enemy and carry out production, thereby creating local sources of supplies so that the people and troops could fight the enemy. Today, with the complete dictatorship of the proletariat system that extends from the central level to the local level and the installations and in our position as masters of the country, masters of society, we have many new conditions and new, tremendous capabilities. By developing upon their fine traditions and making full use of the new conditions and capabilities that exist, the army and people of Hau Giang Province are fully capable of overcoming their difficulties and obstacles and using the locality's strength in agriculture to accelerate production and build the economy so that not one bit of soil lies fallow.

When these correct attitudes permeated the cadres and soldiers of Hau Giang, they created material strength and led to positive revolutionary actions within units. For this reason, in 1976, when the task of opening new land and restoring fallow fields was started, many comrades at first became discouraged and negative because they felt as though they were returning to the hard days and months spent exposed to the elements during the war of resistance; however, they later changed their attitude and actively participated in production. After these initial problems were overcome, the work of opening new land and restoring fallow fields gradually became a voluntary movement on the part of the masses, became the responsibility and the source of honor of every cadre and soldier. By the end of 1977, more than 7,000 hectares had been opened or restored to the cultivation of rice. In view of the climatic conditions, the rivers, the manpower and the tradition of Hau Giang, this land, once it has been cultivated well, will make a positive contribution to the effort to develop upon the strength of the locality in the field of agricultural production.

As a result of correctly understanding the inherent strength of their locality, the troops of Hau Giang have also gradually linked the production of grain and food products to the creation of sources of materials to provide rear services in the immediate future and over the long range and to the effort to strengthen the national defense system within the locality.

At the very outset, areas Q. X., K. and H. were established as bases for building state farms and as areas for preparing battlefields and maintaining combat readiness. The production groups within these four areas are forces that clear new land, restore fallow fields, build water conservancy projects, construct fields and plant rice as well as units that are permanently stationed in the locality and create a firm, permanent footing for maintaining security, protecting the locality and protecting the fatherland. In order to make the province a strategic unit as well as competently reinforce the frontline, Hau Giang must prepare sources of manpower in well organized units and sources of materiel consisting of large quantities of grain, food products and medicine. Over the past 2 years, the Hau Giang military sector has sent soldiers to be trained and the tons of rice produced by them have been sent to the front. Because the level of grain production has constantly been increasing, the troops of Hau Giang have been able to put hundreds of tons of rice into mobile grain stockpiles. This has not only created a position of self-sufficiency in grain for the military activities within the area of operation of the province, but also enabled troop participation in the grain front of the locality, thereby reducing the difficulties of the state.

2. On the basis of gaining a thorough understanding of the strength of the locality, the troops of Hau Giang attached importance to selecting suitable steps to take in order to develop upon this strength.

These steps first had to be consistent with the political and military tasks of the province and of the armed forces within it as well as consistent with the requirements of economic construction,of the strengthening of the national defense system within the locality and the country in both the immediate and long-range situations. These steps must also be closely linked to the present situation and the prospects in the near future for supplying materials to troops on the various battlefields and in the various localities. In actuality, over the past several years, Hau Giang has not only had to concern itself with building and strengthening its rear lines in various ways, but also had to concern itself with providing material and technical support to its combat units on the frontline. The military rear services of the rear line, the basic line of the province must competently support the rear services on the frontline and give priority to distributing supplies to frontline units.

For this reason, the selection of suitable steps demands thorough, detailed calculations. Calculations must be made for each agency, each unit, each person, for each vehicle, machine, liter of gasoline, liter of oil, each hoe and shovel; it is necessary to clearly analyze and make calculations concerning each area, each piece of land, each natural condition and each existing capability. Only in this way is it possible to make accurate decisions concerning the scale and form of production, the allocation of crops and livestock, plans for the seasons, for the mobilization of labor, means, vehicles, machinery, etc.

Only in this way is it possible to see what can be accomplished and determine the order in which jobs should be done in order to develop upon the locality's strength.

Regardless of how large a locality's strength might be, it cannot, by itself, yield practical returns. Regardless of how enthused or confident persons might be in a strength and regardless of how correct their motive might be, these factors do not, of themselves, yield returns in economic work. Therefore, even when a strength is understood, in order to develop upon it, to produce rice, hogs, chickens and so forth, it is still necessary to engage in analysis and make calculations. In the face of the impressive strength of their locality, analysis and calculations have helped the troops of Hau Giang, to an important degree, to avoid being impetuous, avoid wanting to achieve large-scale operations and earn large profits at the very outset as well as combat the phenomenon of procrastination and hesitancy.

In actuality, the calculations and plans of the troops of Hau Giang for raising grain and food products were not perfected all at once, rather, they were gradually formed and supplemented and gradually perfected through many different stages. However, of decisive significance is the fact that these calculations and plans have been consistent with the actual situation of the locality in keeping with the guidance of the central level and the upper level, thereby insuring correctness from the first stage.

As early as 1976, the province boldly sent forces to open new land and restore fallow fields in area Q., thereby creating a stable production area for the province. At the same time, the province expanded the small-scale, scattered production of the provincial, district and city military agencies. This reality existed as coordination and mutual support between centralized and decentralized production, between nucleus forces and widespread forces, between the province and the district, between the general and the specific and between large-scale and small-scale production.

At the centralized production installation managed by the units specializing in economic work, efforts were first focused on opening new land and restoring fallow fields in order to achieve the norm on the amount of arable land; then, water conservancy projects were constructed and one rice crop per year was grown; in this way, they have gained experience and gradually built the installation in every respect in order to turn it into a state farm. During the past 2 years, due to the requirements of the combat task, this installation has been operated by forces based on a stipulated percentage of the province's troop strength. The installation's farmland is only being maintained at one-fourth the original amount of farmland worked by the installation. However, the harvest from this farmland still constitutes the largest percentage of the total annual rice output produced by the troops of Hau Giang.

On the scattered production fields of the units, districts and cities, the effort to make full use of local capabilities has been both universal and comprehensive, encompassing everything from the opening of new land, the restoration of fallow fields and the borrowing of land of citizens to work rotation and work exchange with citizens, renting and borrowing mechanized equipment from the locality and so forth. On these fields, even in the process of trying to raise one good crop per year, the various districts and cities have, on the basis of their arable land, water conservancy and other conditions within the locality, quickly begun raising two crops on certain fields, quickly linked the production of subsidiary food crops to the production of rice and quickly linked livestock production to crop production. As a result, the district and city military agencies have contributed a significant portion of the total product produced by the troops of Hau Giang. This contribution plus the large harvest of the centralized production agency, which amount to thousands of tons of grain per year, prove the correctness of the province's calculations and stages of development, namely, concentrating first on the production of rice and, on the basis of rice production, expanding crop production and coordinating the various scales and forms of production in order to develop the strength of the locality in grain and food product production.

Moving forward on the basis of rice production, the troops of Hau Giang prepared the necessary conditions and gradually created a balance between crop production and livestock production. Together with the cattle, hogs, chickens and ducks raised in the districts and cities, a centralized hog farm of the province was established in late 1977 and has been developed along the lines of using short-term crops to raise long-term crops and gradually advancing from small scale to medium and large scale. At first, the farm only had one row of pens with 80 hogs consisting of 3 boars, 40 sows and 37 meat hogs. In 1978 and 1979, the farm was expanded to three rows of pens and, in September 1980, the farm had 515 hogs of many different types and ages. The quantity of meat supplied by the farm to the troops and several agencies within the province has risen to more than 17,000 kilograms. The initial results of the hog farm not only confirm the efforts made by the collective of cadres, soldiers and personnel at the farm, but also indicate how well the tremendous potentials of the locality as well as the troops of Hau Giang have been developed once correct calculations were made and correct steps were taken.

3. In the gradual advance of the production process, the troops of Hau Giang have also taken positive steps to improve their management and work methods in order to achieve practical economic returns.

To begin with, it was necessary to improve work methods in the areas of leadership and command activities. Work methods had to be improved in both the formulation of policies and plans and in specific daily actions. Work methods must be such that they insure uniformity from top to bottom, involve investigations, research, management, inspections and close coordination, make it possible to employ the strength of military organization and are consistent with economic activities.

To insure uniformity of thought and action from top to bottom, the Hau Giang military command as well as the rear service agency and production agency of the province have always sought the leadership and guidance of the provincial party committee and the military agency on the upper level. Every resolution and policy regarding economic construction, agricultural production, the use of troops to produce grain and food products and so forth has been rapidly disseminated to and thoroughly understood by the cadres and soldiers of the various units, districts and cities. The provincial party committee has led the military sector in all of the jobs involved in opening new land, restoring fallow fields and producing grain and food products; it has guided the various sectors in the province in helping troops with capital, seeds, technology, etc. Under the leadership of the Military Region Party Committee, the Rear Service Department and the production agency of Military Region 9 have displayed greater responsibility in guiding the province in the areas of organization and plans and have helped the province with materials and technology. Within the provincial military command as well as each district and city military agency, there is one deputy commander who specializes in observing and directly guiding the production carried out by troops. A deputy commander in charge of rear services within the provincial military command personally serves as commander of the centralized production installation of the province. As a result, uniformity has been rapidly established not only in policies and plans, but in actions as well. The effectiveness of this uniformity has been proven by the change that has been brought about in the outlook and thinking of troops in the face of the new requirements of the revolution, especially when they first began producing grain and food products and when the situation and task changed, thus making it necessary to readjust the organization, forces and scale of production. Only as a result of this uniformity has it been possible to mobilize and organize the mass of units and the members of the local army units of the province to overcome every difficulty and shortage and make every effort to use each piece of land, each section of river and each condition with which the locality has been blessed in production.

Uniformity in leadership and guidance always demands a workstyle based on investigations and research. As a result of conducting investigations and research, we have come to see the potentials of the entire province and the capabilities of each area; see our overall strength and specific limitations; see which jobs need to be performed and which jobs need not be performed; see which jobs should be performed now and which should be performed later; see the advantages that we have in order to make full use of them and see our difficulties in order to overcome them, thereby insuring that we are always in the position of being the masters of nature, the masters of our work. Economic activities not only take the form of policies and plans, but also include countless small, almost trivial, jobs that are closely linked to the daily lives of millions of persons. Only through investigations and research have the troops of Hau Giang been able to uncover antagonisms, raise and resolve questions correctly and deal with both difficulties and advantages exactly as they are without distorting or exaggerating them.

Production also demands good management and good inspections. At first, the troops of Hau Giang lacked many items and were unfamiliar with the environment in which they were working. If the upper level did not conduct inspections, did not maintain close contact with the lower level and with soldiers, it would seem that everything posed an inescapable difficulty or obstacle. In the recent period, work has been put on a regular basis, production has increased and, although not many products are being produced, there are products for both consumption and storage. At this time, a lack of management and inspections would easily lead to false reports, to the concealment of output for private consumption, to the use of grain in a manner that violates regulations and ration standards, to the unplanned production of livestock and poultry and to the loss of tools, gasoline and oil and the breakdown of machinery for no legitimate reason and for which no one is responsible. And, of course, when this occurs, even if grain and food products are produced, economic returns are not a certainty.

Economic activities also demand the same unity and coordination found in military activities. The troops of Hau Giang have sold to the livestock feed corporation of the province hundreds of hogs, have supplied the military region with dozens of tons of rice seed and have loaned to Minh Hai Province 100,000 dong in capital supplied by the upper level so that Minh Hai could overcome the aftereffects of natural disasters. Conversely, the troops of Hau Giang have been supplied with fertilizer, seed, capital and technology by friendly sectors and units and by the upper level. As a result of this unity and coordination, the troops of Hau Giang have established mutual help between themselves and the people, between the army and the various sectors of the economy, between the upper level and the lower level, between their locality and neighboring localities; in this way, they have created additional conditions for developing upon their advantages, overcoming their difficulties, increasing their production capacity and making full use of the province's strength in the production of grain and food products.

The troops of Hau Giang have recorded encouraging results in the production of grain and food products and have laid the necessary foundation for future years. The strength of the locality on the agricultural production front has been partially developed. However, there are still limitations and shortcomings. In the years ahead, with the organizational stability that has been established and the stability of the agricultural production task, with the experiences that have been gained and by improving their work and production skills, the troops of Hau Giang will surely record even better achievements.

FIVE-YEAR TRADE AGREEMENT SIGNED WITH USSR

OW312032 Moscow Radio in Vientiane to Vietnam 1000 GMT 31 Jul 81

[Text] Following their talks, the Soviet and SRV Governments' trade delegations on 30 July signed in Moscow a commodity exchange and payments agreement for the current 1981-85 5-year plan.

Soviet Foreign Trade Minister Patolichev and Le Khac, his Vietnamese counterpart, signed the agreement. Also present at the signing ceremony was SRV Ambassador to the Soviet Union Nguyen Huu Mai.

The following is our station observer's report on the agreement.

This is one of the Soviet-Vietnamese agreements signed in Moscow in July. The previous ones dealt with Soviet-Vietnamese cooperation in the cultural, scientific, economic, and technical fields. The new agreement is another important document. It concerns the volume of goods exchanged between the two countries.

Compared with the previous 5-year plan, the volume of goods exchanged in the current 5-year plan will increase by nearly 90 percent. The Soviet Union will substantially increase volume of essential goods provided to Vietnam such as oil products, automobiles, metals and road building machinery. The volume of fertilizer will more than triple and metal will more than double. Cotton supplies will increase by 70 percent.

For its part, Vietnam will continue to increase its regular export goods to the Soviet Union such as rubber, coffee, spices, lumber and fine arts products.

The increase in the volume of commodities exchanged between our two countries is a result of the continuing development and consolidation of friendship between our two countries and peoples, of the perfecting of the procedures in Soviet-Vietnamese economic and trading cooperation. Past experience shows that trading on the basis of equality and mutual interests has effectively promoted the building of socialism and communism in our two countries. It is consistent with the spirit of fraternity reflected in the USSR-Vietnam friendship and cooperation treaty, which Comrade Brezhnev, in his speech at the 26th CPSU Congress, called a realistic example of socialist internationalism.

Of course, in order to satisfactorily carry out the newly signed trade agreement and the other agreements, millions of Soviet and Vietnamese workers must persevere in their work. The Soviet people, who have always considered their assistance to Vietnam as a dictate of their hearts and their minds, are determined to satisfactorily implement the new agreements.

MEDICAL TOOLS, EQUIPMENT CORPORATION DIRECTOR FIRED

Hanoi NHAN DAN in Vietnamese 5 Jun 81 p 4

[Article: "Director of Medical Tools and Equipment Corporation Fired"]

[Text] In its issues of 28 May and 3 June 1981 NHAN DAN printed the opinions of readers about the director of Medical Tools and Equipment and Grade 1 Test Chemicals Corporation of the Department of Materials (Ministry of Public Health) who had had the policy of using scalpels and razors "to distribute within the corporation" and permitting "husband provides protection, wife is warehouse keeper." After having checked into what the two articles had revealed, the Minister of Public Health signed an order to fire the director of the corporation, to appoint a deputy chief of the Department of Materials (Ministry of Public Health) to replace him and to name a new deputy director to complete the leadership of the corporation. He also ordered the recall of the scalpels, razors and medical tools that had been "distributed within the corporation" and informed all public health units and installations in the sector of the need to draw some experience from this incident. This decision has been made public.

There has been a suggestion to the effect that a control team should be set up to fully investigate this incident.

HANOI, HAIPHONG IMPROVE DISTRIBUTION, MARKET MANAGEMENT

Hanoi NHAN DAN in Vietnamese 5 Jun 81 p 1

[Article: "Improving Purchase and Distribution of Vegetables in Hanoi, Market Management in Haiphong"]

[Text] Implementing the Political Bureau resolution on distribution and circulation, with an aim at gradually stabilizing the living conditions of cadres, workers and civil servants, the Hanoi VCP Standing Committee has recently decided to take new urgent measures.

In the production, purchase and distribution of vegetables in Hanoi, there were many efforts but supply was far from regular and quality was not guaranteed. The lack of proper interest in the vegetables-growing zones was reflected in these facts: the quantities and time of delivery of grain, fuels and other necessary goods were not guaranteed; the capital invested in the building of the material and technical base for such zones was far from sufficient, etc.

To get enough vegetables for the municipality, in addition to planning anew the use of land for intensive cultivation and increase of yield, the vegetables-growing zones in the cities of Son Tay and Xuan Hoa will be expanded and more cooperatives specialized in growing vegetables will be established in Dan Phuong and Hoai Duc Districts. There will be a switch to the formula of exchange for grain for the vegetables-growing zones and for nitrate fertilizer for the seasonal vegetables-growing zones. The purchase prices of some varieties of vegetables will be raised during the summer-autumn season and adjusted during the winter-spring season to ensure reasonable prices that will be an encouragement for producers. The municipality sells vegetables at commercial prices to those workers whose wages already include price differences or allowances. It maintains supply balance by securing quantities of vegetables, which are transported by both motorized vehicles and rudimentary means; sets rational freight rates; and sells means of transportation and replacement parts to the cooperatives in charge of transporting vegetables to the retail counters. Districts are to draft plans for producing vegetables to sell to the urgan wards, to sign and carry out two-way economic contracts with vegetables-growing production installations and to organize retail sales of vegetables to organs and units within the districts. The Hanoi Vegetables and Fruits Corporation is to strengthen its system of purchase and distribution and to make preparations for assigning early the task of managing, distributing and retailing vegetables to wards and subwards.

The corporation both steps up the purchase of vegetables and extends the network of transportation by rudimentary means in the three wards adjacent to the urban wards and in Tu Liem and Thanh Tri Districts and urges the cooperatives to carry vegetables straight to the retail locations. It signs transportation contracts with the Red River and October pedicab cooperatives in Hoan Kiem Ward and the Goods Transportation Corporation of the municipality, coordinates the two-way rental of vehicles by organs and army units within the municipality and at the same time improves the working method adopted by the corporation's fleet. It organizes the operations of the fleet in shifts and maintains on a regular basis 20 vehicles for transporting 80-120 tons of vegetables a day. In May the quantities of vegetables purchased were twice as large as those in the same month last year. The corporation takes additional measures to purchase and control the sources of vegetables.

The Municipal VCP and People's Committees of Haiphong have been concentrating their leadership on stepping up production; carrying out procedures about delivery of products, financial management and balance between money and goods; and improving the method of distribution. Adjustment of allowances has been made temporarily for those who now work for wages in the state sector. Such sectors as finance, banking, commerce, prices, labor, etc. have been providing guidance for production installations to quickly develop their regular work. Production and commercial business units have made inventories to know the amounts of goods they had in stock as of 31 May and maintain profit-and-loss accounting separately for each line of goods.

The municipality is concentrating its efforts on stepping up purchases and reorganizing the sales network to make it more appropriate. Industrial production installations are checking into their implementing the Council of Ministers' directives and ensuring the obligation to deliver products to the state. As to grain and foods, after the obligation quotas have been filled, the remaining products, if need be, will be sold by the cooperatives on a priority basis to the commercial sector at agreed prices under the guidance of the Municipal Price Committee. The sales network is being reorganized to become two separate ones.

About market management, the financial and commercial reform committees of wards, districts and the municipality are checking into the number of small business people, issuing business registration papers, posting prices and paying taxes. Subwards are establishing consumer cooperatives. Districts are setting up retail counters in Sat Market for regular business. In the concentrated business locations, cases of violations of regulations are checked and handled. Speculation and hoarding and all illegal transactions are severely punished.

ECONOMIC PLANNING, TRADE AND FINANCE

EDITORIAL URGES DISCIPLINE TO STABILIZE ECONOMIC ORDER

Hanoi NHAN DAN in Vietnamese 5 Jun 81 p 1

[Editorial: "Discipline in Production-Business"]

[Text] On the basis of the system of socialist collective ownership of the working people at all of the basic levels (basic, local and central) and a full understanding of the principle of democratic centralism in economic management, our party affirms that managing the economy as it moves from the small-scale production to the socialist large-scale production requires a strengthening of leadership and of unified centralized management, on that basis an extension of the right to have initiative in production-business and a full and broad development of the capabilities and talents of all sectors, echelons and production installations. This is a managerial formula that both complies with the regulations and is suitable for the real situation of our country as it is aimed at making the economic managerial system truly efficient and brings about great results in the construction of our socialist economy.

To ensure the right to have centralized management and to extend the right to have initiative in the economic activities of all sectors and echelons are two aspects that are unified. Both aspects act simultaneously in the entire economic managerial system from the central to basic level and are seen in all fields of production, distribution, circulation and consumption. The centralized leadership and management we mention here are different from the all-level bureaucratic administrative management which we are abolishing. To achieve the right of localities and production installations to have initiative in production and business is not to organize economic activities in a divisive manner. To extend a right always goes hand in hand with emphasizing obligation and responsibilities.

By correctly implementing new resolutions and policies, many localities and production installations have made initial progress in making management orderly and creating a new situation in production, distribution and circulation. The restrictions imposed by the all-level bureaucratic administrative management have been destroyed for the first time. The right to have initiative in production and business and the right of production installations to be financially self-ruled are gradually being established. However, in some localities there appeared incorrect ways of thinking and working. The echelons that held the leadership and management functions failed to uphold their own concentrated power and still neglected management in regard to the major activities of the lower echelons. Plans both were ineffective and failed to awaken the great potential capabilities of the localities and production installations. The lower echelons, including the people who work in the basic economic units, did not show much initiative in fulfilling their production and business task, nor did they guarantee the interests of the state; many management policies and procedures were not respected properly. Not only did these deviations weaken the centralized management role of the state but they also had adverse effects on the economic activities and interests of all units and working people.

To continue implementing Decisions Nos 25 and 26-CP of the Council of Ministers requires that the entire managerial system from top to bottom on the one hand ensure the effectiveness of centralized management and, on the other, fully and correctly develop the right of sectors and echelons to have initiative in economic activities, for the purpose of exploiting in the best manner its own capabilities so as to fulfill the tasks of the state plan.

The strength of unified centralized management first of all is guaranteed by unity of mind, organization and action in correctly implementing the policies and procedures currently in effect. The use of the goods-money and market relationships must be based on guaranteeing fulfillment of the state plan and guaranteeing the unified relationship among the interests of the state, collectives and individuals.

To correctly develop their right to have initiative in economic activities, localities and production installations must adopt the appropriate forms and measures of organization of management, achieve ownership in production and business on the basis of properly carrying out the legal goals of their plans and fulfilling their obligation to the state and make sure to concentrate the sources of goods and financial resources on the state budget.

To stress discipline in production and business and to respect the economic law is the first important factor needed to stabilize the economic order.

MEASURES TAKEN TO REDUCE COAL CONSUMPTION

Hanoi NHAN DAN in Vietnamese 6 Jun 81 p 1

[Article: "Ha Bac, Thai Binh Adjust Levels of Coal Consumption; Hanoi Uses Cinder As Fuel"]

[Text] Ha Bac and Thai Binh Provinces have just readjusted 68 coal consumption norms for almost all of the production sectors using large quantities of coal in the locality.

After a period of survey, testing and calculations based on economic and technical facts, Ha Bac Province readjusted 44 norms for 9 production sectors. These sectors use 70 percent of the coal consumed in the province. Almost all of the coal consumption norms for the production of building materials, processing of grain and industrial crops and industrial production are now lower than before. As a result, every year Ha Bac can save more than 14,000 tons of coal and replace 33,000 tons of good-grade coal by different kinds of coal of poorer quality.

Thai Binh Province readjusted 24 coal consumption norms for production of pottery, porcelain and glassware; distillation of essential oil; making of silk, pulp, etc. It set up a council for establishing coal consumption norms and sectors in charge of control and examination of level of coal consumption in the key production installations. It also affirmed the guideline for investing coal in the major products and the measures to combine management based on sectors and zones in regard to the use of coal, as well as built the organization of coal supply within different districts.

In the first 4 months this year, the Hanoi Coal Supply Corporation and Municipal Fuel Corporation retrieved 8,800 tons of cinder in such production installations using large quantities of coal as Yen Phu Power Plant, 8-3 Textile Mill, Sao Vang Rubber Factory, Hanoi Distillery, etc. The cinder was recycled and supplied in time to satisfy part of the municipality's need for fuel.

Within the municipality there presently are nearly 300 production installations of the central administration and of Hanoi itself with annual coal consumption ranging from 500 to tens of thousands of tons, in some cases as much as from 130,000 to 150,000 tons. By properly exploiting them as sources of cinder Hanoi will be able to overcome even better its present difficulty in fuel supply.

ECONOMIC PLANNING, TRADE AND FINANCE

COMMERCE SUPPORTS DAILY EXISTENCE

Hanoi HANOI MOI in Vietnamese 16 May 81 p 3

[Interview with Nguyen Con, Commercial Service deputy director, by unnamed reporter; date and place not specified]

[Text] [Question] How do you rate the work of the commercial branch in support of daily existence in recent days?

[Answer] We have met more difficulties than opportunities. Difficulties, because production in all respects has not increased and is still below the required levels (the existence of policies notwithstanding), whereas the struggle target set for the sector was to provide staple commodities such as meat, fish, vegetables, bean curd, fuel, etc.

[Question] Some people note that it is hard to buy meat and fish although standards have been publicized. Please comment.

[Answer] Here, two components of the problem must be mentioned: commodity forces and commodity distribution. The commercial branch has made maximum efforts to organize the commodity forces. We have stayed close to level 1 fish sources and have overcome all difficulties so as to promptly receive and transport the commodity whenever it was available. We have organized meat purchases right in the localities and at agreed with prices for resale at supply prices. We have actively received meat and fat from level 1, and actively purchased and organized the shipping of refrigerated meat from the south. As a rule, each year the period following the Tet festival is always tense in terms of meat supply. In past years, during the months following Tet we announced the sale of only a quantity of meat corresponding to 1 block of stamps. Since the beginning of this year, the branch has announced the monthly sale of meat corresponding to 2 blocks of stamps (either all meat or half meat and half fat). Such monthly ration level for each cadre plus 1 kg of fish--the level for this also is being maintained--reflected the determination and efforts of the branch to serve daily existence. This being the case, why have there at times been discrepancies between announced levels and actual sales? The answer is that this happened beyond our wishes. This happened because we still are contingent upon the source of commodities, which, rather than early, have arrived late or irregularly. For instance, in mid-April fish was scarce, but in late April and early May it came in successive shipments. Our spirit is to strive to keep in stock in sufficient quantities any commodity that has been announced for sale, but we are compelled to make extensions when we struck snags. So far the difficulties over fish supply have been overcome. We have just received timely and smoothly a quantity of fish enough to help us solve the April backlog and at the same time meet the May sales criteria. We are now stepping up meat purchase and pickup. Likewise, the meat pinch will be conquered soon.

[Question] Please tell us about the efforts of the branch regarding other commodities?

[Answer] We have properly organized the purchase, collection, shipping and storage of soybeans necessary to produce bean curd and sauce. Due to the efforts of the Sauce Enterprise, sauce production has been assured; consequently, this commodity is stable. According to state regulations, in a quarter we must assure the sale of 2 liters of sauce and fish sauce to each cadre or worker. In the first quarter alone, we sold 3 liters. In the second quarter, sauce caused no problems, but fish sauce is encountering difficulties because its supply relies mainly on level 1. Nevertheless, we will strive to supply each cadre, worker and civil servant with 2.5 liters of fish sauce and sauce in the second quarter. This level is a little lower than that in the first quarter but still higher than required. Each cadre, worker and civil servant is entitled to 1 kg of bean curd a month; however, the present difficulty is that the supply of electricity and water necessary for production is very unstable. To solve the problem, we have expanded contractual work and opened new shops at our bean curd enterprises. In recent days, bean curd production has reached 30 tons a day. This result is helping us solve the backlog from past months and proceed with May sales.

[Question] As a rule, April is the off season for vegetables. But this past April vegetable supply was smooth. Was this a result of the weather factor?

[Answer] This past April, the vegetable preharvest period generated no tense situation. In terms of distribution, it can be said that there was no vegetable off season in April. Favorable weather did play a role, but not by itself. In past years, the April vegetable shortage even occurred when weather was very favorable. Besides weather, the recent success in vegetable supply was caused mainly by improved leadership of the city, districts and the commercial branch over the production and purchase of vegetables. The city has the policies of economic flow, of contractual work in agriculture and of appropriate pricing. On the basis of these policies, the branch has stayed close to production and stepped up purchases. The branch has sold 10,500 tons of vegetables, out of the preharvest purchase and reserve of 1,000 tons of potatoes and 300 tons of green beans (equivalent to 1,500 tons of vegetables, and the April purchase of 8,000 tons of vegetables of all kinds. This level not only has greatly exceeded that of the preceding years' corresponding period, but it has also surpassed even the normal requirements of a single month according to current supply standards.

AGRICULTURE

BRIEFS

GIA LIA-KON TUM ECONOMIC CENTERS--Over the past 5 years, Gia Lai-Kon Tum Province has received more than 120,000 people from the provinces of Hai Hung, Ha Nam Ninh, Nghe Tinh, Quang Nam-Da Nang...who came to build a new economic zone. Four thousand leading cadres from various branches and echelons, and scientific-technical cadres from other provinces have beefed up the organs, offices and branches in the province. With this reinforcement, Gia Lai-Kon Tum has built 12 state farms, 13 farming stations, 24 cooperatives and 50 agricultural production collectives in 72 new economic centers in the province. As a first step, the province has rationally reorganized its force, combining the task of economic construction with national defense. [Text] [Hanoi HANOI MOI in Vietnamese 25 Mar 81 p 4]

IMPORTANCE OF SMALL INDUSTRY, HANDICRAFTS STRESSED

Hanoi NHAN DAN in Vietnamese 6 Jun 81 p 1

[Editorial: "An Important Productive Force of Socialism"]

[Text] After 20 years of transformation, building and development, our country's small industrial and handicraft sector has not ceased to grow up and occupies a major role in the national economy and social life.

The value of small industrial and handicraft production accounts for more than 40 percent of the value of national gross industrial production and two-thirds of the value of local industrial production. The sector has produced tens of thousands of items, from the small miscellaneous ones very necessary for the standard of living to the ones having high export value. Every year it receives from 70,000 to 100,000 workers, raising the force of handicraftsmen throughout the country to 1.5 million people and contributing to speeding up the new division of labor in the countryside and achieving the combination of agriculture and industry from the village unit to the district and provincial level. Many cooperatives have become semimechanized and quite a few others have reached a higher level of mechanization. With a large variety of products ranging from means of production to consumer goods, the sector has effectively served agriculture and other economic sectors and national defense and has contributed to the socialist accumulation.

Such achievements are the results of a correct implementation of the economic line and policy of the party and state. As we carry on the socialist industrialization under the conditions of our country moving directly from a small-scale agricultural production to socialism without going through the stage of capitalist development, we cannot fail to exploit every force and every capability of different sectors in terms of labor, resources and producing power, nor to use every form and scope of organization suitable for developing production and improving the standard of living. On the industrial front, in addition to striving to build the centrally-run and local industries, we need very much to care on a permanent basis about expanding small industry and handicrafts in the collective economy and to encourage both individual and private production.

A component of the local industry, small industry and handicrafts directly contributes to speeding up the process of forming the district agricultural-industrial and provincial industrial-agricultural structure. It plays an important immediate and long-term role in the national economy and social life. To step up the production of consumer goods and local industry in the direction outlined in the resolution of the 6th Plenum of the VCP Central Committee we must ceaselessly develop small industry and handicrafts.

As there is a lack of balance in many areas of the economy, our industry, big and small, does encounter difficulties. Because of its inherent characteristics, small industry is in better conditions than big industry since it has both many realistic capabilities to exploit and favorable conditions for operating in a mobile and flexible manner. It is in a strong position to be actively exploiting and fully using sources of raw materials in the country and in different localities and to practice thrift so as to produce the same or larger amounts of goods than before with a smaller volume of materials. Lacking electric power, it can switch to manual production or use machinery whenever power is available. Lacking high-grade coal, it can use in its place peat, local coal, cinder or plants and grass. Lacking motorized means of transportation, it can switch to rudimentary means. It also is capable of operating flexibly by changing the lines of goods it produces to suit the conditions of raw materials: if it cannot make this line of goods, it can switch to another one.

As the results of carrying out the state plan in 1980 and in the first months of this year have indicated, correctly implementing the guidelines and policies mentioned in Resolution 6 of the Central Committee and Resolution 26 of the Political Bureau means we can maintain and develop small industry and handicrafts under any circumstances. Combining planning with using the goods-money relationship and ensuring a correct combination of three interests is an effective lever that stimulates the active producing capacity and creativity of production installations and workers.

The immediate task of the small industrial and handicraft sector is to uphold the spirit of self-sufficiency, to strive to exploit every potential and existing capability, to develop as quickly as possible production of the common consumer goods, to organize a good repair service network and to satisfy the people's daily needs. Try to provide at any cost rudimentary and improved tools to all sectors of the national economy, first of all agriculture. Increase further the pace of producing goods for export, including the ones made of domestic raw materials and made for foreign countries. All production installations have the responsibility to deliver the right quantities of products their obligation requires, to sell outside-of-the-plan products to the state-operated commercial organizations and marketing cooperatives so as to let the state concentrate all of the sources of goods and ensure supply, and to form a force to compete with the unorganized market.

The great strength of the collective production sector in industry must be exploited much more and better. The federations of small industrial and handicraft cooperatives of all levels must be further improved so as to fulfill the function of being the organizations of the collective economy and manual workers.

TABLE OF CONTENTS OF BOOK ON FORMULATING STATE BUDGET

Hanoi LAP VA CHAP HANH NGAN SACH NHA NUOC in Vietnamese 1978

[Introduction and table of contents of book "Formulating and Implementing the State Budget"; 34,185 copies printed at the Tong Hop Printing Plant in Ho Chi Minh City, printing completed in December 1978]

[Text] Introduction

On 25 March 1977, the Council of Ministers issued resolution number 76-CP concerning the matter of guiding the implementation and formulation of uniform laws for the entire country.

In keeping with this resolution and in order to create the conditions for all sectors to fully and scrupulously implement the laws of the state, the Ministry of Finance has collected and selected the primary documents that have been promulgated by the Council of Ministers and the Ministry of Finance concerning the procedures for formulating and implementing the state budget.

All of the documents presented herein are currently in effect and must be complied with by all sectors and levels in order to put financial management, in particular, and economic management, in general, on a regular basis.

Because this book is very large, we have divided it into many volumes. This is volume I, the other volumes will be published at a later date.

May 1978

PUBLISHER'S NOTE TO BOOK BY LE DUAN

Hanoi PHAN DAU XAU DUNG NUOC VIET NAM XA HOI CHU NGHIA GIAU DEP in Vietnamese 1979 pp 5-6

[Introduction to book "Endeavoring To Build a Prosperous and Beautiful Socialist Vietnam" by Le Duan; published by Su That Publishing House, Hanoi, 1979; 13,200 copies printed at the Tien Bo Printing House in Hanoi; printing completed 15 Apr 79]

[Text] Publisher's Note

At the 25th Plenum of the 3rd Party Central Committee, Le Duan, general secretary of the party, presented the elements of the documents presented at the 4th National Congress of Delegates of the Party.

His presentation consisted of four main parts:

--The war of resistance against the United States for national salvation;

--The line on the socialist revolution in the new stage;

--Cultural matters;

--The party, the state and the mass organizations.

In part I, Le Duan spoke in general terms about our people's war of resistance against the United States for national salvation, pointing out the factors that led to victory as well as the lessons and experiences gained in the national democratic revolution, in general, and the war of resistance against the United States for national salvation, in particular.

In part II, Le Duan presented the general line of the socialist revolution in our country, especially its theoretical and practical bases and the fundamentals of the system of socialist collective ownership; he also presented the line on building our country's economy under the conditions of advancing from small-scale production to large-scale socialist production.

In part III, Le Duan presented the primary factors involved in building the new culture and molding the new, socialist man.

In part IV, Le Duan discussed the mechanism of collective ownership and the relationship among the party, the masses and the state; he especially emphasized the leadership role of the party in the new stage of the revolution.

In order to research and gain an understanding of the contents of the documents of the 4th National Congress of Delegates of the Party, we must study this speech by Le Duan.

We have been given permission to publish this important speech in a book entitled "Endeavoring To Build a Prosperous and Beautiful Socialist Vietnam."

We hereby respectfully present this book to readers.

LAWS, DOCUMENTS ON PEOPLE'S ORGANS OF CONTROL

Hanoi LUAT VE VIEN KIEM SAT NHAN DAN VA CAC VAN BAN CO LIEN QUAN in Vietnamese 1978 pp 5, 7, 8, 16-18, 21-25, 31-32, 36-37, 43-44, 65, 71

/Introduction and table of contents of book "The Laws Regarding the People's Organs of Control and Related Documents; published by Su That Publishing House, Hanoi, 1978; 15,185 copies printed at the Tran Phu Printing Plant in Ho Chi Minh City; size: 14 x 20; publishing number: 55; printing number: 130/78; printing completed 15 November 1978; put in circulation November 1978/

/Text/ Publisher's Note

When the Socialist Republic of Vietnam was born, the National Assembly of the entire country (6th Legislature) decided during its first session:

"Until the new Constitution is adopted, the state of the Socialist Republic of Vietnam shall be organized and shall operate on the basis of the 1959 Constitution of the Democratic Republic of Vietnam.

...As regards the current laws (laws, regulations, decrees, resolutions, decisions, circulars and so forth) of the Democratic Republic of Vietnam and the Republic of South Vietnam, the Council of Ministers of the Socialist Republic of Vietnam will provide guidance so that they are implemented in a manner consistent with the actual situation."

On 25 March 1977, in keeping with this resolution of the National Assembly, the Council of Ministers adopted Resolution number 76-CP, which promulgates a list of current laws to be implemented on a uniform basis throughout the country. On the basis of this list and with the collaboration of the Supreme People's Organ of Control, we have published "The Laws on the People's Organs of Control and Related Documents" to assist the various sectors and levels.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

REGULATIONS ON INNOVATIONS, INVENTIONS

Hanoi NHAN DAN in Vietnamese 31 Jan 81 pp 1, 3-4

/Article: "The Regulations on Innovations That Result in Technological Improvements and the Rationalization of Production and on Inventions (Appended to Council of Ministers' Decree Number 31-CP dated 23 January 1981)"/

/Text/ According to these regulations, innovations that result in technological improvements or the rationalization of production (abbreviated as innovations) and inventions are the results of scientific and technical creative labor by laborers exercising collective ownership, results that have the effect of stimulating technological advances and which yield large socio-economic returns, thereby helping to develop the national economy, strengthen the national defense system and improve the living conditions of the people.

In order to provide incentive to and help each citizen create and apply innovations and inventions; in order to organize and guide the management of innovations and inventions in a planned manner and in close coordination with the social organizations, especially the Trade Union and the Ho Chi Minh Communist Youth Union; in order to build and develop a movement of the masses to create and apply innovations and inventions;

In order to uphold the interests of those who develop innovations and inventions;

These regulations define the essence of innovations and inventions, the rights of the persons who create and apply innovations and inventions and the responsibilities and authority of state agencies and enterprises, of the socialist collective economic organizations and of the individuals related to the creation and utilization of innovations and inventions.

Chapter I: Innovations That Result in Technological Improvements and the Rationalization of Production

A. Concept:

Article 1

1. According to these regulations, an innovation that results in a technological improvement or the rationalization of production is a technical method or a new

method of organizing production that can be applied and will yield practical returns to the agency or unit (including a collective economic unit) that registers it.

2. Innovations can consist of the following:

a) An improvement to the structure of machinery, equipment, tools or products, an improvement to a design plan or the structure of building projects...

b) An improvement to the properties, use or composition of a raw material, building material or product...

c) An improvement to survey, design, industrial or construction methods, a technical improvement in crop or livestock production, an improvement in disease prevention or treatment methods...

d) An improvement to the organization of production designed to make efficient use of labor, tools, raw materials, supplies, energy, capital...

Article 2

A solution is recognized as new if, prior to its registration, it:

--Has not been applied or planned for application by another agency or unit in its production or work;

--Has not been introduced in the form of a document by a management agency on the upper level or disseminated within technical textbooks published by the sector or locality to the point where the innovation can, on this basis, be immediately implemented;

--Has not been stipulated as a mandatory measure, such as a standard, regulation, code and so forth, by an agency or unit or a management agency on the upper level;

--Does not duplicate a solution that has already been registered.

Article 3

A solution that is capable of being applied at the agency or enterprise that agrees to register it is a solution that meets a requirement of the production or work task and which can be implemented under the existing economic and technical conditions of the agency or enterprise.

Article 4

A solution that yields a practical return is a solution that, once it has been applied in production or work, yields a higher economic or technical return or improves working conditions, living conditions and health conditions, improves labor safety...

Article 5

Solutions proposed by technical cadres or management cadres in the process of performing the task assigned to them can, if these solutions are of major economic and technical value and can be widely applied, also be recognized as innovations.

B. The Registration and Recognition of Innovations and the Insuance of the Innovation Certificate:

Article 6

1. The innovation registration application must be filled out by the innovator and submitted by that person to the agency or unit at the place at which he works or to any agency or enterprise that can apply his innovation.

2. In the case of identical solutions for which many persons submit innovation registration applications independent of one another, the person who submits the application first will be recognized as the innovator.

Article 7

1. The agency or unit that accepts an innovation registration application must record it in its innovation registry and inform the person who submitted the application of this action.

2. Within 1 month from the day they receive an innovation registration application, agencies and units must conduct an examination and determine whether or not to recognize the solution as an innovation.

3. In cases of solutions that require experimentation or trial application before a decision can be made to recognize them as innovations or not, the above mentioned deadline may be extended on the basis of test requirements and the innovator must be informed of this action.

Article 8

1. If a solution is recognized as an innovation, the manager of the agency or unit must issue to its creator an Innovation Certificate and must inform his agency or unit that such a certificate has been issued. The Innovation Certificate is only of value within the scope of this agency or unit.

2. In the case of an innovation made by a collective of persons (herein after called innovators), the Innovation Certificate is to be issued to each person with the names of the other innovators recorded on each certificate.

3. The innovator enjoys the rights stipulated in Chapter IV of these regulations.

4. If a solution is not recognized as an innovation, the agency or unit must inform the person who submitted the innovation registration application of the reason for this decision and does not have the right to apply the solution developed by this person.

5. The procedures for registering, recognizing and issuing an Innovation Certificate shall be stipulated by the State Science and Technology Commission.

Article 9

If, when determining whether or not to recognize an innovation, a solution that can be defended as an invention is discovered, the agency or unit must immediately take the necessary steps to register this invention in accordance with the stipulations contained in Chapter II, Item C of these regulations.

Chapter II: Inventions

A. Concept:

Article 10

An invention is protected under these regulations as a new, creative technical solution that can be applied within the national economy, the public health sector, the cultural sector, the educational sector or the national defense sector and which yields socio-economic benefits.

Article 11

A technical solution is recognized as new if, prior to the day that the invention registration application is filed, this solution or similar solutions have not been publicly revealed at home or abroad in any form that could serve as the basis for its implementation.

Article 12

To be considered creative, a technical solution must be the result of creative labor and may not naturally arise from the existing level of technology prior to the day that the invention registration application is filed.

Article 13

1. An invention is a new structure, method or material as well as a known structure, method or material used for a new function.

2. Protected as inventions are:

a) New crop varieties and breeds of livestock;

b) New methods in the prevention, diagnosis and treatment of diseases of humans, livestock and crops.

3. Solutions that are contrary to socialist ethics and which cannot be implemented are not considered inventions and are not protected.

B. The Protection of Inventions

Article 14

1. The state protects inventions in one of two ways: by issuing an Inventor's Certificate or issuing an Exclusive Invention Rights Certificate.

2. The Inventor's Certificate certifies that the technical solution is an invention, certifies the priorities regarding the invention and certifies the rights of the inventor and the ownership of the invention by the state. The person who receives an Inventor's Certificate shall enjoy the rights and benefits stipulated in Chapter IV of these regulations.

3. An Exclusive Invention Rights Certificate certifies the inventor's ownership of the invention, certifies the technical solution as an invention, certifies the priorities regarding the invention and certifies the rights of the inventor.

4. The inventor or his legal heirs have the right to select either one of the two forms of protection mentioned above.

5. During the period of time for which it is in effect, an Exclusive Invention Rights Certificate can be exchanged for an Inventor's Certificate. An Inventor's Certificate may not be exchanged for an Exclusive Invention Rights Certificate.

Article 15

1. Inventor's Certificates are issued only in the following cases:

a) Inventions created within the scope of responsibility of an inventor when performing the task of his agency or unit or of an inventor who receives material assistance from his agency or unit in order to create his invention (hereafter abbreviated as a public service invention);

b) Inventions related to national defense and national security;

c) Inventions of equipment and methods employed in the prevention, diagnosis and treatment of diseases of humans, livestock and crops;

d) Inventions of:

--Substances extracted by chemical methods;

--Various types of pharmaceuticals for the prevention and treatment of diseases of humans, livestock and crops;

--Various types of food for humans and feed for livestock.

2. An Exclusive Invention Rights Certificate may be issued for the invention of methods for the manufacture of the various objects set forth in 1d of this article.

Article 16

1. Inventions are protected under the law from the day that the State Science and Technology Commission decides to issue the certificate.

2. The amount of protection of an invention is defined in the invention formula. The invention description section of the certificate is only used to describe the invention formula.

3. An Inventor's Certificate and an Exclusive Invention Rights Certificate are in effect for 15 years from the date of filing of the invention registration application.

Article 17

1. Persons who violate the invention ownership rights of the state and the inventor will be prosecuted under state law.

2. The following cases are not considered violations of the invention ownership rights of the state or the inventor:

a) The use of machinery, equipment, materials and so forth that are inventions for which certificates have been issued on means of communication and transportation that are passing through or temporarily remaining in the territory, air space or territorial waters of Vietnam provided that this machinery, equipment, supplies and so forth are only used to support the maintenance of the operation of these means of communication and transportation.

b) The use of an invention for non-business purposes.

3. If, prior to the day that the invention registration application is filed, another agency, unit or individual independent of the person who filed the application has applied or has prepared the conditions needed to apply a solution that is identical to the invention, they still have the right to continue to apply this solution but may not broaden the scope or increase the magnitude of its application.

Article 18

1. Inventor's rights belong to the person who creates the invention by means of his own creative labor.

2. If something is invented by a collective of inventors, the inventor's rights belong to all of these inventors (hereafter called the inventors).

3. Persons who violate inventor's rights shall be prosecuted under state law.

Article 19

During the period of time that an Inventor's Certificate is in effect, all agencies and enterprise have the right to use this invention but must inform the State Science and Technology Commission in advance of its use by them and have an obligation to pay royalties to the inventor.

Individuals and entities considered individuals under the law may only use an invention after they have received permission from the State Science and Technology Commission.

Article 20

1. The inventor of a public service invention (Article 15, Point 1a) shall be issued an Inventor's Certificate and, at the same time, shall receive an initial incentive royalty as described in Part B of Appendix 2 of these regulations.

2. An agency or unit that invents a public service invention shall be issued a Public Service Invention Certificate and shall enjoy the following rights:

--It shall be given priority in the supplying of equipment, materials and finances for organizing the testing, application and perfection of the invention;

--It shall be entrusted with being the owner of the invention when the invention is registered in a foreign country and shall enjoy the rights related thereto in accordance with regulations of the state when implementing contracts to buy, sell or trade the right to use this invention.

Article 21

1. In order to keep an Exclusive Invention Rights Certificate in effect, the inventor has the obligation to pay an annual fee as stipulated by the State Science and Technology Commission.

2. An Exclusive Invention Rights Certificate shall be terminated before its expiration date in the following cases:

a) If the inventor fails to pay the stipulated fee;

b) If the inventor requests that invention protection be terminated.

Article 22

During the period of time that an Exclusive Invention Rights Certificate is in effect, the inventor has the right to use his invention for production and business purposes in accordance with the law of the Socialist Republic of Vietnam, the right to permit others to use his invention and the right to transfer part or all of the ownership of his invention on the basis of a contract negotiated by the two parties involved. A contract that permits the use of an invention or transfers ownership rights must be registered at the State Science and Technology Commission.

Article 23

In the case of inventions of especially important significance in which the inventor does not use the invention or does not use it to an extent that meets the requirements of the national economy and in which an agency or enterprise requests permission to use the invention but does not reach agreement with the inventor concerning the taansfer of the right to use his invention, the premier may, at the suggestion of the State Science and Technology Commission, decide to make a confiscatory purchase of this invention or issue a permit to use the invention to the agency or enterprise. Compensation shall be paid to the inventor by the agency or enterprise that uses the invention, the amount of which shall be determined by the State Science and Technology Commission.

Article 24

1. To protect national interests as they relate to inventions, agencies, units and individuals are permitted to:

a) Request the protection of their inventions in foreign countries;

b) Buy, sell or trade the right to use an invention with individuals or organizations in foreign countries.

2. A request to have an invention protected in a foreign country can only be made after the invention has received protection in Vietnam and must comply with the regulations of the authorized state management agency.

Article 25

1. A foreigner (or an entity that has the status of an individual under foreign law) enjoys the rights defined by these regulations on the basis of the principle of reciprocity in accordance with the laws of the Socialist Republic of Vietnam and the international treaties to which Vietnam is a party.

2. A foreigner (or an entity that has the status of an individual under foreign law) who seeks protection for an invention in Vietnam must do so through the legal representative, that is, the Commercial Affairs Office of the SRV.

C. The Registration of Inventions

Article 26

1. The application for an Inventor's Certificate or an Exclusive Invention Rights Certificate (hereafter abbreviated as the invention registration application) must be completed by the inventor or his legal heirs and filed with the State Science and Technology Commission.

2. As regards public service inventions, agencies and enterprises have the responsibility of completing and filing invention registration applications together with their conclusions concerning the newness, the degree of creativity, the applicability and the benefits of the invention and must make it possible for the inventor to participate in the filing of the invention registration application.

3. Persons who request an Exclusive Invention Rights Certificate must pay the invention registration fee stipulated by the State Science and Technology Commission.

4. The procedures for completing and filing an invention registration application have been defined by the State Science and Technology Commission in the circular issued for the purpose of guiding the implementation of these regulations.

Article 27

1. Persons working at agencies and enterprise who, in the course of performing the task assigned to them, discover technical solutions capable of being recognized as inventions must promptly inform their agency or enterprise manager of this discovery; no one is permitted to reveal the nature of this solution before the invention registration application is filed.

2. If, after a period of 2 months from the day it was informed of this discovery, an agency or enterprise has not completed and filed an invention registration application, the inventor has the right to complete and file this application on his own but this application must clearly state that the invention is a public service invention.

Article 28

The priorities regarding an invention are established as follows:

a) On the basis of the day that the invention registration application is filed at the State Science and Technology Commission;

b) On the basis of the day that the invention registration application is filed in another country on the basis of an international agreement to which Vietnam is a party;

c) On the basis of the day that the invention is presented at an official exhibit within Vietnam, provided that the invention registration application is filed within 6 months from the day that the invention is presented at the exhibit.

D. Testing, Issuing a Certificate for and Publicly Announcing an Invention

Article 29

1. Within no more than 3 months from the date that it receives an invention registration application, the State Science and Technology Commission must conduct a preliminary test of the invention and inform the applicant of whether or not his application has been accepted or request that he revise or supplement it in some way.

2. If, after 2 months from the date he received this notification, the applicant has not forwarded the revisions or amendnents requested by the State Science and Technology Commission, the invention registration application shall be considered to have not been filed.

Article 30

1. Within no more than 18 months from the date it receives an invention registration application, the State Science and Technology Commission must conduct a scientific and technical test of the contents of the solution set forth within the application and, on the basis of the results of this test, determine whether or not to issue a certificate to the applicant. If a certificate is not issued, the reason for this decision must be given and the applicant must be informed.

2. As regards an invention by a collective of inventors, an Inventor's Certificate shall be issued to each person with the names of the other inventors recorded on this certificate.

3. An invention for which an Inventor's Certificate or an Exclusive Invention Rights Certificate has been issued shall be publicly announced in a Notice of Inventions published by the State Science and Technology Commission.

4. In order to protect national interests, the State Science and Technology Commission has the right, when necessary, to postpone the announcement of an invention or not publicly announce an invention.

Article 31

1. In the process of scientific and technical testing, the State Science and Technology Commission has the right to request that the applicant provide additional data in order to clarify the nature of the solution set forth within the application or invite the inventor to participate in the testing of the invention.

2. If the supplementary data changes the nature of the solution, the applicant must complete and submit a new invention registration application.

Article 32

1. At the request of the State Science and Technology Commission, the scientific and technical research and design institutes, colleges, agencies and enterprises have the responsibility of participating in evaluating and reaching conclusions concerning the newness, the degree of creativity, the applicability and the benefits of the solution set forth within the invention registration application as they relate to their specialized field.

2. The State Science and Technology Commission has the permission to establish an Inventions Examination and Testing Council to help the head of the commission to examine and resolve every problem related to the testing of inventions. The composition and mode of operation of this council shall be determined by the head of the State Science and Technology Commission.

Article 33

1. The Ministry of Agriculture has the responsibility of examining and issuing Inventor's Certificates for new varieties of crops and species of livestock once they

have been recorded by the State Science and Technology Commission in the National Inventions List.

2. The procedures for registering, testing and issuing certificates for inventions, organizing the application of inventions, rewarding inventions and resolving suits related to new varieties of crops and species of livestock shall be stipulated by the Ministry of Agriculture in a separate circular after reaching agreement with the State Science and Technology Commission.

E. Supplementary Inventions

Article 34

1. A supplementary invention is an invention that perfects another invention (called a basic invention) for which an Inventor's Certificate or an Exclusive Invention Rights Certificate was issued and still in effect; a supplementary invention is one that cannot be used without using the basic invention.

2. The protection of and the procedures for registering, testing, issuing a certificate and publicly announcing a supplementary invention are the same as those set forth in Chapter II, Items B,C, and D of these regulations.

Article 35

1. The inventor of a supplementary invention shall be issued a Supplementary Invention Certificate if the inventor of the basic invention has been issued an Inventor's Certificate.

2. If the inventor of the basic invention has been issued an Exclusive Invention Rigtts Certificate, the person who submits the supplementary invention application can request to be a issued a Supplementary Inventor's Certificate or a Supplementary Exclusive Invention Rights Certificate. In this case, the supplementary invention can only be used with the agreement of the inventor of the basic invention.

3. If an Inventor's Certificate or an Exclusive Invention Rights Certificate for a basic invention is, for some reason not related to the supplementary invention, no longer in effect, the certificate issued for the supplementary invention shall be considered to be independent.

F. Secret Inventions

Article 36

1. Inventions that are related to national defense and national security as well as inventions which, due to national interests, must be kept secret are considered secret inventions.

2. The protection of secret inventions shall be defined by the State Science and Technology Commission together with the Ministry of National Defense and the Ministry of Interior in a joint ministry circular.

Chapter III: Applying and Making Information Known About Innovations and Inventions

Article 37

1. Agencies and enterprises have the responsibility of organizing the timely and most effective application possible of innovations and inventions in exact accordance with the requirements of production and work.

2. A decision by the head of the agency or enterprise is needed when applying an innovation or invention in production or work. This decision must clearly state the date on which the application of the innovation or invention will begin, the components or individuals responsible for applying it and the new economic-technical norms and quotas that apply.

3. If the application of an innovation or invention changes existing economic-technical norms or quotas, the responsible agency or enterprise must conduct research and revise these norms and quotas accordingly. In the case of innovations or inventions that raise labor productivity, the persons applying them under Point 2 of this regulation shall receive wages and bonuses based on their old labor productivity quota for a period not to exceed 6 months from the first day of application.

Article 38

1. As regards innovations and inventions whose application can be broadened to the sector or locality, the responsible agency or enterprise must promptly report the substance of and benefit derived from the innovation or invention to the management agency on the upper level and, at the same time, create the conditions for other agencies, enterprises or localities to apply the innovation or invention.

2. The sector or locality has the responsibility of organizing the dissemination of information on innovations and inventions and guiding the application of innovations and inventions within the agencies and enterprises of their sector or locality.

3. The State Science and Technology Commission has the responsibility of organizing a nationwide system of information on inventions. As regards an important invention, the State Science and Technology Commission has the task of promptly informing the State Planning Commission and the various sectors and localities of this invention or proposing that they research ways to incorporate it in their plans for applying technical advances.

Chapter IV: The System of Commendation and Awards for Innovations and Inventions

A. Commendation and Awards for Persons Issued Innovation Certificates or Inventor's Certificates:

Article 39

1. Persons who are issued Innovation Certificates or Inventor's Certificates have the right to receive an award when an agency or enterprise applies their innovation

or invention. The right to a monetary award may be transferred to heirs in accordance with state law.

2. The magnitude of the awards for such persons is based on the benefits derived from the application of their innovation or invention.

3. The heads on the various levels have the responsibility of offering commendation and awards to innovators and inventors in accordance with the provisions of these regulations.

Article 40

1. The forms of commendation can be: letters of commendation, certificates of commendation, titles of honor and so forth determined by the heads on the various levels.

2. Awards to individuals or collectives who make innovations are not to exceed ten thousand (10,000) dong and awards to an individual inventor or a collective of inventors are not to exceed fifty thousand (50,000) dong. In the case of a collective of innovators or inventors, the persons within the collective must reach agreement concerning how the monetary award for their innovation or invention will be used.

3. Persons whose innovations or inventions are of especially large scientific, technical or economic value shall be awarded titles of honor and national science and technology prizes by the state.

Article 41

1. The agency or unit that first applies an innovation or invention has the responsibility of computing the direct benefit (or savings) in money resulting from the application of the innovation or invention.

2. The monetary award for an innovation is based on the amount of money earned from it during the first year of its application and is calculated on the basis of Appendix 1 to these regulations.

The monetary award for an invention is calculated for the first 2 years of its application. The amount of the award during each year is based on the amount of money earned from it during that year and is calculated in accordance with Chart A in Appendix 2 to these regulations. The total monetary award granted during these 2 years may not exceed the maximum award stipulated in Article 40, Point 2 of these regulations.

3. Monetary awards for persons whose innovations or inventions change the design or construction plans of construction projects shall be stipulated by the State Capital Construction Commission and the State Science and Technology Commission in a joint-ministry circular.

Article 42

1. If the benefit derived from the application of an innovation or invention cannot be computed in monetary terms, the amount of the award to the innovator or inventor shall be determined on the basis of the following:

a) The benefits derived in various areas, such as improving working conditions, improving living conditions, improving the maintenance of health, improving the protection of the environment, improving labor safety, improving national defense capabilities and national security...

b) The magnitude and scope of application;

c) Scientific and technical value;

d) The complexity of the task being performed.

2. The benefits set forth in Point 1 of this article must be described fully and in detail in order to lay the basis for consideration for commendation or an award.

Article 43

If the benefit computed in monetary terms in accordance with Article 41 does not fully reflect the value of the innovation or invention, the heads on the various levels have the permission, on the basis of the economic and technical significance or the importance of the task being performed, to increase the award to no more than three times the amount allowed under the authority to determine the amounts of awards stipulated in Article 46 of these regulations.

Article 44

1. The agency or enterprise that first applies an innovation or invention and directly benefits from its application has the responsibility of paying the award to the innovator or inventor.

2. If the application of an innovation or invention does not directly benefit the agency or unit that first applies it, any agency or unit that does benefit from the innovation or invention has the responsibility of paying the award to the innovator or inventor, the amount of which shall be the same as the award that would have been paid by the agency or unit that first applied the innovation or invention.

Article 45

1. If, within a period of 2 years for innovations and 5 years for inventions from the date that the innovation or invention is first applied at an agency or unit, the innovation or invention is applied at other agencies or enterprises, the innovator or inventor shall receive a supplementary monetary award.

2. The supplementary monetary award for innovators and inventors shall be paid by the agencies and units that expand the application of their innovations or inventions. The ministers, the heads of agencies of ministerial level, the heads of agencies directly subordinate th the Council of Ministers and the chairmen of the provincial people's committees and the people's committees of the municipalities subordinate to the central level have the responsibility of determining the amount of supplementary awards when the scope of expanded application lies within the sector management agency on the central level or within the scope of local management.

Article 46

The authority to determine the amount of an award is as follows:

a) The head of an agency or unit has the authority to determine the size of all awards to innovators and inventors from category 1 to category 6 in Appendix 1 and Appendix 2A to these regulations depending upon the division of levels of the ministry, sector, provincial people's committee or the people's committee of a municipality subordinate to the central level.

b) The ministers, heads of agencies of ministerial level, heads of agencies directly subordinate to the Council of Ministers, the chairmen of the provincial people's committees and the chairmen of the people's committees of municipalities subordinate to the central level have the authority to determine the amount of awards to innovators and inventors from category 7 to the maximum award and can, within this limit, give management levels subordinate to the sector or on the local level the authority to determine the size of awards.

B. The Other Rights of Innovators and Inventors

Article 47

1. Innovators or inventors have the right to participate in the testing and the trial application of their innovation or invention in accordance with the general plan of agencies and units.

2. All other conditions being equal, innovators or inventors are given priority over other persons with regard to training and the improvement of their specialized skills.

C. Incentive Awards for Persons Who Assist Innovators and Inventors and Persons Who Organize and Apply an Innovation or Invention for the First Time

Article 48

1. Persons assigned to provide technical assistance to innovators or inventors in the process of research and testing to create an innovation or invention shall receive an incentive award not to exceed 25 percent of the monetary award given to the innovator or inventor.

2. Persons who participate in organizing and applying an innovation or invention for the first time by an agency or unit shall receive an incentive award not to exceed 50 percent of the monetary award given to the innovator or inventor.

3. Persons who take the initiative and propose or who directly participate in organizing and applying an innovation or invention for the first time for an agency or enterprise after the innovation or invention has been successfully applied elsewhere shall receive an incentive award not to exceed 50 percent of the monetary award given to the creator of an innovation or invention that has earned a corresponding amount of money.

4. The incentive awards to the persons described in Points 1, 2 and 3 of this article shall be deducted from the money earned as a result of applying the innovation or invention. The consideration of whether or not to make an incentive award must be based on the following:

a) The amount of work and the complexity of the work performed by the participants.

b) The spirit of initiative displayed in helping to accelerate the process of the creation and application of the innovation or invention.

Chapter V: Protecting the Rights Related to Innovations and Inventions

Article 49

1. Persons who file innovation registration applications have the right to lodge complaints against agencies and units in the following cases:

a) If the innovation registration application is not examined within the stipulated period of time;

b) If the person does not agree with the reason given by the agency or enterprise for not recognizing the solution registered by him as an innovation.

2. Within 1 month from the date that a complaint is received, the head of the agency or unit has the responsibility of acting upon this complaint and informing the complainant of the result.

3. If the complainant does not agree with the result of the action taken by the head of the agency or unit, he may lodge a complaint with the management agency on the upper level. On each level, action on a complaint must be taken within at least 1 month from the date that the complaint is received. In action on complaints involving the registration and recognition of innovations, the decision of the ministers, the heads of agencies on the ministerial level, the heads of agencies subordinate to the Council of Ministers, the chairmen of the provincial people's committees and the chairmen of the people's committees of municipalities subordinate to the central level is the final decision.

Article 50

1. Persons who file invention registration applications have the right to lodge a complaint against the State Science and Technology Commission in the following cases:

a) If the person does not agree with the reason for rejecting an invention registration application;

b) If the person does not agree with the reasons given for not issuing an Inventor's Certificate or an Exclusive Invention Rights Certificate;

c) Of the person does not agree with the invention formula established by the State Science and Technology Commission.

2. During a period of not more than 3 months from the day it receives a complaint, the State Science and Technology Commission has the responsibility of studying the complaint, acting upon it and informing the complainant of the result. The decision of the head of the State Science and Technology Commission is the final decision in action upon complaints.

Article 51

1. During the period of time that a certificate is in effect, any agency, unit, organization or individual has the right to file a complaint with the State Science and Technology Commission opposing the issuance of an Inventor's Certificate or an Exclusive Invention Rights Certificate for the reason of having violated the conditions for issuing a certificate. On the basis of the result of the examination of these complaints, the State Science and Technology Commission has the right to decide to cancel a part or all of the remaining period of effectiveness of an Inventor's Certificate or an Exclusive Invention Rights Certificate, announce this decision in the official Invention Gazette and, at the same time, inform the person to whom the certificate was issued.

2. If the person to whom the certificate was issued does not agree with the decision to cancel the certificate, he has the right to file a complaint with the State Science and Technology Commission within 2 months from the date he is informed of the decision. The decision of the head of the State Science and Technology Commission is the final decision in this matter.

Article 52

1. The person to whom an Inventor's Certificate or an Exclusive Invention Rights Certificate has been issued has the right to file complaints in the following cases:

a) If the person is not permitted to participate in the testing and application of his innovation or invention;

b) If the innovation or invention is not applied or not fully applied in accordance with the requirements of production and work;

c) If the person does not receive a commendation or award as stipulated in these regulations.

2. Persons who support innovators and inventors and persons who organize and apply innovations and inventions for the first time have the right to file a complaint when

they do not receive an incentive award as stipulated in Article 48 of these regulations.

3. The complaints set forth in Points 1 and 2 of this article are to be filed with the head of the agency or unit to which the complaint relates. The head of the agency or unit must take action upon and inform the complainant of the results of this action within 1 month from the date that the complaint is received.

4. If the person who lodges a complaint does not agree with the results of the action taken by the head of the agency or unit, he has the right to file a complaint with the management agency on the level above the agency or unit.

Complaints must be acted upon on each level within 1 month from the date that they are received.

The decision of the heads of the ministries, agencies of ministerial level and agencies subordinate to the Council of Ministers or the chairmen of the provincial people's committees or the chairmen of the people's committees or municipalities subordinate to the central level is the final decision in the resolution of these complaints.

Article 53

Complaints concerning violations of the rights of inventors, the ownership of inventions by the state or the inventor as well as complaints related to inheritence rights shall be handled in accordance with state law.

Chapter VI: Organizing and Guiding Innovation and Invention Activities

A. The State Organizations

Article 54

1. The State Science and Technology Commission has the responsibility of organizing, guiding and unifying the management of innovation-invention activities on a nationwide scale.

2. The ministries, agencies of ministerial level, agencies subordinate to the Council of Ministers, provincial people's committees and the people's committees of the municipalities subordinate to the central level have the responsibility of organizing, guiding and managing innovation-invention activities within their sector or locality. The scientific-technical management agencies of the sectors and localities have the responsibility of helping the head of the sector or the local people's committee to fulfill the above mentioned function.

3. The heads of agencies and units are responsible for the comprehensive development of innovation-invention activities within their agency or unit. The scientific-technical management organization of the agency or unit has the task of helping the head to fulfill the above mentioned function and must put cadres or a component in charge of managing innovations and inventions.

4. Agencies and enterprises of the state are permitted to establish a council of advisors to help the heads of agencies and enterprises fulfill their function of organizing and guiding innovation-invention activities (abbreviated as the Innovation-Invention Council).

The sector management agencies and the people's committees of the provinces and municipalities may, depending upon the specific situation, establish an Innovation-Invention Council on their level.

Article 55

The heads of the sectors and levels have the responsibility of closely coordinating with the social organizations, especially the Trade Union and the Ho Chi Minh Communist Youth Union, in the process of organizing and guiding innovation-invention activities.

B. Finances for Innovation and Invention Activities

Article 56

1. Agencies, units and sector management agencies are permitted to establish funds to pay for the following:

a) The implementation of measures designed to accelerate innovation-invention activities;

b) The organizing of the testing and application of innovations and inventions;

c) The payment of awards to innovators and inventors, the persons who support them and the persons who first organize the application of an innovation or invention.

2. The costs of testing and applying innovations and inventions shall be paid from the following sources:

--The production development incentive fund;
--Scientific and technical research expenses;
--Administrative expenses.

3. Expenditures for the payment of awards and the implementation of measures designed to accelerate innovation-invention activities:

a) As regards production units, these costs shall be paid from the profits resulting from the application of the innovation or invention.

b) As regards administrative agencies, professional units and the sector management agencies, costs shall be considered part of administrative costs or scientific-technical research costs.

4. The procedures for establishing funds, for accounting for these funds and for making payments for the purposes set forth in Point 1 of this article shall be stipulated by the Ministry of Finance and the State Science and Technology Commission.

Chapter VII: Implementation

Article 57

The State Science and Technology Commission has the responsibility of promulgating or coordinating with related agencies to promulgate various circulars explaining and guiding the implementation of these regulations.

Article 58

The heads of the ministries, agencies of ministerial level and agencies subordinate to the Council of Ministers, the chairmen of the provincial people's committees and the chaprmen of the people's committees of the municipalities subordinate to the central level must, on the basis of these regulations and the characteristics of their sector or locality, promulgate specific regulations and supervise and inspect the implementation of these regulations.

Article 59

These regulations go into effect on the day they are signed. All regulations on commendations, awards and the management of innovations and inventions that are contrary to these regulations are hereby cancelled.

On behalf of the Council of Ministers
Signature: The Premier
Signed: Tho Huu

Appendix 1.

Chart for Determining the Amount of an Award to a Person Who Makes an Innovation

Category of Award	Total Money Earned During the First Year of Application of the Innovation (dong)	Monetary Award to the Innovator (dong)
1	Less than 200 dong	20 percent of money earned
2	From 200 to 500 dong	17 percent + 6 dong
3	From 500 to 1,000 dong	14 percent + 21 dong
4	From 1,000 to 2,000 dong	12 percent + 41 dong
5	From 2,000 to 5,000 dong	10 percent + 81 dong
6	From 5,000 to 10,000 dong	8 percent + 181 dong
7	From 10,000 to 20,000 dong	6 percent + 381 dong
8	From 20,000 to 50,000 dong	4 percent + 781 dong
9	From 50,000 to 100,000 dong	2 percent + 1,781 dong
10	More than 100,000 dong	1 percent + 2,781 dong-not to exceed 10,000 dong

Appendix 2.

A. Chart for Determining the Amount of an Award to an Inventor

Category of Award	Total Money Earned During One Year of the Invention's Application (dong)	Monetary Award to the Inventor (dong)
1	Less than 1,000 dong	25 percent of the money earned
2	Fromm 1,000 to 2,000 dong	20 percent + 50 dong
3	From 2,000 to 5,000 dong	15 percent + 150 dong
4	From 5,000 to 10,000 dong	10 percent + 400 dong
5	From 10,000 to 20,000 dong	7 percent + 700 dong
6	From 20,000 to 50,000 dong	5 percent + 1,100 dong
7	From 50,000 to 100,000 dong	3 percent + 2,100 dong
8	From 100,000 to 200,000 dong	2 percent + 3,100 dong
9	From 200,000 to 500,000 dong	1.5 percent + 4,100 dong
10	More than 500,000 dong	1 percent + 6,600 dong-not to exceed 50,000 dong

B. The initial incentive award to the inventor of a public service invention: from 50 to 200 dong per invention but not to exceed 50 dong per inventor.

'NHAN DAN' ON CADRES' REVOLUTIONARY QUALITIES

BK101028 Hanoi Domestic Service in Vietnamese 2300 GMT 6 Aug 81

[NHAN DAN 7 August editorial: "Quality of Cadres and Party Members"]

[Text] Revolutionary qualities constitutes the basic criteria for cadres and party members. In forging our party into a firm and strong Marxist-Leninist party, President Ho Chi Minh strictly demanded that cadres and party members enhance their revolutionary ethics. He introduced the famous motto "diligent, thrifty, honest, just and impartial" that profoundly outlines the virtues of revolutionaries.

Our party, with its great vitality and capacity for struggle, can overcome any difficulty and defeat any enemy because it firmly grasps Marxism-Leninism, sets forth correct lines and at the same time, has a contingent of staunch and dedicated cadres and party members. Cadres and party members have assumed their duties at the forefront of all fierce struggles; and they have endured all difficulties and hardships and shunned no sacrifices. Many of them have lost their lives for the cause of national independence and freedom, thus enriching the party's glorious tradition. In the socialist revolution, many comrades have set examples of diligence and creativity in labor, developing innovations, improving technology and scoring numerous outstanding achievements.

In their daily life, which is still beset with many difficulties and privations, the majority of cadres and party members work diligently and live modestly. They care for the livelihood of the people and stand ready to receive party assignments to work in difficult places. With seething hatred for the Chinese expansionists and hegemonists, our cadres and party members have upheld the "determined to fight and win" spirit to defend the socialist fatherland and fulfill their lofty international obligation. This fine quality of cadres and party members is the result of years of tempering and trials in the course of revolutionary struggle.

Such unhealthy phenomena as corruption, bribery, oppression of the masses, opportunism and liberalism are totally alien to the nature of our party and state; they weaken the prestige of the party and state and damage the revolution. Those whose quality has seriously degenerated are no longer qualified to remain as cadres and party members.

The party's resolve is to build a contingent of clean, firm and strong cadres and party members who are fully capable and qualified to meet the taxing requirements of socialist construction and national defense, and to be worthy of the expectations and trust of the people. While striving to improve capability, we must simultaneously pay even greater attention to enhancing quality and overcome the tendency toward neglecting quality or separating these two criteria. The yardstick for measuring revolutionary quality first of all consists of one's loyalty to the party's revolutionary cause, his total devotion to carrying out the two strategic tasks--successfully building socialism and firmly defending the fatherland--and his determination to foil all the schemes and acts of aggression by Chinese expansionism and hegemonism and other international reactionary forces.

Loyalty to the party means having the courage to struggle to protect the party's lines and its ideological and organizational integrity as if protecting the apple of one's eyes, and scrupulously implementing the party's various viewpoints and policies and state law. All for the socialist fatherland and for the people's happiness--this is a great motto and the glorious cause of the party. The reason for being and happiness for cadres and party members lies in the total devotion of their talents, intelligence and energy to this sacred cause. Difficult times are the very time when party members are required to hold fast to their combat positions, uphold their exemplary steadfast role and display the highest sense of responsibility in their every word and deed.

Educating cadres and party members to enhance their revolutionary qualities is an extremely important task. It is necessary to promote good models of the sense of responsibility, the spirit of organization and discipline, loyalty to the party and the fatherland, defiance of difficulties and hardships, dedication and sacrifice, honesty and valor, and criticism of unhealthy thoughts and behavior. In forging these qualities, ideological work must be closely linked with organizational work. The drives to issue party membership cards, to consolidate organization and convene party congresses at all levels provide good opportunities for inculcating revolutionary qualities and struggling against negative phenomena within the party to make it cleaner, firmer and stronger and to further tighten its bond with the masses.

By all measures, including administrative measures against serious shortcomings, it is necessary to instill in every cadre and party member the code of conduct of the communist which requires that they live with revolutionary ardor, honesty, impeccability, modesty, discipline, democracy, unity, mutual affection and close association with the masses. Making criticisms and self-criciticms and educating and forging the qualities of cadres and party members constitutes a regular task to be performed by all party organizations.

BRIEFS

VOCATIONAL TRAINING CONFERENCE--Hanoi, VNA, 11 Aug--The meeting of vocational instructors of nine socialist countries held in Ho Chi Minh City came to an end on August 9. The meeting decided, among other things, to take Ho Chi Minh City as the venue for the 10th conference on cooperation in vocational training among the socialist countries. The conference will take place on October 5-12, 1982, and will discuss: 1. urgent problems concerning vocational education at the present stage of socialist and communist building. 2. measures to better vocational teaching at job training schools, and 3. problems relating to the education and training of teachers at vocational schools. The meeting adopted a proposal by Vietnam for an exhibition of teaching aids and means of vocational training. The delegates to the meeting were received by the city people's committee. They called at a vocational school at Vung Tau and exchanged experiences with the Vietnamese Department of Vocational Training. [Text] [OW111515 Hanoi VNA in English 1459 GMT 11 Aug 81]

COMMUNIQUE CONDEMNS SPECULATIVE PRICE RISES IN HCM CITY

Ho Chi Minh City TIN SANG in Vietnamese 7 Jun 81 p 1

[Text of communique: "The Municipal People's Committee Urges the People, Sectors and Mass Organizations To Actively Fight for Market Management and Against Speculative Price Increases"]

[Text] On 6 June 1981, the Ho Chi Minh City People's Committee issued the following communique:

Recently the party and government issued some improved regulations about distribution and circulation aimed at stepping up production and further stabilizing the living conditions of workers, civil servants, the armed forces and working people and at the same time adjusted the prices of some goods that had become no longer appropriate.

Taking advantage of that situation, the bad elements and dishonest business people stirred some disturbances in order to raise prices and to hide goods and spread false news to the effect that the state would order the inventories of small business people, etc., which has led to the illegal raising of prices of some goods and services.

The People's Committee of Ho Chi Minh City announces the following:

1. Scheduled inventories are a regular activity of the state-run production and business sectors; the Municipal People's Committee does not intend to order inventories in the private sector, in both production and business.

2. The stores doing business and providing services must post prices and sell and collect in accordance with the posted prices. As an immediate step, the market prices of 1 June 1981 are temporarily considered the standard prices. In the case prices of any goods that have gone down since 1 June 1981, they cannot be raised.

3. Those who sell and collect at prices higher than the posted ones and practice speculation and hoarding to create psychological effects will be severely punished.

All responsible organs, economic control units and market and marketplace management committees must closely coordinate their activities with the mass organizations, particularly the Women's Union, in urging small business people to correctly implement the price policy.

All people, sectors, echelons and mass organizations, particularly the Women's Union, for their own interests, must actively fight for market management and against speculative price increases, step up production and practice thrift.

TEN-DAY AGRICULTURAL REVIEW REPORTED

BK130711 Hanoi Domestic Service in Vietnamese 2300 GMT 10 Aug 81

[Review of agricultural news for the past 10 days]

[Summary] "To date the country has planted more than 2 million hectares of 10th-month rice. The northern provinces and cities have planted almost 1.3 million hectares, achieving nearly 100 percent of the planned areas or 200,000 hectares over the same period last year."

Localities are now caring for the 10th-month rice crop. More than 70 percent of the transplanted ricefields have been weeded in the first phase. Thanks to moderate rainfall throughout the mountainous, midland and delta areas and the former fourth zone last week, slightly more than 100,000 hectares now need additional water from irrigation system.

"The southern provinces and cities have planted more than 1 million hectares of 10th-month rice, achieving 50 percent of the planned areas or 100,000 hectares more than the same period last year."

The pace of transplanting 10th-month rice in southern provinces was quicker than last year, but compared with the plan and crop schedule, it was still slow. A number of provinces in the Mekong Delta area with a speedy record in transplanting achieved only 70 to 90 percent of their plan norms.

"Moreover, southern provinces and cities have experienced diverse weather conditions in their 10th-month crop this year. Some have been faced with drought, while others have been faced with waterlogging. More than 50,000 hectares have been affected by drought in several provinces, mostly in Minh Hai, Kien Giang, Long An and Cuu Long provinces."

Along with transplanting the 10th-month rice, southern provinces and cities have harvested more than 50,000 hectares of the summer-fall rice with a fairly high yield--from 20 to 30 quintals per hectare.

Noteworthy is the appearance of harmful insects in the north. "Areas of 10th-month rice in the north threatened by harmful insects have increased rather quickly. On the average, 10,000 additional hectares have been ravaged daily. To date, more than 200,000 hectares--or five times more than in the same period last year--have been damaged, mostly by brown leafhoppers."

Various localities are actively taking measures to limit the spread of these harmful insects. Their great difficulty now, however, is the shortage of insecticide, spray equipment and the lack of experience in eradicating the insects.

"It is feared that the insect ravaging spell will spread further from mid-August and if measures are not taken to exterminate it promptly, then it will spread vigorously in the following period and may cause massive damage by early September. Various localities, echelons and sectors are therefore urgently required to integrate all of their energy and equipment to eradicate these harmful insects."

Besides brown leafhoppers, localities should also pay attention to eradicating rice hispa which has already ravaged some areas.

"With respect to vegetable, subsidiary and industrial crops, to date localities throughout the country have planted more than 400,000 hectares, of which more than 70,000 hectares are in the north and more than 300,000 hectares in the south."

In the coming days, localities should carry out the following main tasks satisfactorily:

--northern provinces must concentrate all their efforts on eradicating the spreading of harmful insects to protect the transplanted 10th-month rice; formulate plans to control possible floods effectively; strive to produce more fertilizer for ricefields; and take concrete measures to ensure sufficient seeds for this year's winter crop.

--southern provinces must quickly harvest the summer-fall rice to avoid damage which may be caused by floods and waterlogging; accelerate the pace of the 10th-month rice transplanting; control floods and promptly drain water from waterlogging areas; try by all means to transplant rice on all planned areas and prevent them from being damaged.

AGRICULTURE

BRIEFS

LAM THAO SUPERPHOSPHATE PLANT--The Lam Thao superphosphate plant over the past 7 months produced more than 103,000 tons of fused phosphate fertilizer, achieving 60.6 percent of the plan norms for this year. The plant also produced a large quantity of detergent and insecticide to meet public demand and to serve agriculture. [BK081207 Hanoi Domestic Service in Vietnamese 1100 GMT 4 Aug 81 BK]

HA NAM NINH RICE--As of 30 July, agricultural cooperatives in Ha Nam Ninh Province had planted 141,000 hectares of 10th-month rice, overfulfilling the plan norm by 1,500 hectares. About 550 cooperatives have overfulfilled their plan norms. This is the best crop the province has ever produced. [Hanoi Domestic Service in Vietnamese 2300 GMT 3 Aug 81 BK]

THANH HOA 10TH-MONTH RICE--As of 31 July, Thanh Hoa Province had planted 136,200 hectares of 10th-month rice, overfulfilling its plan norms by 0.8 percent. About 10 districts in the province have overfulfilled plan norms by from 2 to 9 percent. "The province has also weeded 87,000 hectares and applied more than 745,000 tons of animal manure on various ricefields. [Hanoi Domestic Service in Vietnamese 1100 GMT 4 Aug 81 BK]

NGHE TINH RICE--As of 25 July agricultural cooperatives in Nghe Tinh Province had planted 137,237 hectares of 10th-month rice, achieving more than 90 percent of the plan norms. Huong Khe, Huong Son, Quy Hop and Nghia Dan districts overfulfilled their plan norms by from 4 to 25 percent. These cooperatives are now caring for the transplanted acreage and have weeded 63,200 hectares. [Hanoi Domestic Service in Vietnamese 1100 GMT 31 Jul 81 BK]

GIA LAI-CONG TUM AGRICULTURE--In an effort to advance toward the path of large-scale socialist production, Gia Lai-Cong Tum Province is planning to zone off 1 million hectares of natural land for agriculture and forestry. This area will include 16 state farms, 19 forestry sites and 120 agricultural cooperatives. [Hanoi Domestic Service in Vietnamese 0400 GMT 4 Aug 81 BK]

HAU GIANG DROUGHT--Some 7,000 hectares of summer-fall rice and 29,000 hectares of 10th-month rice and seedlings in Hau Giang Province have been affected by the prolonged drought since early July, while more than 20,000 hectares of plowed ricefields are waiting for water before transplanting work can continue. To cope with the situation, drought control committees of various echelons in the province are mobilizing the work force and integrating facilities to bring more water to the fields and accelerate the pace of sowing seedlings for the 10th-month crop. HEAVY INDUSTRY AND CONSTRUCTION

BUILDING MINISTRY CONFERENCE ON 1980-1981 TASKS

Hanoi XAY DUNG in Vietnamese No 1, Jan 81 pp 2-3 & 31

[Excerpt of the Ministry Report at the Conference to Review the Tasks Done in 1980 and to Discuss the Guidelines and Tasks for 1981: "Policy and Tasks of the Building Sector and Construction Materials Industry According to the 1981 Plan"]

[Text] On the threshold of 1981--the first year of the 1981-1985 5-year plan--, we are faced with numerous difficulties including a serious economic imbalance and a substantial reduction in the supply of materials and energy. In investing in capital construction, it is, therefore, necessary to make appropriate arrangements to concentrate capital, materials, energy and equipment on agricultural development, exportation and the building of key industrial projects for the economy; to reexamine the scale and objectives of capital construction in order to concentrate forces on stepping up the building of the most important and economically effective projects; and to resolutely suspend or postpone the execution of projects which are not really urgent and do not promise high effectiveness and if it is impossible to procure enough materials and forces for their construction or to obtain the materials and energy necessary to their production activities once they are commissioned.

Based on the guidelines and tasks indicated in the state plan and on the abovementioned policy on capital construction investment, the planned tasks of the sector in 1981 are as follows:

Priority must be given to the task of concentrating forces, supplies, materials, vehicles, machines and transportation means...in order to accelerate the construction of key projects of the state--first and foremost, agriculture promoting projects, electric power plants (especially the Pha Lai thermoelectric and Hoa Binh hydroelectric projects), export promoting projects, projects related to the oil and natural gas industry, factories that contribute to coal exploitation, cement factories, projects that serve communications and transportation, housing in the Hanoi capital city and so forth.

--It is necessary to continue accelerating the building of projects which are above the norms set for transitional and continued construction, which are urgently needed and for which there are sufficient conditions to continue construction and to subsequently start production on completion of their construction. Production projects the construction of which will be completed by the end of 1981 must be considered important.

--It is necessary to phase out and suspend the construction of certain projects which are not urgently and immediately needed and for which there are not enough materials for construction and not enough raw materials for production on completion of their construction. Rigorous restrictions must be put on the construction of new projects including those under the norms set for construction and completion within the space of 1 year.

--Efforts must be concentrated on the building of in-depth investment projects including those which are under the set construction norms, which require the use of only a small capital and a small amount of building materials and which promise to bring about a quick effect.

--Active preparations must be made to invest capital and to build important large-sized state projects such as those related to electricity, oil and gas, nitrogen and apatite as well as the complete-equipment projects of the sector itself.

The two cement factories of Bim Son and Hoang Thach must be quickly commissioned to achieve the set targets.

In view of the abovementioned policy and tasks according to the 1981 plan of the sector, the following guiding concepts must be thoroughly understood in carrying out the plan:

1. The sense of responsibility of workers and cadres at all echelons and their spirit of revolutionary offensive in overcoming difficulties and exploiting the existing possibilities and potentials must be extolled in order to give a seething impetus to production, construction and installation, labor performance and task execution and to induce people to enthusiastically strive to successfully achieve the planned objectives--especially those of the main and completed projects and the production of essential building materials.

Every effort must be exerted to develop all potentials of the entire sector and society--first of all, labor, materials and equipment--and to draw them from affluent and strong areas to supplement and strengthen the needy and weak ones. Localism and individualism must be opposed. The entire sector must be motivated to take the initiative, to improve and rationalize production, construction and installation, surveying, planning and scientific research and to apply technical progress in production with the aim of increasing labor productivity, economically using material supplies, vehicles, machines and transportation means...and manufacturing a large amount of products of guaranteed quality and at a low cost.

2. All levels from the ministry to the grassroots must continue to intensify planning and economic management in carrying out construction and installation and in producing building materials to quickly promote any shift in production and must also fully use all potentials of each unit. Continuous efforts must be made to modify inappropriate norms and unit prices, to continuously and intensively apply economic incentives to stimulate production development, to broadly apply the product contract system with the objective of increasing labor productivity, social wealth and laborers' income, to associate the three types of interests and to raise three kinds of funds.

Due to the limited supply of gasoline and oil and to the shortage and instability of electricity, the entire sector must rapidly and firmly shift to manual and semimechanical production in any job or construction stage where this method is applicable even though it may initially entail low productivity, the use of more manpower, and a higher production cost. We must absolutely avoid waiting for the supply of gasoline, oil and electricity when we can do a job manually with rudimentary tools.

3. Subjects for scientific research must be broadened effectively. It is necessary to closely watch the state of production and to widely and vigorously apply technical progress in construction and installation, in the production of building materials and in carrying out surveying and planning in order to pave the way for a production shift at a time when production and life are beset with difficulties. The greatest attention must be paid to the application of technical progress while trying to save energy, raw materials, gasoline and oil in all phases of the production line. Scientific-technical cadres must really get into close contact with production realities and deeply analyze them so as to be able to discover new factors and innovations in the production process.

4. It is necessary to gradually improve the sector's task of providing supplies, building materials and equipment, and production means according to the method of managing supplies on the basis of the business product nomenclature, work assignment, decentralization and the delineated network. The task of providing supplies, building materials, equipment, vehicles and machines must be planned not only for the entire country and sector but also territorially and regionally and must coordinate production, business, distribution and circulation units with consumer ones in a flexible manner according to the planned norms in order to reduce circulation overheads and to deliver good-quality supplies most rapidly to consumer units.

5. To reduce the volume of materials to be transported from afar, to save gasoline and oil and to reduce the use of vehicles and machines, it is necessary to continuously develop the production of unbaked building materials and to vigorously develop installations that produce building materials on the spot or near construction projects, that require small capital investments and that can be quickly commissioned to help build the initial bases and prepare for the building of large-sized important state projects during the planned years and the subsequent ones such as the Lao Cai apatite project, the Vung Tau oil and natural gas project and so forth. If their production is unstable, the existing installations and factories which produce building materials must be firmly geared toward manual operation or shut down and properly preserved so that they will not require capital investment in repairs whenever they resume production in the future.

Concerning those goods which were exported in 1980--especially cement, enamelled procelain bricks, marble and so on--, production must be stepped up and exportation continued in 1981 with a larger volume and better quality. To contribute to the balance between foreign currencies and grain requirements within the economic system, it is necessary to further increase the volume of goods--mainly cements, bricks and tiles--that can be exchanged for grain, especially in the Mekong Delta.

6. Achieving product quality must be considered to be a primary task in all fields of activity--construction and installation, production of building materials and machines, surveying, planning, supply, training, task execution and so on. All echelons must assign cadres and manual and office workers to supervise the quality

of each job...Regulations must be set forth to estimate and determine product quality and to define the administrative and economic responsibility of the producer for the quality of his product. The system of reward and penalty for product quality must be firmly implemented.

7. In the process of productive labor, construction and installation, surveying, planning and so on, it is necessary to organize labor--be it manual, semimechanized or mechanized--along a production line. On the other hand, work must be done according to specific measures no matter whether these govern rudimentary work or are technical ones based on industrially oriented working methods. Organizing laborers into a production line and working according to technical measures is an indispensable condition for increasing labor productivity, lowering production cost and heightening the laborers' standard of living.

8. Since the capital and materials available for the building of housing, technical and public utility projects in cities and new economic zones are limited, it is necessary to think it over and to strike a balance before building projects--especially housing--which will meet realistic and immediately urgent needs; in this respect, boastful formalism must be avoided. Priority must be given to the building of houses in the Hanoi capital city and houses for workers of factories that are going to be commissioned and for workers in coal mines, state farms and new economic zones. Construction speed must be maintained for child-care centers, schools and hospitals built with international organizations' aid. It is necessary to build a number of hotels for specialists and to postpone the building of offices and meeting halls.

9. It is necessary to rationally assign the existing forces, to soundly use the army forces to participate in construction and to promptly train reinforcements. The entire sector's forces must be strengthened in view of the need to continuously streamline organizations responsible for managing business in a uniform and profoundly professional manner. The quality of advanced training and formation of workers and cadres throughout the sector--especially managerial cadres from the team and unit level upward--must be raised and forces and organizations including the entire contingent of specialized and skillful cadres and workers of all types must be prepared to assume the building of large-sized key projects of the state within the framework of the 1981-1985 5-year plan and in the subsequent years.

10. It is necessary to review the tasks done by the sector during the 1976-1980 5-year plan and to speed up the drawing of the 1981-1985 5-year plan.

11. The task of providing ideological leadership and potential motivation and education must be strengthened and improved and an emulation movement to achieve the planned targets launched.

12. Along with carrying out tasks, achieving norms and fulfilling the plan, basic units must draw up plans to increase the production of grain and food, to produce consumer goods by fully using discarded materials and substandard products from factories and work sites, to struggle against negative practices, to achieve combat readiness and to fight whenever war breaks out.

HEAVY INDUSTRY AND CONSTRUCTION

BRIEFS

BUILDING TOOL SHORTAGE--It is a sad thing to say that over the past few years we have not taken care of the workers' equipment. Not only have the improved tools vanished but even the ordinary implements have not been sufficiently provided! To replace improved carts, we have reverted to the use of shoulder poles and many groups of workers went almost empty-handed to work sites! All these types of tools are not the products of a large-scale industry which we do not yet possess but can be made by the artisan or handicraft industry; the need for these tools has been met in some localities where attention has been paid to the workers' equipment. Though improving tools and equipping construction workers with enough handtools is merely the simplest of all technical progress measures, it has been neglected by us; if so, how can we speak of the scientific-technical revolution? [Excerpt] [Hanoi XAY DUNG in Vietnamese No 2, Feb 81 p 3] 9332

VEHICLE SHORTAGE--Because of difficulties with means, gasoline and oil, the Nghe Tinh Building Corporation has bought 30 vehicles with wheel-tires and 30 draft buffalos and let them out on contract with workers for transportation based on set norms and progressive unit prices. As a result, this group of vehicles and buffalos has replaced six automobiles, carried the exact volume of sand and stone indicated in the plan, transported an additional amount of materials for sale at the agreed prices and saved 13 tons of gasoline and oil. LABOR

LABOR MINISTER WRITES ABOUT IMPROVING LIVING CONDITIONS

Ho Chi Minh City TIN SANG in Vietnamese 6 Jun 81 pp 2 & 3

[Article by Labor Minister Dao Thien Thi: "Stabilizing the Living Conditions of Workers, Civil Servants"]

[Text] "The purpose of the economic policy of the SRV is to satisfy better and better the increasing material and cultural need of society as a whole and by ceaselessly developing production to raise the productivity of social labor on the basis of the socialist collective ownership system and modern science and technology" (excerpt from article 15 of the SRV Constitution).

In the past years, in spite of the fact that the economy of our country started at a very low level and had to fulfill the heavy tasks of fighting natural calamities and enemy-inflicted misfortunes, our economy has been restored and in some aspects developed; millions of people have been given relatively steady jobs; and the material and cultural l[illegible] t[illegible] majority of the people has been gradually improved.

On the basis of agr[illegible]e being developed, prices of supplied means of production and purchased g[illegible]nd agricultural products have been lowered and the living standard of far[illegible]y parts of the country has been improved. As handicrafts and sma[illegible] were developed, additional jobs were created for the people, thus prov[illegible] means of living for millions of people.

The living conditions of workers and civil servants were far from properly secure. The supply of essential goods for their everyday life was not maintained correctly and sufficiently at the specified quantities; as prices in the free market were rising, their income in terms of cash was affected. A number of localities which paid wages by the job and on the basis of products delivered were able to arouse workers' enthusiasm and thus, on the basis of production being developed, to maintain labor productivity and to ensure an increase of producers' income. But a number of other localities which incorrectly carried out such measures, lowered the norms, raised unit prices at their convenience and sought every means to raise the income of laborers turned out to have made wages and cash award income of laborers no longer retain their unity and balance in the national economy.

The income of workers in many important economic sectors producing means of production, building materials, etc. was lower than that of workers in a number of light and food industries, commerce, tourism, etc. The income of those working in sectors of scientific and technical, cultural, educational and administrative activities was under no conditions to be improved. The law about wages was not obeyed; labor discipline was loose, with workers' enthusiasm being adversely affected; the principle of distribution on the basis of labor was not rigidly observed in the national economy, thus creating many negative effects.

In the direction of Resolution 26 of the Political Bureau, to improve distribution and circulation is aimed at ensuring that the state controls a large part of society's goods and money, manages financial affairs better, assumes mastery of market and prices, restores the economic and financial order, stabilizes the overall situation to step up production development and, on that basis, stabilizes the living conditions of working people.

The living conditions of working people, first of all of the armed forces and workers and civil servants, are to be stabilized by taking these major measures:

- To ensure supplying the very essential goods in fixed quantities and at stabilized prices.

- To grant wage allowances due to fluctuation of prices, including prices of some goods raised by the state.

- To extend the scope of applying the system of paying wages by the job and on the basis of products delivered in a correct manner.

The question of top importance is how to provide enough jobs for workers and how to maintain their productivity, hence to raise their income.

To ensure supplying the very essential goods is a very important measure to stabilize the living conditions of the armed forces, workers and civil servants. The quantities of goods must be fixed by the state and uniformly applied throughout the country. There are goods that are sold in fixed quantities and at stabilized prices and those that are supplied according to appropriate formulas and at stabilized prices.

Dependents in the families of workers and civil servants are also supplied with some goods in accordance with current regulations.

The state supplies at stabilized prices writing paper for students, medicines for patients and milk for newborn infants.

While there still exist difficulties in the goods supply situation, to ensure supplying the very essential goods as mentioned above must be based on the following principle:

- To do one's best to take care of the front and the armed forces.

- To ensure supplying workers and civil servants in municipalities and concentrated industrial zones with grain and foods, with attention to be paid to laborers doing heavy work, occupations involving health hazards and front-line sectors of the national economy.

- To put aside an appropriate part of industrial goods for rural areas so as to step up purchases.

- To take good care of wounded soldiers, families of dead heroes encountering difficulties, children and patients.

To ensure supplying the very essential goods, particularly grain and foods, to workers, civil servants and dependents in their families has a significance of utmost importance in ensuring practical wages and stabilizing their living conditions. Our wages precently consist of two parts, one paid in cash and the other in kind in fixed quantities and at stabilized prices. The Ministries of Home Trade and Food and all localities pay special attention to properly resolving the matter and strengthening the organizing system in charge of supplying the very essential goods to workers and civil servants, particularly in municipalities and concentrated industrial zones.

Because of rising market prices, the state grants wage allowances to workers and civil servants in order to ensure their practical wages and to reduce their difficulties while supplying them with the very essential goods.

The systems of wages and allowances as set by the government must be uniformly carried out throughout the country. We must continue to correctly apply the different forms of paying wages by the job and on the basis of products in conformity with rational norms and unit prices so as to step up production, to raise labor productivity and to boost workers' income.

With wage allowances being relatively larger, conditions are more favorable for maintaining income balance among sectors and occupations, and as such allowances are calculated within the unit prices used for figuring in kind wages, it is possible to raise such unit prices and thus to lessen the gap between the basic part and changing part of wages and to make the meaning of the effort to encourage increases of labor productivity more obvious.

For labor in the administrative and professional sectors, we must study an appropriate policy of rewards to encourage development of a sense of responsibility, greater work efficiency and better quality of service, and at the same time to actively reduce the staff size. Attention must be paid to extending appropriate assistance to poor and large families in municipalities and concentrated industrial zones.

Although this is not yet a wage reform, the distribution by means of wages and bonuses for personal spending must also ensure a thorough understanding of the principle of labor-based distribution, balance among sectors of the national economy and encouragement of important sectors and occupations and increase of social labor productivity, with calculations including such needs as social consumption, national defense tasks and socialist accumulation and, as a result, being made on a national economic scale rather than through decisions of individual localities, sectors and production installations.

The directive of the Political Bureau and resolutions of the Council of Ministers continue the implementation of Resolution 26 of the Political Bureau to further improve distribution and circulation and to let the state control goods and money, be the master of the market and prices, ensure supply of goods and stabilize the standard of living.

Under the present difficult conditions, the policies about distribution and circulation and securing the living conditions of workers, civil servants and the armed forces constitute a very great effort of the party and state.

Let us show unanimity toward the policies of the party and state, believe in and resolutely organize their best implementation and ensure raising the balance-maintaining capacity of the state and supplying goods in the best manner to workers and cadres of the armed forces. Let us correctly compensate for wages while maintaining a stable market without sudden price increases, raise revenue and reduce spending, restore further the economic order and create favorable conditions for production development and greater changes of the situation.

Let us resolutely carry on the task, create an atmosphere of revolutionary enthusiasm, overcome any difficulties and ensure production development and unselfish labor for the sake of socialism.

Our people maintain our independence and self-rule, in the defense of our fatherland and national construction win the precious assistance of the Soviet Union and the fraternal countries and friends in the world, but first of all must make our own efforts. In the economic relations, we work with world prices, export in order to import, borrow money and pay it back and move toward doing serious and careful business so as to develop good foreign economic relations.

In the spirit of independence and self-rule, as we start from a very low level and have to build the nation at the same time while defending the fatherland against a dangerous and shrewd enemy along the line set by the party, there is only one road for us to take: to work unselfishly for the fatherland and socialism; to have a thrift-minded, simple and wholesome way of living within the limits of our working capacity; and to lead a life commensurate with the extent of our work while still having to contribute to building our future.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

READERS DENOUNCE PORNOGRAPHIC BOOKS, COUNTERFEIT GOODS SALES

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 5 Jun 81 pp 1, 4

/Column: "Saigon People's Forum"/

/Text/ Do Not Buy and Sell Pornographic Books

We, a number of fathers and older brothers, are extremely concerned because our children are surreptitiously finding and reading various types of pornographic and decadent books.

In our opinion, we fathers and older brothers must resolutely participate in eliminating pornographic and decadent newspapers and books.

We dare to speak in this manner because we know there are still a number of families who still have decadent newspapers and books stored away in bookcases and are unwilling to throw them out but clearly recognize the danger of allowing their children to read them. These people, taking advantage of a time when the price of old books has risen, take them out for sale.

Thus, within only a few hours, these types of books are thrown on the market like poison.

Therefore, we wish to suggest that families with decadent newspapers and books stored away not bring them out for resale under any form but turn them in to the local authorities.

Merchants selling these types of harmful books should not arbitrarily sell them on the outside but must deliver them to the cultural agencies.

Nguyen Huu Ngan

Severely Punish Those Producing Counterfeit Goods Bearing State Labels

A few days ago, a friend complained to me that he had just been deceived into buying a package of Hoa Mai cigarettes for 4 dong which at home turned out to have a bitter taste and flavor completely different from the type usually sold in stores.

Thus, a dishonest merchant had abused a product label of the state, produced an illegal article and poisoned a consumer with an article of insufficient quality standards.

Producing a counterfeit product bearing a state label is an extremely serious crime requiring appropriate punishment. We suggest that the authorities find the source and production location of these counterfeit cigarettes in order to stop their production, prosecute the producer, protect the consumer and especially protect trust and confidence in the state.

MILITARY AFFAIRS AND PUBLIC SECURITY

COUNTERREVOLUTIONARIES RECEIVE LONG JAIL TERMS

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 29 May 81 p 4

/Article: "For Plotting To Overthrow the Revolutionary Government, Nguyen Van Manh and Henchmen Severely Punished"/

/Text/ On 28 May 1981, the Municipal People's Court tried Nguyen Van Manh and his henchmen, Huynh Van Xa, Doan Trong Hien, Ho Cong Nghia, Huynh Ba Boi, Soleiman, Huynh Tan Duc, Nguyen Van Nghia, Tran Van Tai, Nguyen Van Thung, Nguyen Van Thanh, Vo Van Be, Duong Van Cuong and Pham Van Thang, for the crimes of counterrevolutionary activity and plotting to overthrow the government.

Nguyen Van Manh and his henchmen were nearly all puppet soldiers and tyrants given leniency by the revolution but were unwilling to undergo transformation and continued as lackeys for the imperialists against the people. In October 1977, Manh participated in the "Vietnam Fatherland Restoration Front" reactionary organization and was elected by his henchmen to the post of "Military Committee Member." In March 1978, this organization was discovered by the revolutionary government. Manh escaped and afterwards continued to establish contact with other escapees for counterrevolutionary activities. He and his henchmen coordinated with reactionary remnants in a number of other provinces to establish the so-called "National Restoration Front" with a plot to assist the imperialists and expansionists in resisting, destroying and overthrowing the revolutionary government. At the end of 1979, the counterrevolutionary organization of Nguyen Van Manh and his henchmen was discovered by the people and the security forces. Before the court, Manh and his henchmen bowed their heads and confessed their crimes.

Weighing the serious nature of the case and the level of the crimes of each individual, the court sentenced Nguyen Van Manh to life imprisonment. The others received from 6 to 20 years in prison. All were forbidden from residing within the city and deprived of their voting right and right to hold office for 5 years after release.

MANY INLAND WATERWAY FREIGHT HAULERS EVADE TAXES

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 5 Jun 81 p 4

/Article by Quang-Binh: "Tax Evasion on Transported Goods"/

/Text/ On the Inland Waterways

The Mekong River Delta with its system of crisscrossing canals and ditches is convenient for communications and transportation. Compared with land transportation, that by inland waterway is more economical. Due to the characteristics of this means of transportation, offloading cargo for inspection is also difficult and is therefore usually inspected only at the loading and offloading piers. We made a test visit to an inland waterway port: the Binh Dong Port 2.

A sampan arrived from Ben Tre, carrying sugarcane. When the tax authorities inspected the sampan, they found not only sugarcane but underneath the sugarcane was sugar. The lightly taxed cargo was on top, concealing the more highly taxed goods below. Another sampan arrived from An Giang, carrying old oil cans and scrap aluminum. Beneath this scrap material was foreign cloth and cigarettes. Along with their friends conducting temporary business along the land routes, those on the inland waterways also have all kinds of camouflage for tax evasion.

On the land routes, their friends use buses to enter the city while on the inland waterways, they use "relay stations." The sampans do not dock at the stipulated piers but usually slip into buildings along the river to offload the cargo and slip away. Because the inspection at Port 2 is severe, the sampans usually dock along the river south of the city such as in the 4th, 8th or 1st precincts and not at the primary pier.

Another worrisome fact is that major cargo transporters evading taxes on tons of sugar, rice, etc. usually produce all types of introduction papers, contracts and two-way cargo exchange documents each time they are inspected.

Through a review of the situation on collecting temporary business taxes at a number of locations, we note several problems:

Nearly all those engaged in temporary business do not have or do not carry temporary business logs. This fact creates difficulties in tax collection and in checking the number of tax collectors accepting bribes. Engaging in business without carrying a log (or not having a log) is engaging in illegal activity because no report is made to the state. First of all, we should levy a fine on each cargo trip but simultaneously educate those involved to properly comply with state stipulations. Gradual progress must be made for successfully assuring that everyone engaged in trade has a log.

The exchange contracts and production orders between local areas are still fairly arbitrary with many unclear stipulations, creating many loopholes for adverse elements to evade taxes. Many cooperatives and local production facilities sign contracts with each other without the management or supervision of state agencies. Some contracts have only side A signed (also not with the signature of the person ordering the goods or the accountant) while side B is blank. The contract time limit is too long and a number of corrupt individuals can take advantage of this to make two or three trips.

We also do not have methods for appropriately prosecuting a number of "fairly famous" temporary businessmen evading taxes.

Taxes under our system express the agreement between individual interests, the interests of the collective and the interests of the state. Our taxes are aimed at assisting in socialist construction and in providing for the welfare of the laboring people. Along with those engaged in an honest living, submitting reports and fulfilling their obligations to the state, there are also an extremely large number of people engaged in illegal activity, evading taxes and creating harm to the overall interests of all society.

Our people must coordinate with state agencies to well-manage the collection of taxes on all routes, blocking and punishing tax evaders, smugglers and speculators creating difficulty for production and the lives of the laborer.

SUBWARD CLOSES HOUSE OF PROSTITUTION

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 23 May 81 pp 1, 4

/Article by Q.V.: "People of Subward 4, Tan Binh Ward Expose House of Prostitution Disguised as Barber Shop"/

/Text/ On the night of 21 May, the Tan Binh Ward People's Committee was in session to administratively judge Nguyen Thi Vai for the crime of "operating a house of prostitution disguised as a barber shop." Attending were a number of people from Subward 4 of Tan Binh Ward and many businessmen operating in the ward.

Receiving the accusations of many people, the Subward 4 public security forces administratively inspected the "Thien Thai" barber shop at 298 Hoang Van Thu Street, catching it red-handed engaged in prostitution. The shop owner is Nguyen Thi Vai, 45 years old. According to an investigation by the authorities, Thi Vai has operated the barber shop since June 1980 actually as a front for prostitution. Vai hired three young women to both cut hair and give massages in order to entice the customers and to solicit sex. To deceive the people, she operated an ordinary barber shop on the bottom floor as a precaution against discovery while a house of prostitution with all the necessary equipment operated on the upper floor. The customers served here were youths in connivance with black marketeers and degenerate elements engaged in illegal activities. Thi Vai received half the money earned by the women.

People in the ward promptly discovered the dishonest activity of Thi Vai and warned her many times. The Subward 4 People's Committee invited her to come for guidance and the ward public security forces warned her several times but she stubbornly continued to engage in this decadent business.

Before the people in the subward, Nguyen Thi Vai bowed her head and admitted her guilt. She confessed that she "had engaged in illegal and immoral activities, violated good morals and customs and caused harm to society."

Anh Duong Dong, from the same ward as Nguyen Thi Vai, said, "I don't believe your confession is complete, failing to note the evil and corruptive nature of illegal business. These actions are the child of a decadent and reactionary culture which we are in the process of eliminating. We cannot allow our women to be considered as an item of goods for sale or as a tool for satisfying the desires of those with money. Only in a capitalistic society can this shameful trade be acknowledged. It cannot be acknowledged in our society and by people of conscience and must be eliminated. When she operated a house of prostitution disguised as a barber shop, it is clear that Thi Vai was assisting in reviving the decadent way of life. Not only was she selling the dignity of women but also harming the young men. Who would dare pay 50 to 70 dong for each period of material enjoyment in her shop? Surely not honest and good individuals but only those youths engaged in illegal activities. She lured these young men deep into a harmful and sinful way of life."

"The crime of Nguyen Thi Vai should be brought before the courts for judgement. I think that an administrative judgement is too lenient."

Tran Thi Nhung, a member of the Subward 4 Women's Association, said, "I think that the motive for the decadent business of Nguyen Thi Vai was the pursuit of money. For money, she sold the bodies of young women, disregarded the admonishments and criticism of the people and disregarded the laws of the state. As a member of the Women's Association, I am extremely displeased at her actions because they trampled on the dignity of women. I fully endorse the policy of eliminating the decadent and reactionary culture. In our city, we still have many places engaged in illegal or incorrect activities, creating harm to the young under one form or another. We must sweep out these remnants."

Cung Thi Ty, from Neighborhood 38, said, "Every mother wishes her child to become a good person. Surely Nguyen Thi Vai wished the same thing since she sent her children to school. When she operated a place of massage and prostitution right in the house, didn't she think about how it would harm the lives and future of her children. Her husband was an officer under the old regime, received reeducation training and was generously allowed by the state to return and rejoin his family. If she knows how to think and has a conscience, surely she must come to her senses and engage in an honest living."

Representatives of the Ward People's Procurate read the charges and analyzed the multifaceted harmful effects in "operating a house of prostitution disguised as a barber shop" of Nguyen Thi Vai. According to the Procurate's opinion, due to her family environment and honest attitude and confession when apprehended, she would not be tried by the court but would be administratively judged. This suggestion was accepted by the Ward People's Committee.

Nguyen Thi Nguyet Anh, Vice Chairmen of the Tan Binh People's Committee, read the judgement: the "Thien Thai" barber shop will be closed, her business license will be revoked and Nguyen Thi Vai will be permanently forbidden from engaging in business or trade under any form and will be transferred to production. The in-place management and reeducation of Nguyen Thi Vai for 1 year was assigned to the Subward 4 People's Committee.

HOAN KIEM WARD CRACKS DOWN ON COUNTERFEIT GOODS

Hanoi NHAN DAN in Vietnamese 30 Jun 81 p 2

[Article by M.H.: "Hoan Kiem Ward Punishes Speculators, Smugglers and Counterfeiters"]

[Text] Since the start of June, in the process of its work of inspecting business licenses and conducting inspections to insure that prices are publicly posted and goods are sold at stipulated prices, Hoan Kiem Ward in Hanoi has exposed and arrested speculators, smugglers and manufacturers of fake goods and gradually put market management on a regular basis, thereby helping to stabilize prices. Together with forces of the commerce and finance sectors, the public security forces in the various subwards have exposed persons who have been earning their livings illegally. In the past 2 weeks, with the help of the people and the people's security teams, they have exposed and made arrests in 39 cases involving speculation and the manufacture of fake goods.

The people of Hang Buom Subward have applauded the arrest of Nguyen Van Khoa, who specialized in selling smuggled goods and precious metals. Khoa already had a police record and had been imprisoned before. Upon his release, he returned to Hanoi and began residing illegally with his family at number 2 Hang Buom Street. This house has a backyard gate that leads to number 36 Dao Duy Tu Street. On the afternoon of 1 June, as Khoa was engaged in a gold transaction with a person named Lai (number 50 Dao Duy Tu Street), public security forces of Hang Buom Subward arrested him at his house and confiscated more than 3 kilograms of silver, approximately 6 ounces of gold and 1,400 dollars and 65,000 dong in cash in evidence. In a vain attempt to evade prosecution, Khoa brazenly offered a bribe to Pham Ngoc Chuc, the police sergeant in Hang Buom Subward and the person who confiscated the illegal goods and filled out the report. Chuc reported this crime and warned Khoa and his accomplices.

On 7 June, public security personnel of Hang Bac Subward, with the help of the people, arrested 30 year old Le Thi Kim Oanh, who lives at number 10 Phat Loc Lane. Miss Oanh, who used counterfeit papers to travel by airplane to buy smuggled goods, was arrested in possession of many different types of western medicines worth 20,000 dong and in possession of 16,800 dong in cash.

On 15 June, public security personnel of Hang Bo Subward arrested Truong Thi Phuc of 31 Pham Ngu Lao Street, who was taking 25 meters of cloth to sell illegally. This arrest led them to the house of Nguyen Van Bot, a dishonest merchant and major seller of smuggled goods, at 25 Hang Bo Street. There, the security forces conviscated 750 meters of cloth of various types, 15 kilograms of PC plastic granules and 250 Hong Ha pens.

A number of persons who specialize in making fake goods were also trapped by the law. Public security personnel of Hang Dao Subward investigated and arrested Trieu Thi Dac of 24-26 Hang Dao Street, who specializes in making fake beer for sale on the market. According to her confession, she, her husband and her accomplices had earned their living in this way for quite some time. At Dac's house, security personnel confiscated various types of new bottle caps from state-operated enterprises that they had obtained through conspiracy, more than 400 grams of Truc Bach and Hanoi beer labels and nearly 200 bottles (either empty or filled with fake beer). Trieu Thi Dac confessed to having sold thousands of bottles of fake beer at a price of 6.5 dong per bottle.

Public security personnel and the Commerce Bureau of Hoan Kiem Ward arrested Nguyen Thi Lan of 31 Nam Bo Street, who specializes in counterfeit cigarettes of the Song Cau, Song Huong and Do Son brands. When arrested, she had in her house more than 2,300 packs of cigarettes, 22,100 cigarettes that had been rolled but not packaged, more than 22 kilograms of pre-labeled packing paper, more than 4 kilograms of silver foil, 13 kilograms of moisture proof paper, more than 3 kilograms of tobacco stamps and nearly 2 kilograms of cigarette paper. The books she had kept showed that she had sold 5,934 cartons of counterfeit cigarettes on the market since May.

Public security personnel in Hang Bac Subward also exposed and arrested Dang Anh Phi, number 4 Hang But Street, and Nguyen Van Vinh, number 112 Nguyen Thai Hoc Street, as they were selling 100 thin sheets of zinc at a price of 300 dong per sheet.

The speculators and counterfeiters are being investigated and prosecuted in court by the responsible agencies.

At present, there are still some persons on the streets and at markets who are illegally selling goods that are under the exclusive management of the state and selling many counterfeit goods, especially bicycle tires, tubes, chains and sprockets, flashlight batteries, MSG, cigarettes, etc. These decadent persons generally operate in groups in order to entice others and protect themselves. At the Dong Xuan-Bac Qua Market, the market management committee has put on display several counterfeit goods and constantly reminds shoppers to be vigilant when they shop and not be deceived by decadent elements.

In a short amount of time, due to close cooperation between the public security forces and the market management forces and with the wholehearted assistance of the people, many gangs of smugglers and manufacturers of counterfeit goods in Hoan Kiem Ward were exposed. It is the desire of the people that the responsible agencies take necessary, timely and thorough steps to combat these persons who earn their livings illegally.

PARTY ACTIVITIES AND GOVERNMENT

PROCEDURES EXPLAINED FOR ACCEPTING NEW PARTY MEMBERS IN SECRECY

Hanoi XAY DUNG DANG /PARTY BUILDING/ in Vietnamese No 2, Feb 81 p 41

/Replies to readers column: "On Organizational Work and Party Building"/

/Excerpt/ Question: Is the party accepting new members in secrecy? In such cases, must the party chapter obtain the opinions of the masses concerning the persons being accepted into the party?

Answer: Article 4 of the Party Statutes stipulates five procedures to be followed in the acceptance of new party members. Point 3 of Article 4 states: the acceptance of new party members "must be considered and decided upon for each person seeking to join the party by a conference of the party chapter, with the agreement of at least two-thirds of the official members of the party chapter required. Before the party chapter decides to accept a new member into the party, the party cell and party chapter committee must carefully examine the person's personal history, level of awareness, qualities, abilities and motive for joining the party in order to insure that this person is fully qualified to join the party. It is necessary to obtain the opinions of the masses concerning the person being considered for acceptance into the party, recheck the propaganda work performed especially for the person seeking admission to the party and insure that the Party Statutes have been thoroughly explained to this person and that he has been thoroughly propagandized and educated concerning the lines and policies of the party. After the party chapter has decided to accept a person into the party, it is necessary to publicly inform the masses, except in special cases in which secrecy must be maintained."

The specific provisions mentioned above show that the acceptance of new party members is work that is carried out publicly, work in which obtaining the opinions of the masses is considered compulsory, is considered a principle. The provision "special cases in which secrecy must be maintained" refers to cases in which the revelation that a person is a new party member would not be beneficial in his work or in his effort to fulfill the leadership role of a new party member among the masses. In cases in which secrecy must be maintained, the party organization must still take practical steps to obtain the opinions of good persons among the masses concerning the person being accepted into the party; it is necessary to obtain the opinions of the masses and still maintain this secrecy instead of not obtaining the opinions of the masses at all.

STATISTICS ON PARTY MEMBERSHIP IN HANOI

Hanoi XAY DUNG DANG /PARTY BUILDING/ in Vietnamese No 2, Feb 81 pp 29-32

/Article by Truong Vinh Phien: "The Issuance of Party Membership Cards in Hanoi"/

/Excerpts/ The Hanoi party organization, which is a relatively large one, has nearly 2,000 basic organizations of the party and more than 140,000 party members. For many years, the city party organization implemented the various resolutions and directives of the Party Central Committee on party building, such as the resolution of the 23rd Party Plenum, circular number 22 and directive number 72 in order to constantly improve the quality of party members and strengthen the basic organizations of the party. Generally speaking, however, the prospects for a qualitative improvement were still not strong, still not uniform. About one-third of the basic organizations of the party within the city were still categorized as weak and deficient. The Hanoi party organization also recently incorporated the basic organizations of the party at the central agencies and eight district and city party organizations turned over to it by friendly party organizations. As a result, the assessment of the situation was still limited in some respects.

Realizing that the issuance of party membership cards must meet comprehensive requirements and be under the close guidance of the party committees on the upper levels, the Standing Committee of the City Party Committee adopted the following policy: in 1980, party membership cards would only be issued to about 60 percent of the basic party organizations and 60 percent of the total membership of the city party organization. Facts have proven this to be a correct policy consistent with the quality of the basic organizations of the party and the ability of the party committees on the upper levels to provide guidance. It was a policy that met the qualitative requirements involved in the issuance of party membership cards and which closely linked the issuance of membership cards to the strengthening of the basic organizations of the party.

Under this policy, during the 3 February and 19 May 1980 phases, the city party organization issued membership cards to 35,931 party members (25 percent) at 457 basic organizations of the party (24.2 percent). In these party organizations, 80.64 percent of party members were fully qualified to receive party membership cards and 1.31 percent were unqualified and had to be expelled from the party. During the first 9 months of 1980, together with purifying the corps of party members, the party organization of the city accepted 3,741 new party members.

As regards basic organizations of the party for which the issuance of membership cards was planned but which were found, through inspections, to lack the necessary conditions, the issuance of membership cards was postponed so that these basic organizations could be strengthened. In each of the recent phases of issuing party membership cards, each ward and district party organization postponed the issuance of membership cards at 5 to 10 basic organizations of the party. Within each basic party organization issued membership cards, membership cards were not issued to party chapters or party members that were still weak or deficient. During the 19 May 1980 phase, nearly 100 party chapters within the basic party organizations had to continue working to strengthen themselves further.

During the 3 February and 19 May 1980 phases, the Hanoi party organization issued party membership cards at strong, stable and good basic organizations of the party. In these party organizations, approximately 80.64 percent of party members were qualified to receive party membership cards. Of this number, 78 percent were in the village sector, 82.7 percent were at schools, 84.1 percent were at enterprises, 90-91 percent were at agencies, etc. Party members who are cadres who hold official positions that were not issued party membership cards constituted 27.3 percent of the total number of party members that had to be held back for examination and education. This figure also rather clearly reflects the quality of the corps of party members who are cadres. Of course, among the qualified party members who received membership cards there are also some persons who must endeavor in one area or another to improve themselves so that they are truly worthy of the title "vanguard warrior of the party."

ORGANIZATION DEPARTMENT GUIDANCE ON POLITICAL BUREAU RESOLUTION

Hanoi XAY DUNG DANG [PARTY BUILDING] in Vietnamese No 2, Feb 81 pp 1-19

[Article: "Guidance on Political Bureau Resolution on Organizational Work"]

[Text] I. The Reasons for and the Requirements and Importance of the Resolution

1. The starting point of the resolution.

The resolution of the Political Bureau was promulgated in the face of the following situation:

a) We are about to conclude the second 5-year state plan and begin the third 5-year state plan. The 5th National Congress of the Party will be convened soon, in late 1981.

During the period of the second 5-year plan, our people, under the leadership of the party, won tremendous victories in the socialist revolution and in the protection of the socialist fatherland.

However, besides the achievements that have been recorded, we, because of subjective shortcomings and objective causes, face very large difficulties in many areas. These difficulties and the tasks of the third 5-year plan demand a profound change in organizational work.

b) Organizational work helped to guarantee the tremendous victories that we have won but was still performed very slowly in many areas. The 4th Plenum of the Party issued resolution number 10 on "strengthening the organization and improving work methods in order to meet the requirements of the new situation and tasks." This is a very correct and very important resolution. It has yielded a number of results but, because of shortcomings in the organization and guidance of implementation, organizational work has still not undergone the necessary change. The slowness in organizational work is still very serious.

c) In order to meet the requirements of upcoming tasks and make every effort to overcome the slowness in organizational work, the Political Bureau has deemed it necessary to issue a resolution on organizational work with a view toward gaining a more thorough understanding of resolution number 10 of the Party Central Committee, further concretize this resolution and accelerate its implementation.

As the introduction to the resolution of the Political Bureau points out: this resolution is designed to "bring about a profound organizational change with a view toward strengthening leadership and management, especially of the economy." The resolution comprehensively deals with organizational work but focuses on the problem of organizational work insuring a strengthening of the leadership and management of the economy.

2. The significance and importance of the resolution.

The Political Bureau resolution reviews organizational work since the day that the South was liberated, especially since the 4th National Congress of the Party, correctly evaluates achievements and strongpoints and squarely faces the truth in order to evaluate and analyze shortcomings in a spirit of strict self-criticism and criticism. Particular importance is attached to analyzing the underlying and basic causes as well as the immediate causes lying within the organization of implementation that have led to the serious stagnation in organizational work.

On the basis of these causes, the resolution sets forth programs and measures designed to bring about a change in organizational work, demands that there be a profound change of a revolutionary nature in our viewpoints concerning building the organization and concerning management work and demands that every effort be made to bridge the present gap between the requirements of the political task and our organizational skills, thereby bringing organizational work to the level of the political task.

On the basis of the pressing, immediate situation and tasks, the guidelines concerning the tasks of the third 5-year plan, resolution number 10 of the Party Central Committee and the actual situation at this time of the organizations of the party, the state and the mass organizations, the Political Bureau resolution sets forth the tasks of pressing and long-range, basic significance for the next 5 years regarding organizational work. The resolution also sets forth specific policies and measures concerning each aspect of organizational work on the central level, within the various sectors and localities and on the basic level, from the party and state to the mass organizations and other organizations of the people; at the same time, the resolution sets forth the jobs that must be performed and the areas in which continued research is required and establishes a specific division of responsibilities and deadline in order to insure the implementation of the resolution.

The contents of the resolution, the high level of determination of the Political Bureau and the procedure for organizing the implementation of the Political Bureau's resolution will be of tremendous practical significance to all activities of our party and state in the coming period.

Our study of the resolution of the Political Bureau must have the purpose of fully comprehending the resolution, of deeply understanding the contents of the resolution in order to bring about a true change in action; we must strengthen our discipline, heighten our spirit of responsibility and broaden the practice of democracy even in the implementation of this resolution so that it yields the desired results.

II. The Situation and Its Causes

1. The situation.

Strongpoints: it is necessary to repeat and clarify the conclusion reached by resolution number 10 concerning organizational work: "we have built a unified organizational system of the party, state and mass organizations throughout the country and are using this apparatus to complete work of strategic significance in transforming and building the economy and culture, developing production, maintaining order and security and organizing the lives of the working people"; we must also carefully study Point 1 in the report by Le Duc Tho (Part 1).

At the same time, attention must be given to clarifying the two following points so that we are aware of the positive factors that exist in organizational work and of the potential of the corps of cadres and party members to bring about a change in organizational work in the coming period:

--"Recently, there have been changes in the correct direction in the leadership and management of the economy, thereby creating positive factors in this area."

--The observation of the Political Bureau that the corps of cadres and party members "is basically good as a result of being forged and challenged...in combat and construction and gradually being trained in various fields of knowledge; generally speaking, it is a corps that is loyal to the party, the system...to the masses..." (Point 1, Part 1 of the resolution).

Shortcomings: importance is attached to analyzing and relating to the actual situation in order to clarify four points regarding the significant aspects of organizational weakness: point 1 deals with the organizational apparatus, in general, and emphasizes the economic efficiency of this apparatus; Point 2 discusses the installations; Point 3 deals with cadres and party members; and Point 4 discusses work procedures and methods.

The harm caused by these shortcomings:

+ They create inertia within the organization and cause the apparatus to be so ineffective that it reduces the confidence of the masses at many places.

+ They create additional conditions for the enemy to take advantage of and exacerbate our shortcomings, provoke the masses and find ways to commit internal sabotage.

2. An analysis of the causes of the slowness in organizational work.

Some of the causes of the slowness in organizational work are objective (see the resolution and report). This resolution of the Political Bureau emphasizes the need to thoroughly examine the subjective causes. The resolution reiterates the basic causes set forth in resolution 10 of the Party Central Committee: "We have yet to firmly grasp economic laws and the science of organization and have been slow to rectify the shortcomings that have persisted for many years in organizational work and work procedures."

In order to be specific and provide emphasis, the Political Bureau resolution clarifies these basic causes under the following four points:

First, grasping economic laws:

The resolution points out: "For a long time, we have managed the economy by subsidies and bureaucratic administrative procedures, used political mobilization in place of calculating economic returns, used administrative relations in place of economic relations and used a purely administrative apparatus to manage the economy.

The slowness with which we have established a suitable economic structure and the slowness with which we have improved management on the basis of the socialist mode of business as well as the major shortcomings in the formulation of plans and management policies have negatively affected the organization and cadres."

At the same time, our shortcomings in organizational work and cadre work have been that we have not fully realized the weaknesses in terms of economic management qualifications of the corps of cadres, have been slow to train cadres in this area and have not strengthened the organization, especially the organization of the socialist business apparatus; the training and deployment of cadres have not truly been consistent with the requirements of building the economic structure and implementing the new mode of management."

In presenting these causes, it is necessary to clearly realize the cause and effect relationship between our failure to grasp economic laws and our shortcomings in organizational work and cadre work.

It is necessary to thoroughly analyze the harm caused in many areas by the management mechanism based on administrative bureaucracy and subsidies, which is a vivid manifestation of our failure to firmly grasp socialist economic laws.

Management by administrative bureaucracy and subsidies is economic management that does not comply with economic laws: political mobilization and administrative orders are used to manage the economy, importance is not attached to the various economic measures, light attention is given to material incentives, cost accounting is not being practiced on the basic level and the initiative and creativity of the lower level and installations are not being tapped. Authority is centralized on the upper level and there is no distinction between the administrative economic management function of upper level management agencies and the production and business function of the basic units.

Management based on administrative bureaucracy and subsidies is evident and has caused harm in many fields, primarily the economy, organization and cadres:

a) The economy:

+ In plans, this style of management is evident in the assignment of very many norms under pressure, the formulation of plans usually on the basis of the supplies being provided by the upper level and the failure to utilize the horizontal relationship between one locality and another, between one installation and another. The lower level merely does what it is told to do by the upper level; the lower level receives little material incentive to succeed, it is considered normal if it does not succeed and does not earn a profit and if it suffers a loss, it is compensated for this loss, etc.

+ In construction, management based on administrative bureaucracy and subsidies has led to sweeping investments (the upper level allocates whatever the lower level requests and investments are evenly distributed among the various sectors and localities; returns are not carefully calculated; economic returns are not throughly calculated in designs and construction work, consequently, capital becomes backlogged, projects remain unfinished, construction time is lengthened and so forth).

+ In production, this system does not provide incentive for higher labor productivity or improved product quality and does not create the conditions for implementing cost accounting at basic units. Consequently, it neither compels nor provides incentive to basic units to calculate economic returns.

+ In circulation, it has caused a lack of flexibility and responsiveness in commerce, from the supplying of materials to purchases, wholesale sales and retail sales, thereby posing obstacles to production and opening the door to conspiracy, authoritarianism and theft.

+ In distribution, it fails to implement the principle of distribution in accordance with labor, creates false needs among the people and does not provide incentive for higher labor productivity.

+ The administrative management and subsidy system has posed an obstacle to the redistribution of labor, posed an obstacle to the reorganization of production, posed an obstacle to the formation of the new economic structure, impeded the moving forces of the system and posed major difficulties to the implementation of the line of the party and the plans and policies of the state.

b) Within the organization and among cadres:

The above mentioned negative aspects of the economy have adversely affected and harmed the effort to build the organization and the corps of cadres and party members. In addition to these negative influences, the salient feature of the administrative management and subsidy system within the field of organization is the lack of responsibility; bureaucratic centralism on the level above the production and business of installations has posed an obstacle to the operations of installations. The production and business systems and the system of economic administrative management agencies have not been formed and are not clearly distinguished from each other. The training and deployment of cadres are not consistent with the requirements of economic management based on the new mode; the capabilities of cadres are hampered and little or nothing is done to develop talents.

Because we have failed to fully realize the shortcomings mentioned above and the serious harm caused by management based on administrative bureaucracy and subsidies, we have been slow to strengthen the entire organization in order to research a new management mechanism; slow to build a production and business system that operates on the basis of cost accounting and an administrative economic management system to guide the production and business system; and slow to improve leadership and management based on the socialist mode of business.

c) The other fields:

In actuality, economic management based on administrative bureaucracy and subsidies has caused harm in the fields of society, culture, education, public health, literature and art. It has also adversely affected the effort to mold the new way of thinking and the new style of work, the thinking and qualities of cadres and party members and even the lifestyle and daily activities of the various strata of the masses.

Economic management based on administrative bureaucracy and subsidies together with the major shortcomings in the formulation of plans and in organizational and managerial work are the underlying causes of the stagnation we are experiencing in many areas, especially in the economy. Under war time circumstances, unavoidable weaknesses and difficulties made it necessary for us to adapt managerial work to suit war time circumstances. As a result, economic management based on administrative bureaucracy and subsidies was able to infiltrate our management of the economy. The longer the war time circumstances existed, the slower we were to correct the shortcomings of management based on administrative bureaucracy and subsidies, the more serious this management system became and the longer it lasted.

This time, the Political Bureau, while pointing out that one of the causes is our failure to firmly grasp economic planning, emphasizes the cause of economic management being based on administrative bureaucracy and subsidies and the cause of us being slow to improve management on the basis of the socialist mode of business together with major shortcomings in the formulation of plans and so forth in order to correct these causes. This is very important in order to adopt guidelines and take measures for strengthening the organization and training and assigning cadres.

Of course, besides our failure to firmly grasp economic laws, there are also causes in our failure to grasp other laws. Our problems and shortcomings in organizational work and cadre work are not merely the result of our failure to grasp economic laws or to the administrative bureaucracy and subsidy management mechanism. There are numerous shortcomings in organizational work, such as the failure to clearly stipulate duties and work procedures, the failure to appropriately assign cadres, etc. However, if we maintain the management mechanism based on administrative bureaucracy and subsidies, if we do not rectify the shortcomings in the formulation of plans and so forth, it will be difficult to reverse the situation regardless of how specific regulations might be and we will only legitimatize a restrictive management system and create additional harm.

Secondly, the failure to firmly grasp and properly apply the science of organization.

The Political Bureau resolution points out: "We do not fully realize the complexity and scientific nature of organizational work; we have not trained leadership cadres, management cadres or organizational cadres in the necessary knowledge of the science of organization, the science of management, etc."

To explain this cause, it is necessary to discuss, in practical terms, the subjects dealt with in the resolution of the Political Bureau and the report by Le Duc Tho.

The report by Le Duc Tho mentioned that the scope of the science of organization is very broad. Here, we shall only discuss a number of aspects that are directly related to building the organizational structure and the economic leadership and management apparatus.

The science of organization is the science of researching the various scientific methods employed in the organization of labor with a view toward rationalizing work, increasing production, reducing the amount of strenuous labor and producing much wealth at the lowest possible cost. This is the narrow definition. In its broad definition, the science of organization is the science of researching the laws that have an effect in the organizing of social production, in the organizing of the system of management apparata and in the various forms of organization and activity.

In some fraternal countries, the science of organization is considered to be a combination of methods of socialist leadership, encompassing the following: organizing the social labor forces (in substance, this involves distributing the economic and technical sectors and organizing production by territory, organizing production within each basic economic unit and so forth); organizing the processes of leading the economy and society (leadership and guidance), issuing decisions, obtaining and using information, using electronic computers, raising the qualifications of cadres, broadening democracy and so forth; the apparata, structures, authority, operations, relationships and division of labor of the various management processes; and organizing and leading personnel.

The resolution of the Political Bureau emphasizes: "We do not fully realize the complexity and scientific nature of organizational work. The organizational structure with all of its complex relationships has not been clearly established and the art of leadership and management, especially with regard to the economy, has not been improved; work procedures are still outmoded, impractical and inefficient."

The report by Le Duc Tho, when discussing grasping and applying the science of organization, emphasized the need to adhere to the principles of this science and maintain its systematic, well coordinated and closely interconnected nature and the need to make efficiency the only measurement of organization. The science of organization demands the application of the laws of organization (the general laws governing the building of an organization and the specific laws of each type organization). The report emphasizes the need for a systematic, well coordinated organizational structure in order to overcome the present state of fragmentation and decentralization, overcome liberalism and overcome the practice of doing as one sees fit.

It is necessary to clearly see the shortcomings that exist when building our organization, such as the failure to realize the reciprocal impact among the various components of the organizational apparatus, the reciprocal relationship among the various elements within the organization (the political task and the specific organizational task, functions, the apparatus, mode of operation and cadres), etc. The failure to comply with regulations on the building of the organization, the failure to respect the authority of management agencies, the haphazard establishment of an organization, the haphazard selection and assignment of cadres, the establishment of staffs on the basis of personal views and so forth, these are manifestations of the failure to firmly grasp the science of organization in the building of our organizational structure.

Thirdly, giving light attention to the position of organizational work and not closely linking ideological work to organizational work. There are still conservative, feudal and petty bourgeois viewpoints and concepts being displayed in organizational work, especially in cadre work. (With regard to this cause, it is necessary to thoroughly study Point c regarding causes in the report by Le Duc Tho in order to compare the information contained therein to the realities of one's sector, locality or unit).

Fourthly, the guidance of organizational work lacks resolve and is severely rightist in nature. (Importance must be attached to thoroughly analyzing this shortcoming on the basis of Point e in the report by Le Duc Tho).

The report clearly states the shortcomings of the agencies that assist the Party Central Committee, the various party committee echelons, the party affairs committees and the party groups regarding organizational work and the shortcomings and weaknesses of the corps of cadres who perform organizational work and even of the leadership agencies on the various echelons of the party, the party affairs committees, the party groups and the cadres in charge of organizational work (Point e in the report, which must be compared to the actual situation at one's agency, locality or unit).

The following manifestations must be emphasized and given attention: serious formalism, low quality and poor efficiency in organizational work resulting from the causes mentioned above.

III. The Tasks Regarding Organizational Work and the Guidelines for Bringing About a Change in Organizational Work in the Coming Period

A. The tasks in organizational work.

1. The Political Bureau resolution sets forth the pressing political task at this time and the guidelines and tasks for the years of the third 5-year plan.

Importance must be attached to clearly presenting the following several matters:

--The tremendous victories that have been won (on the basis of the resolution of the 6th Party Plenum and the speech by Le Duc Tho at the plenum);

--The very large difficulties that exist (with attention to the four points within the resolution: production, living conditions, negative phenonena and the enemy) and the pressing political task;

--The basic tasks during the period of the third 5-year plan.

The Political Bureau sets forth the requirements that must be met during the 2 years 1981 and 1982 in order to bring about a strong change in the socio-economic situation and in the management of the economy, thereby creating favorable conditions for the implementation of the 5-year plan. These requirements demand a corresponding change in organizational work.

2. The tasks in organizational work.

To insure the good completion of the political task, the Political Bureau, on the basis of an analysis of the past situation and the requirements of the upcoming tasks, sets forth the following requirements in organizational work, (the ministries, departments and provinces must thoroughly discuss these requirements):

--Insuring a thorough understanding of the economic line and the performance of the political task of the party;

--Manifesting an industrial-agricultural economic structure throughout the country and within each sector and locality;

--Insuring that the management of the economy is based on the socialist mode of business and that the principle "the party leads, the people exercise ownership and the state manages" is implemented;

--Insuring that the ability exists to redistribute social labor and stimulating the redistribution of social labor;

--Insuring success in the research and application of scientific and technological advances in production;

--Insuring that distribution and circulation are improved and support production and everyday life well;

--Developing the export potentials of the sectors, localities and installations on the basis of clearly realizing the strategic importance of the foreign economic task and strengthening our international economic cooperation.

The seven requirements mentioned above are seven very basic areas in which organizational work was not performed well in the recent past. In essence, they are the very basic points involved in applying economic laws and the science of organization to the specific conditions of organizational work in order to insure the building of our country's economy. When researching how to strengthen the organization, how to improve leadership and guidance, it is necessary to firmly adhere to these seven requirements so that the returns from organizational work are manifested as supporting the tasks of building the economy of our entire country over a long period of time.

In order to thoroughly meet these requirements, organizational work must, on the one hand, be designed to support immediate, pressing tasks well and, on the other hand, must support the basic and long-range tasks of the third 5-year plan well and some jobs requiring even more foresight.

3. The tasks in organizational work.

The Political Bureau resolution sets forth four tasks in organizational work in the coming period (the 5-year plans).

It is suggested that each task set forth in the resolution be explained with importance attached to emphasizing the guidance provided within the resolution concerning each task.

a) The first task: strengthening the organization.

The resolution emphasizes the following several matters:

--Every effort must be made to strengthen the leadership and increase the fighting strength of the party as well as increase the management effectiveness of the state, especially with regard to managing the economy on the basis of the socialist mode of business. (The relationship among these efforts must be clarified in the spirit that leadership and management must be based on the socialist mode of business and that determined steps must be taken to abolish the method of organization and management based on administrative bureaucracy and subsidies).

--The apparatus from the central level and the various sectors to the localities and installations must be strengthened in a well coordinated manner; however, it is first of all necessary to strengthen the central level and the provincial level so that the district and basic levels can be strengthened well.

This does not mean that we must wait until the central and provincial levels have been strengthened before strengthening the basic level. The effort to strengthen the organization must be oriented toward the basic level in order to meet the requirements of the basic level. The report by Le Duc Tho pointed out: building the districts and strengthening the basic level are the key elements in the strengthening of our organization.

However, under present conditions, if we begin the shift from management based on administrative bureaucracy and subsidies and carried out by means of outmoded policies, regulations, rules and work methods but do not first attach importance to strengthening the central, provincial and municipal levels but only strengthen the basic level, it will be very difficult to strengthen the district and basic levels well. There are very many issues, from researching the new economic structure and the new mode of management to the plan for initiating the research of policies involving the use of economic levers, of other management policies and regulations to be implemented on the basic level and so forth that must be studied by central agencies for the purpose of promulgating policies and regulations and which the ministries and provincial agencies must clearly understand so that they can provide guidance.

It is necessary to emphasize the importance of strengthening the key economic sectors and the production and business organizations that occupy vital positions within the national economy as well as the important districts and installations.

b) The second task.

The following points must be emphasized:

--In cadre work, importance must be attached to emphasizing the need for cadre planning in order to, on this basis, adopt elementary and advanced training plans consistent with the requirements of building the new economic structure and of the new mode of management; importance must also be attached to overcoming the negative phenomena arising from management based on administrative bureaucracy and subsidies.

--At the same time, importance must be attached to correctly deploying the corps of key leadership and management cadres on the various levels and within the various sectors.

--Determined steps must be taken to streamline the administrative apparatus.

c) The third task: work procedures.

The following must be emphasized:

--Insuring strict adherence to organizational and activity principles and upholding the socialist system of law.

--Rectifying the shortcomings that exist in preparing, making and organizing and guiding the implementation of decisions, especially ones regarding the economy.

d) The fourth task.

The following must be emphasized:

--Truly implementing the right of collective ownership of the working people, the most pressing aspect of which is the right of economic ownership on the basic level (emphasizing the three interests);

--Truly strengthening and developing the organs of power (the National Assembly and the People's Councils) and the mass organizations.

In summary, the themes common to all four of these tasks are the need to establish the organizational task on the basis of the requirements of the political task and especially the economic task and the need to strengthen the organization, improve leadership and guidance, train and assign cadres and truly uphold the right of collective ownership of the masses on the basis of taking determined steps to abolish management based on administrative bureaucracy and subsidies, build the new economic structure and boldly shift to the socialist mode of business.

The strengthening of the various elements of the organization must be well coordinated and must begin with the central and provincial levels so that the district and basic levels can be strengthened well.

It is necessary to insure that organizational work is of high quality and effective and necessary to combat formalism and bureaucracy.

The tasks presented above require guidelines and measures that will bring about a change in organizational work.

B. The guidlines and measures for bring about a change in organizational work.

On the basis of the causes underlying the stagnation in organizational work and the immediate and long-range requirements of the political task, the Political Bureau resolution and the report by Le Duc Tho set forth guidelines and measures for overcoming these causes with a view toward bringing about a change in organizational work: "There must be a profound change of a revolutionary nature in our viewpoint concerning building our organization and improving our management and every effort must be made to bridge the present gap between the requirements of the political task and organizational skills, thereby bringing our organizational work to the level of the political task."

These guidelines and measures are:

a) Clearly recognizing the position of organizational work.

Organizational work has become a pressing political task. It requires that "the leadership agencies and the persons in charge on the various levels and within the various sectors be skilled in organizational work and consider it a decisive element in changing the situation and completing every task of the party and state."

b) Firmly grasping economic laws and improving our knowledge of economic management, science and technology in order to perform organizational work well (clearly state the measures set forth on page 12, Point 2 of the resolution and in the report by Le Duc Tho).

c) Researching, understanding and applying the science of organization in order to gradually build an organizational structure that manifests the principle "the party leads, the state manages and the people exercise ownership," and oganizational structure that is based on a comprehensive viewpoint and is systematic and well coordinated in nature.

Importance must be attached to training cadres and party members in the science of organization.

d) Closely linking ideological work and organizational work: we must mold correct viewpoints and criticize and struggle against incorrect viewpoints and thoughts even in organizational work; we must teach the line and viewpoints to cadres and party members and forge their revolutionary qualities.

e) Strengthening the apparatus and improving the quality of organizational cadres and the methods employed in organizational work. Importance must be attached to the following:

+ Leadership agencies and leadership cadres must control organizational work. This work cannot be turned over to supporting agencies.

+ There must be a clear division of responsibilities among the various agencies performing organizational work (without concentrating everything within the organization department).

+ The quality of agencies and cadres performing organizational work must be improved by the following methods: training and increasing the number of cadres who are able to perform this work; replacing those cadres who are not qualified and do not have the ability to carry out this task. It is necessary to clearly state the standards for cadres who perform organizational work: personal qualities + ability (as stated on page 12 of the report).

IV. Specific Policies and Measures

This portion basically deals with strengthening the entire party system, the state management system, the system of production and business units and the system of mass organizations within a unified structure that both expresses and concretizes the principle "the party leads, the people exercise ownership and the state manages."

A. Further improving the organizational apparatus.

I. The central and provincial levels.

The central level and the party committee echelons.

It is necessary to clarify the following several important matters:

1. The Politiaal Bureau resolution emphasizes the need to improve the quality of leadership provided by the central level and the party committee echelons over the entire dictatorship of the proletariat system and, at the same time, clearly present the organizational measures designed to insure the strengthening of the guidance of implementation by the party through the organizational system of the party. Specifically:

a) The quality of leadership provided by the central level and the party committee echelons, especially economic leadership, depends, on the one hand, upon the leadership levels themselves and, on the other hand, upon the quality of the staff agencies, especially economic staff agencies.

The resolution emphasizes the formulation of work regulations of the Political Bureau to insure that the quality of collective leadership is improved and requests that the Secretariat and the Council of Ministers make good preparations for Political Bureau conferences in order to improve the quality of these conferences. The proposals prepared by the state agencies and mass organizations must include the official opinions of the responsible departments of the party so that the Political Bureau and Secretariat can examine them before making a decision.

As regards the party committee echelons, the resolution of the Political Bureau emphasizes the need to improve the overall quality of leadership of all work of the party and state within the locality and, at the same time, heighten the responsibility of the party committee echelons with regard to the elements of the central economy that are within the locality.

It is necessary to emphasize providing good leadership of the formulation of plans and management work, which are weaknesses at this time, and to clearly define the problems which the party committee echelons must concern themselves with resolving in order to more clearly delineate the division of responsibilities between the party committee echelons and the people's committees and state agencies, thereby correcting the problem of one echelon, committee or agency overriding or performing the work of another.

b) In order to insure that the guidance of implementation by the central level and the various party committee echelons is strengthened, is truly effective and is consistent from the central to the basic levels, the Political Bureau resolution emphasizes the following organizational measures:

--More clearly defining the responsibility of the Secretariat (see the resolution);

--More clearly defining the responsibility of the secretaries and assigning them the task of helping to organize the implementation of the resolutions and directives of the Party Central Committee, the Political Bureau and the Secretariat (resolutions and decisions of the collective must be the basis upon which the daily work within the field of which one is in charge is carried out).

--It is suggested that the Party Central Committee strengthen the Secretariat by adding a number of secretaries;

--Strengthening the various departments of the Central Committee and the committees of the party committee echelons, especially those dealing with the economy.

--The standing committees on the various party committee echelons should include additional comrades in charge of the economic committees of these echelons (comrades who do not simultaneously hold posts in the government), etc.

The guidance of implementation by the various party committee echelons on the basis of the system of organizations of the party and by means of party work (giving the organizations of the party on the lower echelon a thorough understanding of lines, policies and resolutions; guiding, inspecting and acting upon the suggestions of the party committee on the lower echelon; inspecting the work of the government; stimulating the performance of the political task through party building and the mobilization of the masses; resolving the most important problems related to organization and cadres; assigning key cadres, training and inspecting them and observing and evaluating their qualities and their work; heightening the exemplary-vanguard role played by party members, etc.) is effective and very important guidance as regards stimulating and improving the quality of the performance of economic tasks, social tasks, etc.

In the recent past, due to the failure to establish a clear division of labor, the shortage of comrades in charge of party work (especially on the provincial and municipal levels with regard to economic matters and the shortage of comrades in charge on standing committees who do not simultaneously hold posts in the government) and the failure to strengthen assisting committees, the organization of implementation within some fields of work of the party, especially the economic field, has only been based on the system of the state and the guidance provided by the party committee echelons through the system of party organizations has usually been limited.

The measures mentioned above, although specific in nature, are very important in improving the work guidance system of the party in accordance with the mode of party work.

2. The Political Bureau emphasizes that the strengthening of the leadership echelons must go hand in hand with strengthening the staff agencies. It must be recognized that the strengthening of staff agencies is very necessary in the leadership of the economy.

Some of the staff agencies of the party are departments of the party and some are state agencies used for staff purposes.

--With regard to vital economic issues, such as socio-economic plans, major economic policies and draft legislation, especially economic legislation, the party must rely upon the staff system of the state agencies (the commissions, institutes, departments and ministries and the research agencies of the ministries, etc.).

On the central level, the Political Bureau has decided to subdivide or merge a number of departments. On the provincial and municipal levels it is also necessary to strengthen the various committees, especially the economic committee and the agricultural committee; the municipalities and some provinces must also strengthen their industrial committees.

The Political Bureau resolution requests the formulation of organizational and work regulations for the various departments.

The general spirit is that importance must be attached to quality in the organization of departments and committees (specific regulations will be issued so that the establishment of additional departments and committees does not lead to the excessive growth of staffs). It is not absolutely necessary to establish committees on the provincial and municipal levels whose functions correspond to those of the departments on the central level.

It is necessary to fully comply with resolution number 10 in order to streamline the apparatus and establish the responsibilities of the various departments and committees.

The State Agencies and Economic Organizations

It is necessary to clarify the following several important requirements:

--On the basis of clearly defining functions, tasks and authority it is necessary to strengthen the organization in all areas and on all levels so that the apparatus is unified and smoothly coordinated and tasks are not overlapping and do not nullify one another's returns.

--There must be unified management throughout the country and throughout the sectors and the initiative of localities and installations must be tapped.

--Two distinct systems must be formed: the production-business organization and the economic-administrative management organization.

--There must be a division of labor among the ministries and a division of management levels between the central level and the local level.

--Guidance of the southern provinces must be intensified.

The administrative apparatus must be streamlined in order to correct the cumbersome, isolated, decentralized and fragmented nature of this apparatus.

All of these matters are oriented toward buidling an organizational structure that will insure the building of the new economic structure and the implementation of the new mode of management, thereby abolishing management based on administrative bureaucracy and subsidies and insuring the completion of the tasks of the third 5-year plan.

1. The central level and the economic-technical sectors.

a) The Council of Ministers:

--It is necessary to improve the quality of the plenary conferences of the Council of Ministers. The most important matters must be presented to the plenary conference of the Council of Ministers. The state plan, draft legislation and major policies must be debated by the Council of Ministers so that it can make a decision or propose to the Political Bureau or National Assembly that they make a decision (importance must be attached to managing the state by means of the law, consequently, the government must give very much attention to improving the drafting of legislation).

The Council of Ministers periodically discusses the socio-economic situation and the living conditions, thinking and attitudes of the people in order to adopt measures designed to improve the situation. (This is an important measure in improving the political quality of the activities of the Council of Ministers).

--It is necessary to define the responsibilities, improve the capabilities and develop the role of the ministers.

--It is necessary to strengthen the Office of the Council of Ministers (primarily so that it can collate information and prepare for the conferences of the Council of Ministers and the Standing Committee of the Council of Ministers on the basis of the proposals made by the various ministries; the office must not take over the research work of the various ministries).

b) Strengthening and defining the important role of the combined agencies:

--The guideline is to appropriately strengthen the combined agencies (commonly called the functional management agencies). We must not reduce the role or function of these agencies because of the problems now being encountered.

--The combined agencies are very important staff agencies of the government. They propose tasks, objectives, policies and regulations of importance to the entire country and many different sectors. However, it is necessary to correct the situation of combined agencies intervening in the guidance of the implementation of plans by the ministries and provinces.

--The Political Bureau resolution defines the basic function of the combined agencies as that of staff agencies that provide unified management and conduct research so that the government can promulgate or they themselves can promulgate (under the authority of the government) policies and regulations while guiding implementation and conducting inspections.

--Special emphasis must be placed upon the role played by the State Planning Commission as the economic command staff (with attention to the new aspects of the task of the commission). The commission has the responsibility of helping the government to adjust imbalances that arise in the process of implementing plans.

--Due to the need to improve the quality of economic, scientific and technical research, the Political Bureau has decided to strengthen the State Planning Commission, the Science and Technology Commission, the Price Commission and the other commissions and combined ministries. At the same time, it has decided to establish a Vietnam Academy of Sciences on the basis of unifying and reorganizing the present institutes of science and the Social Science Commission (it is necesaary to clarify the close link between the technical sciences and the social sciences under present conditions; the establishment of the Vietnam Academy of Sciences must meet the requirement of raising the quality of scientific research to a new level).

Emphasis is placed on the need to reorganize and strengthen the system of institutes that research the technical sciences, economics and economic management in order to improve the quality of research and closely link it to production and everyday life.

c) The control agencies, the agencies that protect the law and the information agencies:

The Political Bureau resolution also calls for strengthening the organization and heightening the role of the Control Commission, the Arbitration Council and the legal agencies in order to improve the protection of the law, especially economic law.

It is necessary to emphasize and set forth guidelines for improving the system of economic information, primarily statistical information, in order to improve the quality of economic information. Scientific information must be improved.

d) The ministries that manage economic and technical sectors and the other ministries:

In the process of implementing resolution number 10, a number of problems have arisen regarding understanding and organization concerning the matter of the formation of economic and technical sectors and the strengthening of ministries.

+ The ministries are confused with the economic-technical sectors.

+ The organization of the federation of enterprises is still "form for form's sake" in nature.

+ The departments that serve as the staffs of the ministries have not been improved in terms of their quality and still adhere to their old work methods by intervening in the daily work of the production and business organizations.

+ The organization and division of labor within a ministry and so forth are not the same.

The Political Bureau resolution clarifies the problems mentioned above in order to provide guidance with regard to resolving them; at the same time, on the basis of the actual situation, it sets forth policies for strengthening the ministries on the basis of reorganizing sectors and maintaining the commander system.

As regards specifics, importance must be attached to the following matters:

+ Defining the responsibilities of the ministries on the basis of a correct division of sectors (see the report by Le Duc Tho, the section dealing with management by sector and the characteristics of the economic-technical sectors under our specific conditions).

+ The resolution emphasizes the need to strengthen installations, to strengthen and reorganize the production federations and to have existing federations begin practicing cost accounting (without turning them into "disguised" administrative agencies). New federations should only be established when the factors set forth in the resolution have been fully prepared. The Political Bureau calls on the combined agencies, such as the Price Commission, the Ministry of Finance, the Ministry of Supply, the Ministry of Labor, the Bank, etc.) to conduct research in order to amend or revise policies and regulations to insure that production federations and installations practice cost accounting.

+ The Political Bureau emphasizes the need to reduce the number of intermediary elements and levels within the production and business system by implementing a two level model, a three level model or a mixed model; the four level model should not be applied in all ministries.

+ It is necessary to clearly establish the organizational structure of a ministry along the lines of dividing the ministry into regions so that cadres can be correctly deployed, so that there is an efficient division of labor between the minister and the vice ministers and so that the apparatus is used in a scientific manner.

+ The method of establishing the division of labor between the minister and the vice ministers.

+ The Political Bureau emphasizes the need to quickly strengthen the party committees of the ministry agency and establish the scope of work of the ministry party affairs section. This decision is designed to strengthen the inspections conducted by the organizations of the party and implement the "one person in charge" (the commander) system within the ministries. The spirit of this decision is to eventually eliminate the party affairs section and assign heavier responsibilities to the agency party committee. For this reason, it is necessary to quickly strengthen the various party committees in accordance with the new requirements.

+ In order for the ministries to be able to fulfill their responsibilities well, it is necessary to reorganize and improve the quality of the departments that serve as the staff and research organizations helping the ministers to implement state management.

In the past, the departments performed a number of production and business jobs; now, these jobs must be assigned to installations or production federations, consequently, the apparatus of the ministries must be more streamlined than before. It is necessary to correctly implement resolution number 10 of the Central Committee: "The ministers must urgently reorganize the production of their sectors throughout the country and create a new economic structure for their sector by, depending upon the conditions, by establishing production groups, federated enterprises, federations of enterprises or corporations and assigning these economic organizations the function of directly managing production and business. Toward this end, it is necessary to boldly change the organizational structure of the ministries by completely eliminating the line departments, reducing the number of staff departments and significantly reducing their staffs."

It is necessary to truly "improve the quality" of the departments. Their organization must be streamlined and their cadres, generally speaking, must have a college education, have work experience and be able to conduct research, draft documents and propose opinions to the ministry. The cadres in the various departments must be deployed in exact accordance with the requirements of work and their own capabilities.

The reorganization of production by sector and the requirements of the upcoming tasks require the reorganization of a number of ministries. The establishment of a Ministry of Food Industry (in order to closely link the production, cultivation, processing, marketing and exportation of important food products) would be consistent with the requirement of accelerating the production of grain and food products, consistent with the requirement of reorganizing the sector along specialized, federated lines and consistent with the guideline of increasing our exports, in view of the strategic position of this task. Dividing the Ministry of Power into a Ministry of Electricity and a Ministry of Coal is necessary because the nature of these two sectors is totally different. Electricity and coal production must be strongly developed in the years ahead; coal, however, must not only be used to support the production of electricity. Although organized into two ministries, the organizations of these ministries must be very simple. The government will tightly control their administrative staffs (here, the ministry will be in charge of one sector, consequently, many problems must be researched so that the organization of the ministry is suitable and different from that of the other ministries).

Due to the formation of an economic administrative management system and a production-business management system, the size of the administrative staff of the various ministries will be significantly reduced.

2. The provincial and municipal levels.

--The resolution of the Political Bureau defines, in broad terms, the close relationship between the ministries and the provincial people's committees (with regard to this matter, it is necessary to study the report by Le Duc Tho, which clearly states the relationship between the minister and the provincial chairman; the rights of the minister as regards the activities of his sector throughout the country; the responsibilities and authority of the local people's committee as regards providing management by territory within each locality on behalf of the state).

--The resolution focuses on the positions and measures involved in the division of management levels between the central level and the local level.

When studying this matter, importance must be attached to the following main guidelines:

+ It is necessary to adopt the correct point of view concerning the division of management levels: we must overcome departmentalism and localism (as specifically stated in the resolution) and overcome the practice of considering the division of levels to be the severing of one from the other, to be the division of assets and rights and, as a result, not coordinate the central economy with the local economy, the sector with the territory within a unified structure.

+ The division of levels must be well coordinated.

+ More matters of basic importance must be concentrated on the central level; the authority of the local level must be broadened so that it can take the initiative in arranging the local economy; at the same time, the locality must scrupulously obey the law and fulfill its obligations.

+ The assignment of installations to localities must be based on the following principles: examining whether or not the structure of the local economy and the central economy is efficient; examining the management capabilities of the locality and examining economic returns.

On the basis of these principles, the Political Bureau has determined which specific types of installations must be directly managed by the central level and what the specific tasks of the locality regarding the central economic installations within its territory are (see the resolution).

The central economic units must contribute sources of revenue and welfare funds to the localities.

+ On the basis of general principles and regulations, each ministry must hold specific discussions with each province in order to resolve this matter; any problems must be reported to the Standing Committee of the Council of Ministers for resolution.

As regards the capital and Ho Chi Minh City, the Political Bureau has delivered to the Standing Committee of the Council of Ministers a specific plan for resolving this matter during the first months of 1981.

On the basis of the division of levels, it is necessary to improve the quality of the people's committees and the services in order to meet the requirements of local economic management and the requirements of managing the central economy within the territory. It is necessary to streamline the apparatus of the various provinces and eliminate unnecessary agencies (each province and municipality must take the initiative in efficiently arranging its apparatus and must seek the opinions of the ministry).

Changing the provincial departments into services is not merely a matter of changing their names, but a matter of correctly and uniformly establishing the position of the provincial level agencies.

The prevailing concept that the provincial services are more important than the provincial departments is incorrect and poses difficulties to the implementation of policies regarding cadres (for example, the agricultural services in some cities are no longer more important than an agricultural department in a large province, etc.)

3. Guidance as it relates to the South.

It is necessary to fully study the report by Le Duc Tho. With this in mind, this matter will be studied as a separate, special subject.

4. Streamlining the administrative apparatus.

--In this resolution, the Political Bureau examines the basic and specific causes underlying the problem of administrative staffs constantly increasing in size even though we say that it is necessary to streamline them.

It is necessary to carefully study the analysis of causes in the report by Le Duc Tho. Of these causes, three are emphasized as being most important:

+ Management based on administrative bureaucracy and subsidies.

+ The apparatus was established without standards and lacks tight management from above.

+ The labor policy within state agencies is outmoded, personnel are hired without considering their level of specialization, etc.

--The Political Bureau has set forth guidelines and measures for resolving the problem of streamlining the administrative staff:

+ Correcting the basic causes (administrative bureaucracy and subsidies).

+ Making a list of the jobs that exist within each agency or unit and reducing the staff on the basis of this list (persons displaced from their jobs will not be given other jobs within the organization, policies and regulations must be adopted to resolve their problem. They shall not be left abandoned without a job.)

+ Assigning the Ministry of Labor and the Ministry of Finance the task of researching and amending staff and wage fund management regulations along the lines of providing incentive for the persons in charge of agencies to complete their tasks while only utilizing a small number of persons (patterned after the wage fund contract but with guidance provided with regard to the principles involved in resolving the staff problem).

--Establishing regulations which require that personnel recruited for staffs have the necessary professional qualifications.

--The resolution also sets forth specific measures for resolving cases in which it is necessary to transfer personnel to other jobs, to transfer personnel to the countryside, to transfer personnel to the production sector, to one of the service sectors, etc.

--Guidelines must be adopted for recruiting college and vocational middle school students and employing these students once they graduate from school so that staffs do not burgeon as the did in the past.

II. Building the districts and strengthening the installations.

On the basis of the causes of the shortcomings in the work of building the districts and strengthening the installations, the resolution of the Political Bureau establishes policies and measures of both an integrated and specific nature for guiding the effort to build the districts and strengthen installations.

1. Building the districts.

--The Political Bureau resolution raises the matter of "urgently building the districts and strengthening the district level, considering this to be a key element in advancing agriculture and the artisan and handicraft trades and organizing the life of the people well."

--The report by Le Duc Tho confirms that the accuracy of the policy of building the districts has been proven by places that have carried out this policy well. The report points out the causes that lie in attitudes and in the guidance of implementation for the building of districts to be carried out slowly and not yield good results at many places.

Attitudes: the report observes that two incorrect tendencies exist: being conservative and one-sided and being divorced from reality and establishing requirements that are too high, which leads to bureacuratic centralism, reliance upon investments by the upper level and the loss of guidelines (see the specific contents of the report in order to compare them to the actual situation and analyze them). These incorrect attitudes have affected the determination to guide the building of the districts and caused the attitudes within party organizations to differ concerning the policy of building the districts.

Guiding implementation: the most significant aspect of these shortcomings is the lack of well coordinated measures for building the districts. Importance is only attached to reorganizing the various activities of the district level or the installation; nothing has been done to improve the guidance of the district by the upper level; attention is only given to individual areas, such as strengthening the organization, reorganizing production, resolving problems regarding organization, the apparatus, cadres, the organization of production and so forth but not to making the district a management level; prompt steps have not been taken to revise management policies and regulations, policies regarding distribution, contracts and so forth, which are important forces in stimulating the development of production, etc.(for specifics, see the report).

On the basis of the above analysis of causes, the Political Bureau emphasizes two steps that must be taken in order to insure the building of districts: first, it is necessary to overcome incorrect tendendies (see the resolution); secondly, we must "apply well coordinated measures in order to guide the building of the districts."

The points emphasized by the Political Bureau with regard to the measures for building the districts are:

+ The agencies, such as the State Planning Commission, the Ministry of Agriculture and the other ministries, "must work with the provinces to help the district formulate production planning and plans, stabilize their production guidelines, deploy and assign labor in the most profitable manner possible, etc."

+ Each district must reassess its arable land and labor and redistribute its labor in the various sectors and trades with a view toward making full use of the arable land, labor, supplies and technical cadres of each district.

+ The armed forces stationed in the locality must participate in the building of the district.

+ The government must make selective investments in the districts, concentrating on the key rice growing districts and those districts that produce many products for exportation. (The State Planning Commission, the Ministry of Agriculture and the agriculture committees shall be given the task of making lists of these districts and helping them formulate investment plans; the ministries shall assign additional cadres to these districts if there is a shortage of cadres, etc.).

+ Making the district a management level; in conjunction with putting under the district's management material bases and production and business installations that directly support agriculture and everyday life within the district, it is necessary to resolve the problem of sources of revenue for the district.

+ Eliminating inefficient aspects of the district level apparatus.

+ The building of districts must be closely linked to strengthening cooperatives, strengthening the party base, the government and the mass organizations on the basic level. The resolution of the Political Bureau and the report by Le Duc Tho set forth well coordinated measures for strengthening the basic level (measures involving production guidelines, plans, the assignment of norms, the organization of production, obligations, contract regulations and internal distribution within the cooperative, etc.). It is necessary to carefully study the report by Le Duc Tho in order to shed light on the points set forth within the resolution.

+ As regards the South, in addition to giving priority to making investments in a number of districts in the key areas mentioned above, especially in the Mekong River Delta, the Political Bureau resolution emphasizes the need to give priority to assigning management cadres and scientific and technical cadres to the provinces in the key areas.

The resolution emphasizes the pressing need to deploy the corps of district and village cadres, successfully build [illegible]re, stable and strong party chapters and remove decadent elements, elements t[illegible] political problems and elements that have become deviant or are corrupt from w[illegible]itions within the districts, villages, production collective and agencies. [illegible]portance is attached to the need to organize work teams to help villages buil[illegible]s teams in the hamlets, cooperatives or production collectives and assig[illegible]us teams the task of operating as a party cell in order to propose opini[illegible]lving the difficulties encountered in work, production and everyday life [illegible] the village or hamlet. On this basis, persons must be selected and trained for [illegible]ptance into the party. This is a very important policy that must have the guidance of the various party committee echelons in order to rapidly strengthen the party base in the rural areas of the South, especially at places where the movement is still weak.

2. Strengthening the basic level.

The report presented by Le Duc Tho at the Political Bureau Conference analyzed the weaknesses of the basic organizations of the party, in general, and of many basic organizations of the party in the South. At the same time, it analyzed, in a basic way, the causes of the prolonged weakness of many basic organizations of the party in both areas: the causes resulting from the shortcomings and weaknesses of the basic level itself and the underlying causes resulting from the guidance provided by the upper level (especially the influences of the outmoded management mechanism based on administrative bureaucracy and subsidies).

In order to strengthen the basic organizations of the party, it is necessary to comprehensively examine the causes of the weaknesses of each type installation and of each individual installation so that correct guidelines and measures can be adopted to correct these causes.

When analyzing the weaknesses of installations, many party committees only give their attention to the shortcomings of installations themselves but do not fully see the shortcomings that exist in the guidance provided by the upper level, especially in the guidance of the formulation of plans, in researching economic policies (such as the policies on prices, purchasing, distribution, wages and so forth and management regulations, the instructions given with regard to organizing production, organizing management and so forth) consequently, even though many efforts are made to strengthen installations, such as replacing core cadres, practicing criticism and self-criticism, studying and so forth, installations continue to be weak or do not make strong progress. In actuality, there are many basic organizations of the party that have worked very hard, have made very many efforts and whose cadres and party members have remained firm in the face of every challenge; however, due to the lack of good guidance on the part of the upper levels, with the exception of the central level, the the actual results achieved by these installations in production and work have still been very low or limited.

The report by Le Duc Tho points out: "The advanced installations generally have a good corps of core cadres and have been helped by the upper level to go beyond the orb of a number of unsuitable management policies and regulations."

The presentation of the causes mentioned above is of very important significance. It shed light on the requirements and guidelines that must be met and adopted in order to resolve these causes in a well coordinated manner and insure that the basic level is strengthened well.

For this reason, the resolution of the Political Bureau points out: "It is necessary to correct the prolonged weakness of the basic level on the basis of clarifying and resolving the general or specific causes of the weakness of each unit or each type installation. On the one hand, we must rectify the shortcomings of the installations themselves; on the other hand, we must rectify the shortcomings of the upper levels, including the central agencies, in researching the matters that are implemented at installations." The specific solutions for overcoming both types of causes mentioned above are stated in the report by Le Duc Tho.

The Political Bureau resolution emphasizes several important points:

+ It is necessary to implement resolution number 10 on strengthening those production-business units that are financially autonomous units that have the status of an individual under the law. Immediate steps must be taken to improve a number of policies and regulations in order to increase the independence of installations, have them begin practicing cost accounting, raise their labor productivity and carry out distribution in accordance with labor. At the same time, it is necessary, on this basis, to strengthen and improve the leadership provided by the organizations of the party and strengthen, in a well coordinated manner, the organizations of the government and mass organizations. (When presenting this point, it is necessary to repeat the specifics presented in resolution number 10 concerning strengthening the basic level. It is both very important and very necessary to study this matter again as it is presented in this resolution).

+ Improving the leadership of the basic party committees at basic units so that they implement the "one person in command"(unit head) system; the party committee must not take over the work of the entire unit; the inspection work performed by the basic party committees at these units must be improved.

+ Holding symposiums on each type installation.

+ Permitting the city party committees to establish a party affairs committee to guide a number of types of basic organizations of the party in basic units that are directly managed by the central level in cases in which the precinct or district party committees have not been strengthened (after receiving the consent of the Organization Department of the Central Committee).

The resolution of the Political Bureau emphasizes the need to correct the tendency to lower party member standards in the issuance of party membership cards (for example, not taking determined steps to expel unqualified members from the party and not taking disciplinary action against party members who commit mistakes; to avoid these problems, the issuance of party membership cards must be postponed in such cases).

The resolution presents additional cases in which it is necessary to expel persons from the party as stated in resolution number 10 and states that the following additional persons be expelled from the party:

+ Persons whose revolutionary fighting will declines, who do not comply with the resolutions of the party, who no longer provide leadership and who no longer are trusted by the masses;

+ Persons who stop participating in party activities for no legitimate reason.

When presenting these points, it is suggested that they be compared to the actual situation of the locality (with attention to examining the notice of the Organization Department of the Central Committee concerning the inspection of the issuance of party membership cards in two villages in Ung Hoa District, Ha Son Binh Province, in order to correct any mistakes that might have been made).

It is necessary to issue a reminder to comply with directive number 72 on acquiring new party members and emphasize the development of the party among manual workers.

B. Improving the qualities and capabilities of cadres and correctly assigning cadres.

The report by Le Duc Tho emphasizes that this is the basic matter that ultimately determines the quality and effectiveness of the effort to strengthen the organization.

The resolution of the Political Bureau deals with six matters:

1. The matter emphasized first is the need to "formulate good cadre planning in order to correct the piecemeal, passive nature and the lack of continuity in the building of the corps of cadres, especially key leadership and management cadres."

The purpose of emphasizing this point is to correct the largest shortcoming in cadre work, one that has lasted for many years and has caused serious harm in many areas (see Point a, Section 1, in this part of the report by Le Duc Tho). As regards this shortcoming, the following is emphasized: the lack of coordination in training; the piecemeal, passive nature of the deployment and utilization of cadres; and the lack of stability and continuity in the building of the corps of key leadership and management cadres. Without planning cadre training, it is impossible to promote and utilize cadres well.

Cadre planning must reflect a thorough understanding of cadre selection guidelines (manual workers, working farmers, revolutionary intellectuals and members of the ethnic minorities) and must be carried out 5 years and 10 years in advance of requirements.

The resolution sets forth specific requirements regarding the selection of reserve cadres for key positions and sets deadlines for completing this work and assigning these cadres specific responsibilities (see Point 1 in this section of the resolution).

2. The resolution sets forth the requirement of improving the quality of cadre training and sets forth integrated measures designed to insure quality (ranging from the specifics and requirements involved in the training of the various types of cadres, the contents of programs, recruiting methods and the quality of instructors to replanning the system of schools). Specifically, the resolution sets forth the following important measures:

--On the basis of planning (reserve cadres), formulating plans for the training of key leadership and management cadres (in economic management and state management) from the central to the basic levels.

--Providing training on the basis of job duties in order to develop skilled managers in each job (director, deputy director, chief, department head, etc.).

Reviewing the actual situation and improving and supplementing training programs.

--Inviting specialists; sending personnel from the same shifts in sectors, enterprises and federations of enterprises for short-term study of the experiences in friendly countries, especially the Soviet Union.

--Providing key leadership and management cadres with training once every 3 years in new knowledge, especially economic management, technological advances, etc.

--Providing cadres with training in management, technology and politics (emphasizing one of these three depending upon the type of cadre).

--Improving the system of party schools on the various levels; updating and supplementing their programs.

--Training and selecting a corps of instructors and building a corps of instructors who possess knowledge of theory and practical experience.

--Improving the way in which cadres are registered for courses at enterprises and cooperatives by recruiting students from installations and coordinating installations sending them for training with testing their academic knowledge and returning them to their installation upon the completion of training.

--Assigning the responsibility to concerned agencies to research and plan the various types of schools.

(This research must be based on the resolution and the thorough analysis of the situation set forth in the report by Le Duc Tho).

3. Improving the quality of cadres, strengthening their unity and overcoming the negative phenomena among cadres.

It is necessary to thoroughly present the analysis of the situation in the report by Le Duc Tho (and compare it to the actual situation in one's locality) before presenting the various corrective measures. Importance must be attached to manifestations of a serious decline of personal qualities (dishonesty, a lack of confidence in the face of difficulties, decadence, dissatisfaction and so forth), a prolonged lack of unity and its causes (arbitrariness and jealousy of another's position that lead to factionalism, impeding one another's work, a struggle between the conservative and the positive and so forth) and the use of one's authority to bring pressure to bear upon cadres, to suppress good persons and force them to go elsewhere, etc.

It is necessary to clarify the various kinds of harm caused by the situation mentioned above (work being performed slowly and, at some places, coming to a standstill; the adverse effect upon the relationship between the party and the masses; the enemy taking advantage of the situation to provoke the masses and divide cadres and the masses from leaders).

It is necessary to clarify the four measures set forth in the resolution (teaching cadres and party members about resolutions; adopting a plan, setting a deadline and taking strict disciplinary action; practicing criticism and self-criticism; resolving the problems and improving the living conditions of cadres, etc.).

4. Deploying the corps of leadership and management cadres in accordance with the requirements of tasks and the capabilities of cadres.

The major issues presented in this section are firmly adhering to standards and implementing the "promotions and demotions" guideline, determined to replace incompetent cadres.

--The Political Bureau resolution emphasizes the need to overcome conservative, feudal thinking which is not based on the political task and which does not truly consider the completion of work tasks to be the central manifestation of the qualities and capabilities of cadres. It is necessary to compare this section of the resolution to the actual situation in one's locality, sector or unit in order to clearly see the manifestations of feudal thinking(emphasis on rank or grade; jealousy of another's position; the failure to support active persons and good, competent persons and impeding their work; elderly persons who hold positions but, in actuality, do not correctly carry out or cannot carry out the tasks assigned to them; restricting the development of lower level cadres; conservative and other one-sided attitudes; and the failure to firmly adhere to the standards that pertain to qualities and talents).

The Political Bureau resolution points out the need to "firmly adhere to the essence of standards" by evaluating personal qualities from the point of view of a person's stand, viewpoints and revolutionary ethics as manifested in his loyalty to the revolution, revolutionary zeal and understanding of and compliance with the lines and policies of the party; personal qualities should not merely be evaluated on the basis of specific shortcomings, which generally involve personal attitudes or which place heavy emphasis upon the past, upon cadres' background. When evaluating a cadre's capabilities, it is necessary to examine the capabilities displayed by him in his job without placing undue emphasis upon his diploma, education, age, etc. These two aspects are closely interrelated and must ultimately be manifested in actual results on the job.

It must be stated that incorrect practices in the application of standards have led to the selection of "rotund" persons who are not decisive, who "rarely express a different opinion," who are meek and easily "bossed" or who have a good reputation but possess poor or average capabilities.

--The Political Bureau resolution sets standards concerning the qualifications required for official positions between now and 1985 (economic, technical, management and political qualifications). It clearly states the guidelines and measures to be employed in the promotion of cadres in cases in which promotions cause cadres to skip a level, cases in which retirement is or is not suggested, cases in which the average age requirement is reduced, the age of an individual person cannot be determined, etc.).

It is necessary to thoroughly explain, on the basis of the report by Le Duc Tho, the position of determinedly replacing incompetent cadres. That a person can be "promoted" as well as "demoted" must be considered normal; we must put an end to the practice of promoting persons simply so that they are eligible for the benefit policy or for personal reasons. Determined steps must be taken to correct the attitude that a "promotion" is "stable" and a "demotion" is impossible and correct the problem of good persons not being commended or awarded while persons who perform poor work can continue to perform poor work without worry. We must prohibit the practice of sending cadres who make mistakes at one place to another place to be promoted.

A deadline must be established for reinvestigating management cadres to insure that they are suited to the new economic structure and the new mode of management. The corps of scientific, technical management cadres must be re-examined so that cases involving the incorrect utilization of these cadres can be corrected.

--As regards the method of deploying cadres, the Political Bureau resolution establishes procedures for examining and assigning cadres by a scientific process (it is necessary to thoroughly explain each point in the method that must be applied on the basis of the report by Le Duc Tho so that this method is utilized correctly and in order to guard against deviations analyzed in the report).

It is necessary to clearly state the importance of managing cadres on a routine basis and implementing the policy of evaluating cadres on the basis of the three main points (the completion of assigned tasks, the improvement of qualifications and the improvement of personal qualities).

5. Amending and correctly complying with policies and regulations regarding cadres.

--The resolution sets forth a number of policies and regulations that must be amended or revised with a view toward providing incentive to cadres to work at installations, to return to installations; providing incentive for cadres to work at places where the work is difficult and complex; providing incentive to talented cadres, retired cadres, veteran cadres, including cadres who participated in the two wars of resistance against France and the United States, ethnic minority cadres, intellectual cadres, cadres who are writers and artists, etc.

The resolution rectifies the shortcomings in the implementation of the policy regarding cadres of Chinese ancestry and emphasizes the need to improve the protection of the party (these matters are dealt with in detail and resolved in the report by Le Duc Tho; in order to present them clearly, they must be presented in exact accordance with the report).

--In conjunction with amending policies, the resolution stresses the need to fully comply with existing policies and regulations. We must avoid violating policies and regulations for personal reasons (by doing either more or less than required and treating persons differently than required in regulations), thereby creating a bad attitude and a lack of unity among cadres.

The spirit of the various policies is to provide incentive for higher productivity and work efficiency and incentive to delve into one's field of specialization, not to provide incentive for cadres to try to attain a higher job grade or position. Policies and regulations must be fair, must fully reflect the principle of distribution in accordance with labor, not distribution on the basis of averages. Correct policies and regulations must be used to create a new psychology in society, one that sees the value of man in the results of the contributions made by him in any field, not merely in his work grade or official position.

It is necessary to thoroughly educate cadres and personnel who are responsible for implementing policies and regulations regarding cadres, especially cadres who have retired, who are persons who no longer have the authority they did when they were working, consequently, they are not given attention or supported in accordance with existing regulations.

6. Improving the management of cadres.

The Political Bureau resolution attaches importance to establishing scientific procedures in the management of cadres and applying modern means in this work. It emphasizes the need for a system of prompt information on cadres, redefines objectives and boldly assigns cadre management responsibilities to levels and committees. Meetings with cadres must be increased, etc. This decision is designed to overcome the shortcomings of the management of cadres based on administrative bureaucracy and correct the "handicraft" nature of this work.

C. Firmly adhering to organizational principles, heightening responsibility, strengthening discipline, broadening democracy and establishing revolutionary and scientific work procedures and methods.

When introducing these issues, it is necessary to clearly state that they are matters of basic principle as well as pressing, contemporary problems that must be quickly resolved because liberalism, the lack of discipline, the lack of responsibility, the lack of democracy and the unrevolutionary and unscientific handicraft way of work are becoming a lifestyle and becoming rather widespread. These are problems that must be successfully resolved and which must be resolved immediately after the dissemination of the resolution.

The report by Le Duc Tho to the Political Bureau discussed the serious situation and the pressing nature of the problems in each area touched upon by the Political Bureau resolution. It is necessary to compare the actual situation in one's sector, locality or unit to the report in order to gain a deep understanding of the resolution.

1. Above everything else, the resolution emphasizes the need to strengthen discipline.

a) The discipline in complying with the resolution, laws and plans of the state;

b) Discipline in speech;

c) Discipline in reports and requests for directives;

d) Discipline in maintaining the secrets of the party and state.

It is necessary to clearly state the political and economic significance of each point regarding the strengthening of discipline set forth in the resolution and analyzed within the report by Le Duc Tho. It is necessary to analyze one's situation in light of these points and criticize the harm caused by liberalism and the lack of discipline, especially with regard to leading and managing the economy and to internal politics (the activities conducted by the enemy to take advantage of the liberalism and lack of discipline of cadres in order to exacerbate our shortcomings, attack our leaders and commit internal sabotage).

The resolution points out: in the economy, it is even more necessary for discipline to be very strict. We must harshly prosecute under the law every act of bureaucracy and irresponsibility that causes a serious loss or waste of socialist property, cases in which irresponsibility results in the failure to complete plans, the failure to execute contracts and harms the overall economy and other units, etc. This is a very basic aspect of the quality of our system, is an important requirement in insuring the implementation of the new management mechanism and establishing the rules of the apparatus; it is also a viewpoint to which there must be firm adherence in the building of the socialist economy.

2. In conjunction with discipline, it is necessary to display high responsibility and broaden the practice of democracy.

The present state of irresponsibility must be brought to an end by formulating and correctly implementing organizational statutes and regulations on the responsibilities of each official duty, from the leadership level to personnel and using them as the standard for clearly determining the responsibility of each organization and each person. It is necessary to clearly state the relationship between rights and obligations.

As regards raising the level of responsibility in conjunction with broadening the practice of democracy, it is necessary to clarify the spirit of the resolution, that is, attaching very much importance to maintaining the practice of collective democracy and maintaining strict discipline while also attaching importance to displaying and encouraging initiative; the upper level must truly accept the opinions of the lower level in order to rectify its own shortcomings. The resolution strictly forbids arbitrariness, paternalism and suppression of the opinions of the lower level and calls for strict punishment of acts of retaliation against persons who express different opinions. In economic work, even more importance must be attached to having persons who understand economics, science and technology participate in the formulation of plans.

3. Revising work procedures and methods so that they are both revolutionary and scientific.

The three matters stressed in the Political Bureau resolution are:

+ Insuring the accuracy of information (especially economic information, scientific-technical information and information obtained through visits to the lower level).

+ Implementing the procedures for preparing and making decisions;

+ Rectifying shortcomings in organizing and guiding the implementation of decisions.

As regards the information system, it is necessary to clearly state the need to assess the actual situation by gathering, processing and filtering information.

Importance must be attached to analyzing the various sources of information; organizing information systems; improving the procedures involved in making trips to the lower level (to meet with party members or masses who have specific requests, etc.); and maintaining reporting procedures (combating opportunism and reports that are contrary to the truth because of bureaucracy, poorly qualified personnel writing reports or a lack of loyalty). Information must be used to formulate a good program; the lower level must be informed of what the upper level's program is.

As regards the work of preparing for and making decisions, it is necessary to emphasize the following: the preparations that are made must be good enough so that the debate conducted at conferences primarily involves the selection of good plans or so that important opinions regarding matters upon which agreement has not been reached can be immediately debated and agreement concerning them can be rapidly reached.

Clear procedures must be established for preparing for, making and organizing the implementation of decisions.

As regards rectifying the shortcomings in organizing and guiding the implementation of decisions, the resolution stresses the need to gain a thorough understanding of resolutions and establish a program for implementing them. The upper level must inspect the program of the lower level.

Implementation must be well coordinated and comprehensive in every respect. However, the secret to successful implementation is determining the main areas in which guidance must be concentrated (assembling forces and establishing good coordination among sectors and levels from the central level to the local level, from the people to the state; attaching importance to conducting inspections, conducting inspections while providing supervision, periodically conducting preliminary reviews, gaining experience, conducting final reviews, making awards or taking disciplinary action, adopting a new program, etc.).

+ The resolution emphasizes the need to employ a very practical method of a highly militant nature:

Conducting a thorough inspection at one or several places, issuing a decision or circular concerning strengths and weaknesses and correcting these weaknesses so that the same steps can be taken at other places.

This is a new mode of working, one that reduces the use of general circulars and directives that lack detail, reduces paper work and the size of staffs and saves both manpower and research time. All sectors, party committee echelons and agencies must immediately begin using this method.

+ It is necessary to mold the industrial style (it is necessary to thoroughly explain that the industrial style involves urgency, practicality, planning and the calculation of returns with less reliance upon being decisive).

Importance must be attached to conducting pilot projects with regard to matters that are new and important in order to prepare decisions and promptly concretize and codify decisions.

In summary, bringing about a strong change in the implementation of the principle of democratic centralism, displaying a high level of responsibility, strengthening discipline, broadening the practice of democracy and establishing and implementing revolutionary and scientific work procedures are a pressing requirement in insuring that leadership and management, especially of the economy, are improved. The effort to implement an economic management mechanism based on the economic laws of socialism and abolish management based on administrative bureaucracy and subsidies makes it even more necessary to correctly implement the decisions of the Political Bureau concerning the matters presented above.

D. Truly upholding the right of collective ownership of the masses, especially on the basic level, and strengthening the power agencies of the state and the mass organizations.

It is necessary to clearly state that the implementation of this entire resolution will guarantee, in terms of organization, the implementation of the system of collective ownership of the working people.

In this section, we shall deal with a number of specific matters related to the implementation of the right of ownership of the masses, especially on the basic level, through the mass organizations and the agencies of power.

The general spirit is to combat the malady of formalism and truly establish a practical viewpoint and mode as regards upholding the right of ownership of the masses. The Political Bureau resolution emphasizes four points that must truly be successfully implemented:

1. Truly upholding the right of collective ownership of the masses on the basic level. Here, two points are stressed:

First, upholding the right of economic ownership is of utmost importance in implementing the right of ownership of the masses on the basic level; one thing that must be successfully carried out is the launching of a mass movement on the basis of insuring the unity of the three interests (the interests of the state, that is, the interests of society; the interests of the collective; and the interests of the individual laborer). Because we did not attach importance to it in the past, the resolution emphasizes the need to attach importance to providing psychological and material incentives to workers. Guidance must soon be provided for implementing the cost accounting system on the basic level.

Secondly, it is necessary to truly show concern for living conditions and to adopt policies and measures designed to overcome the difficulties in the daily lives of the masses. This must be considered a matter pertaining to the ideals of the communist, to the party spirit of the party member (see the measures set forth in the report by Le Duc Tho).

2. Truly strengthening the organization and developing the role of the power agencies of the state (the National Assembly and the People's Councils). The two matters emphasized by the resolution are:

It is necessary to improve the party's leadership of the agencies mentioned above (by not making decisions that are so detailed that they restrict the initiative of delegates regarding specific policies and measures.)

The activities of the National Assembly and the People's Councils on the various levels should not be limited to plenary sessions of these bodies. It is necessary to establish many more committees of the National Assembly and subcommittees (either permanent or temporary) of the People's Councils so that delegates can participate in a effective manner in the activities of these bodies (at regularly scheduled times and by working with ministers, with the members of people's committees, with department directors and so forth to hear reports on the situation, provide supervision and contribute practical opinions).

The establishment of additional committees of the National Assembly will help to improve compliance with the law. These committees must prepare opinions, communicate with the masses and survey the opinion of the electorate in order to prepare proposals for presentation to the National Assembly. There should be many economic committees, committees dealing with culture, education, etc.

3. Truly strengthening the organization and developing the role of the mass organizations, especially the Trade Union, the Communist Youth Union and the Women's Union.

The resolution criticizes the tendency to give light attention to civilian proselyting. It stipulates that the various party committee echelons must periodically hear reports from the mass organizations and establishes a procedure for the persons in charge of the Trade Union, the Youth Union and the Women's Union to attend sessions of the Standing Committee dealing with economic and social matters.

The state must amend the law on the Trade Union, draft youth laws and draft a law on the protection of mothers and newborns.

The resolution defines the role of the Trade Union in economic management, especially in improving the organization, making technological improvements, raising labor productivity, strengthening labor discipline and improving the living conditions of workers.

It emphasizes the role played by the Ho Chi Minh Communist Youth Union in the educating of Youth Union members and youths.

When discussing the various mass organizations, it is necessary to carefully study that portion of resolution number 10 that deals with strengthening the mass organizations. Attention must be given to such important ideas as correcting the administrative, bureaucratic style of activities, restoring and developing the party's tradition of mobilizing the masses, becoming involved in awakening and influencing each person and helping individual families to resolve problems they might be encountering with their thinking and resolve difficulties regarding their living conditions.

It is necessary to implement a program for streamling the specialized apparata of the various mass organizations and widely utilize many cadres who perform mass organization work but not in a manner divorced from production and work.

4. Truly respecting and listening to the opinions and aspirations of the masses and adopting a specific plan for raising the level of the masses in every respect.

This is a measure for truly upholding the right of collective ownership of the masses and constantly improving the quality with which this right is implemented.

The report by Le Duc Tho deals specifically with this matter. It must be thoroughly examined in order to explain this matter properly.

V. Organizing the Implementation of the Resolution

The Political Bureau resolution stresses the following several points:

--It is necessary to put a number of members of the Political Bureau, the Secretariat and the Standing Committee of the Council of Ministers in charge of helping the Political Bureau and Secretariat guide the implementation of this resolution.

Within each province, municipality and ministry, it is also necessary to give a number of comrades on the Standing Committee, on the Party Affairs Committee and in the party group the responsibility of providing similar help.

--The resolution emphasizes the need to implement, in a short period of time, the most practical and pressing measures that have been set forth so that every organization of the party and state and every mass organization implements the fundamentals of the system of democratic centralism with a view toward heightening the level of responsibility, strengthening discipline and stimulating the performance of immediate tasks; it is also necessary to be highly determined to implement the well coordinated organizational measures set forth in the resolution in a manner closely linked to the implementation of the 1981-1985 Five Year State Plan and the establishment of the new mode of management.

The Political Bureau emphasizes the need to be determined to organize the implementation of this resolution in order to comply with resolution number 10 of the Party Central Committee and bring about a profound change in organization for the purpose of improving leadership and management, especially of the economy, from the Political Bureau, the Secretariat and the Council of Ministers to the various levels and sectors.

The specifics involved in organizing implementation are stated in Part IV of the report by Le Duc Tho. The contents of this section must be carefully studied.

It is necessary to emphasize the responsibility of each organization and party member in the implementation of this resolution.

It is necessary to clarify the following: "The correct attitude concerning the old and conservative and the new and progressive, which stimulate development, is to know which one to select and to pursue it with determination."

"The requirement of the organization of the implementation of this resolution is to bring about a positive, strong change that has an impact upon the extremely complex living organism that is the national economy."

The effort to provide cadres and party members with an understanding of this resolution must be thorough, not cursory, to insure that they "grasp the essence of the resolution" and that their level of awareness is raised so that they "see the necessity, the pressing nature and the beauty of the new and inherit the good aspects of the old and see the absurd and harmful nature of the old that has become backward."

As a result, it is necessary to make very thorough preparations for disseminating the resolution by thoroughly relating it to the actual situation within one's sector, locality or unit. On the basis of gaining a thorough understanding of the resolution, it is necessary to immediately rectify whatever can be rectified. At the same time, responsibilities must be asssigned for preparing matters that need to be presented to the collective for a decision and holding a conference to discuss the implementation of the resolution of the Political Bureau in accordance with the plan of guidance of the Secretariat.

The matters presented above are general guidance. When disseminating the resolution, it is necessary, depending upon to whom the resolution is being disseminated, to emphasize or delve into necessary matters, especially matters related to their work, with which the persons studying the resolution must concern themselves.

On all levels, in all sectors and at all installations, importance must be attached to studying and introducing those portions of the resolution that deal with the situation, causes, tasks and measures for bringing about a change in organizational work; the district level and the basic level; cadre work; discipline, responsibility and democracy; and the right of collective ownership of the masses.

Each level must emphasize those matters that pertain to it.

It is suggested that the various levels and sectors thoroughly study the resolution and the report by Le Duc Tho at the Political Bureau Conference.

DOMESTIC CIRCULATION OF FOREIGN CURRENCY BANNED

Hanoi NHAN DAN in Vietnamese 27 Jun 81 p 4

[Article: "Improving the Management of Foreign Exchange and Prohibiting the Circulation of Foreign Currency on the Domestic Market"]

[Text] On 22 June, the premier issued directive number 135-TTg on improving the management of foreign exchange and prohibiting the circulation of foreign currency on the domestic market.

After emphasizing the importance of the management of foreign exchange and the problems in need of correction that have existed in this work in the recent past, the directive sets forth specific regulations designed to abolish the circulation of foreign currency on the domestic market, which has started a flow of gold, silver, diamonds and other precious gems overseas and led to smuggling, and concentrating the sources of foreign exchange in the hands of the state with a view toward supporting the development of production, stabilizing the economic situation and helping to maintain the security of the country.

The premier requires that the responsible sectors and the municipal and provincial people's committees immediately reorganize the activities of the stores serving foreign guests and the local export stores.

In the section dealing with improving the management of foreign currency, revising exchange rates and the foreign currency business measures of the bank, the directive states: "In order to provide incentive for overseas Vietnamese to send money from overseas to help their families instead of sending presents, which are costly to send and are easily lost, the State Bank shall establish a bonus rate for persons who receive foreign currency from overseas, which will depend upon the actual foreign currency or the amount of money sent from overseas. This bonus rate shall not exceed 50 percent. If the person receiving the foreign currency does not want to convert it into Vietnamese currency but to put it on deposit at the bank, the money shall earn interest at the rate stipulated by the bank. When the money must be withdrawn in order to make an expenditure, the person withdrawing it shall receive a money order in place of the foreign currency with which to purchase goods at stores serving foreign guests and overseas Vietnamese, for which he will pay the same prices paid by foreign guests and overseas Vietnamese visiting the country.

As regards overseas Vietnamese who send money from overseas and wish to participate in a joint business with the state in a production sector, the government will appoint a representative of that sector to discuss the specific form of participation, capital participation terms and the rights involving the use of resulting profits."

In order to concentrate within the State Bank all foreign currency, gold, silver, platinum, diamonds and precious gems still being held by the various sectors and localities and prohibit private individuals from doing business in gold, silver, diamonds and precious gems, the directive stipulates: "All sectors and localities that still hold foreign currency, gold, silver, precious metals, precious gems or diamonds, regardless of their source, after 31 July 1981 must declare them and turn them over to the local branch of the State Bank or the Foreign Trade Bank so that the state can adopt a plan for utilizing them; sectors and localities may not continue to possess these items. After foreign currency has been turned in to the bank, the sectors and localities are permitted to use it to import raw materials and supplies needed to develop the production of the sector or locality. The chairmen of the provincial and municipal people's committees and the heads of the sectors are responsible to the government for implementing this decision.

The state prohibits private individuals from doing business in gold, silver, precious metals, precious gems and diamonds. Persons who once worked in this trade are not permitted to resume their activities. Goldsmiths and silversmiths who want to open jewelry repair stores must have the permission of the provincial or municipal people's committee after the matter has been discussed with the director of the provincial bank, the municipal bank or the bank of a special zone subordinate to the central level. The business operations of these stores must be under the inspection of the bank.

The provincial, municipal and special zone banks must establish gold and silver jewelry repair stores directly under their management that are operated by skilled, trusted craftsmen so that they can accept jewelry for repair or make jewelry to sell to foreign guests and the people; on this basis, they must gain an understanding of the needs of customers and correctly determine the amount of labor involved in repair work in order to provide leadership of private repair shops.

As regards foreign currency that is still among the people, the provincial and municipal people's committees must explain the management policy of the state to everyone and encourage them to deposit all of this money in the bank, between now and 31 July 1981, the final deadline. Foreign currency put on deposit will be converted at the new exchange rates and the general director of the bank shall establish an incentive bonus, the amount of which will depend on whether the money is put on deposit early or late. The people's committees of the provinces, municipalities and special zones have the right to use all of this foreign currency to import raw materials for the development of the local economy but must allocate money from the local budget to pay the bank for the above mentioned foreign currency. Persons who have production installations and deposit foreign currency in the bank shall be permitted to use 70 percent of the foreign currency they deposited to import raw materials and shall receive the remaining 30 percent in Vietnamese currency at the new exchange rate. Beginning on 1 August 1981, anyone who still holds, circulates, buys or sells foreign currency shall be considered in violation of the law and shall be harshly punished in accordance with the law.

The directive also sets forth specific regulations regarding scrupulously complying with customs statutes and the export-import management regulations of the state; all trade with foreign countries must comply with the export-import management regulations of the state.

FUEL SHORTAGE FORCES ABANDONMENT OF NEW FISHING SHIPS

Hanoi NHAN DAN in Vietnamese 30 Jun 81 p 3

/Readers' Opinions column by Quoc Minh, Hue, Binh Tri Thien Province: "The Forgotten Ships!"/

/Text/ Several coastal cooperatives in Dong Hoi City, Binh Tri Thien Province, received investments from the state totalling nearly 2 million dong with which to purchase 14 82 horsepower and 90 horsepower fishing ships. The ships arrived during the fuel shortage. For the past 2 years, these ships have been idle but the cooperatives have continued to pay interest to the bank. The ships are serving no useful purpose and none of the cooperative members is looking after them. Rust covers everything from the hulls of the ships to their engines. If payment were made now, the total value of these ships would only be about 500,000 dong, one-fourth the original price.

Should not these ships be promptly repaired and used for other purposes or sent to other places? Or, shall we allow them to become scrap iron and lose the entire 2 million dong?

FISH, VEGETABLE PRICE DIFFERENTIALS ESTABLISHED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 29 May 81 p 4

[Notice: "Fish, Vegetable Differential Supplement Prices to Cadres, Workers"]

[Text] With the authorization of the Municipal People's Committee and the Price Differential Supplement Appraisal Council, the Commerce Service wishes to present the following notice on fish and vegetable differential supplement prices for the second quarter of 1981:

FISH: The price of fish is stipulated by the Appraisal Council as 15 dong per kilogram less 2 dong which the cadres, workers and public servants must spend. Thus, each individual receives a supplement of 13 dong per kilogram.

Others: 13 dong times .5 kilogram or 6.5 dong per individual.

VEGETABLES: The supplement price for vegetables stipulated by the Appraisal Council is 2.5 dong per kilogram less .5 dong (spent for the purchase). Each individual receives a supplement of 2 dong times 6 or 12 dong.

The procedures for establishing fish and vegetable differential supplement prices for cadres, workers and public servants and of fish for other individuals were resolved in accordance with the spirit of Notice 719/UB of the Municipal People's Committee and Notice 815/TC-TN of the Finance Service and the Commerce Service.

THREE NORTHERN PROVINCES MEET GRAIN OBLIGATIONS

Hanoi NHAN DAN in Vietnamese 27 June 81 p 1

/Article: "Ha Son Binh, Hai Hung and Ha Nam Ninh Provinces Fulfill Their 5th Month-Spring Grain Obligations"/

/Text/ During this year's 5th month-spring season, Ha Son Binh Province had a bumper crop in terms of the amount of area under cultivation, yield and total output. Ung Hoa and Phu Xuyen Districts increased their yield per hectare by 4 quintals of paddy compared to the plan; My Duc and Chuong My Districts increased their yields by 3 quintals and Thanh Oai District by 2 quintals. The cooperative member families that accepted contracts to deliver their products to the cooperative have promptly fulfilled their grain obligations. The province has used the model units, the Hop Tien Cooperative in My Duc District and Ung Hoa District, to build the movement to fulfill grain obligations and disseminate the experience of rapidly and systematically collecting products.

The grain sector has sent many cadres to mobilize and help cooperatives complete the procedures for putting their grain into granaries and rapidly transporting their grain. As of 23 June, the province had put into granaries 32,050 tons of paddy under 5th month-spring grain obligations, thereby exceeding its plan by .2 percent. In the five lowlands districts of Ung Hoa, My Duc, Phu Xuyen, Chuong My and Thuong Tin, 96 percent of the cooperatives that executed rice product contracts for laborers exceeded their grain obligations by 0.1 to 5 percent. Many districts deposited in granaries over 60 percent more grain than required under their stable obligation for the entire year. Some 85 cooperatives that accepted product contracts have completed their total grain obligations for the year. Some 250 cooperatives have completed the obligations temporarily assigned to them for the 5th month-spring season. Ha Son Binh Province is continuing to mobilize those places that have recorded a large paddy output to continue, after fulfilling their obligations, repaying their debts and selling paddy at negotiated prices to the state.

On 24 June, the farmers of Hai Hung Province completed their 5th month grain obligation, depositing 75,431 tons in granaries, thereby exceeding the plan assigned by the central level by .5 percent. The province is continuing to purchase grain over and above obligations.

As of 23 June, Ha Nam Ninh Province had deposited in state granaries 100 percent of the grain required under the obligation temporarily assigned for the 5th month-spring season, the equivalent of 63.6 percent of its grain obligation for all of 1981. Ha Nam Ninh Province still has 6,000 tons of paddy owed in debts.

Eight units met or exceeded their 5th month-spring grain obligations: Hai Hau, Xuan Thuy, Thanh Liem, Kim Bang, Duy Tien, Hoa Lu, Tam Diep and Nam Dinh City. Some 238 cooperatives completed their 5th month-spring grain obligations.

AGRICULTURE

EDITORIAL OUTLINES NEEDS OF AGRICULTURE

Hanoi NHAN DAN in Vietnamese 30 Jun 81 p 1

/Editorial: "The Agricultural Front"/

/Text/ Under the second 5-year plan, agricultural production has developed but at a low rate. The slow development of agriculture in the production of grain, food products and industrial crops and in the use of labor and arable land has posed a major obstacle to the implementation of the economic-social programs of the country. At the first session of the 7th Legislature of the National Assembly, the general secretary of the party stated: "In the 1980's, the foremost front of the economy is accelerating agriculture and taking an important step toward upgrading agriculture to large-scale socialist production within an efficient industrial-agricultural structure."(1)

In the years ahead, the task of the agricultural sector is to better develop the advantages afforded by our tropical environment, the tremendous capabilities in multicropping and intensive cultivation and in the clearing of wilderness and the restoration of fallow fields to production in order to rapidly increase the output of rice and subsidiary food crops, establish centralized industrial crop areas and accelerate livestock production, with attention to developing forestry and fishing. The agricultural sector must improve itself to fulfill its three basic tasks of fully meeting the needs of society for grain and food products, supplying raw materials to light industry and producing an increasingly large volume of agricultural products for exportation.

Under normal weather conditions and with fewer technical supplies than last year, the country recorded a successful winter-spring harvest. Grain output during this season increased by 200,000 tons, with the major portion of this increase occurring in the North, where there is a widespread mass movement to expand the use of product contracts with groups of laborers and individual laborers and uphold the right of collective ownership of cooperative member farmers. Every locality that has rapidly expanded and closely guided the use of product contracts has seen the rate of increase of its output rise in comparison to other places. Practically all units that have expanded the use of product contracts to laborers have recorded higher yields than places using contracts for groups of laborers or old style contracts. On the basis of increasing their total output, cooperatives have carried out distribution in a manner that satisfies the three interests. The general secretary gave the following evaluation: "Those cooperatives that have applied product contracts for groups of laborers and individual laborers have recorded good results: the yield and output of rice have risen significantly, the income of cooperative members is much higher, obligations to the state have been fulfilled rapidly and cooperatives have truly been strengthened."(2) The new form of contract is a strong attraction to the masses and has become a moving force in developing production and building the new countryside. Tightly organizing implementation, insuring that established objectives and principles are met, establishing good and comprehensive coordination with the organization of production, improving management and applying science and technology are the most important measures in performing the tasks of agriculture.

With their favorable natural conditions and tremendous potentials in terms of arable land, the South, in general, and the Mekong River Delta, in particular, occupy an important position in the development of agriculture throughout the country. Here, it is necessary to closely coordinate socialist transformation with the reorganization and development of production. Positive steps must be taken to create the conditions for guiding farmers down the path of earning their livings collectively through various stages of transition and by means of suitable forms of organization based on the guideline of positive and steady progress. The building of production collectives and cooperatives at places that have the conditions needed for them must be closely linked to the redistribution of cropland. Places that have not established production collectives and cooperatives also must redistribute cropland to farmers who have no cropland or lack cropland in accordance with the policy that has been promulgated. It is necessary to improve policies and the forms of contracts and provide incentive to farmers to practice intensive cultivation, raise crop and livestock yields, apply technical advances and produce many products.

Developing agricultural production is the country's task of foremost importance. The various economic sectors, especially industry, including heavy industry, the communications-transportation sector and the capital construction industry, must make the development of agriculture the primary object of their support. The various levels and sectors must focus their energies on building the 400 districts of the country into bases organizing production, redistributing labor, making efficient use of arable land, expanding the trade sector, organizing the material and cultural lives of the people, simultaneously carrying out the three revolutions, gradually developing agriculture toward large-scale socialist production and building the new countryside.

CUU LONG PROVINCE ACTS TO INCREASE GRAIN STORAGE CAPACITY

Hanoi NHAN DAN in Vietnamese 30 Jun 81 p 2

/Article by Vu Anh Chien: "Cuu Long Province Stores Grain"/

/Text/ As of the end of June 1981, Cuu Long Province has mobilized enough grain to exceed its 10th month and winter-spring quotas by nearly 10 percent, which represents twice as much grain as was mobilized by this time last year. At the same time, the province has delivered a full 50,000 tons of grain (in paddy equivalent) to the state. The quantity of paddy that has been mobilized is relatively large but, during the past 2 months, granaries and storage yards were cleared before the onset of the rainy season; paddy was put into granaries safely; the loss rate has been 1.6 percent, 2 percent less than last year.

At first, Cuu Long projected a higher loss rate of paddy. Cuu Long's grain mobilization norm for the 10th month and winter-spring seasons is 100,000 tons. Before beginning the mobilization of 10th month grain, the granaries of the province only had a capacity of 30,000 tons. In addition, semi-permanent granaries and temporary shelters provided another 20,000 tons of capacity. The grain bags being provided by the locality were only enough to meet one-third of needs.

The purchasing network was not widespread, the paddy shipping and receiving teams lacked personnel and these personnel were poorly qualified for their work. There was an inadequate supply of scales and equipment for handling paddy. Land transportation posed difficulties due to the need for repair work on many bridges and the poor condition of roads; transportation by river route was convenient but dependent upon the tides.

As it began the mobilization campaign, Cuu Long Province made rather thorough preparations. The provincial party committee assigned the various localities the task of rapidly and systematically depositing in granaries adequate quantities of paddy of the required quality, thereby limiting losses to the lowest possible level.

When the campaign began, competent cadres from the various sectors and levels, along with cadres from the grain sector, went to Tra Cu, Chau Thanh and Cau Ngang Districts. Widespread propaganda and mobilization work was performed among cadres, party members and farmers in order to give them a thorough understanding of the two requirements of completing their grain obligations and maintaining the quality of paddy.

Transportation forces were deployed in a more efficient manner and the responsibilities of each level were clearly defined. The Communications Bureau and the Grain Bureau were given the responsibility of picking up and transporting paddy to district granaries. The district communications and grain sectors have been transporting the grain from district granaries to provincial granaries for storage, supervising the milling of grain and organizing the delivery of grain to granaries of the central level. Every level and sector has heightened its spirit of responsibility and transported grain in a rapid and systematic fashion; at the same time, all available means of the people, the state and cooperatives have been utilized, such as grain bags, improved vehicles, sampans, motorboats and trucks.

The grain sector has taken the initiative in strengthening the purchasing network, providing professional guidance and training cadres, especially the heads of stores, granary custodians and accountants; it has promptly sent more than 200 cadres to strengthen the districts and villages. The sector has given priority to allocating money for the construction of 26 additional semi-permanent granaries and temporary shelters with a storage capacity of 8,000 tons and for leveling sites and laying bricks to construct the additional storage yards on which to dry and temporarily store 20,000 tons of paddy while waiting for it to be transported to granaries for storage. In addition, the province has also made use of hundreds of public places, such as the enclosed areas in markets, and borrowed space at private factories and at floating granaries to stores tens of thousands of tons of paddy. The granaries in which paddy has been stored were cleaned and have been equipped with adequate shelves and ventilation pipes to maintain the quality of paddy.

This year, the grain sector has established professional and semi-professional paddy handling units with 1,200 workers (there were only 600 such workers last year) who work on a seasonal basis and are paid piecework wages; these units have been deployed to all purchasing and transportation sites. At each shipping and receiving site, the sector has also deployed additional teams to inspect the quality of paddy being put into granaries and take prompt action to insure that paddy is dry and clean before being put into granaries for storage or before being shipped. Practically all shipping, receiving and transportation is done in exact accordance with the following procedures: checking the quantity, checking the water content, checking for impurities, checking the grade of paddy, etc.

A positive factor in this year's storage of grain has been the spirit of responsibility displayed by cadres, party members and farmers by insuring that the majority of the grain contributed under obligations is dry and clean. The villages and hamlets have continuously held grain delivery festivals and made full use of available bags and equipment, such as sampans, motorboats and improved vehicles, to promptly transport grain to shipping and receiving sites. In coordination with mobilizing the owners of means of transportation, the grain sector has organized escort forces consisting of public security personnel, communications personnel and grain personnel. At places where paddy is received, it is weighed, its quality is checked and the paddy shipping invoice is checked so that the shipment can be promptly handled. The people's security network along transportation routes has helped to limit losses.

By the final days of April 1981, the granaries and temporary shelters were filled to capacity and the province still had more than 30,000 tons of paddy lying exposed to the elements. Determined to put this paddy into granaries before the onset of the rainy season, Cuu Long Province launched a campaign to collect paddy and assembled thousands of youths, shock youths, students and workers to handle this paddy; in only 10 days, all of this paddy had been safely deposited in granaries for storage.

It must also be realized that although progress has been made in the storage of grain, the percentage of loss is still higher than stipulated; a small number of localities have put paddy into granaries without grading it, consequently, the quality of paddy is not guaranteed and the percentage of yellow grains is high. During the remaining months of the year, Cuu Long Province will focus its energies on mobilizing more than 30,000 tons of summer-fall grain. At present, there is considerable rainfall; the grain sector must quickly make preparations and adopt a thorough storage plan in order to insure that it meets its norm of mobilizing 140,000 tons of paddy in 1981 on time and in exact accordance with qualitiative standards.

HO CHI MINH CITY CURTAILS USE OF ELECTRICITY

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 20 May 81 p 4

/Notice: "Curtailing Use of Electricity"/

/Text/ To provice convenience for arranging the shifts of production facilities and with the consent of the Municipal People's Committee, the Electric Power Management and Distribution Service will temporarily apply the following methods effective on Tuesday 19 May 81.

1. Enterprises and small industry and handicrafts households will cease operations for 3 consecutive days per week, that is, resting for the 2 days following their regularly scheduled weekly day off. During the night, there will still be electricity for protection but not for production.

Production facilities in the wards of Binh Thanh and Phu Nhuan that previously had Saturdays off will now have Sunday off and remain inactive for 2 additional days, Monday and Tuesday. During the days in which electricity is available, small industry and handicrafts households will not engage in production from 1700 to 2100.

2. Civilian households will not have electricity for 3 days as above and will not have electricity for 1 night each week.

3. The Electric Power Management and Distribution Service and electric power branches in the city will strive to assure a stable supply of electricity in accordance with points 1 and 2 above but on the other hand request that agencies and enterprise units with their own electric generators continue to make preparations and precautions against unexpected losses of electric power possibly occurring on a number of lines during periods other than those stipulated above.

CAPITAL CONSTRUCTION MANAGEMENT STATUTES ENACTED

Hanoi NHAN DAN in Vietnamese 27 Jun 81 p 1

[Editorial: "Managing Capital Construction"]

[Text] Each year, how well the capital construction task is carried out directly affects national income. The present difficulties of the economy are due to many causes, including the fact that capital construction work is still carried out slowly, still decentralized and still characterized by waste. The money that is invested yields very low returns. During the past 5 years, the new capacity put into production has only equalled one-half the capital invested; the remaining capital is tied up in construction projects that are unfinished or in projects that were shut down upon their completion because they lacked the conditions needed to maintain their operation. This inefficient construction is due to the absence of a comprehensive, unified and well coordinated management mechanism based on the socialist mode of business. The management of capital construction is still heavily characterized by administrative bureaucracy and subsidies; responsibility for investment capital and construction and assembly processes has not been defined, the division of labor and division of levels are unclear and importance is not attached to utilizing economic levers.

In order to improve the management of this work, the Council of Ministers recently issued the Decree Promulgating the Capital Construction Management Statutes. This, an important step in improving economic management, is a basic legal document that establishes the main principles in the management of construction on the basis of the socialist mode of business. The statutes begin to define and clearly establish the responsibilities of production and business organizations regarding the investment capital of the party managing investments and the party managing construction and define the relationship between state management and production-business as well as between centralized and decentralized management of capital construction investments. The statutes are the basis for researching, revising, amending and perfecting in a well coordinated manner the new system of construction management regulations so that they are consistent with the new task.

The basic requirements of construction management are to correctly express the lines and policies, make the most effective use possible of the various sources of investment capital and successfully develop natural resources, the potentials that lie in labor and arable land and every other production potential. Investment plans must insure the development of the economy in a balanced, smooth manner, the establishment of an efficient economic structure in each stage, the achievement of high economic returns, an increase in the social product and higher national income.

The principles of management are to provide comprehensive and well coordinated planning from the stage of preparing investments to construction and assembly work and the stage of putting the project into use; closely managing the economic returns from investment capital; implementing cost accounting, applying the various economic levers and correctly coordinating the three interests in order to quickly put projects into use in a manner that reflects high quality and involves low production costs.

Preparing investments, preparing for construction and construction and assembly work are consecutive stages that are closely related to one another in the construction process. The failure to perform the work of any one stage well will cause an overall imbalance. However, the recurring problem is that the construction of projects is begun without thoroughly preparing investments; after designs have been examined and approved and construction and assembly work have started, changes in the construction site and building plan still occur. This haphazard method of working has led to instable construction plans, decentralized forces, lengthy construction time, significant waste and low returns from investments. The new statutes require strict adherence to the order in which capital construction work is performed. Only by making thorough preparations on the basis of sound economic-technical foundations is it possible to make an accurate investment decision. Preparations for construction should only be made after the investment decision has been made and construction must not begin until adequate preparations have been made.

Carrying out construction in accordance with a selective plan and quickly putting projects into use in a manner that reflects high quality and involves low costs demands a higher level of responsibility of all parties, organizations and individuals participating in the work of preparing and making investments. This responsibility is defined under the law. The implementation of these statutes will create favorable objective conditions for advancing capital construction to a new level of development.

HEALTH, EDUCATION AND WELFARE

DECADENT BOOKS ADVERSELY AFFECT EDUCATION

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 23 May 81 pp 1, 4

/Editorial by Teacher Manh Hung, Phu Nhuan Ward: "Unwholesomeness in Children's Autograph Books"/

/Text/ At the end of the 1980-1981 school year, many students approached me to request an "autograph." Opening the "student autograph" and "youth autograph" books of the 6th grade students, I was suddenly startled. Nearly all the books were devised in a gaudy and strange manner with a heart and the word "LOVE" (an English word meaning "love"); a heart pierced with an arrow and drops of blood; a boy and girl expressing love for each other; and pictures of ballplayers with strange foreign names. There were titles written in large letters: "Sad Summer 81," "Sorrowful Summer 81," etc. There were grief-stricken and weeping laments: lonely summer, empty summer, hateful summer, etc. and there were even empty and tasteless remarks such as short paper, long feelings and blunt pen, dry ink, etcetera and etcetera.

I was startled because the feelings and composition in these "youth autographs" of 12 and 13 year old children were virtually all cheap feelings and weeping compositions of the U.S. and puppet era. These things are completely contrary to what the children are taught each day. A great separation may be seen between what the children wrote and the lessons taught them in school. Which is false and which is true? Could it be that the lessons full of enthusiasm, simplicity, clarity and love which the students present the teacher are false?

I went to the home of T. Ng., an excellent student who won an award in the 1979-1980 nationwide outstanding student examination, to return his "autograph" book. Noticing the disapproving look in my eyes, T. Ng. apparently understood his mistake and declarded:

"If I didn't do like that, the kids would call me 'country' and 'not knowing how to live with the times'!"

T. Ng. allowed me to see an entire arm load of books, all pornographic books illegally printed and surreptitiously appearing recently on the sidewalks, in the newspaper stands and in front of the school.

"Where did you get these kinds of books?"

"My friends loaned them to me. They exchange them with each other to read for relaxation and to forget about study."

I suddenly understood. I simultaneously felt anger for the children, my own responsibility for not providing close correction and guidance to the children in reading wholesome books and indignation toward the undesirable elements who had spread poison among my innocent pupils. Not only have they harmed the souls and feelings but also the fondness for beauty and the literary aptitude of the students.

I have only now thoroughly understood this simple fact: only when we eliminate these types of reactionary, decadent and illegal culture from our schools and society can teaching in the schools and my teaching achieve good results.

COLUMNIST CRITICIZES COFFEE SHOP NAMES

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 5 Jun 81 p 4

/Article by Duc Lan in the Column "Saigon's Many Faces": "See the Face, Give a Name"/

/Text/ We Vietnamese have many fairly profound sayings. For example, the saying "See the face, give a name." The face clearly expresses the true features of the soul and the name fully expresses the face. Therefore, the name itself reflects in an extremely straightforward manner the contents within.

It is only necessary to examine the names (actually the shop signs) of coffee shops in the city to see the value of this saying.

A number of shops are locations for drinking wine and the amusement of those with money and property (largely not achieved through sweat and tears but through exploitation and collusion)--and therefore bear signs such as: The Deceiver, Drag On, Relaxed, etc.

A number of other shops are locations for pursuing women in order to satisfy lowly desires and are therefore called: Find a Friend, Apricot Eyes, Beautiful Girl at the Foot of a Coconut Tree, etc.

A number of other shops are locations promising to ease the cares of those who have lost their influence (because the situation has been reversed by 180 degrees) or of those who are disappointed in love (because their "beautiful lady" has given them the"brush" and therefore bear signs such as: Afternoon, Twilight, Caught in Sadness, Sadly Reaching the Frontier, Sadness, Ease Your Sorrow, Lost Soul, I've Lost You Already, etc.

Comparing these shop signs with the activity inside of the coffee shops which public opinion has reflected after administrative inspections, we see it is possible to appropriately apply a famous saying of Buyt-phong "Literature is the nature of man" and we can also add "The name is the substance of the shop"!

Therefore, in the administrative inspections, these signs themselves are good "informers" for the cultural and communications cadres. The problem of names for privately operated shops should probably be also given attention when issuing business permits.

Note: The names "Hung on a head of a goat selling dog meat" will be discussed on another occasion!

HANOI REVIEW OF EVENTS FROM 16 MAR-15 APR 1981

Hanoi VIETNAM COURIER in English May 81 pp 32, 31

[Text]

March

16. A delegation of the Kampuchean Ministry of Public Health, led by Minister Nu Beng, paid a visit to Vietnam from 9 to 16 March. A plan for medical cooperation between the two countries was signed.

17. A delegation of the SRV National Assembly, headed by Phan Anh, acting Chairman of the National Assembly's Laws Drafting Commission, attended the conference of interparliamentary delegations from the socialist countries held in Moscow on 17-18 March.

— *VNA*: Signing of an agreement on water conservancy cooperation between Vietnam and Kampuchea in Phnom Penh.

18. The People's Revolutionary Council of Kampuchea issues a decree on elections of delegates to the National Assembly.

— A TASS delegation, headed by its director general Serguei Lossev, pays a visit to Vietnam. A new agreement on professional cooperation between the agencies of the two countries is signed.

19. Decision of the Government Council concerning:

— the establishment of educational councils at all levels, from the provinces down to the communes;

— the modification of examination procedures in general education schools;

— the professional guidance in general education schools provided to all pupils graduating from basic and secondary general education schools.

– *Nhan Dan*: The Chinese authorities continue their armed provocations and incursions in the Northern border provinces of Vietnam, causing losses of lives and property to the local people.

– On the occasion of the International Day Against Racial Discrimination, Prime Minister Pham Van Dong sends a message to the UN Secretary-General and to the Chairman of the Special Committee against Apartheid.

– The spokesman of the SRV Ministry of Foreign Affairs makes a statement strongly condemning the aggressive policies and acts of South Africa against Angola and Mozambique.

21. The Bulgarian Red Cross donates gifts including 15 tonnes of medicines and 140 tonnes of food, cloths and fabrics to the Vietnamese Red Cross.

– *Nhan Dan*: Election to the People's Committees at street quarter and commune levels are held in Kampuchea.

– *Nhan Dan*: The FAO decides to send an emergency aid of 10,000 tonnes of food to help Vietnamese people stricken by storms and floods in 1980.

25. *Quan Doi Nhan Dan* (the People's Army daily) condemns the slanderous campaign against Vietnam by the Yugoslav press. It also affirms that this campaign is aimed at concealing the crimes of the Chinese, the US and other reactionary forces.

– *Nhan Dan*: The conference of the Executive Committee of the World Federation of Democratic Youth held in the capital of Lebanon strongly condemns the policies of the Chinese authorities against the socialist countries.

– On the occasion of its 50th founding anniversary, the Ho Chi Minh Order, first class, is confered upon the Ho Chi Minh Communist Youth Union.

– Mohammed Essaafi, special envoy of the UN Secretary-General arrives in Hanoi to "investigate the possibility of convening a regional conference" for peace and stability in Southeast Asia. The Vietnamese side reiterates its stand as mentioned in the 28 January 1981 statement of the Conference of Foreign Ministers of the three Indochinese countries and states its appreciation of all efforts for peace, stability, friendship and cooperation in the region.

26. A delegation of the CPV led by Chu Huy Man, Political Bureau member of the Party Central Committee, leaves Vietnam for the 12th Congress of the Bulgarian Communist Party.

– The 13th session of the Afro-Asian People's Solidarity Organization (AAPSO) held in Aden from 21 to 26 March adopts a joint statement expressing total support for the three Indochinese countries and the Afghan people.

– Signing of a plan for medical cooperation between Vietnam and the GDR for the period 1981-1985.

27. A Vietnamese delegation, led by Ambassador Phan Thi Minh, attended the 27th session of the Economic and Social Council for Asia and the Pacific held in Bangkok.

– *Nhan Dan*: The Posts and Telecommunications School in Phnom Penh receives 300 telephones, a quantity of books, radios and other equipment donated by the Postal Service of Vietnam.

28. The daily *Nhan Dan* once again rejects the slanders by Thailand, China and some Western news agencies which claim that Vietnam has been using toxic chemical in Kampuchea.

30. A Vietnamese delegation, led by Vice-Minister of Foreign Trade Hoang Trong Dai, attends the 60th session of the Council for Mutual Economic Assistance (COMECON) Standing Committee on home trade.

April

1. *Nhan Dan*: The Government Council issues a directive on the new 12-year educational system, with nine years of basic general education followed by three years of secondary general education.

2. *VNA*: A motorbike and bicycle repair workshop built with aid from the GDR comes into operation in Quang Nam – Da Nang province.

– A Vietnamese Communist Party delegation, led by Nguyen Duy Trinh, Political Bureau member and Secretary of the Party Central Committee, leaves Hanoi for the 16th Congress of the Communist Party of Czechoslovakia and the 10th Congress of the Socialist Unity Party of Germany.

– *VNA*: Mr. Antoni Gregori (Italy) has recently donated 3,000,000 *lira* to Vietnam to assist in its national reconstruction. So far, he has given the Vietnamese people 20,500,000 *lira* and a quantity of clothes and other goods.

– Signing of an agreement on electronics cooperation between Vietnam and Czechoslovakia on the occasion of the visit to Czechoslovakia by a delegation from Vietnam's Ministry of Engineering and Metallurgy, headed by Vice-Minister Do Dai Loc.

3. A delegation from Vietnam's Ministry of Labour, headed by Minister Dao Thien Thi, paid a visit to the Soviet Union, begun on 25 March 1981. A cooperation agreement between the two countries was signed on 2 April.

4. The British charity organization OXFAM has decided to give Vietnam 220,000 pounds to buy 1,500 tonnes of rice for flood victims, 57,727 pounds for Ha Bac and Nghe Tinh provinces, and 5,300 pounds for the purchase of medical equipment for Nghe Tinh province.

– *VNA*: Inauguration in Vietnam of two Norwegian-built factories. They are an ice plant at Diem Dien (Nghia Binh province) and a refrigeration plant at Cua Hoi (Nghe Tinh province).

– The Indonesian paper "Observer" condemns the plans by Beijing and other reactionaries to form a "national united front" against the Kampuchean revolution.

7. A cheque of 30,000 *francs* is handed over by the France-Vietnam Association to the Vietnamese Embassy in Paris to help the Vietnamese in flood- and storm-stricken areas.

– *Nhan Dan*: A "National Anthem Committee" has been set up. It is headed by Xuan Thuy, Secretary of the Central Committee of the Communist Party of Vietnam, and is to select a new anthem.

9. A delegation of the Ministry of Education of Angola, led by Vice-Minister Artur Pestana, concludes its friendship visit to Vietnam.

– The Vietnam News Agency is authorized to deny a report in the Thai paper *Ban Myang* (The National) of 7 April. The report said that on 1 April Vietnamese forces intruded into the Aranyaprathet area.

– *VNA*: Signing of a plan for scientific cooperation between Vietnam and Hungary for the 1981–1985 period.

10. Prime Minister Pham Van Dong sends a message of greetings to the 15th conference of the National Council of Palestine asserting that the Vietnamese Government and people resolutely support the Palestinian people's just cause against the Israeli aggressors.

– Vietnam signs the UN Convention on the Prohibition or Restricted Use of Certain Conventional Weapons.

– The spokesman of the Ministry of Foreign Affairs rejects claims by certain Western news agencies concerning the visit to Vietnam by Mr. M. Essaafi, special envoy of the UN Secretary-General. Claims are contained in a report alleging the "view-points of the Association of Southeast Asian Nations and Vietnam are converging towards political solution for Kampuchea".

11. Arrival of a Government delegation of the Sahrawi Arab Democratic Republic led by Energy and Telecommunications Minister Ha Moudi Ould Ahmed Baba.

– A delegation of the Vietnam–USSR Friendship Association leaves Hanoi for a visit to the Soviet Union. It is led by Nguyen Thi Thap, the Association's Vice-President and member of the Communist Party of Vietnam Central Committee.

– Tran Vy, Chairman of the Hanoi People's Committee, leaves Vietnam for the 10th conference of major cities' mayors to be held in Milan (Italy), begun on 12 to 17 April.

12. On the occasion of Laos' traditional festival Boun Pi May, the Chairman of the Vietnam–Laos Friendship Association sends a message of greetings to his Lao counterpart.

– Pham Ho, poet and standing member of the Children's Literature Section of the Vietnam Writers' Association, attended the 5th International Conference on Children's Literature. It was organised by the Federation of Literature for Young Pioneers in Moscow from April 8 to 12.

13. In a message of greetings to the Nicaraguan Committee for Solidarity with Foreign Peoples the Vietnam Committee for Solidarity and Friendship with the Peoples of other Countries and the Vietnam Peace Committee voice their protest against the US authorities' suspension of loans and use of economic pressure against Nicaragua. They also affirm Vietnam's strong support for the Nicaraguan people and the other Latin American peoples in their struggle for independence, freedom and social progress.

— The executive director of the Japanese Consumers' Cooperative Union, Ma Sao Oya, hands the Vietnamese Embassy in Tokyo a sum of 2,000,000 *yen* as relief to 1980 flood- and storm-stricken areas in Vietnam.

14. *VNA*: A delegation of the Supreme Control Board of the Socialist Republic of Vietnam, led by its head Tran Huu Duc, visited Hungary. On 10 April a memorandum on cooperation between the control boards of the two countries was signed.

15. The Central Committee of the Communist Party of Vietnam sends a message of greetings to the Cuban Communist Party on the occasion of its 20th founding anniversary.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PAPERS HAIL AUGUST REVOLUTION AS TURNING POINT

BK191130 Hanoi Domestic Service in Vietnamese 2300 GMT 18 Aug 81

[NHAN DAN 19 August editorial: "Foster the Mass Revolutionary Movement"]

[Text] In August 1945, under the banner of the Viet Minh Front and led by our party, a great movement for national salvation developed and spread from north to south. The Soviet Army's great victory that compelled the Japanese fascists to surrender unconditionally created an unprecedented opportunity for the oppressed peoples in Asia to rise up to regain independence and freedom. Our party quickly seized this opportunity and motivated all the people to rise up to wrestle back national power. The general uprising ended with a swift victory, bringing about a turning point in history and a new era for our nation of Vietnam--an era of independence, freedom and socialism.

In August 1945 we had only 5,000 party members and a few small guerrilla units. But the revolution was still victorious because our party, led by President Ho Chi Minh, was fully aware of the ability of the people and the nation to revolt, correctly evaluated the situation, realized the trend of history and drew up a timely and accurate strategic plan. The party's clearsighted decision was immediately transformed into the determination and the revolutionary actions of tens of millions of people. Although our general uprising was quickly victorious, it was the result of a long struggle full of hardships and sacrifices.

The August 1948 general uprising is a vivid and heroic image of a nation which with bare hands rose up to overthrow the brutal ruling forces, regaining their right to be masters and clearing the way to move their country forward.

A great lesson learned from the August revolution is that of launching a mass revolutionary movement. Once the party adopted a correct policy, the masses quickly responded to it and transformed their determination into revolutionary action in order to change the situation.

Leadership first of all requires the fostering and development of the masses' revolutionary spirit and their abundant creativity. In a critical situation when the revolution is faced with hard ordeals or difficult tasks, if we know how to arouse the masses' revolutionary zeal we will be able to break through the stalemate and stimulate diversified development.

Following the seizure of power, our people had to undertake many great, historic struggles against various brutal aggressive forces in order to move our people's revolutionary undertaking toward new victories and to contribute to the struggles of the various nations for independence, freedom and socialism.

Fostering the spirit of the August revolution and responding to President Ho's sacred appeals that we would rather sacrifice everything than lose our country or be enslaved and that nothing is more precious than independence and freedom, all of our party, troops and people, millions as one, struggled courageously for 30 years, defeating the French colonialists and then the U.S. imperialists and scoring victories of historic and epochal importance.

Today the Vietnamese revolution has to cope again with its new brutal and cunning enemies. The Beijing reactionaries are attempting to invade our country at a time when our former war wounds have yet to heal. But they have come up against a heroic nation which--throughout a 4,000-year history--has defeated the most ferocious enemies of all times. Both of our people's wars for national defense against the Chinese expansionists again demonstrated the heroic bearing and the indomitable spirit of our Vietnamese people--a revolutionary people who would rather sacrifice everything than lose their country and who advocate that nothing is more precious than independence and freedom.

Since the August revolution we have spent most of our time and energy in the struggle against foreign aggressors to fulfill the cause of national liberation and unification. The cause of national liberation and the cause of social liberation to build a new life have always been integrated. This is the abundant strength of our revolution.

Gradually the exploitation systems have been eliminated. Socialist construction has scored great achievements and it is advancing toward a new system, new economy, new culture and a new man.

A country which bears heavy war burdens and is advancing toward socialism from its small-scale and backward production system must, of course, face difficulty and hardship.

Revolution is also a struggle to overcome all difficulties, poverty and backwardness, and to build a new beautiful society. A new revolutionary surge of the masses has occurred. In the rural areas a new working method has become a large-scale socialist revolutionary movement--the method by which the masses are masters of production and distribution. Through this method they have developed their enthusiastic spirit and creativeness and have initially overcome difficulties and scored new, encouraging achievements in increasing productivity, output and in expanding the cultivation area to push agriculture toward a further new progressive step.

In industrial production, distribution, circulation and in activities of other economic branches as well as of cultural, educational, scientific and technological sectors,, and literature and art, there have emerged new factors. A shift in a correct direction has begun.

Our nation's revolution obviously has enormous developmental potential. By trying to foster our revolutionary will and by resolutely struggling to oppose backward, conservative and discriminate phenomena we can surely create a new large-scale revolutionary surge to enable our revolutionary cause to advance further.

HAU GIANG CRACKS DOWN ON REACTIONARY CULTURE, NARCOTIC USE

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 24 Jun 81 p 4

[Article: Hau Giang "Severely Punishes Those Who Store, Disseminate Decadent, Reactionary Culture"]

[Text] VNA--The people's court of Can Tho City (Hau Giang Province) just held a session to try Nguyen Phu Huu and Nguyen Van Giau for the crime of storing and disseminating decadent and reactionary culture, and of buying, selling, smoking and injecting narcotics.

Since January 1980, with a stealthily purchased portable movie projector Nguyen Phu Huu has made a good deal of money by luring many youths into his home to view decadent films left behind by American imperialists. As for Nguyen Van Giau, despite having been educated several times, he continued to stealthily organize the purchase, sale, smoking and injection of heroin and narcotics, poisoning the existence of unprogressive youths.

Huu's and Giau's activities were exposed by the people, who helped responsible organs to arrest and detain them with complete incriminating evidence. Before the court, both Huu and Giau admitted their guilt.

The people's court of Can Tho City sentenced Nguyen Phu Huu and Nguyen Van Giau to 24 months in prison each, with confiscation of all incriminating evidence and means.

SOLDIERS REFUSE TO OBEY INCOMPETENT COMMANDER

Hanoi QUAN NHAN DAN in Vietnamese 25 Jun 81 p 3

[Article by Khanh Van: "A Question Has Been Answered"]

[Text] At the office, nearly all of us were surprised at reports on Company 3 warriors "Refusal to Obey Orders" to go out to track down several bandits who just sneaked across the border. Why? Wasn't Company 3's commander H, formerly the company's political officer and a very good cadre who is well liked by his comrades. We knew that H was an industrious cadre, eager to do any work. Whenever the company cook ran short of firewood, H would chop it for him; whenever there was a festival, he would take out knives and chopping block to slaughter hogs and prepare hog entrails; at night, whenever he saw a soldier standing guard in the cold wind H would offer to relieve him, shift after shift; whenever a warrior was sick, H would care for him as would a good sister for her younger brothers and sisters. So, why, now, is an entire detachment of 12 selected men, including 3 bona fide party members, not complying with company commander H's order? And today H is directly in command of the company!

We sent at once our assistants into the company to look into the matter. They found out that among the 12 men there was only one slightly stubborn guy, while the remaining 11 were straightforward sodiers who had never broken the rules. Nevertheless, all of them privately shared the same perception, "If S were the commander, we would have been ready to go at once (S was deputy company commander then attending a training class); but if H is leading the troops, they might easily be 'barbecued.'" And the soldiers recalled the time when commanding an operation based on azimuthal calculations, H led the whole company into an enemy-controlled zone because he was not familiar with the use of maps and compasses.

The slightly stubborn chap said, "Company commander H is very good, but we are very much concerned about his commanding in combat. Worse still, the company commander hardly wants to improve his knowledge through learning. Back at the time of supplementary education he gave up solving a geometry problem featuring a triangle within a square, terming it 'very difficult.' He said, 'first a square, and now triangle! What a mess!'"

H has rectified the above situation. He has now fulfilled properly the functions of a commander. But the practical lesson from all this is that for a cadre to be trusted and loved by warriors, enthusiasm alone is not yet enough; he also must unceasingly improve himself and learn.

BRIEFS

DONG NAI STEALER--The Dong Nai Provincial People's Court recently sentenced (Doanh Luu Phuong), a warehouse keeper of Bien Hoa Municipality's trade enterprise echelon, to 3 to 12 years' imprisonment on the charge of stealing almost 500 kilograms of state seasoning powder. Taking advantage of loose management during the period of transference of duties between himself and the former warehouse keeper, (Phuong) stole the seasoning powder and sold all to dishonest merchants. [BK081057 Hanoi Domestic Service in Vietnamese 0400 GMT 1 Aug 81]

ASSAULT YOUTHS FROM HANOI--The Hanoi Municipal Ho Chi Minh Communist Youth Union on 4 August held a ceremony to send off 200 members of the Assault Youth General Command Committee voluntarily leaving for Lam Dong Province to participate in building new economic zones. This is the first batch of more than 300 youth union members and youths selected recently from four precincts in the capital. [BK180935 Hanoi Domestic Service in Vietnamese 2300 GMT 4 Aug 81]

DONG NAI THEFT TRIAL--The Dong Nai Provincial People's Court recently tried (Tran Van Bay), alias (Bay Tinh), and his accomplices on charges of stealing socialist property. (Tran Van Bay) is a professional thug with many records in Ho Chi Minh City, who has escaped from a reeducation camp and holed up in Dong Nai Province. Early in August 1980 he and some accomplices on 14 occasions cut 2,853 kg of telephone wires and 1,000 m of cables strung from Thong Nhat District to Bien Hoa City, causing outages to the communications system. Faced with the incriminating evidence, (Tran Van Bay) and his accomplices pled guilty. The court passed a death sentence on (Tran Van Bay) and gave his accomplices jail terms ranging from 2 years to life. In particular, black marketeer (Nguyen Thi Mai), the buyer of the stolen property, was sentenced to 20 years' imprisonment. [BK190941 Hanoi Domestic Service in Vietnamese 1100 GMT 13 Aug 81]

HA BAC COURT CASE--The Ha Bac Provincial Court has recently tried (Nguyen Van Pha), (Nguyen Thi Thoa) and 21 accomplices for embezzling genuine ration stamps and coupons and circulating counterfeit ones. From 1972 to 1979, while serving as official in charge of the distribution and custody of ration stamps and coupons of Pho Yen District, (Nguyen Van Pha) made false reports on the district's population and faked birth records so as to obtain extra ration stamps and coupons, which he would sell to dishonest merchants. Between 1976 and 1978, (Nguyen Van Pha), in collusion with district statistics official (Ho Viet Doan) and dishonest merchant (Nguyen Thi Thoa), made more than 25,000 dong by selling embezzled ration stamps and coupons. The court sentenced (Nguyen Van Pha) and (Nguyen Thi Thoa) to 18 years of imprisonment each. The other culprits received sentences from 18 months of suspended imprisonment to 12 years jail terms. [BK190941 Hanoi Domestic Service in Vietnamese 2300 GMT 16 Aug 81]

PRC INFILTRATORS IN HIGHLAND MARKETS--Recently, the Chinese expansionists are sending their underlings into our highland markets to spread false rumors, to buy our people and to try to split up our national solidarity and the bonds between our people and our army and government rhrough many insidious tricks and schemes. The armed forces and the mobile information teams in the districts of Muong Khuong, Bac Ha, Ha Giang city, etc. have uncovered in time the bad arguments of the enemy so as to explain the situation to the people. Promoting the tradition of solidarity and constant vigilance, the compatriots from various nationalities have on many occasions helped the army to raid and pick up the bad elements right in the marketplace. The authorities in the districts of Sa Pa, Bac Ha, Bao Thang and several other localities have paid attention to building many cultural buildings around the marketplaces such as film theaters, information centers, exhibit halls, etc. in order to serve the people. In the markets of Dong Van and Quan Ba, the roads leading thereto and the stalls have been fixed so as to insure easy access and traffic to the people. INTERNATIONAL RELATIONS, TRADE AND AID

DEVELOPMENT OF EXPORT PRODUCTION URGED

Hanoi NHAN DAN in Vietnamese 20 Jun 81 pp 1,4

[Article: "Encourage the Development of Export Production"]

[Text] With a view towards encouraging the various sectors and localities to exploit their economic potentials in order to rapidly increase exports, on 26 May 1981 the Council of Ministers promulgated the ministerial decree number 200-CP which stipulates a number of concrete points regarding policies and measures meant to develop export production.

The text of the ministerial decree is as follows:

The following organizations are empowered to engage directly in import and export business (this is subsequently referred to as "allowed direct involvement in export-import"):
1. The general companies and companies specialized in foreign trade and directly run by the Ministry of Foreign Trade.
2. The general companies and companies, the federations of enterprises and combined enterprises, and those enterprises belonging to the organs in charge of production management at the central level (grouped under the term "central enterprises") which are stipulated by various conditions.
3. The federations of import-export companies and import-export combined companies of various localities, which are directly operated by the provincial or municipal people's committees directly responsible to the center (these will be referred in abbreviated form as "local import-export companies") and which are stipulated by various conditions.

The central enterprises allowed to engage directly in the export business (subsequently referred to as "allowed direct involvement in export") must answer the following requirements:
1. They must be highly specialized and exhibit a high degree of production concentration, producing specifically or essentially for export or producing a significant proportion of export commodities as compared to the total commercial production value of the enterprise.
2. They must have cadres fully conversant in the general line and policies of the Party and in the legal requirements of the state, fully acquainted with the economic relations with foreign countries, of good political standing and equipped to deal in the specialized field of foreign trade.

Of the above enterprises those that wish to engage directly in the import business (subsequently called "allowed direct involvement in import") must answer the following requirements:

1. The imported commodities must be capital goods (equipment, parts, raw materials, building materials, not counting whole sets of equipment) of a specialized nature used in the enterprise's production. (The more common articles must be imported through the specialized foreign trade companies.) The list of commodities and markets that the enterprise is entitled to deal with in import and export must be determined by the Ministry of Foreign Trade based on the recommendations of the ministry overseeing the enterprise.
2. They must be allocated a certain amount of foreign currency for import purposes or are allowed to use foreign currency in accordance with articles 32 and 34 of the Regulations accompanying the ministerial decree number 40-CP which have been promulgated.

The central enterprises that are allowed direct involvement in import-export must carry out this import-export function through a specialized, small and efficient unit directly responsible to the enterprise (in the form of an export-import company) or through an import-export company belonging to a federation of enterprises.

The localities allowed direct involvement in import-export must answer the following requirements:

1. They have export products that are produced locally (locally produced export products include those commodities which the state does not set a production quota for the locality to produce, or the excess commodities which go beyond the export quota the locality is expected to produce, or the commodities for which the state does set a production quota but does not supply enough raw and building materials for the locality to produce, making it necessary for the locality to produce using raw and building materials found on its own).
2. They must have cadres fully conversant with the Party and state line concerning economic relations with foreign countries, of good political standing, with the necessary skills and knowledge required in the import-export business.

The provinces and cities under direct central control export directly through their federation of companies or the local import-export combined company. The lists of commodities and import-export markets which the localities deal directly with must be approved by the Ministry of Foreign Trade upon the recommendations of the provincial or municipal people's committees.

Each province or city that is allowed direct involvement in import-export can establish only one organization specialized in import-export in order to unify the business of importing and exporting commodities for the localities concerned.

The import-export companies, whether centrally or locally run, must all have regulations dealing with their scope, the conditions attached to their activities, the limitations on their power and their responsibilities within the context of economic relations with foreign countries. These regulations must absolutely be consistent with the laws and regimes of the state dealing with the management of import-export, they must be ratified by the provincial and municipal people's committees in charge with the agreement of the Ministry of Foreign Trade, and they must be registered at the Ministry of Foreign Trade.

As far as the locally produced export commodities are concerned the local people's committees can utilize from 70 up to 90 percent of their actual earnings in foreign currency. The Ministry of Foreign Trade will stipulate the concrete ratios for each type of commodity.

The localities and enterprises which enjoy "the privilege of using foreign currency" or which have foreign currency earned through export commodities produced outside the plan, are guaranteed the use of that foreign currency. The locality or enterprise that has capitalist foreign currency has the right to withdraw its foreign currency at any time in order to pay for its imports. Those localities or enterprises that have foreign currency in the form of rubles are paid in the form of commodities bought from the socialist countries. The Ministry of Foreign Trade discusses with the State Planning Commission in order to draw up annual plans regarding the imported commodity fund so as to supply the localities and enterprises that are entitled to the use of foreign currency and that may have their own foreign currency fund.

The cooperatives, production groups or individual peasant households which do not belong among those categories that are supplied with food and building materials as stipulated in chapters 2 and 3 of the Regulations issued together with ministerial decree number 40-CP but which have agricultural and forestry products to sell to the state for export are entitled to buy from the state a certain amount of food and capital goods or consumer goods but these may not exceed 50 percent of the value in foreign currency earnings which the state gets for the export products supplied to it.

In the case of enterprises and companies that are allowed direct involvement in import-export under the management of the Ministry of Foreign Trade or the local people's committee in charge as far as planning and production is concerned, the ministries and local people's committees in charge have the responsibility of:
1. Guiding the import-export unit under their jurisdiction to expand and develop the export commodities in accordance with the requirements of the world market and with the inclinations of the foreign customers.
2. Helping and creating the conditions for the import-export unit to guarantee the quality of the export commodities, to promote the competitive quality of these commodities on the foreign markets, to control its products from the point of view of quality, pricing and import-export efficiency, in accordance with the guidance of the Ministry of Foreign Trade.
3. Helping the import-export unit to participate in international fairs and exhibitions as well as in other forms of advertisement and publicity abroad, in accordance with the guidance provided by the Ministry of Foreign Trade.
4. Together with the Ministry of Foreign Trade, making sure that obligations assumed by the unit in relation to the agreements signed by the state with foreign countries be fulfilled.
5. Guiding the unit in the correct implementation of the various regimes and regulations related to the management of foreign trade, foreign currency, and finance, etc. and in the full implementation of the planned and financial duties towards the state, in accordance with the guidance provided by the various ministries in charge of the sector.
6. Determining the scope, forms and conditions for setting up permanent representatives (if any) of the unit abroad in accordance with the guidance of the Ministry of Foreign Trade.

As for the enterprises and companies belonging to other ministries and to localities that are allowed direct involvement in import-export subject to the management of the Ministry of Foreign Trade as regard policies, regimes and foreign trade business transactions, the Ministry of Foreign Trade has the responsibility of:

1. Guiding and helping the import-export unit in the job of blueprinting and planning its foreign trade; guiding in the methods of drawing up import and export plans as well as other related plans (including both longterm and shortterm ones), in the price system and various economic and technical standards in the field of foreign trade, in the system of planned samples and in the regime of planned reports; together with cadres and the committees in charge, determining the unit's planned norms for export and import; helping, inspecting and controlling (on a periodical and random basis) the unit in its implementation of the state plan and of the obligations incurred in regard to the conventions and agreements signed with foreign countries.
2. Guiding, helping, inspecting and controlling the unit in its implementation of policies regarding export commodities, of policies regarding the market and businessmen (in the case of the capitalist markets), and of those regarding import-export prices.
3. Guiding, helping and leading the unit in carrying out its business functions such as the study and canvassing of markets, correspondence and negotiations, the signing of trade contracts, and the processing of transactions, etc. as regards the import and export commodities and related service contracts, complaints and lawsuits.
4. Helping in the training and inserving training of cadres engaged in the import-export business.
5. Together with the other ministries and local people's committees in charge, determining the organization and encadrement of cadres engaged in the import-export business. The appointment, disciplining and transfer of directors of import-export companies belonging to the various ministries and localities must have the agreement of the Minister of Foreign Trade.

Besides being managed by the organs in charge and by the Ministry of Foreign Trade, the enterprises and companies that are allowed direct involvement in import-export must also strictly implement the laws of the state, especially the regimes and regulations dealing with the management of foreign currency and finances, they must undergo the inspection and control of the state organs in charge of these areas.

Every import-export transaction including import-export business commodities, samples, exhibit and advertising samples, temporarily imported or exported goods, transit goods, etc. and englobing also cultural artifacts and discovery patents of a commodity nature which are brought in or out of the Socialist Republic of Vietnam, must have an import or export permit. The procedures for applying for and issuing these permits are to be decided by the Minister of Foreign Trade. All violations of this permit regime and of the customs regulations will be prosecuted in accordance with the laws currently in force.

BRIEFS

SWEDISH AID--Hanoi, 14 Aug (VNA)--The Vietnamese Ministry of Agriculture held a ceremony here today to receive 3,700 tonnes of urea fertilizer worth 6 million kronor as aid of the Swedish International Development Agency (SIDA). Present on the occasion were Agricultural Vice Minister Duong Hong Dat and Dag Klac Kenber, charge d'affaires A.I. of the Swedish Embassy in Hanoi. [Text] [OW150511 Hanoi VNA in English 1524 GMT 14 Aug 81]

UNICEF OFFICIAL VISITS VIETNAM--Hanoi, 14 Aug (VNA)--Ms Titi Metmet Tanumidjaja, East Asia director of the United Nations Children's Fund (UNICEF), visited Vietnam from 10-14 August at the invitation of the Vietnam Mother and Child Care Commission. While here, she met with officials of the public offices concerned, visited a number of UNICEF-aided establishments and discussed with the Vietnamese the orientation for UNICEF aid in the years to come. [Text] [OW150511 Hanoi VNA in English 1510 GMT 14 Aug 81]

TRADE UNIONISTS VISIT VIETNAM--Hanoi, 13 Aug (VNA)--A delegation of the International Trade Union of Metal Engineering Industries led by its General Secretary Alain Stern recently visited Vietnam. While here, the guests met with officials from the executive committee of the Vietnamese Metal Engineering Trade Union. They discussed measures to promote cooperation in the interests of world metal engineering workers. The hosts thanked the International Trade Union of Metal Engineering Industries for its solidarity and support. The delegation was received by Nguyen Thanh Le, head of the Foreign Relations Board of the Communist Party of Vietnam Central Committee, and visited places of interest in Hanoi, Ho Chi Minh City and the northern coastal province of Quang Ninh. [Text] [OW150511 Hanoi VNA in English 1452 GMT 13 Aug 81]

SOLIDARITY DELEGATION LEAVES FOR CONGO--Hanoi, 17 Aug (VNA)--A delegation of the Vnetnam Committee for Solidarity with Afro-Asian Peoples led by Doan Tran Canh, member of the committee's presidium, has left here for a friendship visit to the Peoples Republic of Congo at the invitation of its Congolese counterpart. PARTY ACTIVITIES AND GOVERNMENT

BRIEFS

YOUTH UNIONISTS' PARTY MEMBERSHIP--The movement to participate in party building, launched by the Ho Chi Minh Communist Youth Union on the occasion of the 50th founding anniversary of the party, has recorded important results. In 1979 and 1980 alone, various organizations of the union recommended 700,000 outstanding members for party membership and of them, 280,000 were admitted to the party. [Text] [BK190941 Hanoi Domestic Service in Vietnamese 1100 GMT 12 Aug 81]

HA SON BINH PARTY CARDS--In the last phase for issuing party membership cards, Ha Son Binh Province postponed the issuance of cards to 1,223 party members or 12.8 percent; of these, 287 or 3.1 percent were expelled from the party. During this phase, 290 new party members were admitted. [BK190941 Hanoi Domestic Service in Vietnamese 0545 GMT 12 Aug 81]

BEN TRE YOUTH ACTIVITIES--Tens of thousands of youths in Ben Tre Province have actively participated in defending national security. The Ho Chi Minh Communist Youth Unions in seven districts and cities have joined the various committees against decadent and reactionary culture, literature and art and have actively struggled against negativism and enemy sabotage and psychological war activities. More than 20,000 youths in various villages and subwards have also studied, propagandized and disseminated party and state policies among the people. Youths in 134 subwards have served as activists in people's security teams and civil defense units and contributed to firmly maintaining political security and public order and safety. [Text] [BK190941 Hanoi Domestic Service in Vietnamese 2300 GMT 15 Aug 81]

AN GIANG PARTY DEVELOPMENT--Some 60 percent of the number of weak party organizations at the grassroots level in An Giang Province have been consolidated. As a result, these party organizations are now fully qualified for the issuance of party membership cards. Meanwhile, another 235 new party members have been recruited by various industrial and agricultural establishments in the province. [BK180935 Hanoi Domestic Service in Vietnamese 2300 GMT 7 Aug 81]

EDITORIAL DISCUSSES MARKET MANAGEMENT

BK131108 Hanoi Domestic Service in Vietnamese 2300 GMT 12 Aug 81

[NHAN DAN 13 August editorial: "Market Management"]

[Text] Much progress has been made in market management over the past 2 months. Socialist trade is thriving and initial results have been achieved in registering businesses, making inventories of merchandise, posting prices, controlling product quality and measurement, observing service regulations and collecting industrial and commercial taxes. Many cases involving the conduct of unlicensed businesses, production of fake goods and tax evasion have been strictly dealt with. Appropriate punishment has been meted out in a number of cases involving speculative and smuggling activities. However, in some localities, laxity or subjectivism have resurfaced; economic, education and administrative measures designed for market management have not yet been combined with one another satisfactorily; collection and purchase for controlling the sources of goods have not been carried out vigorously; goods and supplies have been subjected to theft and losses in different ways; and speculative and smuggling practices are still prevalent.

Intensifying market management constitutes a difficult and complex long-term task aimed at stabilizing the market and the people's life and stimulating the development of production. Structurally, our country's market consists of the socialist market and the free market. Intensifying market management means to establish the state's mastery over the market, expand the socialist market, guide and control the free market's activities, and resolutely and absolutely oppose speculative and smuggling activities. Expanding socialist trade is an effective measure for transforming and controlling the free market. Socialist trade should not limit itself to offering only items of goods under the state's unified management and to operating strictly on the basis of stamps and coupons; it must rapidly expand its activities on all the three fronts--collection and purchase for controlling the sources of goods, wholesale and retail.

We should remember Lenin's instruction: Communists must learn business. It is necessary to conduct business in a civilized manner and for the interests of the revolution, win the support of the peasants, expand and strengthen socialist trade and satisfactorily control the market. We must closely combine the three economic, education and administrative measures for market management and rounding up goods for the state. Economic measures must be appropriate, flexible, subtle and life-oriented; education measures must be reasonable, rational and convincing; and administrative measures must be firm, just and strict so as to contribute to effectively controlling the free market.

It is necessary to punish severely and without mercy speculators and smugglers, especially their ringleaders, and thieves of state supplies and goods.

Good market management will contribute to stimulating production, stabilizing prices, ensuring the effectiveness of allowances in kind and wages paid to the laboring people, and stabilizing life. It is important that we promptly restore discipline in production and business and do away with unorganized trading activities and unwarranted price increases that disrupt prices, finances and the monetary system, and with the practice of introducing local policies and criteria that are at variance with the regulations set forth by the central government.

The system of product delivery must be scrupulously carried out by state-run enterprises and handicraft collectives producing on state orders. A rational division of labor should be effected among the various sectors and processing, export and domestic distribution establishments for the collection and purchase of agricultural, forestry and maritime products in key production zones to ensure state control over the sources of goods in accordance with the plan and economic contracts. Imported goods must be placed under close management to meet the requirements of production and collection and purchase more satisfactorily. The expansion of economic cooperation and exchange of goods among the various localities should be encouraged only along the line of supplying one another with goods in order to serve production and life; and this is not at variance with the system concerning unified management of the domestic market.

Along with strengthening socialist trade, it is necessary to continue transforming private trade and rearrange markets so as to gradually form a social trade network and restore market order. Market management requires persistence and constant and close guidance of party committee and administrative echelons at all levels.

EDITORIAL CALLS FOR EXPANDING SOYBEAN PRODUCTION

Hanoi NHAN DAN in Vietnamese 20 Jun 81 p 1

[Editorial: "Expand Soybean Production"]

[Text] Soybean has been grown in our country for a long long time but it is considered only as a secondary industrial plant, grown here and there in various localities and used essentially as foodstuff. In recent years soybean has been raised to an important position in line with its multifaceted economic interest and its production expansion has been encouraged by the state in many localities. However, generally speaking the results so far garnered are still limited. In 1976 and 1977, in each year its production only covers 40,000 hectares; in 1978 and 1979 this even dropped to 35,000 hectares each. Since last year there is the beginning of a movement towards producing more soybean but it is still weak and uneven.

There are many reasons why soybean growing has been expanding slowly but it is essentially because we have not had appropriate guidance and organization as expressed on the various aspects of guidance, organization and policy. Obstacles encountered in the production of soybean have not been overcome. Soybean, just as many other quick maturing industrial plants, has had to yield to food plants. The soybean-growing fields and seasons have been transferred to rice and secondary crop cultivation. The producer in specialized soybean and industrial plant growing areas is not regularly provided with food according to agreements and is not encouraged by the organs in charge through rational measures of investment, collection and pricing. The movement for urging people to grow more soybean lacks in concrete measures.

Since last year, here and there in various localities there have appeared relatively good examples of soybean production and thus we have garnered some initial experiences.

In the South the provinces of Hau Giang, Minh Hai, etc. have planted around 2,000 hectares; in particular, Dong Nai province planted 10,000 hectares in 1980 averaging almost 1 ton per hectare.

In the North the mountain provinces which have long been used to soybean growing have planted thousands of hectares in each province. In the midlands Ha Bac has since last year increased the soybean acreage to 1,700 hectares.

In the two-rice-crop areas of the Red River delta the district of My Van (Hai Hung province) has successfully experimented with and expanded into a large crop the formula of rotating the winter soybean crop on the wet soil in between the two spring rice and early main rice crops. The rice crop which follows the soybean crop increases in productivity by 20 to 25 percent.

In the present five- ar plan immediately in front of us (1981-1985) soybean has been raised to the level of among the most important quick maturing industrial plants. The localities must endeavor to create the conditions for expanding soybean production as much as possible for the purposes of expanding the sources of vegetal protein as food for man, of expanding the sources of foodstuff rich in protein for animal husbandry purposes, of diversifying into a valuable export commodity, and of contributing to the improvement of cultivation land. The rate of expansion of soybean production envisioned in the 1981-1985 state plan is one of vast increase, from 30,000 hectares in 1980 up to 300,000 hectares in 1985. In 1981 alone, we should struggle to reach almost 100,000 hectares.

The successful experience of the pilot areas shows that we must implement simultaneously a series of concrete measures, from the level of understanding to organization, management, technical aspects and policies. We must fully see the great potential for realization as well as the exploitable advantages together with the difficulties that need overcoming in each link in relation to specific areas.

Preliminary calculations show that the land that can be used under various forms of cultivation for soybean production in various localities in our country comes to over 2 million hectares. The Mekong delta is the one area with the best chance to become the largest soybean growing area with over half a million hectares.

To initiate a new stage in large-scale soybean production, the various localities and sectors in charge must review the entire question. Most importantly and first of all, they must provide comprehensive guidance to various links, from the production to the consumption links, and clearly see the weaknesses and shortcomings that still remain to be overcome.

The first requirement for guaranteeing the highest economic efficiency consists of firmly grasping the land situation of the localities, evaluating the realization potentials of various areas so as to serve as the basis for regionalization, replanning and rescheduling the planting calendar and the articulation among the various productive crops in a rational manner. We may rotate one or two soybean crops on the following crop lands: the two-rice-crop lands; the lands that presently grow one rice crop and one secondary crop; the lands that are planted during the main crop but left fallow during the fifth-month spring crop; or on the lands used exclusively for seedlings. We can also alternate soybean crops with various secondary crops like corn, yam, manioc; with various industrial plants or forest plants that have not branched out, such as sugarcane, tea, coffee, etc. In the long run, soybean must become a necessary alternating plant the cultivation of which is rotated with other food plants so as to provide sources of protein on a regular basis in the form of food and to serve as fertilizer for the improvement of land. Soybean is very easy to plant but it still requires that a number of technical conditions be implemented before one can have assured harvests and high productivity.

One must do away with inappropriate items in a number of concrete policies and replace them with regulations that would encourage the producer, especially as related to the specified levels of investment needed for production, convenient formulae for collection, and rational prices so as to guarantee the three interests.

To change the structure of crops in a progressive direction is a revolutionary undertaking requiring that strong and firm measures be taken, with a high degree of determination, through drawing the lessons of experience after each crop and each endeavor in order to gradually expand.

CSO: 4209/403

BRIEFS

QUANG NINH RICE--By the end of July Quang Ninh Province had planted 22,800 ha of 10th-month rice, fulfilling almost 85 percent of the plan and scoring a 285-percent increase over the same period last year. The peasants in the province have now shifted to applying additional fertilizer to ricefields and carrying out weeding and aeration. The province has promptly supplied the various cooperatives with over 5,880 tons of chemical fertilizer, 893 tons of lime, almost 30,000 farm tools and 320 sprayers. [Hanoi Domestic Service in Vietnamese 2300 GMT 13 Aug 81]

NGHE TINH RICE--The agricultural cooperatives in Nghe Tinh have planted more than 15,000 ha of fall rice, overfulfilling the area plan by 26 percent; and by August they had planted 152,000 ha of 10th-month rice, fulfilling 101 percent of the plan. The prvince's 10th-month rice is generally growing well thanks to the cooperative members' careful tending efforts. Recently, as many as 4,000 ha of rice in the province were infested with brown leafhoppers and other types of bugs. The affected area was promptly zoned off and the pests were quickly exterminated. [Hanoi Domestic Service in Vietnamese 1100 GMT 10 Aug 81]

SOUTHERN GRAIN COLLECTION--By the end of July 1981 the southern provinces and municipalities from Thuan Hai southward had fulfilled 60 percent of its annual grain obligation quota with their grain procurements from the 10th-month and 1980-81 winter-spring crops, scoring an increase of 430,000 tons over the same period last year. Due to a shortage of storage facilities, hundreds of thousands of tons of paddy have been left in the open; and almost all localities and the communications and transport sector have actively worked with the help of the people to move the paddy collected to central granaries as quickly as possible. [Hanoi Domestic Service in Vietnamese 2300 GMT 11 Aug 81]

MINH HAI DROUGHT--From mid-June to late July, drought had affected 18,000 hectares of Minh Hai Province's summer-fall rice area. The province sent cadres of the water conservancy and agricultural sectors to guide and assist the local peasants and production collectives in applying drought control measures and accelerating the planting of the 10th-month rice. Thanks to these efforts, as of 10 August the local peasants had planted more than 200,000 hectares of 10th-month rice. [Hanoi Domestic Service in Vietnamese 2300 GMT 17 Aug 81]

CAMPAIGN TO SUPPORT AGRICULTURE--To ensure an abundant source of fertilizer for this year's 10th-month crop and winter crop seasons, the Ho Chi Minh Communist Youth Union Central Committee and the Ministry of Agriculture are stepping up the campaign to grow 500,000 hectares of green-manure plants. As of late June, youth unions throughout the country had grown these plants on 460,000 hectares. [Hanoi Domestic Service in Vietnamese 0400 GMT 7 Aug 81]

VINH PHU 10TH-MONTH RICE--Peasants in Vinh Phu Province have transplanted 10th-month rice on 52,000 hectares. This figure represents nearly 90 percent of the planned acreage. Along with fertilizing riceplants, Vinh Phu is intensively combating drought threatening thousands of hectares of this rice in various localities. [Hanoi Domestic Service in Vietnamese 0400 GMT 6 Aug 81]

THAI BINH 10TH-MONTH RICE--By late July agricultural cooperatives and peasants in Thai Binh Province had almost finished the cultivation of rice on 83,240 hectares slated for this 10th-month crop season. To date the province has completed the first phase of weeding for this rice on 50 percent of the cultivated area. [Hanoi Domestic Service in Vietnamese 1100 GMT 5 Aug 81]

QUANG NAM-DANANG SPRING-SUMMER RICE--Quang Nam-Danang Province has planted 16,680 hectares of rice in this year's spring-summer crop season with short-term high-yield rice strains. To date the province has harvested this rice on two-thirds of the cultivated area with an average yield of more than 3.7 tons per hectare. [Hanoi Domestic Service in Vietnamese 2300 GMT 6 Aug 81]

NGHIA BINH, PHU KHANH GRAIN COLLECTION--By 15 June Nghia Binh Province had delivered 45,265 tons of grain--some 106 percent of the norm for the winter-spring crop season--to state granaries and Phu Khanh Province, 40,000 tons--some 100 percent. These two provinces have been highly commended by the Council of Ministers for their success in grain collection. [Hanoi Domestic Service in Vietnamese 2300 GMT 5 Aug 81]

NGHIA BINH COCONUT PLANTING--Nghia Binh Province is prepared to plant 500,000 coconut trees in 11 districts and cities. The province has also formulated plans provided funds for coconut planting, striving to bring the total number of coconut trees to more than 2 million by 1982 in order to support domestic consumption and export. [Hanoi Domestic Service in Vietnamese 0400 GMT 7 Aug 81]

THUAN HAI GRAIN CROPS--As of late July Thuan Hai Province had planted 10th-month grain crops on more than 17,000 hectares. This figure represents 20 percent of the planned acreage. An Son and Ninh Hai Districts, which take the lead in planting these crops, have fulfilled more than 40 percent of their planned norms. [Hanoi Domestic Service in Vietnamese 1100 GMT 5 Aug 81]

AN GIANG SUMMER-FALL RICE--An Giang Province has planted 73,000 hectares of rice in this year's summer-fall crop season. Along with caring for riceplants against insects and flash floods, the province has harvested this rice on some 4,000 hectares with a yield of 3 tons per hectare. [Hanoi Domestic Service in Vietnamese 1100 GMT 7 Aug 81]

PROVINCES COMMENDED FOR PROCUREMENT--On 8 August, the chairman of the Council of Ministers sent letters to the cadres and employees of the Hanoi Trade Service and to Hau Giang, Long An, Ben Tre, Cuu Long and Minh Hai Provinces commending them for their efforts in collecting, purchasing and processing agricultural products and foodstuffs, thus meeting local demands and satisfactorily ensuring the plan for delivering agricultural products to the central government during the first 6 months of the year. [Text] [BK161431 Hanoi Domestic Service in Vietnamese 0545 GMT 12 Aug 81]

LANG SON WINTER-SPRING RICE--Despite continued armed provocations conducted by the Chinese expansionists, Lang Son Province planted 7,352 hectares of rice in the 1980-81 winter-spring crop, overfulfilling its plan norm by 7 percent. This has brought a total output of 15,279 tons of paddy or over 100 tons more than the last crop. [Hanoi Domestic Service in Vietnamese 0400 GMT 18 Aug 81]

QUANG NAM-DANANG GRAIN--Since early this year Quang Nam-Danang has collected and purchased more than 43,000 tons of grain, of which 20,300 tons were from agricultural tax. The province is launching an emulation drive to fulfill and overfulfill its grain obligation for the spring-summer and summer-fall crops to greet the coming VCP National Congress. [Hanoi Domestic Service in Vietnamese 1100 GMT 18 Aug 81]

BEN TRE SUMMER-FALL RICE--As of mid-August, Ben Tre Province had harvested more than 3,000 hectares of early summer-fall rice with good yield. The province is supervising various cooperatives in storage work to avoid damage which may be caused to the paddy during the rainy season. [Hanoi Domestic Service in Vietnamese 2300 GMT 19 Aug 81]

LAM DONG PINE FORESTS--Hanoi, 15 Aug (VNA)--Lam Dong Province on the central highlands boasts vast, beautiful pine forests. Out of its 700,000 hectares of woodland, more than 250,000 hectares are pine forests. Pine forests in Lam Dong are expected to produce each year tens of thousands of tonnes of pine resin for export, and tens of thousands of tonnes of pulp for paper mills. Since early this year, the logging camps in the province have prepared more than 3,000,000 pine saplings for rainy season planting. In the meantime, young workers of the logging camps have felled 20,000 cubic meters of pine timber, and extracted 300 tonnes of resin and hundreds of tonnes of oil. Efforts are being made to expand the pine forests to meet the demands of home consumption and exports. [Text] [OW150635 Hanoi VNA in English 0239 GMT 15 Aug 81]

IRRIGATION TEAMS--Hanoi, 12 Aug (VNA)--Northern Vietnamese provinces have, over the past 5 years, founded 4,080 irrigation teams with a total of 231,100 members. These teams have taken part in building state and cooperative irrigation projects. They have spent nearly 200,000,000 workdays digging almost 160 million cubic meters of soil and building some 300,000 cubic meters of concrete. The irrigation team of Tu Xa Village, a socialist labor team for 10 successive years and the standard bearer in irrigation work of Vinh Phu Province, has spent thousands of workdays moving nearly 128,000 cubic meters of soil. It has been awarded two labor orders, third class, by the National Assembly and many emulation banners by the local and central irrigation services. [Text] [OW150635 Hanoi VNA in English 1447 GMT 12 Aug 81]

HA NAM NINH RICE PRODUCTION--By 15 June Ha Nam Ninh has about completed harvesting its entire fifth-month rice acreage. According to calculations made at 86 percent of the harvesting points made for statistical purposes, the average productivity of this crop reaches 25.19 per hectare. Originally, each hectare was calculated to increase by four ta as compared to the fifth-month spring crop of last year. Compared to the yield contracted out by the cooperative to the laborers, each hectare increases on the average by 3.8 ta. Four districts reach the yield of 28 to 34 ta per hectare. It is estimated that this year's fifth-month spring rice crop represents an excess revenue of about 60,000 tons of paddy as compared to last year. Initial calculations made on 74.1 percent of the acreage contracted out for product, the cooperative member families have gathered in over 50,000 tons of paddy in excess. Ha Nam Ninh has handed over to the state warehouses almost 50,000 tons of paddy out of the 80,000 tons which it has the duty to hand over to the state as part of its food contribution during the fifth-month spring crop. HEAVY INDUSTRY AND CONSTRUCTION

DEVELOPMENT OF POWER INDUSTRY

OW191555 Hanoi VNA in English 1500 GMT 19 Aug 81

["National Day series: Development of Electricity in Vietnam"--VNA headline]

[Text] Hanoi, 19 Aug (VNA)--Vietnam's electric power generating capacity now totals about 1,360 megawatts, 12 times that of before the August revolution of 1945.

Northern Vietnam alone now has 18 thermal and hydroelectric power stations and a number of diesel generators with a total design capacity of 590 mw, a network of high voltage transmission lines of more than 9,000 kilometers, and a number of transformers with a total volume of 2,560 K.V.A.

In 1955, after the anti-French resistance war, northern Vietnam had only four power stations with a capacity of 31.5 mw and some 100 kilometers of 30-k.v. transmission lines. Yearly output was about 100,000 k.w.h. With aid from the Soviet Union and other socialist countries, Vietnam built some new power stations, improved and expanded the old ones, and installed hundreds of kilometers of transmission lines, bringing the total capacity of northern provinces to 65.5 mw.

In the first five-year plan (1961-65), with further assistance from the Soviet Union and other socialist countries, Vietnam built more stations and transmission lines of 110 kv and 35 kv. At the end of 1965, the nine electric power stations were integrated into a common system with a total design capacity of 175 mw.

The number of industrial and handicraft establishments using electricity from the grid almost doubled and the number of electric water pumping stations for cultivation was more than 20 times that of 1960.

U.S. air raids heavily damaged the electric power system in northern Vietnam. From 1965 to 1972, as many as 1,600 American bombing raids were directed at power stations. However, owing to effective protection of equipment and personnel to keep the power stations operating even during the fiercest air strikes, the restoration of these damaged stations was carried out promptly. During the hardest years of the U.S. air war of destruction, the Power Ministry went ahead with the construction of the Thac Ba hydroelectric power station with three 36-mw alternators and started the construction of the Ninh Binh thermal-power station with a capacity of 100 mw.

By mid-1973, all the U.S.-bombed power stations had been restored and at the end of that year, the generating capacity of northern provinces reached 230 mw. The Uong Bi power station was expanded to a capacity of 15.3 mw, and the construction of the Ninh Binh power station was speeded up.

In 1975, electricity output reached 1,264 million kw/h. Electricity used in agriculture was 2.2 times that of 1965.

Following the liberation of southern Vietnam in April 1975, the electricity service took over a number of thermal and hydroelectric power stations and diesel generators with a total capacity of 770 mw. In northern Vietnam, the restoration of war-damaged power stations still continues alongside the improvement and expansion of old ones.

In 1979, the construction of the Hoa Binh hydroelectric power station on the Da (Black) River began. When completed, it will have eight turbines and a capacity of 1,920 mw. The construction of the Pha Lai thermal-power station with a capacity of 640 mw began in 1980. Both projects are being equipped by the Soviet Union, which is also helping Vietnam design and install hundreds of kilometers of 220-kv transmission lines.

ENGINEER UNIT BATTLES HARMFUL CULTURE

Hanoi QUAN DOI NHAN DAN in Vietnamese 23 Jun 81 p 1

[Article by Nguyen Nhu Phong: "Song Lo Engineer Group Implements Civilized Living, Fights Bad and Noxious Culture"]

[Text] In recent times, while the unit was carrying our very urgent training missions and construction work, the executive committee of the Ho Chi Minh Communist Youth Union of the Song Lo Engineer Brigade continued actively to educate members and youths about implementing civilized living and struggling against influences of bad and noxious culture.

Apart from education by party committee echelons and the administration's preventive measures, the Union executive committee has gradually boosted the knowledge of members and youths through firmly maintaining Union activities and organizing youth forums centering around such subjects as, "What is the new socialist man? What is a man engaged in civilized living? How do shock youths fight negativism?" Union chapters launched movements urging members and youths to implement civilized living and fight against expressions of activity not conforming to military status and conduct.

To put an end to manifestations of remnants of old culture in a number of combattants, Union chapters organized sessions to read newspapers, to discuss newspaper articles against bad and noxious culture, and to guide members and youths toward healthy cultural, physical education and sports activities. Union cadres of all echelons conducted surprise inspection drives to discover and confiscate unhealthy music sheets and novels, and severely punished those members and youths who broke the rules.

At present, there are no more phenomena of liberal and uncivilized activity among youths of the Song Lo Engineer Brigade, and the use and propagation of bad cultural products have ended.

DECISION ISSUED ON RENTAL, SALE OF TEXTBOOKS

BK171538 Hanoi Domestic Service in Vietnamese 1100 GMT 15 Aug 81

[Text] On 12 August, the chairman of the Council of Ministers issued a decision on the methods of distributing textbooks, as follows:

Effective from the beginning of the 1981-82 academic year, the education sector is authorized to change the method of distributing textbooks stipulated in Decision No 41-TTG, issued by the SRV premier on 19 January 1976, by lending, renting and selling them to students for private use. The ministries of education and finance and the people's committees of all provinces and cities should direct various schools in rigorously controlling the existing numbers of textbooks in their libraries, considering these as initial capital placed under the management of the educational sector for the establishment of school libraries--the places where students can obtain books on a loan or rental basis.

The educational sector is also authorized to use the money collected from the rental of textbooks, the money earned from price differentials and the money saved from production, publication and distribution costs to cover expenses incurred in the process of renting and lending books and improving school libraries.

The chairman of the State Price Commission must coordinate with the ministries of education and finance in fixing basic retail prices for every 1,000 pages of textbooks of various kinds in accordance with the principle of ensuring balance between revenue and expenditure without profits and losses.

Based on basic prices mentioned above, the minister of education must fix a specific retail price for each book so that it can be applied on a unified basis throughout the country.

The chairman of the Council of Ministers entrusts the ministries of education and finance with the responsibility to guide all localities in satisfactorily implementing this decision.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

NEW DISCIPLINARY REGULATIONS EXPLAINED

Hanoi QUAN DOI NHAN DAN in Vietnamese 15 Jul 81 p 3

[Understanding Regulations column by "Chien Si Dieu Lenh" (Regulations Warrior): "On Rewards and Punishment"]

[Text] (Answering a number of students at the Military Institute and comrade Nguyen Trung Nien, P.O. Box 10R84, Ha Son Binh.)

Question: Have there been any changes in the forms of reward and punishment of our army's disciplinary regulations?

Answer: According to the newest stipulation of our army's disciplinary regulations, promulgated by the General Staff on 21 Bebruary 1981, the various forms of reward and punishment regarding our cadres and men were made uniform, as follows:

Regarding rewards:

As regards noncommissioned officers and enlisted men there are 10 forms of rewards, including:

1. Commendation for achievement.
2. Awarding of keepsakes.
3. Awarding of short leaves (1 to 10 days).
4. Awarding of letter of commendation.
5. Awarding of photograph taken under the unit flag.
6. Awarding of certificate of merit.
7. Promotion to next highest rank ahead of schedule.
8. Awarding of designation of honor and insignia (Hero, Emulation Warrior, Determined-to-Win Warrior).
9. Awarding of a medal or order.
10. Awarding of designation of Hero of the People's Armed Forces.

As regards officers, there are eight forms of rewards which are the same as those for noncommissioned officers and enlisted men (minus the forms of the awarding of short leaves and the awarding of photographs taken under the unit flag).

With regard to punishment:

As regards noncommissioned officers and enlisted men, there are eight forms of punishment:

1. Censure.
2. Restriction to camp (or refusal of permission to go ashore, in the case of naval personnel) on days off.
3. Warning.
4. Disciplinary detention of from 1 to 10 days (not applied to female military personnel).
5. Assignment of lesser position.
6. Demotion.
7. Discharge.
8. Dismissal from military service.

As regards officers, there are seven forms of punishment:

1. Censure.
2. Warning.
3. Assignment of lesser position.
4. Dismissal from position.
5. Reduction in rank.
6. Deprivation of officers' insignia
7. Dismissal from military service.

(Officers are not subjected to disciplinary detention, as are noncommissioned officers and enlisted men).

Question: Which echelon has the authority to award leaves, and which echelon has the authority to impose disciplinary detention on noncommissioned officers and enlisted men?

With regard to awards:

Answer: Battalion commanders and officers of equivalent rank are authorized to award leaves not exceeding 5 days to squad leaders.

Regimental commanders and officers of equivalent rank are authorized to award leaves not exceeding 10 days to squad leaders.

With regard to punishment:

Regimental commanders and officers of equivalent rank are authorized to impose disciplinary detention on squad leaders not exceeding 10 days.

Thus the form of punishment of disciplinary detention can only be imposed at the regimental level or higher. The battalion or lower echelons are not authorized to impose disciplinary detention on noncommissioned officers and enlisted men, but are only authorized to make a recommendation to the upper echelon if they believe there is a need to impose that form of punishment.

Question: Are cadres authorized to apply forms of punishment other tjam tjpse above?

Answer: There are no other forms of punishment in the army than those above. No cadre is authorized to stipulate other forms of punishment to punish military personnel under his command. If military personnel commit violations, they will be dealt with in accordance with state laws that have been promulgated, depending on the seriousness of the violation.

BRIEFS

PRC SPIES--The militia of the border villages of Phong Tho District, implementing the slogan "A Plow in One Hand, a Rifle in the Other" and working and producing well, have intensified their military training and conducted patrols to protect their villages. As a result, during the first 5 months of 1981 alone, the militia of X.L., V.M.C., M.L., C. and other villages apprehended six groups of Chinese intelligence agents and spies who crossed the border in a vain attempt to make contact with reactionary elements in order to conduct acts of sabotage. MEASURES TO STABILIZE PRICES REPORTED

Hanoi QUAN DOI NHAN DAN in Vietnamese 8 Jul 81 p 2

[Dispatch by Trinh Tuong: "What Does One See at Ho Chi Minh City Market?"]

[Text] How can one go to all 120 markets, big and small, in this city--not to speak of hundreds of "squatting" ones scattered all over, along street and squares where 4, 5, 7...streets intersect? The crowded network of markets crisscrosses the entire city with more than 150,000 registered professional merchants. In addition, there are tens of thousands of unregistered merchants--those who do business on a part-time, temporary and seasonal basis. The great number of markets and merchants make it difficult to do market management work. Prices in the markets irregularly go up and down, they even fluctuate hourly if the forces of state commerce and cooperatives are not strong enough to "occupy the battlefield" and restrain the market. A single rumor about goods inventory by the state suffices to cause commodities to almost disappear from stalls in the next couple of hours, shooting prices up.

Or the rumor that "today a very few rice trucks have arrived in the bus station serving the western areas" may increase rice price by 3 to 5 hao per kg. But only a couple of hours following confirmation that these kinds of rumors are false, stalls are again packed with goods and prices are back to normal.

Notwithstanding this, price fluctuations at hundreds of markets in the city depend on a handful of centers. From these, prices go out in all directions, governing the whole free market in the city. The reason is that all small merchants have to go there to buy. Each market center deals mainly in a few commodities. I visited a number of markets, Ben Thanh, Binh Tay, An Dong, Cau Muoi-Cau Ong Lanh, Tan Dinh, Tran Chanh Chieu, An Lac, Xom Cui, etc. Among them there are some market centers: An Lac for pork; Binh Tay for handicraft products; Tran Chanh Chieu for rice: Xom Cui for sea fish; Cho Cau Muoi-Cau Ong Lanh for vegetables, fruit and fish...Market center customers include temporary merchants from the provinces, retailers from municipal markets, owners of sundry goods stores and small merchants from open air markets. Therefore, it is very easy to understand why when prices at master markets fluctuate, those at other places immediately follow suit.

Only by following prices and looking at current business methods at various markets can one see the remarkable effort of state commerce and cooperative commerce at wrestling and struggling over nearly the past month to keep market prices from shooting up. Prices on almost all commodities have been posted. Rice sells at 6-7 dong per kg, lean pork from 45 to 50 dong per kg, sugar 20 dong per kg, black beans 13 dong per kg, soap bars and soap cakes from 12 to 14 dong per kg...

Although at this or that place figures on price lists are still blurred, although price lists are kept away from customers' view, or although posted prices differ from selling ones, price posting is a success--an Uncle Tu Anh, a retired cadre told us at Tran Chanh Chieu market--since it has created a legal basis for business, making buyers more at ease.

As a matter of fact, it is no easy task to ensure that tens of thousands of merchants display price lists on thousands of commodities. From leading comrades of the city on down to those in precincts, districts and wards, all have had to exert firm guidance day by day with the use of three kinds of measures--educational, administrative and economic. As for economic measures alone, each day the state commercial sector must bring into the city 45 tons of vegetables from Da Lat, 23 tons of vegetables from the suburbs, and 52 tons of pork. Each day Food Corporation 3 brings 60 tons of fish into the city. To sell meat alone to cadres, workers, civil servants and the armed forces according to standards, Food Corporation 1 must provide up to 20 tons of pork. The Vi San plant must slaughter 800-900 pigs daily to supply the city. The State Grain Corporation has launched into the market thousands of tons of rice at prices guaranteeing continuation of business...In addition to the forces of state commerce, the cooperative commercial sector has also taken part in this struggle in a fairly enthusiastic manner. Aside from hundreds of additional stores and vending centers opened by state commerce in June, the cooperative commercial sector has opened 60 more food vending centers in the markets, selling daily from 30 to 40 tons of vegetables and fruit, tens of tons of pork and tens of thousands of liters of sauce. In particular, the consumer cooperative of precinct 1 which manages the fishyard at Cau Ong Lanh market, distributes daily 40 tons of fish, snails and oysters to its own wards.

As of now, the price situation in the city free market has shown signs of gradual stability and no longer has sudden fluctuations as during the first days of June. The day we arrived at Go Vap market, the price situation there apparently looked better. The Go Vap district people's committee has set unified prices throughout the district for 150 commodities, using the May 1981 price levels as standards. At the market, we saw that lean pork sold at 45 dong per kg (meat from private merchants sold at 47 dong), and that ham sold at 43 dong. As for top quality white upland rice, the price was 6.9 dong per kg, versus 7.5 dong for glutinous rice.

Nevertheless, the comrades in the commercial sector have assessed the situation more cautiously. The initial results of recent days were not yet really steady and secure. A loose link--any link--in the system would permit bad elements to squeeze in immediately and the market situation could fluctuate anew.

In fact, the ongoing struggle of the city in the fields of goods distribution and circulation is no less fierce. Educating and struggling with small merchants, store owners and stall owners is already protracted and difficult; however, struggling with those standing behind them is much more difficult and complicated. Business dealings at a number of market centers here are characteristically very different from those in other provinces and cities. Goods displayed on stalls do not necessarily all belong to stall owners. They invest only a small amount of capital in business, while nearly all goods displayed on their stalls are consigned by "supply agents," who dictate the prices. Stall owners sell goods on commission, ranging from 10 to 20 percent of the selling price. Each of these stalls has at least 10 "supply agents." Only after a consignment has been sold do the supply agents show up to collect their money and replenish the stock. Thus, both sides are closely tied up together by interest, and it is up to supply agents to determine whether prices are high or low.

As a result of education and struggle, a number of commodities essential to existence tend to be stablizing; however, many other commodities still sell at high prices, particularly articles in aluminum, plastic and imitation leather...Another to market observers, current prices on handicraft goods are up from January 1981 by 10 to 40 percent.

The struggle to stabilize the city market is being pursued strongly and regularly to prevent sudden price fluctuations which would cause more difficulties to cadres, workers, civil servants and the laboring people. However, the situation in the unorganized market will certainly go through complicated developments.

PRICES OF COMMODITIES FOR CADRES, WORKERS DISSOCIATED FROM MARKET PRICE SYSTEM

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 27 Jun 81 p 1

[Article by C.P.: "Two Supply and Business Systems Dissociated in Entire City Trade Sector - Sixth Precinct First to Implement This Policy"]

[Text] In order to insure the supply of various commodities according to the criteria stipulated for cadres, employees and consumers in the exact amount and quality and in time, while at the same time expanding the service business, the city Trade Service has instructed the whole sector that from the end of June on they should dissociate the network of subsidized price commodities from the network of business price commodities at the municipal, precinct and district levels and make them into two separate networks.

The subsidized price commodity stores are charged with supplying essential commodities to those entitled to them in accordance with the criteria and to stable prices encompassing meat, fish, monosodium glutamate, sugar, soap, nuoc mam, fuel and materials.

The stores selling at business prices have the mission of dealing with commodities that lie outside the criteria-determined commodities in accordance with guaranteed business prices in order to struggle and bring down gradually the market prices to a reasonable level.

The subsidized price network is expanded more or less depending on the number of cadres and employees that we serve, on the basis of convenience to the customers. In the immediate future, because the supply of criteria-determined commodities to the cadres and employees of various central and city organs and enterprises has not reached in time the precincts and districts at the local level the supply of subsidized price commodities must still be temporarily be done by the general stores that are directly under the supervision of the Trade Service. Eventually these subsidized price commodities shall be given to the precincts and districts for them to be directly responsible for their distribution.

After the districts and precincts are fully in charge of the retail link (both in subsidized price and regular business commodities), the level 2 corporations of the city will move into business tasks, actually implement production, process and organize centralized procurement of commodities in accordance to plans B and C, buying from sister provinces while at the same time organizing the supply and distribution to the precincts and districts.

The precinct and district-level trade units are responsible for procuring locally produced and locally consumed commodities in the cooperatives and from the individual producers in the locality so as to insure a balanced supply and demand situation in the locality in accordance with the plans entrusted from above; they also are procurement agents for the city's specialized corporations and carry out these activities in accordance with their economic contracts.

In order to manage the subsidized price commodities in exact conformity with the state's stipulations, the various units must proceed immediately to the job of dissociating the two commodity funds: the commodities sold at subsidized prices and those sold at business prices starting 1 July 1981.

By now, the Building Materials, Trade and Living Conditions section of the Sixth Precinct has completed the preparations for building the network of stores, cadres and employees needed to dissociate the two subsidized price commodity and business price commodity systems.

The Sixth Precinct will open its network of subsidized price commodities sold according to criteria in the area of Hau Giang Street: the store located at 180 Hau Giang Street will sell at subsidized prices such commodities as sugar, monosodium glutamate, materials, soap and milk for babies; the sotre located at number 182 (Hau Giang Street) will sell at subsidized prices prok, fish and nuoc mam. Burning oil, however, is sold at a nearby store.

This subsidized price commodity area is responsible for selling the various criteria-determined commodities for 5,000 cadres and employees belonging to the Sixth Precinct and thousands of cadres and employees belonging to 72 central and city organs who are stationed within the district.

The network of business price stores which participate in the market is organized at 7 different localities within the precinct: number 15-17 Ba Hom Street, number 610 and number 92F Hau Giang Street, number 85-89 Pham Phu Thu Street, number 18 Le Quang Hien Street, number 74 and number 32E Thap Muoi Street.

Each store has at least three counters. The store at number 74 Thap Muoi Street, however, has 8 counters and the one at number 32E Thap Muoi has 20 counters. In Binh Tay market the precinct Food Store still maintains two stalls to sell pork as in the past.

BRIEFS

GENERAL IMPORT/EXPORT CORPORATION--To serve in timely fashion the import and export of building materials and commodities in accordance with the needs of various localities and sectors, the Ministry of Foreign Trade has just established the General Import/Export Corporation (abbreviated to Generalimex), located in Ho Chi Minh City. The establishment of this corporation creates favorable conditions for the localities, especially the provinces of the Mekong delta and Ho Chi Minh City, to expand their export of commodities lying outside the planned targets as assigned by the state. AGRICULTURE

COOPERATIVE HAS GOOD HARVEST DESPITE POOR CONTRACTING-OUT

Hanoi QUAN DOI NHAN DAN in Vietnamese 15 Jul 81 p 2

[Article by Nguyen Van Don: "Why Did Hung Chinh Cooperative Have a Successful Harvest Despite Poor Organization of Contracting-Out?"]

[Text] We arrived at Hung Chinh cooperative (Hung Nguyen District, Nghe Tinh Province) after the people had harvested the fifth-month rice and were planting the tenth-month rice. In contrast to last year, this year Hung Chinh had a good fifth-month rice crop and harvested it rapidly and efficiently. Output amounted to 301.9 tons of rice, about 45 tons more than last year's fifth-month crop. During the present season the cooperative's grain obligation to the state was 160 tons, about 25 tons more than last year. The average yield per sao was 100 kilos of paddy, while it was only 70 kilos last year. The value of a work day also increased notably this year. In the hamlets the people are enthusiastic because all families harvested more paddy than last year. Some families' harvests were double or triple those of last year.

We asked the cooperative director, "Why did Hung Chinh have a successful crop?" "Because of favorable weather conditions, but mainly because the cooperative did a good job of organizing the contracting out of rice output to laborers." After hearing his answer, we sought to understand how Hung Chinh had organized the contracting of output.

Hung Chinh applied the method of contracting output to laborers, but its organization of contracting was not good, and the cooperative failed to assure a number of stipulated tasks.

After working several days with cooperative cadres and interviewing cooperative members, we saw that although Hung Chinh applied the contracting-out form, the cooperative assumed responsibility for five tasks: soil preparation, seedstock, fertilizer, irrigation, and the prevention and elimination of insects and diseases. It contracted out to cooperative members three tasks: transplanting, tending, and harvesting. But in fact, although the cooperative made all-out efforts it failed to assure the good performance of such tasks as soil preparation, seedstock, and fertilizer. After failing to carry out its intention to prepare the soil for the entire cooperative, Hung Chinh contracted out 360 mau and 219 water buffaloes and oxen to the units, so that they could organize soil preparation for the cooperative member families. Therefore, each unit had to set up a labor team specializing in soil preparation headed by the deputy team leader. The cooperative stipulated that before land was contracted-out to the cooperative, the team had to complete the plowing of the entire area and meet requirements regarding techniques and time. That stipulation could not be carried out because some members of the plowing team were not truly positive, worked when they felt like it, and conserved the water buffaloes' strength when plowing and harrowing and were afraid of damaging their plows and harrows, so they plowed carlessly and plowed shallow. We asked a production unit leader, "What was the reason for that situation?" He replied, "There are many reasons. One was that the production organization, management, and coordination work of the cooperative and the units was not tight, control was not deep and close, and supervision was not timely. Second, the cooperative set the rate of only eight work-points for plowing and harrowing a sao of land, and 86 animal husbandry work-points for raising a water buffalo, with penalties for sickly water buffaloes which are weak and sub-standard. However, last year the value of a work day was low -- only .5 kilo of paddy -- so people who raised water buffaloes and plowed were not enthusiastic, which resulted in failure to plow the required number of days or the required area, or in the entire area being plowed but plowed rapidly and carelessly, without assuring technical standards.

The chief accountant told us that another reason was that the cooperative was not yet able to supply plows and harrows to the cooperative members. The value of plows and harrows was included in the 86 water-buffalo raising work-points the cooperative contracted to cooperative members raising water buffaloes. In the past, when a plow or harrow was damaged the collective would repair it, but now if one was damaged the person who raised the water buffalo and was also the ploughman had to repair it or buy one for nearly 100 dong. When a plow or harrow was broken, it was of course necessary to stop work. Some families which wanted to raise water buffaloes had to buy plows and harrows first. Some cooperative members were "far-sighted" and sought ways to conserve the water buffaloes' strength and save wear-and-tear on the plows, for they feared that later on the cooperative would contract out land to the families on a "blank check" basis and they would have no implements to work the land. Furthermore, some people in the plowing teams were not impartial, and when they knew in advance which fields would be assigned to their families they would plow those fields more carefully. That situation resulted in plowing and harrowing not being done as rapidly and effeciently as expected.

Comrade Khoat, head of unit 5A, said that in soil preparation his unit attained only 80 percent of the requirements regarding time and technical quality. Therefore, some people had to plow or hoe additionally.

With regard to seedstock, the cooperative had no closely supervised plan to divide up the rice seedlings, so when the seedlings were green and healthy and ready to be transplanted, the families which had many members or arrived first quickly uprooted the good seedlings, while families which had few members or arrived later were left with the bad seedlings. Therefore, there arose many conflicts among cooperative members and between cooperative members and the production units.

As for fertilizer, the cooperative did not firmly control its sources and did not correctly calculate the amount of fertilizer needed to supply to cooperative members. Therefore, in the course of production many families lacked fertilizer so the units had to transfer fertilizer from one family to another so that transplanting could be carried out in time. Due to that situation, some families even spread on fields manure that they hadn't had time to compost. There were also families which did not participate in the cooperative's plan to equalize fertilizer, but concealed fertilizer to use on their own contracted-out fields, so there were families which lacked fertilizer and were forced to transplant without it.

The cooperative carried out well only the irrigation task and the prevention and elimination of insects and diseases.

In brief, there were still deficiencies in the cooperative's organization and support of tasks related to contracting-out, so the cooperative members who accepted contracted work encountered considerable difficulties in the course of production. So how was Hung Chinh cooperativive still able to have a good harvest?

The contracting of output met the aspirations of the cooperative members, so everyone fully utilized all labor capabilities and all material resources in order to overcome difficulties and win victory in the fifth-month season.

Many cooperative members in Hung Chinh cooperative told us that "Although the cooperative was still confused in organizing contracting-out, that method of contracting-out was still better than when there was no contracting-out, for only with contracting-out can we fully utilize all labor capabilities and all material resources in production." After speaking with many people, we realized that that observation was very correct.

During the same time last year, before the contracting of output was instituted, Duoc market was crowed with people from Hung Chinh Village. Every day, as many as 40 percent of the main laborers were shopping, making bricks and tiles, baking lime, or hauling goods for others to earn maney with which to buy rice. In the entire cooperative, only 30 to 40 percent of the laborers worked the required 150 days (for women) or 170 days (for men) during a season. The harvest was poor, and the value of a work day was only .5 kilo of paddy. But during this year's season, due to the contracting out of output the cooperative members paid much attention to the fields. Nearly all of the main laborers focused their energies on production. The old people, the children, and the people working in the organs made full use of their spare time by participating in production. In Hung Chinh, the most distant field was onlu two kilometers away, but during the season all families took their meals to the fields and ate then there in order to have additional work time. Many headless households, such as that of Mrs. Binh, a cooperative member in unit 1A whose husband was working far from home and whose family included three children and a 71-year-old mother-in-law, and that of Mrs. Lanh, Mrs. Vuong, etc., all of whom requested contracted-out land. With the help of their relatives and neighbors, and by means of their own efforts, those families surpassed the contracted-out norms in harvesting.

Since the cooperative was not yet able to assure a number of tasks in the production process, the cooperative members took the initiative in overcoming difficulties in order to produce on schedule and effectively. If the rice seedlings were not in good shape, the cooperative members spread more fertilizer and took better care of them. When there was a shortage of fertilizer, many families raised additional livestock and poultry and produced green fertilizer and alluvium. Twenty-three families in the village purchased water buffaloes in order to both increase draft power and have additional fertilizer.

It may be said that because the cooperative members exerted themselves in production, although the cooperative did not fully assure the production conditions Hung Chinh still had a successful harvest. But it must also be realized that if a cooperative does not do a good job of organizing contracting, there can be no solid basis on which to assure victories.

Hung Chinh cooperative must study and resolve the legitimate worries of the cooperative members.

Since the victorious fifth month-spring season, in addition to their enthusiasm the members of Hung Chinh cooperative members have had many worries and perplexities because the cooperative still has not done a good job of such tasks as soil preparation, producing seedstock, etc., during the present tenth-month season.

We have learned that after realizing that during the recent fifth-month season the plowing teams did not meet the requirements, the cooperative met with the production units and changed the working method as follows: each production unit was divided into many groups. The cooperative divided the water buffaloes among the units, so that they could divide them among the groups. The groups stipulated that each Class-A water buffalo would plow two mau. Two or three families with contracted-out land amounting to two mau would be combined to form a small team which shared a water buffalo to do the plowing. The people who did the plowing would receive workpoints determined by the cooperative. The people feared that with that method of organizing soil preparation it would be difficult to avoid the situation of the people who kept the water buffalo plowing their own land more carefully and more on schedule than when they plow other people's land. The people who did not keep a water buffalo would be more or less dependant on the plowers. Therefore, some people had to find ways to "gain the favor" of those who did the plowing by cutting additional grass for the water buffalo to eat (although they were not required to do so) or "giving extra" so the plower would plow their land more carefully. Furthermore, when the water buffalo was sick there would be no draft power for plowing.

As for seedstock, during the presen season the cooperative distributed seedstock to the units, which distributed them to the groups. Some groups organized joint seedling sowing, but others distributed to the cooperative members so that each person could sow their own seeds, so the people encountered considerable difficulties. When we went to the home of Mrs. Lan we saw a small seedling bed of about 10 square meters on the bank of a pond. The seedlings were very thick and crowded one another. She saod, "The seedling bed assigned by the unit had no water, so I had to sow them in my private plot. I'm very worried about what I'll do this season if I don't have enough seedlings to transplant." Many other headless households were also very concerned over the cooperative's method of handling the seedstock task. Mrs. Bang was distributed six kilos of seed rice before she had time to prepare a seedling bed, so she had to take them home. She was worried that she would not be able to grow the seedlings on schedule.

In addition to those specific worries, some cooperative members with a broader outlook asked the questions, "Is Hung Chinh cooperative's method of organizing con tracting-out tending increasingly to become 'blank check' contracting-out? With that method of organizing contracting-out, will the material-technical bases and the specialized units gradually fade away? When difficulties are encountered with regard to weather, how can laborers who accept contracting-out overcome them?"

A cadre from Hung Chinh who was on detached assignment told us, "I'm only concerned that the comrades in the cooperative will only see that the fifth-month crop was succesful and will not realize that their organization of contracting-out is not good, and will not study and correctly implement the policy of the Secretariat of the Party Central Committee."

We think that that is a legitimate worry and concern of the cooperative members which the Hung Chinh cooperative must study and resolve, in order to assure that better results are attained in the tenth month season than during the recent fifth month season.

CONSTRUCTION RATE OF PHA LAI POWER PLANT ACCELERATED

Hanoi QUAN DOI NHAN DAN in Vietnamese 19 Jul 81 p 1

[VNA News Release: "Pha Lai Thermoelectric Power Plant Construction Site Excavates 843,850 Cubic Meters of Earth and Rock, Accelerates Construction Rate of Principal Project Items"]

[Text] During the second quarter of this year, the units participating in the construction of the Pha Lai thermoelectric power plant accelerated the construction rate of the principal project items. During June the construction site concentrated its construction forces, combined mechanized labor with manual labor, dredged 4,000 cubic meters of mud, pumped 16,000 cubic meters of water from the foundation excavations, and overcame the consequences of the flooding of the water circulation pumping station. Therefore, the construction site was able to rapidly pour more than 2,200 cubic meters of concrete to form the pumping station building and the working area floors and raise their level from four feet below the surface to 3.2 meters above the surface.

The all-out efforts made during the second quarter helped the site to maintain the construction rate of such important project items as the bunker compartment, the steam boiler room of the main plant, etc. The construction site as a whole has excavated 843,850, cubic meters of earth and rock, poured 20,314 cubic meters of concrete, constructed 8,835 square meters of various kinds of walls, machined and installed 3,164 tons of iron and steel, installed 3,740 meters of various kinds of pipe, and constructed 16,500 square meters of barracks for the workers. Construction Corporation No 18 transported large quantities of cement, bricks, and rock, received industrial equipment, and did a good job of serving construction. The "69-1" machinery installation enterprise assembled nine cranes of the various kinds, and for the first time assembled a BK-1000 crane in our country.

However, the site's construction rate is still slower than called for by the plan. In order to accelerate the construction rate, the site launched an emulation campaign to achieve accomplishments to celebrate the Fifth Party Congress which had specific objectives: the completion of construction of the steam boiler room by 30 September 1981; the completion of construction of the turbine rooms and the bunker compartments of units No 1 to No 15 by the end of this year; and the completion of construction of the water circulation pumping station, the central control building, the 110 KV electricity distribution station, and many other project items.

NEW SHIPPING PROCEDURES NEEDED TO STOP LOSSES OF GRAIN

Hanoi NHAN DAN in Vietnamese 9 Jul 81 p 2

/Article by Vu Thanh Tu and Hoang Luu: "Closing the Loopholes in the Transportation, Shipping and Receiving of Grain"/

/Text/ During the past 2 years, the volume of grain transported has constituted a rather high percentage of the cargo transported, especially along the North-South route; meanwhile, wharehouse space, bags, scales, boats and vehicles are in short supply. Rice and paddy are put in bags of different sizes and types, in new bags as well as old bags and sometimes spill from these bags. On one trip, cargo is transpoted by many different means of ocean and river transportation, by vehicle, by train and by rudimentary means of transportation belonging to the state-operated, joint public-private, cooperative and private segments of the economy in order to reach the hands of consumers. One problem that has arisen is that in shipping and receiving operations, the weighing of cargo is inaccurate and allows tens of thousands of tons to be lost each year without anyone being responsible. This is a major loophole, one used by decadent elements to steal more than a small amount of grain when it is being transported on ships and trucks and when it is being loaded or unloaded.

The organization and management of shipping and receiving operations are still lax. In the transportation process, from the time that the level I and II grain agencies receive and ship grain on state-operated and joint public-private means of transportation, very large amounts of grain are lost. Even in this stage, bags of rice transferred from four to six different types of means of transportation and, although each transfer involves shipping and receiving procedures, the rice is only weighed twice. It is weighed for the first time at the mill in western Nam Bo and weighed for the last time when it reaches the level II granaries in the northern provinces. In the intermediary stages, the grain passes through many different granaries, railroad stations and ports on three or four different types of boats and vehicles over a distance of thousands of kilometers with shipping and receiving procedures primarily only involving counting the bags that are showing (at some times and places, a number of bags are weighed to verify the contents). And, it is here that the largest waste of grain occurs.

On a number of motorized barges and boats that transport rice from the western region to the port of Saigon, boat and barge owners "shift bags"(that is, they pour the rice into old bags and take the new bags for themselves) and take some of the rice in the process. This practice generally goes very smoothly because at boatside or when delivering the rice to the port, only the bags that are showing are counted. For this reason, there is generally a very large difference in the amount of grain recorded on the manifests of many large ships going to northern seaports and the actual amount of rice loaded on them. In April 1981, the ship Haiphong transported 5,500 tons of rice and paddy to Dong Hoi but was short more than 850 tons. In the Bach Dang area of the port of Haiphong, the ships Dong Nai and Song Gianh, which were transporting broken grains of rice, unloaded onto river ships 20 to 30 tons less than actually recorded when these two ships were loaded. On 17 May 1981, vessel SM51 of the Bach Dang River Transport Enterprise was loaded with 1,256 bags of rice (105,564 kilograms); however, when the rice was delivered to the Go Cong Wharf, 31,962 kilograms were missing. Many ships deliver from 50 to 60 tons less than stated on their manifests. In 5 months of transporting broken grains of rice on 56 barge trips, the total quantity recorded on manifests was 7,169 tons but 1,303 tons less were delivered(!). Generally speaking, roughly 10 percent of the grain transported is lost but, in some cases, this figure is as high as 20 or 30 percent. In which stages of transportation is rice lost, where is it lost? Is it lost because it is dropped and scattered on the ground or stolen? Who is responsible for this loss? In view of the present mode of shipping and receiving grain, it is difficult to answer these questions precisely. Some corrupt cadres, manual workers and ship personnel have taken advantage of these loopholes to steal state property. They employ many different methods to engage in collective conspiracy and theft in the transportation process, in the cargo handling process and so forth, giving as an excuse "the permissible loss rate" or "cargo is delivered in the exact same way it is received." The driver of a truck transporting rice from Haiphong to Hanoi can "stab" various bags of rice and take out 2 or 3 dozen kilograms, which is a commonplace practice because rice is received on the basis of counting the number of bags showing but delivered on the basis of weight, consequently, who is to say that the rate of loss conforms or does not conform with regulations. This is not to mention the more than a few cases in which drivers and seamen conspire with stevedores and grain personnel to steal from a few to a dozen bags of rice during shipping and receiving operations. On 11 January, tugboat K.107, after selling more than 5 tons of rice to a dishonest merchant, was detained; the grain remaining on the boat's barge was weighed and turned out to be 7 tons more than recorded on the shipping manifest(?).

The principle "one bag received, one bag delivered," which has been in effect for nearly 2 decades, was suited to grain transportation under war time circumstances. It does not have the quantitative basis needed to establish a permissible rate of loss. In recent years, the shipping and receiving of grain have, at some times and places, been carried out on the basis of accurately weighing grain. However, material-technical bases are not matched, there is a shortage of equipment and lack of close coordination and grain is handled slowly, consequently, there is always an urgent need for grain to be transported. As a result, the new shipping and receiving regulations were rapidly ignored and we returned to receiving a certain number of bags and delivering a certain number of bags.

A number of other shipping and receiving principles that are now in effect must also be improved. The most widely used implement for loading and unloading bulk cargoes of grain, such as wheat kernels, corn kernels and so forth is a clam-shell bucket. Each clam-shell bucket is considered to be one unit and the number of times the bucket is loaded is multiplied by the capacity of the bucket to determine the quantity of cargo recorded on the manifest. The lack of accuracy in the use of a clam-shell bucket for this purpose is easily recognized but nothing has been done to correct this. Even the commonly used practice of sending an escort to accompany the shipment of grain to the port still results in a loss rate of 7-8 percent even over short distances.

As regards cargo shipped in bags, in addition to the principle of delivering the same number of bags that are received, the transport and grain sectors frequently ship and receive this type of cargo in closed compartments and sealed railroad cars. The river transport sector has more than 100 closed compartment barges used to transport grain and other types of cargo contained in bags. The owners of cargo prefer this method of shipment above all others. Yet, there are still boat personnel who conspire with shipping and receiving personnel to buy "lead clasps"; in deserted areas along the transportation route, they break the original seal, steal cargo and then put on a new seal. Similar incidents also occur with railroad cars sealed with lead clasps.

For a long time, we have given little attention to inspecting, evaluating and summarizing the shipping and receiving measures in effect and have not rapidly established an improved mode of shipping and receiving of a legal nature. Losses of cargo occur in a widespread and routine fashion but neither party--not the owners of cargo or the owners of the means of transportation--bear any material responsibility to the state. Everyone has long known that there is a lack of accuracy in the weighing, measuring and counting of cargo but coordinated steps to thoroughly resolve this problem have not been taken by the weights and measures sector, the registration sector or the functional agencies. Hardly any of the major cargo handling terminals, such as the port of Saigon, the port of Haiphong and the inland river ports such as Hanoi, Nam Dinh, Bac Giang, Viet Tri and so forth have large scales capable of weighing entire trucks and railroad cars. At present, very many scales are broken and there is a shortage of both spare parts and the tools needed to perform repair work. The grain sector has placed an order to buy 10 truck scales but the scale factory has only delivered 3. It generally takes 2 years to install and put one of these scales into operation. As long as the mode of shipping and receiving is based on delivering the same number of bags shipped, the use of bags that comply with specifications and standards is necessary and will limit our losses. Recently, 4 million new bags were supplied to the grain sector in the southern provinces but a number of localities did not use them and substituted old bags in their place. Deserving of reprimand is that even within some grain shipping and receiving agencies, bags are being "distributed at internal prices" of 1, 2 or 2.5 dong per new bag. Some persons are buying these bags and selling them at 25 to 30 dong per bag. After each phase of such unprincipled distribution, the deputy director of a grain shipping and receiving corporation and his wife have earned an additional 1,000 or 2,000 dong.

At present, the Ministry of Food, the Ministry of Communications and Transportation and the Ministry of Interior are focusing their efforts on implementing positive measures designed to protect grain in the transportation process. The uniform regulations now in effect are: 100 kilogram, new bags will be used to ship grain along the North-South route; the boatside unloading of grain may not be practiced in the port of Saigon; when shipping and receiving cargo, it is necessary to verify the contents of at least 10 to 15 percent of the total number of bags; grain being transported to the armed forces must be turned over to the owner of the cargo and escorted from the railroad station and so forth. If there is strict compliance with these regulations, losses will significantly decline. In trans-shipment operations from seaports to the hinterland, in order to rapidly unload ships and handle cargo and insure the quantity and quality of cargo, primarily bulk shipments of grain, the Ministry of Grain and the Ministry of Communications and Transportation are conducted a pilot project in shipping and receiving cargo on the basis of the waterline of vessels. Initial shipments have yielded good results: the percentage of loss has been low and the figures obtained by measuring the waterline of ships have not been significantly different from the actual amount of grain on each barge, which was determined by weighing the cargo.

A mode of shipping and receiving that is scientifically based must be quickly established in order to reduce losses in the process of transporting grain and many other products. In the immediate future, it is necessary to correctly implement the responsibility regulations that have been promulgated by the state. Together with investing in additional material bases and researching and applying weights and measures techniques and an advanced mode of shipping and receiving, tight organization and management in conjunction with the use of material incentives for persons engaged in shipping, receiving and handling cargo will yield practical results.

POPULATION, CUSTOMS, AND CULTURE

BIN DINH HA TRIED FOR POSSESSION, PRODUCTION OF REACTIONARY MATERIALS

Trial Inaugurated

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 25 Jun 81 pp 1, 4

[Article by P.V.: "Trial of Bui Dinh Ha for Circulating and Creating Reactionary and Corrupt Cultural Materials"]

[Text] On the morning of 25 June 1981 the People's Court of Ho Chi Minh City inaugurated the trial of Bui Dinh Ha who was caught in flagrante delicto in the act of storing, circulating and producing reactionary and corrupt cultural materials, following the decision of the Public Security Service to prosecute him and the decision of the People's Organ of Control of Ho Chi Minh City to ratify the charges.

Presiding at the trial was Mr. Nguyen Thanh Vinh, Chief Justice of the People's Court of Ho Chi Minh City. Mr. Le Trong, Deputy Director of the Road Freight Transportation Company, and Mrs. Thai Thi Ngoc Du, instructional cadre at the city's University, served as the people's jury, and Miss Pham Thi Dieu Hoa served as the recording secretary of the court session.

Bui Dinh Ha was born on 5 April 1952 in Hanoi, is domiciled at 497 lot F Nguyen Dinh Chieu Street, Third Precinct; he is a merchant by profession and has had 5 years of schooling in the 12-year track.

After having gone south in 1954, Ha helped in his father's business of selling books and magazines and of "running" films among the various cinema theaters. In 1971 he went into the army and was sent to the 3rd artillery battalion of the paratroopers.

After 30 April 1975 Bui Dinh Ha went to reeducation for three days, then was allowed to go home to resume his trade of seller of old books and magazines at stall number 60, Dang Thi Nhu Street, First Precinct.

On 17 April 1981, thanks to the help of a youngster, the cultural organs and the Public Security people of the First Precinct caught him redhanded in the act of loaning out corrupt books. The Administrative Committee of the First Precinct has ordered an administrative inventory of his bookselling stall of which he was the owner. Through this inventory it has been found that he owned 232 books and posters of every kind which exhibited reactionary, corrupt and bad moral contents and which are forbidden material. These materials were subsequently confiscated.

These cultural products include: 30 books written by reactionary lackey authors, 13 monthlies and semimonthlies published by the Catholic Chaplaincy Directorate of the old puppet government, entitled "Tinh Than" ("The Spirit"); 12 semimonthly issues of of the U.S.-puppet psychological warfare organ called "Thoi Nay" ("Our Times"); 38 corrupt and evil novels among which 11 contain highly pornographic material; 17 posters of nude women; and 17 nonsensical comic books for youngsters.

These reactionary products all contain counterrevolutionary content, antisocialist material, material disparaging of the two godlike resistances of our people under the leadership of the Party, and material disparaging and sacrilegious to the extremely revered and beloved leader of our entire people and of the Vietnamese Communist Party.

Such materials as "Political Questions" ("Cac Van De Chinh Tri"), "Tinh Than" and "Thoi Nay" are meant to poison and stimulate the fight-to-the-death spirit of humble sheep in the puppet army, to urge them to do their best to sabotage the revolution and to struggle against the people. They constitute the kind of reactionary political tracts that are opposed to socialism and that have long since been on the index as far as storing and circulating them is concerned.

Among these books there are five which contain articles by the reactionary Tran Quang Thai under the common titles of "What Is To Be Done?" ("Chung Ta Phai Lam Gi?") or "Looking at Our Homeland" ("Nhin Vao Que Huong Chung Ta"). These give a distorted presentation of the truth of revolutionary government, slander and oppose the leadership of the Vietnamese Communist Party on every count, they especially sap the faith of the masses in the Party and the revolutionary authorities. The article by Dang Thanh Nnan entitled "The Issue" ("Van De") means to distort and oppose the socialist system in the world. In the magazine "Tinh Than" there is an article by Vu Tien Phuc dealing with the struggle for peace but the content of which is actually anticommunist.

Through the circulation of such materials, Bui Dinh Ha is spreading the ideas of opposition to the present regime, ideas which are clearly reactionary and aimed at promoting the violent overthrow of the regime.

Furthermore, Bui Dinh Ha also kept in store, loaned out and sold 20 "Selected Works of Mao Zedong" published between 1954 and 1960.

As everybody knows, after their military defeat the Peking expansionists are plotting together with the reactionary imperialists, especially the U.S. imperialists, to blockade and isolate us on the diplomatic front and to carry out sabotage inside our country in a comprehensive manner including such aspects as economics, political, diplomatic and cultural-ideological affairs, so as to weaken us and make it possible for them to carry out their aggressive schemes and take over our country. The scheme of the Maoists is to transform China into the center of the world in order to rule the world.

It is clear that Bui Dinh Ha, through his concrete actions, is striving to indirectly serve the plots of not only the imperialists but also of the Chinese expansionist hegemonists.

Before the organs of the law Bui Dinh Ha has admitted that the above-mentioned materials, whether sold or loaned by him, are all thoroughly reactionary, antigovernment, propagandizing for the old regime which has been toppled, and serving the plots of the imperialists and of the Peking expansionist hegemonists.

Among the 11 books with extremely corrupt content and of highly prurient interest there are some which he wrote himself such as "Memoirs of a Libertine" ("Hoi Ky Khoai Lac") or "Diary of My Life" ("Nhat Ky Doi Toi"). In actuality these are nothing more than running stories written in the manner of pornographic films, in which are peppered the most dissolute passages picked up from the foreign novels translated during the U.S.-puppet period or coming from his own dirty experiences. Besides these there were also novels such as "The Life of a Fifteen-Year Old Virgin" ("Cuoc Doi Nang Trinh Nu 15 Tuoi"), "The Rebellion of the Skins of Two Colors" ("Cuoc Noi Loan Giua Hai Mau Da"), etc. which advocate quick love and life grabbing. All these are meant to stimulate the animal in one, to push our youth towards the road of dissolution and rakishness.

He admitted that each time he loaned out this kind of novel, he always included a few nude pictures to increase the readers' sexual interest. Asked whether he realized that these novels have a bad content, he answered: "I think these books are evil because they cause people to lead sexually dissolute lives." Thus, Bui Dinh Ha has deliberately poisoned our people's mind, especially the mind of our youth.

He has admitted that on the average he has circulated between 10 and 15 of these reactionary and corrupt books and magazines, representing a total of a little less than 20,000 times during the last 6 years!

The serious and concretely damaging consequences of Bui Dinh Ha's actions have been to lend a hand to the enemy so that he can try to restore the old reactionary and corrupt culture so as to create disturbances and disrupt public order, to poison our youth and to oppose the building of a new culture by our state and our people.

Under the guise of selling and loaning out continuously these reactionary, corrupt and bad moral products, Bui Dinh Ha has propagandized the slave culture of the enemy and implicitly opposed the national culture with its roots in 4,000 years of history.

Bui Dinh Ha has confirmed in court that he has been reminded constantly about his activities by the market management committee and by the precinct's Culture and Information Service, that he has been warned and admonished twice and that 50 of his books which were on the index list had been confiscated. But he still deliberately followed in the old tracks until 17 April 1981. It is clear that he acted in full consciousness of what he was doing.

Bui Dinh Ha's crime therefore is all too clear.

He must bear the full responsibility for that crime before the law and before the people.

Life Sentence Given

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 26 Jun 81 pp 1, 4

[Article by P.V.: "Guilty of Circulating and Producing Reactionary and Corrupt Cultural Materials Bui Dinh Ha Was Sentenced to Life"]

[Text] After nearly four hours of trial, on the morning of 25 June 1981 the People's Court of Ho Chi Minh City has pronounced Bui Dinh Ha guilty of storing, circulating and producing reactionary and corrupt cultural materials and sentenced him to life imprisonment.

At the trial Bui Dinh Ha has admitted his crime. He fully realized that his actions were illegal since he had been warned, reminded, and admonished on several occasions by various organs and functionaries, but he still went on and obdurately circulated these forbidden materials. Ha further admitted that he knew as a matter of fact that these materials had a reactionary and antigovernment content, that they pushed our youth towards dissolution, idleness, and avoidance of duties towards the state, but he nonetheless went on trading in those materials.

Even more serious is the fact that he himself produced either typewritten or handwritten books which he lent out that are meant to poison the mind of our youth, leading them into the life of dissolution and sexual promiscuity.

Of the 232 bad books confiscated at his stall there were 112 bearing a reactionary political content, with some of an extremely reactionary nature such as "The Soapberry of Eternal Life" ("Trai Dang Truong Sinh") or "The Fruit of Misery" ("Trai Cay Dau Kho") of the lackey author Doan Quoc Sy which were meant to totally distort the truth about the revolution and slander the extremely beloved and revered Uncle Ho of our nation.

Originally a paratrooper guilty towards the people who has been leniently dealt with by the revolutionary authorities, Bui Dinh Ha in his conscious effort to oppose the regime and with his habits of sexual gratification and dissolution, instead of finding gainful employment, deliberately sought to sabotage our regime, to lend a hand to the enemy in the hope of paralyzing the will of our youth and debilitating the revolutionary forces.

At the trial many witnesses have angrily condemned the crimes of those given to cultural and ideological poisoning such as Bui Dinh Ha, who lead their children into crime, dissolution and sexual promiscuity, going so far as to turn upside down public morality.

After listening to Mr Le Van Xoan, representative of the city's People's Organ of Control, who analyzed the extremely serious nature of the trial as the defendant has been proved to be guilty of the crimes spelled out in articles 4, 7, and 8 of the decree-law 267/SL promulgated on 15 June 1956 by the Council of Minister, and who proposed that an appropriate sentence be given; and after listening to the discussion of the defendant's crimes by Chief Justice Nguyen Thanh Vinh of the city's People's Court, who based himself on the fact that Bui Dinh Ha has consciously stored and circulated reactionary and corrupt books and magazines and thus has sabotaged and impeded the implementation of the cultural policy of the state, lending a hand to the enemy, the court has decided to sentence Bui Dinh Ha to life imprisonment and ordered that all the materials adduced as evidence be confiscated.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

'QUAN DOI NHAN DAN' ON MILITIA, SELF-DEFENSE FORCES

BK291629 Hanoi QUAN DOI NHAN DAN in Vietnamese 7 Aug 81 pp 1, 4

[Editorial: "Increase the Fighting Strength of Militia and Self-Defense Forces"]

[Text] Over the past 6 years, since the country achieved total independence and reunification, the militia and self-defense forces, under the direct leadership of party committee echelons and the command of local military organs and thanks to the diligent building efforts of the people, have undergone a new development both quantitatively and qualitatively. Militia and self-defense forces units in many localities, especially along the northern and southwestern borders, have fought valiantly and resourcefully, making worthy contributions in defeating the invading Chinese forces and their Pol Pot-ieng Sary henchmen. They have also effectively participated in maintaining public order and security and played the role of an assault force in production in localities.

The fighting strength and the work performance of the militia and self-defense forces at many establishments, however, are still limited and incompatible with their requirements and latent potentials. In many enterprises, worksites, state farms, forestry sites and public organs, as well as in a number of hamlets and villages, the militia and self-defense forces, though having relatively large personnel resources, continue to have their work performance rated weak as evidenced by the fact that they have not yet been able to effect a vigorous change in the tasks of safeguarding security, maintaining public order, protecting socialist property at the grassroots level and opposing negative phenomena.

Fostering strong points and achievements gained while embarking on the emulation drive to score achievements to greet the Fifth National Party Congress, various militia and self-defense force units are making new changes in their efforts to overcome weaknesses and increase their fighting strength in order to meet requirements dictated by the situation and tasks of the localities concerned.

Carrying out the motivation drive to "foster the fine nature and improve the fighting strength of the people's armed forces," the militia and self-defense forces must concentrate on building grassroots-level units in such a way as to make them politically strong, well-trained and capable of fulfilling their combat duties, defending the fatherland's border and maintaining public order and security in various localities.

As an armed organization of the masses, the militia and self-defense forces, in order to attain a high fighting strength, must primarily be closely organized politically. Along with giving indoctrinations on the situation and tasks and with improving revolutionary awareness and fighting determination, it is necessary to purify the internal ranks of the militia and self-defense forces, keeping them free from bad elements and those engaging in illegal business, and ensuring that the militia and self-defense forces--especially their mobile combat units--are fully armed and high in political qualities. All commanders of militia and self-defense force units must be good party or youth union members--those who have been tested in reality and are dependable. It is necessary to replenish the militia and self-defense forces with discharged soldiers--who have satisfactorily fulfilled their military obligations and have just returned to the civilian life--in order to strengthen the militia and self-defense forces, both politically and militarily.

Training is an important factor for increasing fighting strength. Military and self-defense units must base their training schedules, programs and plans for the final months of the year on their specific combat duties and plans in order to ensure that every member, squad and platoon receives good training. They must be determined to eradicate problems of formality, simplicity, and superficiality in training; to prepare training more carefully in order to ensure the results of each training hour and each training subject; and to ensure that training can produce practical results and can improve the combat effectiveness of personnel and that training does not cost them a lot of time and affect their production. Through the conduct of military drills in various localities and through various local training seminars, provincial and district military affairs agencies must increase their inspection of the training qualities and discipline of militia and self-defense units and their abilities to react in the face of each specific combat mission and situation.

The tasks of strengthening the organization of, providing military training for and building grassroots-level militia and self-defense units must always be linked with the fulfillment of present and long-term missions. Militia and self-defense forces in the border areas and on the off-shore islands must constantly increase their combat readiness; closely cooperate with military units in quickly and duly punishing those enemy forces which are carrying out harassment operations and reconnaissance activities and which are sending commandos to carry out harassment activities; and adopt appropriate combat tactics which can produce high combat results in order to firmly defend their localities and safeguard the fatherland's border. Militia and self-defense forces in the rear as well as in all areas throughout the country--especially in municipalities, cities, industrial complexes and in those areas along communications lines, seaports and the shoreline--must closely coordinate with other forces in formulating practical combat plans, stepping up the maintenance of political security and public order and safety, protecting the property of the state and the people and fighting against the enemy's psychological warfare, espionage and sabotage activities.

Performing labor activities well while fulfilling the duties of safeguarding the border, off-shore islands and localities and maintaining security and order at various establishments are a yardstick to precisely measure the qualities of every militia and self-defense unit. Closely combining the building of comprehensively steadfast grassroots-level units with the outstanding fulfillment of those tasks involving combat, combat readiness and maintenance of security and order in localities is the most significant action to be taken by the militia and self-defense forces in their emulation drive to greet the Fifth Party Congress to be held sometime by the end of this year.

COLLUSION BETWEEN SECURITY CADRES, SMUGGLERS REPORTED

Hanoi NHAN DAN in Vietnamese 18 Jul 81 p 3

[Article by Nguyen Thanh Ly, An Giang: "Bribery Continues At Tan Chau Inspection Station"]

[Text] In the town of Tan Chau, Phu Chau district (An Giang), there is an inspection station for transiting ships, including those from foreign countries. This station also is a port of call for convoys of boats and barges.

Taking advantage of that condition, crooked merchants engaged in unlawful business, conspire with a number of customs and border security cadres at the station, buy off sailors with money and exchange gold for various kinds of goods on board. Whenever ships and barges arrive at the station, they row a launch close to their bulwarks to induce the crews to buy, sell, and exchange goods. In particular ships transporting oil, gasoline, chemical fertilizer, etc., stop by the Tan Chau station to sell the above goods to these unlawful dealers. Some ships have sold tens of tons of chemical fertilizer or seed rice. Around the station, many women make sexual proposals to sailors. These phenomena have been prohibited by the local administrstion. However implementation is still uneven and loose.

We think that if the situation in the Tan Chau station area is allowed to continue, the state will lose a large amount of goods and properties--a considerable waste. The branches and organs concerned must at the same time to severely punish those who deliberately encroach upon socialist properties.

ARMED FORCES OF HO CHI MINH CITY FIGHT PORNOGRAPHY

Ho Chi Minh City TIN SANG in Vietnamese 18 Jun 81 p 1

/Article: "The Activities Being Conducted To Combat the Decadent Culture and Establish the New, Revolutionary Culture"/

/Excerpt/ In recent weeks, the armed forces of Ho Chi Minh City have conducted many activities for the purpose of helping to eradicate the decadent, reactionary culture, literature and art and establish the revolutionary, wholesome culture, literature and art.

All precinct and district units of the city armed forces have presented reports on the situation and tasks involving cultural, literary and artistic work at this time to cadres and soldiers. Each unit of the precinct and district armed forces has held many meetings and forums to enable young soldiers to understand the harm caused by the various types of decadent, pornographic "cultural products." The unwholesome cultural, literary and artistic activities that have appeared within the city in the recent past have been presented to cadres and soldiers so that they could analyze them, understand their causes and understand the serious harm caused by them among some of our youths and teenagers.

In conjunction with the struggle to abolish the decadent, reactionary culture, literature and art, the units of the city's armed forces have intensified the effort to establish the new, cultured style of life, mold the new man, build the various movements to read revolutionary books and magazines and strongly develop the literature and art movement among the masses within each unit. The propaganda and agitation unit of the city command has been assigned the task of serving as the nucleus in the effort to build the mass literature and art movement within the armed forces of the city, further improving both the substance and form of performances and delving more deeply into reality in order to support troop units.

The city command has also launched among the armed forces an emulation movement to select soldiers who sing well and an emulation movement to read and discuss the heroes and war dead among the armed forces and is encouraging cadres and soldiers to participate in the upcoming literary and art contests and athletic meets of the city in order to commemorate the 5th Congress of the Party.

PRINTED SHIRTS BELIEVED TO CARRY PROPAGANDA SLOGANS

Ho Chi Minh City VAN NGHE THANH PHO HO CHI MINH in Vietnamese 19 Jul 81 p 15

/Article by "The Electrician": "A Type of Slogan, A Type of Propaganda"/

/Text/ In our lives, surely no one can deny a form which is beautiful on the outside. Although the contents are important, the more consistent a form is with man's evaluation of beauty, the more those contents are raised. Speaking in this manner, we can confirm that external beauty--of the proper type--is still a necessary item. However, if that beauty is not of the proper type, can it even cause harm? Surely we cannot allow it to freely develop.

Recently, part of the young generation of our city--surely those with abundant clothing and food--have been competing with each other--they surely think that only in this manner can they conform--with a fashion which seems to be slightly incredible. Generally speaking, they do not dare to shamefully dress in a revealing manner as under the old regime but the fashions of which they are fond are types of clothing brought from foreign countries by the smuggler route or sent by relatives in foreign countries by the so-called providing for the life route. Besides the relatively unusual "fashions," there is one type which draws our attention and if closely studied, is extremely dangerous and not conforming at all. These are the shirts printed in letters or embroidered of a slogan nature. Let us comb out some of the wording printed on these shirts:

1. In order to encite a decadent life for the young, they have printed the following words in English: Kiss Me; Don't Touch Me Now; and Let Me Love or in French L'amour pour toi (Love for Me), etc.

2. Even worse, they have printed words with a clear political nature: Let Me Live, I Will Go and We Will Return or more blatantly with huge letters on the chest: U.S.A., etc. and etc.

There are hundreds of other such flamboyant sayings. The Electrician recognizes that these are really slogans. They have taken advantage of the material infatuation of a number of individuals to slip into our society slogans and those wearing the shirts really serve as their propaganda loudspeakers.

This is extremely harmful. In the past, when our comrades wanted to raise a revolutionary slogan in the middle of this city, they often had to do it with their bones and blood. Could it be that at the present time--right in our city--ranks propagandizing such depraved ideas are still carefree?

Whether unintentional or not, these things should be repressed immediately in order to alleviate the irritated eyes of the people. Their existence is not beneficial for anyone other than the reactionaries and their lackeys who are hoping to destroy our society and these very types of "posters" and "living slogans" are their dangerous weapons.

CHEATER OF WOULD-BE 'BOAT PEOPLE' CAUGHT

Ho Chi Minh City SAIGON CIAI PHONG in Vietnamese 13 Jun 81 p 4

["Tale of Vigilance" by Huynh Binh and Manh Hong: "The Benefactor"]

[Text] On the morning of 18 May 1981, passers-by on Phan Van Tri Road (16th Subward, 5th Precinct) hardly paid attention to two men who were cordially greeting each other. They had just met by appointment at the Bui Huu Nghia-Phan Van Tri road intersection. One of them was over 50, his hair touched with grey. Wearing a black hat which concealed most of his face, he was clad in dark blue pants and clean white shirt. Holding a thick leather attache case in one of his arms, he looked like a teacher. The other man was about 35 and had a round face. He wore an old blue "jeans" and a striped blue shirt. After greeting each other for a moment, they clasped their hands and entered a coffee shop in Phan Van Tri Street. After choosing a secluded table at the farthest corner of the shop, the young man pulled out a chair, invited the elderly man to sit down, took out a pack of "Saigon" cigarettes, offered him one and called the shop owner in a hushed voice. The shop owner was a charming young lady. No sooner had she come near the table than she said in a familiar voice:

--Yes, I guess brother N. will have iced coffee. As for you, uncle, what would you like?

--A cup of hot, strong coffee.

Ly N., the young man, deeply inhaled his "Saigon" cigarettes smoke, kept it for a while in his chest, slowly puffed it and, turning toward the elderly man, said softly:

--Uncle, I am very impatient. How are things going for my wife and me thanks to your assistance?

The elderly man grinned. Puffing away at his cigarette while looking at the coffee falling in drops from the filter to the cup, he replied:

--We still have to wait for some time. Moreover, the amount you gave away was not "hefty" enough. Don't be impatient. With "enough dollars," everything will be easy.

Ly N. gave a sign and a forced laugh. After sipping his iced coffee, he said again softly:

--I gave you four "pieces" already. Our family is in straitened circumstances. Since we have started this affair....[we should follow it to the end.] How many more will do, uncle?

The elderly man answered in a low voice:

--Two more "pieces," brother. Two more will suffice. Things will go exactly as promised. In 10 days, some people will take you aboard the ship and you will arrive in Singapore a few days after. From there, you may go anywhere you like...

--May I hand over the remainder the day I board the ship?

--The remainder must be paid in full immediately, otherwise, they will not allow you to go. These people are "bigwigs" and the deal is reliable and, therefore, rather expensive. Don't tell this to anyone else. Your family alone is in the know. Since we are close acquaintances, I have sympathy for you. I had had to entreat them a lot before they accepted your request...

--Yes,in a moment, please come to my house and I will hand over the remainder. I entrust everything to you. You are our family's benefactor.

They went together to the young man's house. At Ly N.'s house, when the "benefactor" of his family was accepting the remaining 2 taels of gold prior to helping them "cross the border," he was caught red-handed by Nguyen Van Giang, a policeman in the 16th Subward (5th Precinct), and by members of the people's protection force. He said that his name was Hoang Thai Hoa, aged 50 and specialized in swindling. He belonged to an organization comprising 10 persons specialized in impersonating public security agents to extort money, to instigate credulous people to flee abroad and to cheat them. This time, he was caught red-handed cheating Ly N.'s family out of 6 taels of gold.

Among the members of the self-defense and people's protection forces and the Nguyen Van Giang area police who uncovered this swindling case was the charming and highly vigilant coffee shop owner.

TOURISM OFFICIALS ACCUSED OF EMBEZZLEMENT

Hanoi NHAN DAN in Vietnamese 19 Jul 81 p 4

[Article: "Proceedings Initiated Against Embezzlement At Nghia Binh Tourism Corporation"]

[Text] Legal organs of Nghia Binh Province have just started proceedings against Vu Kim Thanh and Hoang Phuong Nam, deputy director of Nghia Binh Tourism Corporation, for deliberately violating--for personal gain--the principles and procedures of economic and financial management, causing serious consequences.

Thanh and Nam along with 11 other persons took it upon themselves to deal in re-exported goods (sewing machines, transistor radios, and foreign-made cigarettes) without the authorization of the Tourism General Department and the local administration. They sold goods to improper buyers, creating conditions for a number of people to speculate. Thanh and Nam also set priority prices for Nghia Binh Tourism Corporation personnel and business prices, causing damage to the state.

They set up a secret fund and exchanged Vietnamese money for foreign currency on the free market to buy goods.

Their method consisted in allowing corporation cadres and personnel to use phony names and addresses to make frequent purchases of goods, dodging the control of state organs. As a result, Thanh, Nam and accomplices collected a very large amount of money to split among themselves. Nam got 50,000 dong and U.S. $6,327; Thanh got more than 31,400 dong. Other persons such as Dang Thanh Tri, chief of the planning and supply bureau, and Nguyen Kim Hung, chief accountant...each pocketed from more than 33,000 dong to more than 42,000 dong.

BRIEFS

HANOI VICE CRACKDOWN--Within less than 2 months the security forces in Hanoi have arrested almost 1,000 dishonest merchants, speculators and thieves of socialist property. Almost all of the offenders are unemployed and many of them have had records of possessing stolen goods, producing fake goods, theft, smuggling and so forth. Although the crackdown is still underway, the Hanoi security forces have retrieved for the state a lot of gold, silver, gem stones, foreign currencies and contraband goods, and a large quantity of fabric, gas and oil, foodstuffs, medicines, pharmaceutical supplies and many other scarce items. [BK270215 Hanoi NHAN DAN in Vietnamese 30 Jul 81 p 3]

CORRUPTION CASES--The Ha Son Binh Provincial People's Court held an open hearing from 22-24 August to try (Cao The Tuong), captain of the HB-027 boat; (Nguyen Van Thanh), assistant captain of the boat; Sen Sgt (Do Duy Dao), leader of the boat's escort team, and their accomplices on charges of corruption and deliberate destruction of more than 218 tons of wheat grains. (Cao The Tuong) was sentenced to death while his accomplices received jail terms ranging from 17 years to life imprisonment. The story goes like this: On 29 May 1980 (Cao The Tuong) received an order to transport 584.2 tons of wheat grains from Haiphong Port to Ky Son Port in Ha Son Binh. While in transit, he colluded with other accomplices in selling 95.8 tons of cargo for profits and leaving a larger quantity of wheat grains destroyed by rain. [Hanoi Domestic Service in Vietnamese 2300 GMT 25 Aug 81]

SOUTHERN SMUGGLING CASES--Many provinces in the south have discovered countless smuggling cases involving millions of dong worth of contraband goods confiscated for the state. In Minh Hai Province, 550 smuggling cases have been discovered with the most important one being the capture of 1,200 meters of fabric which were smuggled from across the border. In An Giang Province, many cases involving the smuggling of goods such as cigarettes and monosodium glutamate were discovered, especially the seizure of 2,000 cartons of Thai-made cigarettes. In Quang Nam-Danang Province, more than 100 smuggling cases were discovered in June alone with hundreds of thousands of dong worth of contraband goods confiscated for the state. [Hanoi Domestic Service in Vietnamese 0400 GMT 26 Aug 81]

BRIEFS

HEALTH DELEGATION IN MEXICO--Comrade Nguyen Duy Cuong, SRV deputy public health minister, visited Mexico from 18 July to 8 August at the invitation of the Mexican Health Ministry, according to VNA's correspondent in Havana. He attended meetings on health work with health delegates from Mexico, Nicaragua and other Latin American and European countries. Speaking at a meeting on the situation of Vietnamese and Cuban health services, former Mexican President Luis Echeverria Alvarez, director of the Center for Study of the Third World's Economic and Social Affairs, pointed out that Vietnam has very satisfactorily resolved its health problems and that its experiences are very valuable for Mexico. [OW150511 Hanoi Domestic Service in Vietnamese 1430 GMT 9 Aug 81]

SOVIET-AIDED FACTORY EMULATION--To score achievements to honor the Fifth Party Congress and mark the anniversary of the Soviet October revolution, Vietnamese workers and Soviet experts at the Thuong Cong diesel factory worksite--a major project built with Soviet assistance in Bac Thai Province--have pledged to emulate in completing seven workshops on schedule with good quality. On this occasion, the worksite also presented the Victor Insignia awarded by the Central Committee of the Soviet Trade Unions to a Soviet engineer and a Vietnamese worker for their outstanding achievements in the construction of the factory. [BK270215 Hanoi Domestic Service in Vietnamese 1100 GMT 23 Aug 81]

SOVIET EXPERTS, EMULATION DRIVE--Together with the team of Soviet experts, various work units at the Lam Thao superphosphate plant's expansion worksite have set the norms and schedules for the construction of a number of projects in the current emulation drive to honor the Fifth Party Congress. These include the main equipment storage, the furnace system, the cleaning and drying system and the air compressor system. [BK270215 Hanoi Domestic Service in Vietnamese 1100 GMT 23 Aug 81]

CIRCULAR ISSUED ON LOCAL ELECTIONS

BK261145 Hanoi Domestic Service in Vietnamese 1100 GMT 23 Aug 81

[Text] The VFF Central Committee Secretariat on 10 August issued Circular No 211. The circular says:

Faced with the present situation and tasks, the forthcoming election is of great importance to efforts to motivate the people in developing their sense of collective mastery so as to realistically participate in building and consolidating the administration at the district and village or equivalent levels. These two levels of the administration play a very important role in the system of our state apparatus, especially the village or city ward level which is directly responsible for the management of all political, economic, cultural and social activities and national security and defense in all localities throughout the country.

The standing committees of the VFF committees in all provinces, cities and special zones must concentrate on adopting proper plans to guide, supervise and help the front committees at the district and village or equivalent levels in satisfactorily carrying out the following tasks:

1. Make the cadres of the front thoroughly aware of their responsibilities in this election. Consolidate the front committee organizations at the district and village or equivalent levels. Assign personnel to join various organizations in charge of the election.

2. Extensively carry out propaganda among the people in order to explain to them about the election of representatives to the people's councils at the district and village or equivalent levels.

3. Satisfactorily hold consultative conferences to recommend candidates for election to the people's councils. This is the major part of the front's role as a participant in activities in preparation for the election. As stipulated in the constitution and the election law, front committees at all levels are directly responsible for this task. Meanwhile, under the leadership of party committee echelons, leading cadres of front committees at all levels must uphold initiative and closely cooperate with various party and state organs in order to satisfactorily fulfill the front's responsibility in the recommendation of candidates for election to the people's councils.

4. Provide guidance for and encourage the people to express their views on the activities of the outgoing people's councils and people's committees and arrange for candidates to meet with the voters.

5. Participate in inspecting election activities. It is necessary to satisfactorily conduct inspections in order to promptly discover and correct mistakes and shortcomings, ensuring that the election is carried out in accordance with policy and law. The front committees must cooperate with the electoral council and all electoral committees and teams so that inspections can be conducted regularly, especially during the three stages: When the namelines of voters are posted, when discussions on the structure and composition of the people's councils and on the nomination of candidates are held, and when the election is in progress.

6. Motivate the people to enthusiastically go to the polls.

7. Review and draw upon the experience acquired by the front in the election of the people's councils at the district and village or equivalent levels.

PARTY OFFICIAL DISCIPLINED FOR BUILDING PRIVATE VILLA

Hanoi XAY DUNG DANG [PARTY BUILDING] in Vietnamese No 4, Apr 81 pp 21-23

[Article by Cong Minh: "We Must Be Alert When We Have Authority"]

[Text] After several years of preparation and several months of construction, the magnificant house of Comrade Nguyen Van Nam stood out among the other houses in the area. People praised the house as being large and attractive, but they were very critical of that comrade for abusing his authority for personal benefit. The house was rather imposing: the main part had an area of 226 square meters, and the living room alone had an area of 84 square meters. It had a living room, bedrooms, a dining room, etc. The house had a modern design and all conveniences. Beside the main house there was a house for his daughter and son-in-law, a garage, and a storage building.

To build that house its owner had to use more than 10 tons of cement, more than 4 tons of iron and school, more than 10 cubic meters of wood, 40 cubic meters of sand, gravel, and rock, 60,000 bricks (including 5,000 patterned bricks), a ton of fuel oil, and many attractive materials. Twenty-five trips were required to transport materials (including three tank truck trips to carry fresh water with which to mix mortar). It cost more than 20,000 dong and required more than 1,000 work days. Furthermore, it required the use of 40 steel panels used to pave airfields, 2,000 welding rods, etc.

Before building that house, the state had provided Nam with a house with a garden for growing crops and raising livestock which was convenient for his work and family life. But he still made preparations to build an estate in his home area to serve as "a place for family reunions and for ancestor worship," as he often said. In fact, why was it necessary for a person like him, for whom "revolutionary work was his reason for living," to build such an estate? No one had doubts about the legitimate money he and his wife had saved, but public opinion criticized him, a leadership cadre of the local party organization and governmental administration, for competing along the lines of "raising hogs, selling rice, and building houses," and for commercial activities. He even accepted the help of several of the local bourgeoisie, whom he regarded as his "friends." Because of such things, his prestige in the party organization was seriously weakened. He clearly realized that, but continued to commit errors. It was not true that if one could build a house as large and attractive as he wanted, for the local construction projects were encountering many difficulties regarding raw materials, and some had to temporarily suspend construction because they lacked cement, wood, bricks, etc. Since he was a key provincial cadre, he was clearly aware of those difficulties. Many people advised him not to build a big house, but he was determined to do so. He believed that he "had a right" to build the house as he so desired, for he had contributed more than 40 years to the revolution and was now a member of the provincial leadership committee.

As a member of the standing committee of the provincial party committee and Vice Chairman of the Provincial People's Committee in direct charge of the transformation of capitalist industry and commerce in the locality, Nam believed that he had merit toward the revolution, had not committed any major mistakes, and had the confidence of the party and the respect of the people, so building such a house would be "something that is appropriate and is nothing that should be criticized." With such a distorted way of thinking, in his capacity as a leader Nam requested a number of cadres in charge of the various sectors in the province to help him build the house. So some cadres and employees of the construction, forestry, real estate, and forest control sectors, the materials corporation, etc., in the province, and even a corporation of a ministry, in some cases because people respected him and in some cases because they saw a "good opportunity to profit," they enthusiastically helped him. Once he had the construction materials, he was provided transportation to take them to his home area, which was hundreds of kilometers away. Calculating what would benefit him most, Nam assigned the designing and construction to a bourgeois contractor managed by the Construction Corporation. That contractor sought all ways to please the cadre who had authority in the province. And of course, he also sought ways to significantly benifit himself, not only in the short run but also in the long run, and not only economically but also politically. The contractor paid for the machinery operators and the more than 1,000 work-days needed to build the house at rates stipulated by the state. If anything was needed for the project, Nam wrote a letter requesting it, and the contractor located it and bought it. That resulted in violations of the materials supplying system, such as "arbitrarily supplying materials outside the plan," "degrading first-class products to the status of waste materials," etc. Nam regarded that as "being helped by his friends and the lower echelon." When he lacked iron, a bourgeoisie in the transformation category gave him some. When he lacked hard-to-find materials, his "friends" enthusiastically provided them or or help him find them!

During that period, to repay the "kindness" of the people who helped him, Nam sold to a bourgeoisie two tons of rice which his family should have sold to the state. At a time when the local governmental administration was implementing the policy of closely managing gtain, taking advantage of the authority that had been given him and his acquaintance with cadres in other provinces, he requested the governmental administrations in other provinces to issue permits allowing bourgeoisie to transport that rice from one province to another. From then on, Nam had many improper relations with the local bourgeoisie which were contrary to the policies of the party and state. For example, in commercial dealings he acknowledged the right of the bourgeoisie to own and manage real estate, and allowed some people to buy and sell contrary to policies, or else paid them large sums of money which the state should not have had to pay. An investigation of 14 transactions showed that all were incorrect.

Brother Nam, who had been active in the revolution since 1936, participated in the winning of political power during the 1945 August Revolution, and stalwartly overcame difficulties and hardships during the resistance wars against France and the U.S. Hebecame a member of the provincial party committee, secretary of the provincial party committee, secretary of the provincial party committee, a member of the standing committee of the zone party committee, and was in charge of the party, governmental, and mass association tasks. After the country was unified, he assumed important party and government positions in a province. It was appropriate that the party assigned him such positions, for it correctly evaluated his revolutionary qualities and work ability during previous revolutionary periods.

As a member of a provincial leadership organ, during the first few years after the revolution Nam grasped the lines and policies of the party and the missions of the party organization, and manifested a sense of responsibility toward guiding and consolidating the governmental administration and toward socialist transformation and socialist construction in the locality. But his prestige was gradually weakened by such negative thoughts and acts. The standing committee of the provincial party committee, of which he was a member concerned itself with educating the cadres regarding to great, difficult missions facing them and the requirements of forging the cadres and party members, especially the hard-core cadres, in the class struggle in the new period and opposing all enemies and harmful influences of neocolonialism, while overcoming the manifestations of hedonism and pacifism, mandarinal thinking, etc. He himself had participated in meetings of the standing committee held to criticize and discipline cadres who had committed such mistakes as taking advantage of their authority to engage in corruption and improperly purchasing raw materials, materials, and goods for their own use. He had, along with the committee, discussed the resolutions and directives of the party and state and their application to the local circumstances, and discussed the policies regarding party building, the building and forging of the corps of cadres, etc. However, he himself did not think and act in proper accordance with them, but contrary to them.

Despite the sincere, frank opinions contributed by many people, Nam continued to immerse himself more and more deeply in improper acts, in order to have a "big house," and reported nothing to the provincial party committee or base-level party organization. After he had finished building the house, the masses were displeased and denounced him to the state Inspection Commission and the Control Commission of the VCP Central Committee. The provincial party committee took up the matter and an investigation was carried out. Although he was clearly mistaken, he refused to adequately accept criticism. Only after much criticism and struggle in the party committee did he admit his mistake. The resolution of the Party Central Committee regarding his disciplining stated, "Comrade Nam abused his authority by using many state materials and facilities to build a private house at great expense. While building the house he had an improper relationship with a bourgeois contractor and allowed him to engage in illegal livelihood." Nam was disciplined by the party and government, no longer stands in the ranks of the provincial leadership cadres, is unqualified to be a member of the Vietnam Communist Party, and has turned over the house to the local governmental administration. Taking many factors into consideration, the party organization only imposed the "party supervision" form of discipline on him, in order to educate him and with the hope that he would mend his ways and go all-out to improve himself, so that he could continue to be recognized as a party member.

Nam was primarily responsible for his mistake. He was educated by the party, which entrusted him with many important assignments, and he devoted decades to the revolution. But in the new phase of the revolution he at times stopped making progress and became bogged down in the dirty quagmire of individualism.

However, the local party organization was also party responsible. The standing committee of the provincial party committee failed to closely monitor the quality, ability, circumstances, and psychology of each member of its organization, and did not frankly criticize and assist one another when negative manifestations arose, or truly assure the building of standing committee that was unified, unanimous, strong, pure, and worthy of its role and position of being the headquarters organ of a province. The base-level party chapter and party organization did not fully do their duty of educating and managing party members, even though the party member in question was a provincial leadership cadre. The base-level party organization failed to overcome incorrect viewpoints, such as thinking that since he was an upper-echelon cadre with good ability he could assume responsibility for his own work and no longer needed the assistance, control, and management of the organization, or out of respect for him failing to frankly criticize him or being afraid that criticism of him would result in bad "consequences."

A number of cadres in the various sectors did not properly fulfill their duties, and even helped a person in authority to do wrong. Those cadres consciously or unconsciously contributed to preventing the state economic and social management apparata from exercising effective management, and even transformed them into instruments which a person abusing his authority could use to do wrong. If the relevant party and governmental organizations and the responsible cadres and party members had correctly fulfilled their responsibilities, as stipulated by the Party statutes and the state policies and regulations, Nam could not have, by himself, have committed such serious mistakes.

The affair of Nguyen Van Nam is well-known and has been dealt with appropriately by the local party organization. It is a useful and lively lesson for many localities in the party building task and the task of building up the corps of party cadres, and in the implementation of the lines, missions, and policies of the party and state, in order to advance our people's revolutionary undertaking.

That lesson reminds the party committee echelons to be more concerned with educating and managing local cadres who have positions of authority.

THUAN HAI OFFICIAL JAILED FOR CORRUPTION

Hanoi XAY DUNG DANG [PARTY BUILDING] in Vietnamese No 4, Apr 81 pp 24-26

[Article by Le Thanh Minh: "The Disciplining of a Cadre in a Position of Authority"]

[Excerpt] In June 1978 the People's Court of Thuan Hai Province sentenced to 30 months in prison Nguyen Van Co, formerly deputy head of the Communications and Transportation Service, for having committed the crime of "abusing a position of authority and selling state materials on the free market." That was the result of a process of strict struggle against negative manifestations arising in state organs, the perpetrator of which are leadership and management cadres.

The Thuan Hai provincial party committee has a very strict and resolute attitude, and both guides a thorough struggle against negativism and is concerned with, and applies specific measures regarding, the perfection and consolidation of the organs and sectors, especially in places where cadres in positions of authority have degenerated and gone astray. With regard to the Communications and Transportation Service, in the 2 years after the trial Nguyen Van Cu it has, with the positive concern and guidance of the provincial party committee, endeavored to become an economic sector which makes progress.

A question that has been posed is, why did Nguyen Van Co, a southern cadre was a regroupee in the north for 20 years, was trained and cultivated by the party, and was a pipefitter but became a middle-level party cadre with a college education and a technical specialty, rapidly degenerate and become corrupt within a short time after returning to work in his home area? One may answer in brief that Co did not consciously and continually steel himself and did not know how to maintain and improve the qualities and virtue of a communist party member in the environment of new, complicated work after the liberation of the south. As for the party organization, when assigning work it did not tightly manage the cadres did not properly impplement the rules and regulations regarding administrative and economic management, created opportunities which led Co to commit mistakes and crimes, etc. Those were the main factors which led to the above-mentioned painful result.

In order to strengthen the leadership cadres of the Communications and Transportation Service of Thuan Hai, in October 1976 the upper echelon assigned Nguyen Van Co to help the acting head of the Service. Co, who was then 43 years old, was born in

Thuan Hai and was regrouped in the north in 1954, where he became a civil engineer and was the director of a bridge-building corporation of the Ministry of Communications and Transportation. He worked there many years. Co, who was regarded as a good cadre, had a simple way of life, had a sense of responsibility, attained a number of accomplishments in his work, and was elected as a Warrior of Emulation by his unit. Co was so highly regarded that many people thought he should be assigned to the South, in the new situation. If Co had an opportunity to make further progress, he would make many contributions to the communications and transportation activities in the locality.

Six months after accepting his new assignment, the Party Affairs Committee of the Ministry and the Thuan Hai provincial party committee selected Co to serve as deputy head of the Service. Then Co was elected to the provincial party committee by the congress of party organizations of the civilian, political, and party organs in the province, and was at the same time added to the chapter party committee of the Service. Co was also assigned to the standing committee of the Service's committee guiding the implementation of Resolution No 228, and was selected to be an assessor of the Thuan Hai Province People's Court.

Co was very enthusiastic because within a very brief time after being allowed to return to work in his home area he had been assigned many important positions, but at the same time he revealed weaknesses, especially with regard to consciousness of organization and discipline. Taking advantage of the fact that he had been in leadership positions for many years, had managed a corporation of the Ministry, and had both specialized knowledge and actual experience, from the beginning Co had an attitude of disregarding the acting head of the Service, and arbitrarily made decisions regarding many matters within the sphere of the leadership of the Service head without discussing them with him. The bad habits of arrogance, self-satisfaction, disregarding the collective, etc., have always been the closest allies of undisciplined liberalism. Immodesty and boasting are dangerous first steps which lead to acts of unprincipled abuse of authority.

Co's principal duty was to monitor the construction of bridges and roads and motor vehicle repair shops. But when a bridge collapsed because it had to bear excessive weight, the person in charge criticized Co for not going to the scene to examine and resolve the problem. Co did not closely guide or oversee the work of those two units. Indeed, Co set aside much time to do miscellaneous tasks which had not been assigned to him by the collective leadership of the Service. Co ordered the warehouse keeper to issue gasoline without going through the administrative office, as required by regulations. The head of the Service and the organ party chapter never knew where Co was, who he was with, or what he was doing. Those mistakes of Co were a factor which prevented the Service's party chapter from being united and unanimous. There were often loud arguments between Co and the party chapter secretary and several other members of the chapter party committee. The party chapter's activities contrary to the organ's regulations regarding administrative management and economic management, out of respect or fear the party members in the chapter dared not struggle. Although he was an upper-echelon party committee member who had been assigned to monitor the party chapter of the Service's organ, Co never reported on the situation of that party chapter to the party committees of the party civil administration organs.

Co had a younger brother named Hung, a former puppet Captain who had studied aviation mechanics in the U.S. In 1972 he was discharged, for reasons that are unclear. Since 1975 he had been the owner of a passenger bus on the Saigon-Phan Rang route and specialized in transporting contraband and in illegal buying and selling, even U.S. dollars. Co had stayed at the home of Hung's father-in-law for a time when the provincial organ was still in Phan Rang, and sought all ways to find him a job in the sector, but was unsuccesful. The close relationship between Co and Hung was known the party chapter and the competent organ. Co never reported that fact to the organization. Later, when his mistakes were being reviewed, he was asked about his younger brother's politics. Co only replied in a vague manner: "I've heard that he was a puppet Captain who had a conflict with the upper echelon and was discharged early." That complicated relationship led Co to commit an error error. It was a turning point in Co's revolutionary activities, a turning point which ended in Co's expulsion from the party. In May 1977, Co was transferred to Hanoi to work at the Ministry. The Administration and Management Office had prepared an automobile and driver for Co. But Co selected another automobile and turned it over to Hung to take to his house in Phan Rang "for further repairs," then recommended that the organ have the driver drive him to Hanoi. Out of respect, the head of the organ and the head of he Administrative Office (who was also secretary of the party chapter) did not resolutely intervene and were not put on guard by Co's deliberate violation.

By means of a scheme of issuing a letter of introduction introducing Hung as a Service employee, Co and Hung were able to go to Hanoi, although Hung had not been authorized by the organ to drive an automobile to the north. Co went to his old organ to discuss difficulties regarding the lack of materials of the Thuan Hai Communications and Transportation service. Also out of respect, the of scarce, expensive materials, including hundreds of kilos of welding rods, dozens of insula tion panels (the type with hard covers which are heat resistant and is used to line the inside of automobile hoods). Co also went to another organ with which he was familiar to purchase several tens of kilos of brake fluid. Co entrusted all of those things to his younger brother to take to Phan Rang and Saigon to sell at a profit.

But that illegal sale (without authorization of the Thuan Hai Communications and Transportation Service) was discovered by the accountants and financial personnel of the corporation. Two months later the corporation director sent an official letter inquiring about the above-mentioned items. Co used many schemes to deliberately cover up that matter, including the use of his authority to transfer some cadres who knew of the affair, in order to "shut them up."

The struggle to expose the mistaken actions of Co, a cadre in a position of authority, was not simple and easy. Because of Co's obstinate attitude, the ideological struggle in the party chapter and the party committees of the party civil administration organs in Thuan Hai Province was very bitter and fierce. At that time, many people thought that Co was a "rare cadre" of Thuan Hai, a local person, an engineer, who was still young and had ability and experience in leading and managing the sector, so perhaps the provincial party committee would go easy on him. On the contrary, the provincial party committee did not superficial or protective, but manifested a very strict, very resolute attitude.

At conferences of the party chapter and its party committee, Co refused to sincerely criticize himself, but criticized the deficiencies of the party chapter, the party chapter committee, and many cadres in the Service, which made the conferences even more chaotic. In order to defend himself and lessen his offence, Co wrote explanatory letters to the secretary and chairman of the provincial party committee, to the comrades in charge of the commissions of the party, the Public Security Service, the Supreme People's Organ of Control, the State Inspection Commission, etc. The heads of the organization and control committees, who participated in the criticism sessions, persistently guided the ideological struggle where Co worked. When one meeting failed to produce results they organized another, in order to help the cadres and party members there have motivation and consciousness and a correct attitude of self-criticism and criticism, and improve the quality of struggle, in order to help Co realize his errors, voluntarily accept party discipline, and endeavor to become a good person.

But Co continued to be obstinate, sought all ways to control events, disregarded the collective, and claimed that he was "pure of heart, incorruptible, and had not been seduced by material wealth." He claimed that selling materials to obtain money was necessary to "repair his automobile and pay his driver," and that he was "proud" of having driven himself to and from work. Co's mistake was very serious: abusing his authority to obtain state materials and helping dishonest merchants monopolize the market. His tendency toward corruption led him to violate state principles and laws. He suffered a serious loss of vigilance, and committed mistakes at a time when the entire province was promoting the implementation of Political Bureau Resolution No 228, for which Co was principally responsible, in the struggle against negativism in the provincial communications and transportation sector.

Due to the serious nature of his mistakes and his failure to sincerely criticize himself, the Thuan Hai provincial party committee subjected him to very severe discipline. It exercised very tight, thorough guidance, mobilized the relevant sectors to cooperate in definitively resolving the issue, and not prolonging it. The investigation was carried out efficiently in a period of only 3 months. The provincial party committee ended its work when Co was criticized before the party chapter and the Provincial People's Committee issued a resolution dismissing Co after it had sufficient evidence to make such a conclusion. Before the Public Security Service issued orders to arrest Co and prepare to prosecute him, the provincial party committee decided to expell Co from the party, and then the control committee of the provincial party committee informed the entire party organization about that disciplinary act. Only 7 months passed between the time when the affair eas uncovered and Co's trial.

BRIEFS

PROVINCIAL PARTY CONSOLIDATION--After various phases of party membership card issuance, many weak and lagging basic party units in Nghia Binh, Long An and Hoang Lien Son provinces have been strengthened and consolidated with their members' efforts to qualify themselves for party membership cards. In Hoang Lien Son, the party committee of Van Chan District has resolutely expelled from the party disqualified persons and taken disciplinary actions against 23 errant party members. In Nghia Binh, more than 80 percent of the province's 722 basic party units have been rated good. In Long An, more than 90 percent of the province's basic party units have organized the issuance of party cards and 74 percent of their members have received party membership cards. FLEXIBLE PRICES TO HELP THE STATE TO MANAGE FREE MARKET

Ho Chi Minh City TIN SANG in Vietnamese 23 Jun 81 p 3

[Article by Thi Phuong: "Commerce: Understanding the Viewpoint on Flexible Prices Under Guidance"]

[Text] In the market struggle for stabilization of prices in the last few weeks, we have seen the importance of the participation in the market of the socialist commercial sectors in the marketplace. By putting into the market a quantity of goods essential for the standard of living and sold at reasonable prices, we gradually stopped the private merchants' tendency to freely raise prices and then brought prices closer to the price levels of the state-operated and cooperative commerce.

In the attempt to "win consumers" over to their side, the socialist commercial sectors obviously must bitterly compete with private merchants in all three aspects: quantity of goods, quality and price. If we are weak in any one aspect, we will limit our own attacking capacity on the market.

The price struggle against private merchants today is our topmost concern. By fully understanding the new guidelines about prices the persons who currently do commercial work can achieve victory in the struggle for market stabilization.

Selling at Market Prices

Resolution 26 of the Political Bureau about distribution and circulation has created an obvious change in the state-operated and cooperative commercial sectors. With quite satisfactory financial support of the bank, they have actively taken the direction of business, tried to look for sources of goods and kept in close touch with production so as to have a considerably abundant quantity of goods available for the people.

The experience in the last Tet period shows that as its doubts had been clarified, our socialist commerce was able to fiercely compete with private merchants in regard to every line of goods and this ability was becoming stronger with our maturity gained in the course of our work.

However, stimulated by the new spirit in commercial business, a number of commercial units paid too much attention to participation in market activities while neglecting the role that was no less important they had to play -- to serve the life of workers and civil servants whose actual income depends totally on the supply of goods at stable prices under guidance to remain stable itself. Furthermore, the participation in the market of the socialist commerce, mostly the cooperative one, could sometimes be ineffective because some viewpoints about prices did not go hand in hand with actual needs.

In the case of some goods of the state-operated and cooperative commercial sectors, their prices were sometimes higher, sometimes equal to, and often a little less than the market prices. Competing with private merchants, some units unintentionally adopted their spirit of running after profit. Other units advocated "not allowing private merchants to take advantage of the low prices offered by commerce" and thus deliberately maintained a very small difference in prices. Still other units adjusted by themselves prices of their own goods in accordance with market prices whenever private merchants had created artificial fluctuations to make profitable speculative moves.

Some viewpoints about "agreed," "business" and "high" prices which were baseless adversely affected cadres and civil servants themselves. Except for the goods being supplied to them at directed prices, they were no longer able to buy other essential items at "low" prices. Therefore, while their actual income was raised by the supply of some standard goods at supply prices, this income was in fact limited by the "high price" policy.

Flexible Prices Under Guidance

The new directives about the work dealing with prices have clearly stated: "...objectively speaking, two price systems are set up: the system of relatively stable prices (such as wholesale prices, purchase prices within obligation and selling prices of capital goods in accordance with two-way economic contracts, supply prices, etc.) and the system of prices relatively flexibly applicable to business and commercial activities." The meaning of prices being relatively flexibly applicable, as Le Duan has indicated, is: "Since the 'free' market still exists within definite limits and under the conditions of an unbalanced supply-demand relationship, the state adopts the policy of directing flexible prices in order to manage the 'free' market, to struggle effectively against speculative activities and to make supply-demand adjustments to benefit socialism."

Thus, in business and commerce, commercial sectors cannot buy at any prices and sell at any prices provided they ensure the effectiveness of their business.

The purpose of participation in the market is to manage and to struggle and its effectiveness is the economic results brought about to society as a whole.

The immediate work of the commercial sector is, therefore, to perfect a price guidance mechanism for commercial business to operate flexibly and sensitively and to be effective while being carried out. This mechanism must thoroughly understand the needs and general goals of the national economy and at the same time stay close to the situation and conditions of production and the state of the market so as to determine appropriate price brackets in different periods, for different lines of goods and even in different markets.

We cannot underestimate the need for sensitivity and flexibility of this mechanism of price guidance, for markets, particularly the market in our municipality, change very frequently. If we turn prices loose, we will deprive ourselves of the confidence consumers have in the socialist commerce and create an opportunity for private merchants to monopolize the market. As we call it a mechanism, we clearly recognize the need for it to operate smoothly and in a synchronized, accurate and effective manner as a machinery and to demand from all of its components a compliance with their own responsibilities and functions.

Competing in terms of prices in the market and also being capable of competing even better there, we need to compete about prices with producers themselves -- particularly collective and individual producers. Recently some commercial units were keenly competing about prices in the market, but they almost acted as they had nothing to do with the same competition with the sources of goods, and even had the tendency to be "easy" in accepting any quality of goods and any prices, provided they had some goods and a certain "discount percentage" for themselves.

That way of doing business made their goods, partly because of poor quality and partly because of high prices, unsalable, with the prestige of the commercial sector being adversely affected, its capital paralyzed and its activities slackened.

There also was the phenomenon of a number of commercial units becoming the places that sell fake and imitation goods and goods of poor quality and thus unintentionally lending a helping hand to the dishonest producers or intermediaries. Other commercial units have the tendency to deal with only a number of familiar suppliers and thus limit their own capacity to exploit other sources of goods and to bargain.

As the mechanism that provides business and commerce with price guidance now needs time to operate fully and effectively, the effort at perfecting the organization of state-operated and cooperative commercial sectors also needs some time to draw lessons and experience from purchasing goods, exploiting sources of goods, participating in the market, etc., commercial units, within the limits of their doing business on their own initiative, must thoroughly understand the viewpoint on flexible price under guidance in commercial business so as to fulfill their task at the highest level of achievement. A few markets have by now shown the effort of the socialist commerce at controlling prices set by private merchants by means of unified guidance resulting in a price list for many lines of goods, as well as a determination to maintain prices of the commercial sector at a reasonable and stable level, no matter how strong the market pressure may be. These are some initial tests, but they serve to persuade the persons who go to the market everyday that socialist business and commerce do not run after profit but, above all, their purpose is to serve the standard of living.

HAIPHONG PARTY COMMITTEE ADVOCATES IMPROVED GOODS DISTRIBUTION, CIRCULATION

Haiphong HAIPHONG in Vietnamese 11 Jun 81 pp 1, 4

/Article: "Standing Committee of Municipal Party Committee Decides Policy, Methods of Achieving Political Bureau Directive on Improving Distribution, Circulation"/

/Text/ On 20 and 28 May 1981, a conference of the Standing Committee of the Municipal Party Committee studied and discussed Directive 109 on continuing to comply with Resolution 26 of the Political Bureau on improving distribution and circulation. The Standing Committee of the Municipal Party Committee issued a resolution on policies and methods aimed at strictly achieving the directive and resolution of the Political Bureau.

Concerning achievement of Resolution 26 of the Political Bureau, the conference opinion was that Resolution 26 of the Political Bureau on improving distribution and circulation has been urgently discussed by the Municipal Party Committee and a resolution on organizing achievement has been issued. During the past few months, sectors and echelons of the city have accomplished a number of tasks and achieved initial clear results with agricultural production cooperatives letting product contracts to labor groups and individuals since the 10th-month crop of 1980; and a number of central and local state-operated enterprises, small industry and handicrafts cooperatives, fishing cooperatives, state farms, stations, farms, commerical and business stores, etc. are promoting compliance with application of piecework wages to initially create a new working atmosphere with progress in labor productivity, output and the income of the laborer, actively contributing to achievement of the state plan for the first 6 months and the entire year of 1981.

Nevertheless, because industrial, handicrafts and small industrial production still have many difficulties in energy and primary materials and especially shortcomings in management organization, production capabilities have been much restricted while capabilities still exist for producing additional products, especially a number of trades with the necessary conditions such as rush production, rock quarrying, material production, construction, ocean fishing, export goods production, etc.

The circulation and distribution of the city has also had definite efforts in purchasing, ascertaining goods sources and sales organization. However, production has many difficulties, development is slow, goods are scarce, the source of goods supplied by the Ministry of Commerce has been reduced, prices have undergone great changes and financial and monetary balance cannot be assured; however, a primary problem is that the leadership and supervision of the party and the local administration at all echelons has not been specific and lacks concentration and effectiveness; and the activity of mass organizations has not developed a strong effect. Goods we produce are for the most part not held in the hands of the state, we do not control the market and prices are unmanaged and unstable, causing the actual wages of the cadres, workers and public servants to decline and their lives additionally difficult.

Concerning tasks required to implement Directive 109 and Resolution 26 of the Political Bureau, the resolution of the Standing Committee of the Municipal Party Committee clearly stated: Directive 109 of the Political Bureau has clearly pointed out a course of continuing to improve distribution and circulation and specific policies and methods for organizing achievement supervision.

In order to assure effective achievement of Directive 109 and Resolution 26 of the Political Bureau, the Standing Committee of the Municipal Party Committee decision concentrates on resolving the following primary problems:

1. Strive to promote production aimed at successfully achieving and exceeding the 1981 state plan norms of the city as pointed out by Resolution 28 of the Municipal Party Committee. Totally and widely apply piecework wages precisely in accordance with the policy and system of the state in the economic and service sectors aimed at stimulating everyone to promote production, overcome difficulties and produce many products; especially essential consumer goods to serve the people and to create additional export goods sources. Have a plan to assign specific missions to districts, precincts and primary level units in strictly complying with the system of product delivery, assure that the state has a firm grasp of product sources and is able to purchase the majority of goods from production units and fully achieve obligations to the state as well as plans to distribute centrally owned materials and goods.

Committees and sectors of the city, districts and precincts must regularly inspect urge state-operated enterprises of the central and local areas, small industry and handicrafts cooperatives, agricultural production cooperatives, production organizations and privately operated businesses to fully meet their obligations; moreover, a plan to necessary to rise in grasping and purchasing a large portion of goods in excess of obligations and plans in order to further increase the amount of grain, food, and consumer goods in support of the people.

Inspections and inventories must be held to ascertain the types of goods remaining in the warehouses of corporations and stores in the commercial sector and in primary level production units. On the other hand, it is suggested that the Ministry of Home Trade procure goods in accordance with the plan for distribution to the city and the Municipal Commerce Service arranges for acceptance of all these goods; at the same time importing a number of supplies for production requirements and a number of essential consumer goods to support the people.

2. Stabilize the lives of the laboring people, first of all the lives of the armed forces and the workers and public servants of the state.

Due to rising prices, the state has decided to provide grain subsidies to cadres, workers and public servants. However, an important problem is by every means to assure supply in accordance with fixed quantities and stabilized prices of essential goods such as: grain, meat, fish, sauces, sugar, fuel, monosodium glutamate, cloth and laundry soap to cadres, workers and public servants; piecework wages must be strongly and widely applied in all production and service sectors; and methods are necessary for best achieving three-part plans in each primary level production and business unit in order to provide the workers and public servants with sufficient jobs and jobs of productivity and increased income.
